CONSOLS, Monday, 5th January, 1891.

STOCKS AND SHARES.

Continuation Days.	Ticket Days.	Pay Days.
Monday, Jan. 12.	Tuesday, Jan. 13.	Wednesday, Jan. 14.
Monday, Jan. 26.	Tuesday, Jan. 27.	Wednesday, Jan. 28.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BROKERS SURPRISED—BUSINESS RAMPANT IN INDIANS—THE SETTLEMENT AND THE HOLIDAY—SOME WORDS ABOUT SPECIAL MINES—THE JOY OF THE MINING PROPHET.

WHEN the market opened on Monday, as at the commencement of a ball, those who toed the business line were few in number, and a fair percentage bore still the traces of their Christmas festivities.

We do not by this mean to say that any of them had violated the laws of temperance or set at nought the counsels of the howling dervishes of the teetotal propaganda, but there was an air about them that seemed to say—"We are here for business, but do not expect any—only to put in an appearance, don't you know." Judge their surprise, then, when they found the share market opening with unwonted vigour for this season of the year, and active inquiries on the part of the public for mining shares in general and Indian shares in particular. Judging from the letters received and the orders to hand the pnblic had during Christmas been cogitating over the mining situation with a special eye to Indian descriptions. They had evidently thought over the position of various concerns underground, the prospects of returns, the actual crushings being made, and withal the cheapness of the respective shares, and hence the active business which heralded the first hours of Monday's market. Then, too, the necessity for closing the year with a good bank balance had passed, so that cash being free, speculation became rife, and neither the settlement nor the holiday could stop the genial flow of buying and selling, by which brokers will live and the public (be it hoped) will profit.

Instead of brokers, as they had expected, finding a sluggish market, they discovered, in most cases, that the limits given them by cautious clients rendered business impossible. There was a good deal of mid-day wiring in consequence, and in the result better prices were offered, notably for good Indian shares, such as Mysore, Nnndydroog, Ooregum, and Champion Reefs, not excluding some of the cheaper descriptions. There was, as we have said, much business on Monday, and on the following day its volume became greater, until on Wednesday the high-water mark was reached. On that evening brokers left the market to consume the relics of the Christmas feast, and Thursday was a Stock Exchange holiday. To-day, however, fonnd matters rehabilitated, and with the general result of the week's work all appear to be fairly satisfied. Well, they may be so, for the outlook for business, in the Indian department especially, is hopeful to a degree.

The market for Indian shares this week has been buoyant. It is with real pleasure that we have observed the tendency of these concerns of late to come to the front. Line upon line, precept upon precept, here a little and there a good deal, we have pointed out during the whole of the year that has passed the splendid prospects of these mines and the excellent way in which they are managed. That prices are now getting more into harmony with existing facts is no surprise to us, and neither should it be to our readers. It has been said (and we very much doubt the truth of the statement), that the greatest pleasure a man ever experiences is when his horse wins the Derby and he leads it round the ring, or does whatever is usual on those occasions. But what is that compared with the joy of the mining prophet who beholds his predictions verified, and who knows that the benedictions of his readers accompany him wherever he goes! It is true the latter are not a negotiable security, and do not go far towards adding to the prosperity of the New Year, which everyone wishes him, but still things might be the other way, for prophets are not always right, and shares that should advance, sometimes show an unpleasant tendency to go the other way.

The news from Champion Reefs is wholly good, and not only good, but important. Turn to the last report from the mine published this week, and the reader will observe that respecting Carmichael shaft, that is, the shaft nearest Ooregum at the northern boundary of the property, and it will be found that there is a great change in the gronnd in the lowest point. It is, in fact, becoming more mineralised, and is showing indications of approaching the lode. Observe also what is taking place at Dalyell's shaft. This shaft is nearest the Mysore boundary, and hitherto the lode has been disordered, but as the driving is going northwards towards Garland's shaft, it is becoming more settled, and is showing considerable improvement. What is the meaning of all this? Simply this, that, if struck in these two shafts, the continuity of the Champion lode from north to south, right through the Champion Reef property, is established. This being the case, Champion Reefs should constitute perhaps the next great mining surprise that will startle the somewhat lethargic investor.

A call of 1s. a share has been made by Balaghat directors. The veins of this mine are thin, but very rich. Should they widen out, and maintain anything like the past average of produce, there would in this concern be a prize indeed. It is generally thought on the market that Mysore Reefs are an interesting speculation. Mr. Malcolm Low and Mr. Rowse are still on the spot looking after the interests of their respective companies, and Capt. Plummer is also at hand to give them any needed advice. Mysore, thanks to the extra tailings' machinery put up, may in a month or so be expected to donble its returns from this source.

The Diamond market has been featureless. De Beers are a shade better, on the declaration of a 10s. dividend. South African Land shares are dull. On the other hand, there has been a firmness noticeable in Gold descriptions, but the changes have not been very striking though, with one exception, all upward.

The Australian market has also moved upwards, and late this afternoon there was strong buying of Etheridge shares, the latest report from the mine being unusually encouraging. An important discovery has been made at the point anticipated by the chairman in his speech at the meeting a fortnight ago. There has also been firmness in Bonnie Dundee, Day Dawn P.C., Kangarilla, and New

Queen. The dividend of 6d. declared by the latter company caused some inquiry to be made for the shares.

In the Copper Market the movements have been nneven. The statistics to the end of the year show the position as almost stationary; the consumption for the time being has overtaken supply. The total stocks at the end of December were 65,366 tons against 65,440 tons in November. The total supplies in England and France were 11,807 tons, compared with 8,445 tons in November, whilst the deliveries during December were 11,881 tons, against 11,230 tons.

The news from Almada continues to be good. The discovery in the 24-fm. level on the 100 lode is found to be worth 30 ozs. of silver to the ton, and probably the ore extracted in the 40 ft. so far driven is not worth less than 800*l*. According to the report this valuable discovery is in virgin ground, and should it continue of the same value as indicated by the last report Almada should make fair profits. There have been active dealings in Callao Bis, and Flagstaff. These shares are almost certain to "go better" during the next few weeks. Golden Gates rose on the meeting and we elsewhere give reasons to justify this rise. There have been active dealings in Colorado, La Plata, and Lisbon Berlyn shares. Victorys rose a point when it seemed to become clear that on the poll the honours of the strife would be with the board. There have been dealings in Gravel Gold (these shares are gradually coming to the front), Orita, Tolima, and Colon. The shares of the latter company have been influenced by an encouraging report from the directors. In some other cases shares are down, notably Elkhorn, Yankee Girl, and Montana, owing, it is said, to the Dublin failure.

"There has (says Mr. S. James) been a strong and continued demand for Goldfields, West Indians, Callao Bis and West Argentine among the Miscellaneous mines, and the latter are no doubt cheap and worth buying at present prices. This company is pushing forward work on their newly-acquired property not far from the now famous and remunerative mines owned by the New Guston and Yankee Girl Companies, and returns may soon be looked for."

Cornish shares have moved upwards during the week with one or two exceptions. The Cornish mine of the year has unquestionably been Carn Brea. At the opening of the year the mine was selling for 378,000*l*., but at its close its selling value (judging by the price of the shares), is 366,000*l*. The shares have been as high as 737*l*., as contrasted with about 607*l*. now. The dividends have amounted to 47*l*. 5s. per share, and the total distribution to 25,500*l*. The call of 27*l*. 10s. per share made by Wheal Grenville had previously been discounted.

The course of business during the next week is sufficiently indicated by our opening remarks in this article.

Kaffirs.

Pigg's Peak have again been in demand, the Ordinary shares changing hands at 1 1/16, and the Preference at 3 5/8, but not closing quite so good. Forbes Reef have risen, and also Sheba Gold. The December crushings are looked forward to with interest, it being expected that several companies will show an increase. Shares chiefly dealt in have been City and Surbnrban, Crown Reef, Durban Roodepoort. Simmer and Jack, Forbes Reef, Oceana, Sheba Gold, and Wemmers.

Business:—Those that have risen are as under: Pigg's Peak ordinary, 1/4; Pigg's Peak, Preference, 3/8; Sheba, 3s. 6d.; City and Surburban, 1/8; Crœsus, 1s.; Forbes Reef, 3s.; Glencairn, 1s.;, Jumpers, 1/8; May Consolidated, 6d.; Robinson's (De Villiers), 1/8 and Wemmer, 3/8.

The only other changes to note are a decline in Jubilee of 1/8, and Witwatersrandt (Knight's), 1s., others remaining as last quoted.

Land.

These shares have been almost neglected, and great difficulty has been fonnd in obtaining prices when wanting to deal.

Business:—A rise is shown in Sutherland Reef of 1/8, bnt a fall is registered in British South Africa Chartered of a like amonnt. Others are without alteration to note.

Diamonds.

There has been more enquiry for this class than for some time, and De Beers have been on the npward move. This was partly cansed by the announcement of 10s. dividend. The only other change to note is that New Jagersfonteins are lower.

Business : A rise has to be recorded in De Beers of $\frac{1}{4}$, whilst fall is shown in New Jagersfontcin of $\frac{3}{8}$. Others remain unchanged.

Making-up Prices. Dec. 27th, 1890.	DIAMOND SHARES.	To-night's Prices.

$\frac{5}{8}$	Burma Ruby Mines	$\frac{3}{16}$ — $\frac{1}{16}$ dis.

INDIANS.

There has been some brisk business in this class, and so far as dealings are concerned they are the pick of the market. Up to Wednesday last they looked like going higher all round. Mysores were then changing hands at $6\frac{1}{4}$, but only show a rise of 2s. 6d. on the week, while Ooregums had free dealings at $2\frac{1}{16}$, and Nundydroog at $1\frac{1}{16}$, but do not close so firm, although the first named show an improvement.

The small priced shares appear to be again coming into favour, and higher prices may be looked for.

Business :—The rises are shown as under : Balaghat, 6d. ; Champion Reef, $\frac{1}{16}$; Glenrock, 3d. ; Goldfields of Mysore, 2s. ; Indian Consolidated, 3d. ; Mysore Gold, $\frac{1}{8}$; Mysore Reefs, 6d. ; Mysore West and Wynaad, 3d. each ; Nine Reefs, 6d. ; and Ooregum Ordinary and Preference each $\frac{1}{8}$.

There is no fall to record on the week.

AUSTRALIANS.

There has been very little doing in this class, the chief dealings being confined to British Broken Hill, Bonnie Dundee, Etheridge, Gympie Great Eastern, Mount Leyshon, and New Queen, the last mentioned having declared another dividend of 6d. per share.

Business : A rise is shown in Bonnie Dundee, 6d. ; British Broken Hill, $\frac{1}{4}$; Day Dawn "P.C.," 6d. ; Etheridge, 6d. ; Kangarilla, $\frac{3}{16}$; and New Queen, 1. The only fall is in Gympie Great Eastern of 6d. Others remain unaltered.

COPPER SHARES.

There were free dealings in the principal copper shares on Monday, Tuesday, and Wednesday, and in several instances prices improved, but they have fallen back somewhat to-day. The chief rise has been in Tharsis, but Copiapo and Cape also show firmness and slightly better prices.

Business.—An improvement is shown in Cape of $\frac{1}{8}$, Copiapo $\frac{1}{4}$, Libiola $\frac{1}{8}$, Namaqua $\frac{1}{8}$, and Tharsis $\frac{1}{4}$. The only one in this class quoted lower is Mason and Barry, which has receded $\frac{1}{8}$ on the week.

GENERAL FOREIGN SHARES.

A fairly good amount of business has been transacted in these shares, chiefly in the lower priced stocks, several of which have advanced, notably Almada. Taking the recent discoveries of this company into account, the shares certainly appear cheap. Callao Bis, Etheridge, Flagstaff, New Gold Hills, Golden Gates, New Qneen and Russell have all been enquired for, and have improved in price. We stated last week that we thought Richmonds looked a good investment, and on some small buying on Saturday the shares rose $\frac{1}{8}$, and still appear cheap.

Business : The rises are as follows :—Almada and Tirito, 9d. ; Callao Bis, 6d. ; Colorado Silver, 3d. ; Flagstaff, 6d. ; Golden Gate, $\frac{3}{16}$; Gravel Gold, 1s. ; La Plata, 3d. ; Lisbon Berlyn, 3d. ; New Russell, 3d. ; and Victory, 3d.

The falls are in Elkhorn, $\frac{1}{8}$; Montana, 2s. ; New Guston, $\frac{1}{4}$; Orita, $\frac{1}{16}$; Oscar, 3d. ; Pahang Corporation, $\frac{1}{8}$; Potosi, 3d. ; Tolima, $\frac{1}{4}$; United Mexican, 6d. ; and Yankee Girl, $\frac{1}{8}$.

The following list shows the principal changes whieh have taken plaee :—

LATEST FROM THE MINES.

INDIAN MINES.

INDIAN CONSOLIDATED.—The company has sold, through Messrs. Pixley and Abell, the following amounts of gold, the results of crushings during the month of October, viz., from the Phœnix section, 63 ozs., which realised the sum of 246*l*. 7s. 2d.. and from the Colar section 69 ozs., which realised the sum of 222*l*. 2s. 9d., making a total of 468*l*. 9s. 11d.

COLONIAL MINES.

BROKEN HILL PROPRIETARY.—For the week ending 25th inst. there were 5,158 tons of ore treated, yielding 1,032 tons of lead, containing 196,004 ozs. of silver, The leaching plant realised 1,500 ozs., making a total production of 197,504 ozs. of silver. They also give notice that a dividend of 2s. per share, amounting to 96,000*l*., for the month of January, has been declared on the 960,000 shares, will be paid on the 21st January.

IRONCLAD (AUSTRALIA.)—Copy telegram received 31st December results :—"177 tons crushed, yielding 22 ozs. free gold and 23 tons concentrates, average value of latter, 2 ozs. gold per ton. Chlorination process treated, 42 tons for 72 ozs. gold."

MIDAS.—Cable from the mine :—"Yield for four days, 77 ozs."

MOUNT LEYSHON.—A cablegram from the manager at Charters Towers gives the fortnightly crushing :—"610 tons crushed 380 ozs. gold. Estimated profit for fortnight, 500*l*."

MOUNT MORGAN.—The company has declared a dividend of 1s. per share for the month of December, equal to 50,000*l*. This makes a total dividend of 14s. per share for the whole year 1890.

MOUNT ZEEHAN.—The parcel of 29 tons of silver-lead ore, ex s.s. Murrumbidgee, has realised 25*l*. 6s. 3d. per ton.

NEW QUEEN GOLD.—A cablegram has been received, dated Charters Towers, 30th December, giving result of crushing to 24th December :—"325 tons (yielding) 450 ozs. gold. Shipped to you per Taroba to London." The directors have declared a dividend of 6d.

WAIHI.—Telegraphic advices from New Zealand report progress in erection of new engine, which with holidays hindered working of stamps. The bullion returns for three weeks of December amounted to 1,900*l*.

FOREIGN MINES.

ARGENTELLA.—Professor Heath, one of the directors of the Argentella Mines, Limited, arrived in Corsica on the 1st inst. on his way to the mines to make a personal inspection of the property and works.

ELKHORN.—Cable from Capt. Plummer :—"Bullion shipped for week ending the 27th December was $8,000."

NEW RUSSELL.—It is announced that the coupons for interest due the 31st December, 1890, on the debenture bonds will be paid at the offices, Blomfield House, London Wall, London, E.C. The coupons must be left at least three clear days for examination.

PALMAREJO.—In consequence of the disarrangement of the mail service in America, the report from Palmarejo, which should have reached the office last week, has not yet come to hand. The usual

quarterly circular cannot of course be issued nntil the arrival of this report, on receipt of which the circular will be sent to the shareholders at once.

Raub Syndicate.—A cablegram from Singapore, dated 29th inst., announces another successful crushing at the battery (Pahang) of 490 tons stone from the Raub Australian Syndicate's Mine, which yielded 760 ozs. of smelted gold, valued at 2,964*l.*

Tolima.—A cablegram from the superintendent states :—"Frias December returns, 10,000*l.*; Frias December profit, 6,000*l.*; 100 west worth $2,000 per fm.; Engine shaft, lode worth $2,000 per fm.; sunk during month, 14 ft."

Tolima.—The October returns show a profit of 4,780*l.* 3s. 7d. The report of the superinntendent is good.

United Mexican.—Telegram : "San Cayetano : Gross returns for week ending 20th December, $3,170 ; expenditure for week ending 13th December, $4,580; loss for week ending 13th December, $2,820. El Cubo : Gross returns for week ending 20th December, $7,500 ; expenditure for week ending 13th December, $5,450 ; profit for week ending 13th December, $2,850."

West Prussian.—The directors have declared an interim dividend upon the Pre-Preference and Preference Sharss at the rate of 8 per cent. per annum, and upon the Ordinary Shares at 16 per cent. per annum, for the quarter ending December 31st.

Home Mines.

West Carzise Mine.—At a special general meeting, held at Gracechurch Buildings, E.C., on the 30th inst., the following resolution, passed at a special general meeting, held on the 10th inst., was confirmed :—"That Mr. Edward Ashmead, chartered accountant, of 2, Drapers' Gardens, London, E.C., be, and is hereby appointed, secretary for the purpose of winding up the affairs of the company."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Kleinfontein.—12 days (25 stamps), 260 ozs. smelted.

Victory Hill Consolidated.—The manager writes : I am only too pleased to say I shall be able by the last of December, to prove pay ore in sight many months ahead for a 15-stamp mill.

Durban-Roodepoort.—An interim dividend of 10 per cent. (2s. per share) payable on and after 23rd January at the Bank of Africa, 113, Cannon Street, E.C., has been declared.

Oriental and Sheba Valley.—Cable :—" The mill has run 17 days, crushed 990 tons, yield 271 ozs. We started the new mill of 60 stamps on the 26th December, and are now running 110 stamps.'

Geldenhuis Main Reef.—The London secretary has received, through the Standard Bank of Africa, Limited, 463 ozs. 2 dwts. of retorted gold, being the proceeds of November crushing of 760 tons, with 10 stamps.

De Beers Consolidated.—The Kimberley Board have declared a dividend of 10s. per share to December 31st, and will carry forward to profit and loss account, after paying the above-mentioned dividend and after setting aside 80,000*l.* towards the redemption of the First Mortgage Debentures, the sum of 726,000*l.*, including the balance of 465,000*l.* brought forward on March 31st last.

Transvaal Gold Exploration.—Summary for November :—Mined, 385 tons ; average assay value, 2 ozs. 4 dwts. per ton ; crushed in 18 full days, 460 tons Theta and Beta ores mixed, yielding 851 ozs. 10 dwts. retorted gold, or equal to 1 oz. 17 dwts. per ton. Pans treated 79 tons mixed blanketings, yielding 301 ozs. 15 dwts., or equal to 3 ozs. 16 dwts. 6 grs. per ton. Sundries, 2 ozs. 7 dwts. 22 grs. Total produce, 1,155 ozs. 12 dwts. 22 grs.

Barrett.—The mine manager reports for 2nd December :—Clean-up for November : Result, 165 ozs., from 830 tons, or close on 4 dwts. per ton. The month has been a fair average one in all respects, and, therefore, at present we may look for about the same amount monthly from the mill. This is a great improvement upon the old mine (which averaged 1¾ dwts.), and if alluvial gives its usual yield, the monthly output will be respectable. With an increased water supply, alluvial work is now in full operation again.

Akankoo.—Mr. Deering reports under date November 30th :—Progress : The north-east end of adit driven 32 ft. timbered nearly to face. At 30 ft. the footwall of reef was struck, it is a very nice-looking quartz and shews a fair prospect in panning. It is significant that at this point full 300 yds. to the north-east of shaft, the reef carries good gold-bearing quartz. The pump will be set to work as soon as the new suction valve arrives. New reef : I have commenced sinking a small trial shaft at some old workings on a lode which apparently passes under the dwelling-house, and makes a junction with the reef we have been working on, somewhere to the north of all existing workings. The new trial shaft is down 7 ft. N.B.—This must be the reef referred to in the recent telegram.

COMMERCIAL NOTES.

Metals.

The Metal Market has been quiet during the current week.

Bank rate remains 5 per cent. Bar Silver has improved to 48⅛d.

Iron.—Manufactured continues in poor demand. A fair business was done in Warrants on the London Metal Exchange, at prices rather under those ruling in Glasgow, closing buyers, Scotch, 46s. 3d. cash, sellers, 1½d. more.

Copper has been qniet. Chili Charters for the last 14 days in December, 1,000 tons. Stock increased 2,200 tons during the same time, but the visible supply is now given as 65,368 tons, against 65,440 tons on 1st December. Delivery for December, 11,881 tons. G.M.B. Warrants sold from 53*l.* to 52*l.* 10s. cash, closing on Wednesday at 52*l.* 12s. 6d. cash, and 53*l.* 2s. 6d. three months ; and to-day's prices are 52*l.* 15s. cash, and 53*l.* 7s. 6d. three months. We quote English tough 58*l.* to 59*l.* ; best selected, 59*l.* to 61*l.* ; strong sheets, 67*l.* ; India sheets, 61*l.* to 62*l.* ; yellow metal, 6s. to 6½d. ore, regulus, 9s. 3d. to 10s. 6d.

Tin was quiet early in the week, and Straits closed on Wednesday at 90*l.* 10s. cash, and 91*l.* 5s. three months. To-day the market is active and dearer, business having been done from 90*l.* 15s. to 91*l.* 7s. 6d. cash, and 91*l.* 15s. to 92*l.* 5s. three months. Australian is scarce, and 15s. premium paid to exchange. The arrivals in December were 2,263 tons ; delivery, 1,736 tons, including 350 tons to America ; stock, 3,404 tons ; visible supply in London and Holland, 8,200 tons, against 9,044 tons on 1st December. Straits shipments for December 1,900 tons. English ingots. 94*l.* 10s. to 95*l.* The Dutch market is quiet. Banca and Billiton 54¾fl.

Spelter lower. 22*l.* 10s. sellers for ordinary brands ex ship here.

Sheet Zinc.—In P.S. yesterday 40 tons sold at 25*l.* net at works.

Lead is easier, and soft Spanish quoted 13*l.* sellers ; soft; English, 13*l.* 5s. ; L.B., 13*l.* 10s. ; sheets, 14*l.* to 14*l.* 5s.

Quicksilver.—Rothschild's price, 9*l.* 5s. ; seconds, 9*l.*

Antimony dull ; 72*l.* to 73*l.*

Dividends Declared and Announced for Week Ending January 3rd.

Welford and Sons	20 per cent.

COLON GOLD MINES, LIMITED.

Gold Bearing Alluvial for Many Years' Working.

A report by the directors shows that great progress has been made during the past year. Mr. Russell, the superintendent, arrived with the chairman (Mr. Sankey) on the mines in September, 1889, and the work of opening and equipping the mines has since proceeded with great rapidity. The construction of the ditch carrying the water supply for hydraulicking has been a work of considerable labour. Its length of 17 miles is now completed, and affords a delivery of 500 miner's inches in the dry season, and considerably more in the rainy season. This supply is believed to be ample for present needs, the deposit being soft and friable, and free from pipe-clay and large boulders. In addition to the original block of nine mines acquired by the company, a portion of the adjoining Sabandija estate has been added by purchase to the company's property, comprising valuable water-rights, timber, and a convenient outlet for tailings, as well as an additional mine ; so that the company now own no less than 10 mines, and an area estimated at 1,360 English acres. Two of these mines (the Margaritas and the Quebradona) have been selected for the first attack ; they have been thoroughly mounted with the best hydraulicking plant and appliances, and already two runs have been made through the old Spanish tailings and *débris* towards the rich deposit. This preliminary clearance has yielded, from the first run, some 120*l.* worth of gold, while the second run (cabled since the period covered by the accounts) produced gold worth 270*l.* The gold is found to be of a high grade, and the results augur well for the time when the sluices reach the main gravel beds. The superintendent, in concluding his report, says :—"It is with great pleasure I feel in a position to give my opinion that the properties acquired by this company form, as a whole, a most complete and valuable mining property, and contain an area of gold-bearing alluvial soil sufficient for many years' successful working." Shareholders have of late been very anxious to receive news, and we are glad to be able to place this satisfactory report of progress before them.

REPORT OF MEETINGS.

GOLDEN GATE ALLUVIAL SYNDICATE, LIMITED.

CONFIDENCE IN THE COMPLETE SUCCESS OF THE ENTERPRISE AND IN COL. McLAUGHLIN UNABATED—TESTIMONY TO THE VALUE OF THE ONE AND THE INTEGRITY OF THE OTHER—SPEECHES BY THE CHAIRMAN AND MR. PECHEY.

THE second ordinary general meeting was held at Winchester House, on Wednesday, "for the purpose of receiving and considering the revenue account and balance-sheet, and the report of the directors, and electing directors and auditors in the place of those retiring. "On the conclusion of this meeting, an extraordinary meeting of the company was held for the purpose of considering and, if so determined, passing the following resolutions :—

1. "That the capital be increased to 80,000*l.* by the creation of 15,000 new shares of 1*l.* each, which shall rank *pari passu* with the present capital." 2. "That 13,000 of the said 15,000 shares shall be forthwith offered at par to the members in proportion to the existing shares held by them in the manner prescribed by clause 52 of the articles of association of the company." 3. "That the remainder of the said 15,000 shares, and also any portion of the said 13,000 shares not taken by the members as aforesaid, shall be issued at such time or times, to such person or persons, and upon such terms and conditions, and at such price or for such other consideration as the directors may from time to time determine."

FRANK HODGKINSON, Esq. (chairman of the company), presided.

E. HARVEY, Esq. (secretary), read the notice of meeting.

SHAREHOLDERS KEPT POSTED UP.

The CHAIRMAN, who was received with cheers, said : It hardly seems necessary that I should make a long speech to you to-day upon this, our common enterprise, because so many post-cards and notices have been issued to you from the office at various times that you must have been kept about as well informed as to what is going on out there as we have been at the board. Of course we have had to contend with great difficulties, but I hold that those difficulties, which have existed for many thousands of years, only go to prove that the gold has never been touched which lies in the bed of that river. *It is there.* (Cheers.) Now we have not lost either time or confidence in this enterprise. The elements have been against us—that is all. I am frequently asked, and so are my colleagues, "Well, what about Golden Gate?" Well, gentlemen, we have always said it is a question of the elements. You know last year there was a snowfall in California which was abnormally heavy. There had not been such a fall of snow in the Sierras for many years before, and when that snow melted it did so slowly, and lasted through the summer. It made the river swollen, and hence Col. McLaughlin could uot get into it for work. He saw it was then necessary to increase his dam and make it a structure that would stand any winter's flood. He has had a severe storm of two days or more, in which that dam has stood the test perfectly, and has written to say he is so satisfied with its stability that if anything happens to it he will advance one-third of the cost of placing it in position to coutend with any future tempest that may burst upon it before the summer mining commences. (Cheers.) His opinion is better than that of anybody else, because he is a thorough river miner. He is a man of wide experience, and is looked up to as an authority in America. He is very proud indeed of the way in which you have backed him up and subscribed new capital, and he is still by far the largest shareholder. He has sold none of his shares—in fact he has increased his holding. I repeat, he is very proud of the way in which he has been

BACKED UP BY THE ENGLISH COMPANY,

after the disaster that happened last year, and he looks forward with the greatest coufidence to the future. He says the people iu America who fail on a first attempt throw the whole thing up, but I have told him that in John Bull he has a very different person to deal with so far as tenacity is concerned. It will be for you at the second meeting to say whether you will go on or not. Any discussion on that point will be more appropriate then than now. The business before the meeting is the report and accounts, the reception and adoption of which I now formally beg to move, and at the same time to invite discussion and questions upon them. (Cheers.)

Mr. W. A. ELLIS (director) : I second the motion.

Carried unanimously.

The CHAIRMAN : Two of the directors, Mr. W. A. Ellis and Col. R. C. H. Germon, retire, and I hope you will re-elect them unanimously. We work very harmoniously as a board.

Mr. HARRY MAGNUS : I shall be happy to propose that these gentlemen be re-elected.

Mr. G. G. TURNER seconded the motion, which was carried unanimously.

The CHAIRMAN : During the past year Messrs. J. T. P. Pechey and Mr. T. S. G. Kirkpatrick have been elected to fill vacancies at the board, and the shareholders are asked to confirm their appointment. (Cheers.)

Mr. WYE : I have great pleasure in moving the confirmation of the election of these gentlemen.

Mr. PEAK seconded the motion, which was carried unanimously.

Mr. J. R. TURNER proposed the re-election of the auditors, Messrs. Pixley and Co.

Mr. LONSDALE seconded the motion, which was carried unanimously.

VOICE OF EXPERIENCE.

Mr. PECHEY (who was heartily received) : Perhaps you will allow me, on behalf of my colleague, Mr. Kirkpatrick, and myself, to thank you for the honour you have done us in confirming our appointment as directors. To me it is a great pleasure to be connected with this Golden Gate Company, for I have had some 28 years' connection with alluvial mining interests in California, and I do not depart one iota from the opinion I have always entertained—that this is going to be, perhaps, the most successful of all the alluvial companies that have ever been started in that State. (Cheers.) It is, of course, to you, gentlemen, as great a disappointment as it has been to me that we have, so far, been able to obtain no results ; but, as the chairman was saying just now, I do congratulate myself on that distinguishing trait of Englishmen that they never allow themselves to be beaten, and I think we are all going to justify our reputation in that respect in this company, and to put into practice the motto,

"IF AT FIRST YOU DON'T SUCCEED, TRY, TRY, TRY, AGAIN."

Especially in this company must we remember that the causes which have prevented us from getting any return this season are causes over which one could have no possible control. To myself this has not been such a great disappointment as it may have been to many of you, because I have been prepared for it. Only the other day an old friend came up 100 miles from the country to look at those wonderful photographs that we have of the mine, and he said to me (I hope you will pardon me for being a little personal for a moment), "What you told me has come to pass." I said, "What is that?"

MR. PECHEY FISHES AND PROPHESIES.

"Do you remember when we were fishing in Derbyshire you told me it was possible, if not probable, that, owing to the high water prevailing this season in consequence of last winter's snowfall, we should not be able to do any mining at all this summer." I had forgotten the circumstance, but still, that has been my opinion all along. I never sold a share on the strength of it, because I thought he would get into something good from the upper gravel. I am quite sure that during the coming year we shall be amply repaid for all our patience and perseverance. I have no doubt for a moment as to the strength of this dam.

PITH OF LAST REPORT.

I will read you the main features of the report, which is a week later than that of the directors—

"The head-dam is absolutely stronger to-day thau before the storm. Its decks and buttresses are now water-tight, and two-thirds of the strain removed from it by means of the opened gate and wing. The sub-dam remains in place, as can be seen in photograph No. 1, which shows the river falling over its crest. This forms a spleudid body of water back of it, which acts as an apron to the river uow flowing through the waste-gate and wing, and when the full river flows over it—as it will when the main flume is out—the canon itself will form a back-water below the dam, that will serve this purpose. There cannot now be any doubt as to the stability of the dam, as the water was washing over its entire crest before the waste-gate was opened, yet not the slightest strain is anywhere observable."

The dam has passed through a terrific storm, during which at one time the water was over its crest. I do not doubt that it will stand not only for this season but for many seasons to come. There have been many good-humoured observations in the Press as to Col. McLaughlin. It is said he is always cabling about what the weather has been. Of course he is, because that

STRIKES THE VERY KEY OF THE WHOLE POSITION.

If the weather had held good for a few days longer out there we should probably have had some very good returns. I have here extracts from a private letter, in which Col. McLaughlin says :—

"I have not mentioned it in any official report, because it would look too much like 'if,' but I honestly believe that three days' more work would have brought us to the pay gravel below that quartz ledge which I have so frequently mentioned to you, and that we would have taken out gold by the bucketful. We got three pieces of rough gold while prospecting the last day we worked in the river at this point, weighing from $1 to $2 each. When you know that river gold is invariably smooth and fine—'scale' in fact—you can see the story that this rough gold told the miner. Turner, the foreman at this place, was in a fever of excitement during our last two days' work here, as he *knew* the certain wealth beneath us from his contiuual prospecting, and was more than anxious to be the first to reach *pay*." You will ask what prospect there is as to having such a winter this year as we had last. All I can tell you is that a very heavy snowfall, or rainfall, in California is invariably followed by a dry year. I reached California in the August of 1862, and the winter following was the severest that had ever been known, for during its continuance there was a rainfall of 39 ins. I was looking over my old diaries the other day, and found that the year following we did not get a drop of rain until the 20th of December, and that the whole rainfall for that season was under 11 ins., and the year succeeding that 10 ins. There is not the slightest probability that we shall have such an exceptional rainfall or snowfall as last season. I see by the Californian papers that the season has beeu oue of exceptional dryness.

QUITE TRUE.

I, of course, know that a great deal of the future of this concern, as also of Golden Feather, turns on Col. McLaughlin. Friends of mine have said to me, "I suppose you still pin your faith to Col. McLaughlin?" "Yes, I do ; and so would you if you knew as much about him as I do." (Cheers.) Not only do I know him personally, but I hear from all my friends the same testimony as to his honesty, his integrity, and his ability. (Cheers.) Only the other day au engineer went to Golden Gate, aud wheu he came back he said, "This is one of the boldest schemes that has ever been carried out in California, and only one man could have doue it, and that man is Col. McLaughlin. The only marvel is how the work could have been carried out so cheaply." Such a report, coming as it does from one of the leading engineers in California, shows, at all events, that your money has not been wasted or your resources improperly expended. (Cheers.) If you want to kuow more about the property come to the office and see the photographs and listeu to the story of the work they represent, and then the marvel will be to you, as it has often been to others, not that the work has cost 30,000*l.*, but that it has not cost 300,000*l.* (Cheers.) As to the results of the prospecting carried on so far, I am able to speak from practical knowledge of the subject. I can assure you that all tests that have been made, the $1.300 panned out in 70 hours with two rockers is simply marvellous, especially considering the circumstances. It is something like

$20 DOLS. PER HOUR PER ROCKER.

If he had the place sufficiently opened to sluice it instead of to work it by rockers the result would have astonished you. We have still the most absolute confidence in the riches to be wou from this river bed. Its past productiveness is a matter of history. What has been

taken out from various points of this Feather river is marvellous. We have 3,000 ft. untouched, and in the adjoining property (Golden Feather) 8,000 ft., and if this dam stands, as I do uot doubt it will, the wiuter's storms, you will see results during the coming summer—possibly in June or July next—which will amply repay you for all your patience and all your perseverance. (Cheers.)

CONFIDENCE OF THE COLONEL.

Col. McLaughlin is so satisfied with the prospects beforc us that he has become one of the guarantors of these 10,000 shares which we tell you have been guaranteed. He has never had one penny from this company in cash, and he has more shares to-day than he had at the beginning. He has never received any salary. We asked him a month ago whether he would accept the same terms that he offered us in Golden Feather—1 per cent. after 5*l.* per share had been returned to the shareholders, but in reply he said :—

"I heartily thank the board for the liberal offer covered in their cable No. 1; but I beg to reiterate my answer as covered iu cable No. 2. I shall be more than pleased to give the company my services without remuneration, as heretofore, convinced, as I now am, that the large block of stock that I hold will net dividends that will amply repay me for past labour and disappointments."

There is one gentleman present whose views I should like you to hear, Mr. Hewitt, who visited the mine two or three months ago. (Cheers.)

Mr. ELLIS (director): Mr. Pechey has just thanked you for the confirmation of his own and Mr. Kirkpatrick's appointment to the board, and I can ouly say that Mr. Pechey and Mr. Kirkpatrick have been of the greatest service to us; but I have risen to thank you for my re-election and that of Col. Germou. Both of us have been connected with this company from the beginning. I may say I never had to do with a compauy that has given me so much satisfaction. We have always felt we have had a man on the other side in whom we could

PLACE THE MOST IMPLICIT RELIANCE.

The directors of some companies arc always in a state of anxiety as to how far they can place confidence iu the reports sent home by their managers, but we have never had the slightest fear as to either the ability or the trustworthiness of Col. McLaughlin. We have had the advantage of seeing him here on the two occasions he has visited this country, and I must say I never met a man who inspired me with greater confidence. The speaker then proceeded to read the last letter of Col. McLaughlin, which was written on the 8th December, the main points of which had already been read by Mr. Pechey.

Mr. THOMAS HEWITT: I have no official connection with the company, except an official connection which a shareholder has with every company in which he holds shares. I did not expect to attend here, or to have any remarks to make, but as Mr. Pechey and the chairman have suggested I should do so, I am very happy to give such information as I can as to the recent visit I made to the mine in question in the early part of September. I went in consequence of the considerable interest held in this company and the adjoining company—the Golden Feather Channel—both by myself and friends. I weut to the West Coast of America for the purpose, I may say, of prospecting not only the mine but the colonel, as in all the opinions I have received I may say there has been a very considerable personal element in this matter; that is to say, the mine might be good, but the colonel might be bad. On the other hand, the colonel might be good, and the mine bad, and under these circumstances we felt it was just as well I should go there and see what was to be seen. The colonel was an absolute stranger to me. I did go, and during several days I employed myself in wandering about the ravines which led to this memorable river, and the first thing I learnt from those well acquainted with gold mining was the extraordinary richness in gold of the land which bears upon the river. Mr. Pechey is an old and practical miner of many years' standing, and I am glad to see him on the board as being a warranty of the success and experience of the directors. (Hear, hear.) I may say to those who do not understand the lie of the country it is absolutely essential for understanding the prospects of the mine to say, that almost every few inches of ground has been worked at one time or another for gold, and evidently with great success; inasmuch as it has been continued in the Feather Valley I should say for 8 or 9 square miles; even at the present time it is being worked a second time by Chinese wherever they have the opportunity of reachiug it. The principal idea, I discovered, was this, that all this gold had been left on the gravel and the soil leading down to the river. The river itself must, through centuries, have acted as a sluice, washing the gravel down into the bed of the river, where it is left. There has been a general opinion in the locality that the operations of this company in the end would turn out a success. The people about there are rather different to what we are; they are well-accustomed to river miuing, and talk of their rockers, and use various mining expressions not as we do as something rare, but as everyday occurrences. There was a general concensus of opiniou that in the end the company would be a success provided the engineering works stood. I may say that a more substantial work than the present dam could not possibly be invented. All precautions have been taken for protecting it against possible storms. Further, from inquiry I made in the neighbourhood I fouud the colonel was a man not only of rectitude, but having a reputation for sterliug truth and probity which very few men in the neighbourhood had, and which, to my mind, is of far more importance than the quantity of gold that might be found, inasmuch as that might alter by hundreds of thousands, or tens of thousands, as the case may be. Personally, I had the benefit of four or five days' close communication with him. I inspected the works he had carried out, not only with regard to the Golden Gate but the other works effected by him. The Miocene Ditch conveys a very inadequate idea by its name. The ditch is an immense structure, carried over valleys 800 ft. or 900 ft., conveying the better part of a river on scaffolding, until at last it is carried the entire length of 36 miles. That is a proof of the capacity of the colonel, and enables you to gauge the quality of the man who has the interests of the company at stake. The works, so far as they have been constructed for the company, were most substantial, and very well calculated to withstand the worst weathers we have any right to anticipate during the ensuing winter. The colonel was full of hope at that time of being able to get to the river bed this year; he said it would be a most marvellous thing if he did, though he meant to do it. Circumstances over which he had no control, namely, the *débris* left by former floods, has shown that his calculations were not to be verified. But small blame to him. The speaker added that this was, of course, a mining speculation, but they had every reason to anticipate that the hopes of the founders would be verified. (Applause.)

The meeting was then made special, when the following resolutions were unanimously agreed to :—

(1.) "That the capital be increased to 80,000*l.* by the creation of 15,000 new shares of 1*l.* each, which shall rank *pari passu* with the present capital." (2.) "That 13,000 of the said 15,000 shares shall be forthwith offered at par to the members in proportion to the existing shares held by them in the manner prescribed by clause 52 of the articles of association of the company." (3.) "That the remainder of the said 15,000 shares, and also any portion of the said 13,000 shares not taken by the members as aforesaid, shall be issued at such time or times, to such person or persons, and upon such terms and conditions, and at such price or for such other consideration as the directors may from time to time determine."

A hearty vote of thanks was passed by the meeting to Col. McLaughlin for his exertions on behalf of the company.

A vote of thanks was also passed to the chairman aud directors.

The meeting then separated.

The company have just received, January 2nd, 1891, the following cablegram from their manager at Oroville:—"Company affairs in first-class order, all flume will be stacked and works fiuished about the end of the week, and claim in shape for winter."

THE NEW ZEALAND GOLD EXTRACTION CO. (NEWBERY-VAUTIN PROCESS), LIMITED.

A COMPANY CARRYING ON NO BUSINESS, AND THE SHAREHOLDERS TAKE SO LITTLE INTEREST IN IT THAT PROCEEDINGS ARE DELAYED FOR WANT OF A QUORUM.

THE fourth annual general meeting of this company was held at Winchester House, Old Broad Street, on Monday, the 29th December instant, (1) To receive the report of the directors and statement of accounts to November 30th, 1890; (2) To re-elect as a director Mr. Steele, who retires in accordance with the articles of association; (3) To appoint auditors for the ensuing year, and to fix their remuneration.

Mr. F. Thorn presided.

So little interest appears to be taken in the company by the shareholders that there was considerable delay in obtaining the very small quorum required of seven members.

At 2.30 p.m., the meeting having been called for 2 p.m., the quorum was in attendance, consisting of the three directors, Messrs. F. Thorn, P. Comiskey, and Steele;. Mr. W. H. Clark (the secretary), and three shareholders, of whom two had been sent for.

The SECRETARY then read the notice.

The CHAIRMAN said he regretted the delay in obtaining the quorum, and he would not keep those who were there by pretending to make a long speech. The company had simply

NOT BEEN CARRYING ON ANY BUSINESS,

but had been waiting for improved methods for the extraction of ore. The board had, however, not been idle, but had been in constant communication with the New Zealand board. The directors had had under consideration the working of other companies' stuff on their own ground, and they had had interviews with certain companies with a view of coming to some arrangement, but up to the present time it had not been possible to carry out any arrangement on the spot. They could only wait the development of new processes. Having dealt with the accounts, he concluded by moving the adoption of the report, which was duly seconded and carried, aud the other formal business having been transacted, the meeting separated.

KOHINOOR AND DONALDSON, CONSOLIDATED.

CONFIDENCE IN THE MINE DESPITE PAST FAILURE.

THE ordinary general meeting was held at the company's office, London Wall, E.C., on Wednesday.

Mr. Bernard Gibson presided.

The SECRETARY (Mr. W. H. Rowe) read the notice conveuing the meeting.

The CHAIRMAN feelingly explained that Mr. Hopkins was absent from the chair that day on account of a most painful family bereavement; he alluded to the death of his eldest son. Referring at some length to the great services Mr. Hopkins had rendered the company, to his devotion to the interests of the shareholders, and to his sacrifices of time and money in his efforts to make the company a success, he said that it was most discouraging and disheartening that it had not been possible to send out a more cheerful report than the one before the meeting, The mine was now shut down, as explained in the report, and all they could do was just to leave things in the hands of the directors. If Mr. Hopkins could not make a success of it, he, the chairman, felt sure that no one could. He formally moved the adoption of the report and accounts.

Mr. PURVIS seconded the resolution, and confirmed the chairman's statements in respect to Mr. Hopkins, who had done more than any man could expect, and whose strenuous efforts for the well-being of the company deserved every success, but had most unfortunately, as yet, not commanded it. Referring to his (the speaker's), visit to the mines some year or two back, he was most favourably impressed with all he saw. He then sought the opinion of reliable men, skilled in mining, and they unanimously agreed as to the great value of the property. All the reports, in fact, which they had from time to time obtained on the mines were of a most favourable and encouraging nature—and the surprise was now as great as the disappointment was keen, that the results so far had been so barren of good. He read an extract from a letter from Mr. Elliott—who, unfortunately, was not well enough to venture

out of doors—in which he expressed his continued confidence in the mines, notwithstanding the past failure, and his belief that the manager's last report on the shaft was significant of a change for the better.

The resolution was then put to the meeting and unanimously agreed to.

The retiring director, Mr. John Elliott, was unanimously re-elected, on the motion of the CHAIRMAN, seconded by Mr. MADOCKS.

A vote of condolence with Mr. Hopkins and his family in their painful bereavement was unanimously accorded, and the proceedings then terminated.

GOLDFIELDS OF URUGUAY, LIMITED.

THE MEETING IS POSTPONED OWING TO THE LAMENTABLE DEATH OF THE CHAIRMAN'S ELDEST SON.

THE meeting of this company, called for Monday last, was only held *pro forma*, and was at once adjourned till a date convenient to Mr. George Hopkins to attend. The cause of this adjournment was the premature death of his eldest son, a young gentleman of great promise and ability, who had merely attained the age of 28. The greatest sympathy was expressed with Mr. Hopkins by the shareholders in his terrible bereavement.

THE TAMBRACHERRY ESTATES CO., LIMITED.

THE YEAR DOES NOT PROVE SUCCESSFUL — A COMMITTEE APPOINTED TO CONFER WITH THE DIRECTORS AS TO THE FUTURE POLICY.

THE niuth annual general meeting of the shareholders in this company was held at the Cannon Street Hotel, London, E.C., on Saturday, 20th December, to receive the directors' report and statement of accounts to 30th April, 1890, and to transact other business.

Mr. Jas. Labouchere presided.

Mr. H. TOLPUTT (managing director) read the notice convening the meeting.

Mr. SMITH moved the adjournment of the meeting, Saturday being a most inconvenient day for shareholders to attend.

Mr. WATSON seconded the motion, which was put to the meeting and lost.

The CHAIRMAN: Gentlemen, this is the first time we have held a meeting on a Saturday, but we had no other chance of bringing this meeting before Christmas.

THE RESULT OF THE YEAR'S TRADING.

The directors are very sorry the results of the past year are not very satisfactory. They know perfectly well that they are blamed, and they know that they are blamed for things which they cannot help. One of the principal reasons why we have not shown better results is that the prices realised for bark have been so very poor this year. We did very well with our coffee, but we did not do well with our bark. We might be blamed for having taken a wrong view of the market, but beyond that I do not think anything can be said against us. We have one dark spot in our report. 735*l.* has been obliged to be put to suspense account, owing to the failure of the company's agents in Calicut. We have not written it off, because we are trying to get the money back in instalments. We have one bright spot, and that is that the rupee paper, which we have held for so long, we have been able to sell at a satisfactory average. Rupee paper was taken at 77, and it stands on our balance-sheet at 77. When the market went up we began selling at 81, and sold up to 85½, making an average of 83½. We do not claim any merit for having made a profit, but we were only too happy to realise it when we got the chance.

DISTINGUISHING FEATURES OF THE REPORT.

This report distinguishes itself by being a gloomy one. There are no features put in here by which anybody can say it will be better next year. We hoped to be able to say it, but we are on the eve of a very small coffee crop, and we do not know what the results will be for the current year, which is from 1st May last till 30th April next. This is our ninth annual meeting. In December, 1884, we having given up the idea of mining, we made up our mind to cut down the capital of the company, so we reduced it from 160,000*l.* to 100,000*l.*, the number of shares remaining the same, but being reduced from 20s. to 12s. 6d. We were able to write off everything that was due, and our success at first led us to believe that we should really be able to pay a dividend. But taking the average of the six years that have followed, I find in that time the balance of profit has only been about 2,000*l.* Now, there is one thing that we felt at once when we received these very discouraging reports of the current coffee crop in April last, and that was that we, as directors, should forego our fees, which we have accordingly done, and Mr. Tolputt has relinquished a part of what is due to him as managing director, and for the past year has only taken 250*l.* It has been suggested that if this company is to go on the London expenses ought to be cut down. It has also been suggested to us that we have not been energetic enough in looking for other sources of revenue, and on the subject of revenue and

THE FUTURE OPENING OUT OF THE ESTATES,

the directors received a deputation some few days ago of some influential shareholders, and there has been a couference on the views that were taken on both sides of the question. We all agree about further reduction of expenditure, and I shall leave it to Mr. Tolputt to make his own statement as regards that, but we do not all agree as regards the future in planting tea. We have asked you to take 7,500*l.* of debentures, as the directors do not feel justified in going into. It was then suggested that I should offer from the board to-day to confer with a committee of three gentlemen, to be named by the shareholders, about every point that has been discussed. We are willing to do everything that is possible to meet the views of the shareholders, and as the position of the company will have to be gone into very carefully, we propose that the best way to do that would not be to adjourn the meeting, but to ask three gentlemen to offer themselves to confer with us immediately after the holidays. The chairman concluded by moving the adoption of the report and accounts.

Mr. TODHUNTER asked how it was that the accounts, which were made up to 30th April last, had only now been submitted to the shareholders.

The CHAIRMAN said the accounts had to come from India to be checked. This year they had held back the sale of the bark, the market not being favourable, and the board had reason to believe there would be a better market. The directors had always wished to meet the shareholders earlier, but this year it had been impossible.

VIEWS OF A LARGE SHAREHOLDER.

Mr. PASTEUR said, as one of the shareholders who had the conference with the directors on the affairs of the company, he wished to make a few remarks. The accounts which they had received were not pleasant for the directors to possess, nor for the shoreholders to receive, and the report was very far from encouraging. They quite admitted that the directors were not accountable for the weather and influences of climate, and he was williug to give them credit for having done the best under the circumstances, but it seemed to him the state of things disclosed by the report was one which made it very necessary to have an enquiry into the affairs of the company, and especially its future prospects. He was very glad to hear that the chairman, in the name of the board, had invited some of the shareholders to consult with them. Two thiugs appeared to him to be necessary—the cutting down of the expenses and the cultivation of tea. They had before them the experiment in Ceylon, where the worn out coffee estates had been turned into tea gardens. They knew also that in the district of the Wynaad tea had been planted, and was paying, and also further south. Of course money would be required for that purpose, and he, for one, had very great objection to raising money on debentures. (Hear, hear.) That was a matter that would have to be gone into by the committee. He wished to name as members of the committee Mr. Joseph Todhunter, Mr. James Patry, and Mr. James Cull.

Mr. SAMPSON suggested Mr. Pasteur as one of the committee.

Mr. TOLPUTT (managing director) said the directors were requested to receive a deputation, which they did, and which was represented by Mr. Pasteur and Mr. Patry, and the views expressed were very much ou the lines which Mr. Pasteur had laid down. As far as the office expenses were concerned, he made up his mind a year ago that this should be his last year as managing director. He could honestly say that during the time he had been in office he had saved at least five times as much as he received from the company. The reason they had not planted tea was they had no money to do it. If the shareholders liked to plant tea he had no objection to it, but they would have to find the money to do it with, and also to run considerable risk. The directors had been cautious in the matter, but he thought they had some justification for being cautious.

After a few remarks by the CHAIRMAN, the report and accounts were adopted and the committee elected.

The proceediugs then closed.

SAM CHRISTIAN GOLD HYDRAULIC CO.

MR. WEBSTER VIEWS THE POSITION OF THE COMPANY WITH SATISFACTION, AND ITS FUTURE WITH CONFIDENCE.

THE ordinary general meeting of the shareholders was held on Monday, at the Charing Cross Hotel.

Mr. E. Forster Webster, C.I.E. (the chairman of the company), presided.

Mr. ARTHUR W. WELLS (secretary) read the notice convening the meeting.

MR. HAMBLEY'S OPERATIONS.

The CHAIRMAN: Gentlemen, at the last meeting, held a few months ago, Mr. Hambley, our managing director, gave you a very full account of the present state of things at the mine, and what his opinion was as to our prospects in the future. I have very little to add now. You have seen the last account that we have received, which seems to be favourable. "The vein upon which we are now driving is as large as it ever has been, measuring about 2 ft., with a footwall of firm slate, and a stiff but crumbly clay on the hanging wall. The matrix of the vein is a brecciated quartz highly stained with the oxides of iron and manganese mixed with slate," and so on. Well, Mr. Hambley told us that he believed we were in the vicinity of some rich bunch of ore, and that opinion seems to be held by Mr. Young, who is on the spot. We hoped to have had a letter from Mr. Hambley, but the mail is late, but as soon as a letter arrives we will circulate it to you. I will now turn to the accounts, and there, under the head of debtor in the profit and loss account, you will see a charge for 300*l.* for directors' fees. I wish to say that we have not drawn any fees since February. Directly we found we were getting into difficulties, and that the money we had was not more than was required for the working of the mine, we stopped the fees, and we have no intention of taking any until we are in more prosperous times, so that from February up to now we have drawn nothing, neither shall we ever do so until the company is in a better position. Another point I should like to draw your attention to is the money available. At the bankers we had 1,406*l.* when these accounts were made up, 5*l.* in the office, and 100*l.* and some shillings at the mine. In addition to that we have sold since the accounts were made up gold valued at 365*l.* 12s. 5d., and there is gold at the mine worth about 100*l.*, so that we can go on working as we are doing for several months to come, and still have money in hand. The real question is: What reports are we going to receive between now and the 1st May next? If they are favourable we may hope to succeed altogether. If they are unfavourable, we still have a very valuable property and plant, which we can sell, if the shareholders like, at a handsome price, and divide the proceeds amongst us. I do not think I have anything more to say now, except that I propose that the accounts and report be now adopted. If any gentleman has any questions he would like to ask I shall be happy to answer him.

Mr. H. BINNY WEBSTER seconded the motion.

IN THE CITY *v.* THE WEST END.

Mr. Spicer said that before that resolution was put he should like to propose an amendment. He would say that it was a mistake that that meeting should be held at the Charing Cross Hotel instead of in the City. He understood that it was necessary that the meeting should be held before the end of the year, but he thought it would have beeu better to delay it until the latest possible date, and it was still more important that they should have had the meeting in the City, so that the shareholders might have had a better chance of attending than they appeared to have had on that occasion. At least they ought to have had some chance of being able to discuss, if necessary, the report and balance-sheet. It seemed to him that the holding of that meeting was a perfect farce. They were told that they had a quorum. They had five shareholders present, and it seemed to him an utter absurdity to hold an annual meeting with five shareholders present, especially when three of those five were directors—at least, there were two directors and the secretary of the company. He would not say anything about the report, because it seemed as if they had scarcely any time to talk about it. He was, however, very glad to hear from the chairman that the directors had agreed to forego their fees until the company was in a position of paying its way and returning something to the shareholders. He remembered that they had had a similar assurance at the last meeting he attended. He would certainly say that it appeared to him that their managing director was very considerably overpaid when he was paid 750*l.* a year.

The Chairman : Not for the present. That has ceased.

DISPIRITING INVESTMENT.

Mr. Spicer, continuing, said that when he first became connected with the company—and he might say that he paid par price for his shares ; he did not buy them at 6d. or 1s.—but when he went into that company he was given to understand—not of course by any person connected with that company—that that company had, as was usual in all mining companies, been through its troubles, and that they were all surmounted, that was to say that the mine was to be a hydraulic mine, that a large reservoir of water had been obtained and conducted over some miles of country to where the mine was supposed to be, and all that remained to be done was to commence working the hydraulic machinery and washing out the gold, and that the mine would pay a very handsome profit. Well, he was very glad of it.

MR. HAMBLEY'S MANAGEMENT.

He presumed that Mr. Hambley was the managing director at the mine at that time, and he therefore held him primarily responsible for all the money that was spent upon bringing water to that mine, and to the best of his belief the attempts to work that hydraulic machinery only showed that they could get a certain amount of gold, which was not sufficient to pay the expenses of getting gold by the hydraulic process. He had personally no confidence in Mr. Hambley as managing director of that mine, and that was the reason why he moved. as an amendment, that that report and balance sheet be not adopted, but that the meeting be adjourned until some convenient date—say in a fortnight's time—and that the meeting be held at the Cannon Street Hotel, or some other place in the City, and that a notice be sent to the shareholders in the usual way.

A Shareholder remarked that he did not think it was of any use adjourning the meeting, because they were going to have another meeting in the course of a few months time.

The Chairman : We have had a meeting only a few days ago. Perhaps this gentleman was not present.

Mr. Spicer : I was not, sir.

The Chairman then said that the managing director was there, and laid before the shareholders a very full account of all they had done. There was no doubt but that they had met with great difficulties in that hydraulic mine, in consequence of the "band of chert" which they came across, and the difficulty in passing through the crevices in the gold, and so on. They had had a very full meeting, a number of shareholders being present, when all matters were thoroughly discussed, and at the present moment they had nothing to do but to give their formal assent to the passing of those accounts. They should hold another meeting in the spring, when they should come to a definite conclusion as to whether they should go on or close.

The amendment not being seconded,

The Chairman announced that he could not put it to the meeting. He then put the original motion for the adoption of the report and accounts, which was carried.

A Shareholder : There is a certain amount of money that is due for unpaid calls, 400*l.* odd. He would like to know whether that was a bad debt, or was it likely that the board could get it if necessary.

The Chairman, in reply, stated that the matter was before their solicitor. They were doing their best to get it.

The Chairman then moved the re-election of the retiring director, Mr. H. Binny Webster.

Major Jebb seconded the motion, which was carried unanimously.

The auditor, Mr. Fred. Maynard, was re-appointed.

A vote of thanks to the Chairman for presiding was then carried unanimously.

CHAIRMAN DOES NOT DESPAIR.

The Chairman, in reply to the compliment, said that he hoped that the board should meet them again as soon as possible. The shareholders could not be more anxious than they were to put things on a favourable footing. The shareholders must remember that the board had a very great deal more money in the company than the shareholders, and they had no intention of sitting there and drawing money from the shareholders, and they should draw nothing from them until they could do so in a fair and legitimate way. He did not despair, for he was quite certain that there was a great deal of gold in the mine, and the assays which they had already had were extraordinarily good, not only in the quantity of gold but also in the quality of the quartz, which was reported to have been singularly free from all adverse mixtures, and if they came upon one of those great pockets they should see their shares run up again.

THE GOLD ESTATES (TRANSVAAL) CO., LIMITED.

The ordinary general meeting of this company was held recently at the City Terminus Hotel.

Mr. Alex. Davidson presided.

The Secretary (Mr. A. Fell) read the notice calling the meeting.

The Chairman said that the year under review, as everyone connected with the Transvaal was aware, had been a very bad one for their operations, and much of the directors' work had therefore been below the surface, although it had been none the less hard. He had very little to say with reference to their properties. The Lydenberg Company had not yet reached a dividend-paying state. He thought, however, that when the extra stamps were at work they would be able to expect a dividend, and he hoped in a short time their expectation with regard to that property would be realised. Their manager was residing on the farm, South Gravenhage, and he hoped in a short time to be able to prove the reef, and when that was done, it would be a question whether to sell the property or develop it. The properties adjoining Montrose and Moodies had been visited by Mr. Bunkeil, who sent the board a report of a very satisfactory character. They had also three farms on the Swazi Border, adjoining which there was the

"PIGG'S PEAK CONCESSION,"

about which the shareholders had no doubt read, and they had instructed their manager to send them a fully-detailed report, as to their position with regard to the Devil's Reef. Those were their most important properties, but they were also connected with other minor companies. He had nothing further to say with regard to the properties. Their reserve fund was invested in Consols and in loans, which were all in a good liquid form. It was their intention to manage the company on the most economical scale, and to keep the expenditure as low as possible. They had, therefore, voluntarily reduced their fees by one-half, and the expenses of the office as much as possible. The local board had also offered to reduce theirs. He hoped that the company will have a long and prosperous career. He concluded by moving the adoption of the report, which was agreed to, and other formal business having been transacted, the proceedings terminated.

THE YURUARI CO., LIMITED.

We are informed by the secretary that the manager, under date 12th December, reports :—

I am pleased to state that after long delay in transit the Ingersoll drills arrived last Friday, and I lost no time in putting one to work iu No. 5 drift west of water shaft, the most promising part I can at present discern in the mine. I am sorry to have still to report that miners are extremely scarce, and I do not now anticipate the return of sufficient to meet the requirements of our various stopes aud levels till about the middle of January. Meantime I am utilising those here for experimental purposes in terms of chairman's suggestion—viz., in the levels to the east of Cenicero, and, as I have stated above, to the west of the water shaft. I would veuture again to repeat my recommendations made about the beginning of the present year, that, in my opinion, it would be in the interests of the company that milling operations should be suspended for one to two months, so that I could devote all the men at my disposal for the sinking of the water shaft, as until then returns give no fair criterion of the capabilities of your mines—when, as I have said, I am convinced that shareholders would be amply rewarded for the expenditure incurred by the returns obtained from the mine. I am as convinced as ever that there is no property in this district to compare with your mines, but you are aware of the condition in which I found the property, which I will shortly repeat as follows :—

The Cenicero shaft had been worked to the boundary line of the adjacent property to the east, and extended 1,000 ft. to the west, greatly increasing mining expenses, while the Water shaft required sinking 400 ft. so as to place the stopes and levels east aud west in this new portion of the property available, and which, I am convinced, would suffice to keep the mill fully employed with paying quartz for mauy years to come.

I need not remind the chairman of the result of the sinking of the Cenicero shaft, 500 ft. undertaken at his suggestion, as he is well aware of the returns obtained consequent on the wise policy he followed, by which returns amounting to about 40,000 ozs. have been obtained.

The secretary adds that a telegram from the mines is expected to-morrow, unless it should be delayed owiug to the severity of the weather.

The debenture coupons of the Middlesborough Belt Railroad Company (Middlesborough, Kentucky), due on January 1st, 1891, will be paid at the offices of the Atlantic Trust Company, Wall Street, New York.

Kangarilla Proprietary Silver Mine.—In consequence of the resignation of Mr. Adams, the late secretary, the compauy have taken offices at 68, Coleman Street, E.C., where all future communications should be addressed. The new secretary is Mr. Jos. Robertson.

Manica Goldfields.—The special correspondent of the *Times* writes as follows :—"From time immemorial 'the goldfields of Manica' have been marked on all maps that have any pretence to accuracy of information, and we ourselves have passed through three valleys (watered by the Revue, the Amtali, and Zambesi rivers), as well as seen hillside literally honeycombed with old alluvial workings for gold ; large quantities of gold must undoubtedly have been taken out of the country."—*Times*, Tuesday, December 30th, 1890.

Gold Mining in the Western Ghauts.—Mr. Bruce Foote has reported so favourably on the possibilities of gold mining on the western mountains of Mysore that it is said a powerful syndicate has been formed in London with ample capital to prospect this part of Mysore which was not touched by the Government prospectors three years ago. Experts from Australia, conducted by a gentleman well known in gold mining circles in Bangalore, are to set out as soon as the necessary permit is obtained from Mysore.

BRITISH MINING INTELLIGENCE.

DRAKEWALLS (1st Jan.)—On account of Christmas no material changes in either of the points since last. Pleased to say ends east and west at 147 are very promising, and show signs of early improvement. Sold to Michell and Co., on 24th Dec., 2 tons 4 cwt. 3 qrs. 10 lbs. black tin at 49*l*. Copper ore sold on 18th Dec., 45 tons, weighed 47 tons 10 cwt. 2 qrs., at 1*l*. 19s. Coombe Co. have not finished carting away arsenic. Removing of ground for jigging machinery will be got on with fast as possible.

LEADHILLS (30th Dec.)—Brown's vein : Five men are set to drive the 145-fm. level, now 133 fms. 1 ft. 4 ins. north of Jeffrey's shaft at 120s. per fm., vein above 4 ft. wide, showing rather dark stone, but the quartz is improving, and we see a spot of ore. Three to room out at the 145-fm. level in view of sinking Jeffrey's shaft therefrom at 60s. per cubic fm. Five to stope above the 145 south of Jeffrey's shaft at 37s. 6d. per fm. ; worth 10 cwt. of ore per fm. Eight to stope above the 145 south of Wilson's shaft at 50s. per cubic fm.; worth, 15 cwt. of ore per fm. Four to No. 1 stope above the 145 north of Wilson's shaft at 37s. 6d. per fm. ; worth, 30 cwt. of ore per fm. Four to No. 2 stope at 37s. 6d. per fm. ; worth, 10 cwt. of ore per fm. Five to drive the 130 fm. level, now 168 fms. north of Jeffrey's shaft at 115s. per fm., vein fully 4 ft. wide, nicely mixed with improved quartz and ore worth 30 cwt. of ore per fm. Four to No. 1 stope above the 130 north of Jeffrey's shaft, at 47s. 6d. per fm., worth 25 cwt. of ore per fm. Five to No. 2 stope, at 42s. 6d. per fm., worth 20 cwt. of ore per fm. Four to No. 3 stope, at 47s. 6d. per fm., worth 25 cwt. of ore per fm. Four to rise above the 130 south of Jeffrey's shaft, at 85s. per fm., worth 5 cwt. of ore per fm. Two to stope above the 130 north of Wilson's shaft, at 37s. 6d. per fm., worth 20 cwt. of ore per fm. Five to drive the 115-fm. level, now 24 fms. 3 ft., north of Jeffrey's shaft, at 85s. per fm.; vein 3½ ft. wide, mostly spar with ore, worth 30 cwt. per fm. Five to stope below the 115 north of Jeffrey's shaft, at 55s. per fm., worth 20 cwt. of ore per fm. Two to stope above the 115 south of Wilson's shaft, at 37s. 6d. per fm., worth 20 cwt. of ore per fm. Two to drive the 85-fm. level, now 205 fms. 3 ft. 6 ins. north of Jeffrey's shaft at 125s. per fm. ; vein above 4 ft. wide, wholly stone, of a very hard and dried nature, and, therefore, unpromising for ore. Four to drive the 70-fm. level, now 42 fms. 3 ft. 3 ins. south of Wilson's shaft at 80s. per fm. ; vein, 3½ ft. wide, of soft, unpromising stone for bearing ore. Four to drive the 35-fm. level, now 61 fms. 4 ft. 6 ins. south of Flat Rod shaft at 70s. per fm, ; vein above, 5 ft. wide, charged with a nice mixture of quartz and ore, worth 40 cwt. per fm. Four to stope above the 35 south of Flat rod shaft at 30s. per fm., worth 35 cwt. of ore per fm. Sarrowcole vein : Eight to stope above Gripp's adit north of George's Roust vein at 45s. per fm., worth 6 cwt. of ore per fm.—T. NEWBIGGING.

MID-DEVON.—Report for week ending 27th December :—Surface: The inclement weather and Christmas holidays have impeded the work during week. A shaft : Water in fork to the 80. C shaft : The 50 east driven by nine men 1 fm. ; total distance from cross-cut north 29 fm. 2 ft. 9 ins. The strata is again hard, capel and garnet being the chief components, which is intersected with yellow ore and arsenical mundic at times sufficient to save. The No. 3 stope worked on by six men, yield of ore, 3 tons per cubic fm. ; character of strata unchanged; large deposits of chlorite are still being met with, which points to a larger deposit of ore.—J. NEILL.

WEST WHEAL GRENVILLE (30th Dec.)—There is no change to notice in the cross-cut driving north at the 120-fm. level, which is now extended 76 fms. 5 ft. The 120 driving west of cross-cut is extended 7 fms. 3 ft. This end continues in appearance and character much the same as reported last week. The 120 driving east of cross-cut is extended 7 fms. 1 ft. 6 ins. The vein in this drivage is still composed of quartz, peach, arsenical mundic, and samples from same show good edge of tin.—J. SKEAT, N. TEMBY.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (2nd Dec.)—Extracts from letters received from the superintendent at the mine.—Mining : Driving the north end at 24-fm. level on the 100 lode ; one machine drill working by day only ; drivage 34.6 ft. ; the breast reached a point 5207 north 4930 east ; the lode is about 7 ft. wide, and has now a very healthy appearance ; and as the drift is already entering the tract of ground corresponding (in cross section) to the San Jose ore body on the main lode, we are hopeful of reaching pay ground shortly. The rock has become easier, and the drivage is rapid at present. The back of the main stope is from 27 to 30 ft. above the 24-fm. level ; its length is 180 ft., and its width averages about 12 ft., and is worth from 30 to 60 per cent. mineral. We do not know yet to what height this ore body lives, but it is still looking strong. The back of the 31-fm. level is only 18 ft. below the 24 ; the stoping ground is about 70 ft. long, and varies from 5 to 8 ft. in width, but the ore is scattered. The back of the 36 level on 100 lode is 50 ft. long, and about 43 ft. below the 24, but only about 37 or 38 ft. can be stoped out, as we have to leave a floor 5 or 6 ft. thick to support the timberwork overhead. The ore here is so scattered that it is barely worth taking away. Prospects : During the last few days a decided improvement seems to have taken place in our milling ores ; according to the battery samples taken daily, the average ley of the mineral passed through the mill in the last fortnight is 33.5 ozs. per ton. In case this improvement should be maintained any length of time we could make fair profits. If, at the same time, we happen to strike a new ore body in the 24 level, 100 lode, as indications seem to promise, we could look forward hopefully for better times in the near future. You will readily notice by the maps the importance of a new discovery in said lode, at the depth we are driving on it ; we have solid ground ahead, overhead and below.

— (5th Dec.)—Mining : The north end at 24-fm. level on the 100 lode has been driven about 13 ft. further since last Saturday, and the miner informed me yesterday evening that the breast was already in 3 ft. of solid black ore. It is not possible for me to go underground to-day, but I will see the breast to-morrow, and will report to you by next post.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated 30th October, and from Messrs. Restrepo, dated 11th November. The statement for the month of October is as follows :—382 tons produced 138½ ozs. ; average, 7 3-10ths dwts. ; estimated value of gold, 360*l*. ; cost at the mines, Medellin, and in London, less exchange, 520*l*. 1s. 8d. ; estimated loss, 160*l*. 1s. 8d. During the month sums amounting to 136*l*. 6s. 8d. included in the above statement of cost were expended in Colombia on capital account. The working of the mines has, therefore, resulted in an estimated loss of 23*l*. 15s. This has arisen from the workings having been in poor ground. Mr. White states that he has gone steadily ahead, and he adds, "I am sure we shall be over the worst this month," meaning November. The new mill had just been set running when Mr. White wrote.

ASIA MINOR.—Ara Dere : We are still cross-cutting for the lode in the end. The lode in the winze continues to improve, and is now worth 20 cwt. per fm. In the rise it is worth 16 cwt. of silver lead. Chief Mine : No change of importance has occurred since last report. 88 men are driving, sinking, &c., and 105 men stoping in ground worth in the aggregate about 25 cwt. silver lead ore per fm. Production : 13,925 tons crushed, yielding 995 tons of rich silver lead ore.

BALAGHAT-MYSORE (10th Dec.)—North engine shaft : This shaft has been sunk 8 ft. 9 ins., or 61 ft. 9 ins. below the 500-ft. level ; the quartz continues about 6 ins. wide, but assays 2 ozs. 17 dwts. 11 grs. of gold per ton. The 500-ft. level north has been driven 15 ft. 6 ins., or 358 ft. from the shaft ; the quartz is about 1 ft. wide, and assays 16 dwts. 8 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 6 ft. 6 ins., or 14 ft. 6 ins. below the level ; the quartz is fully 2 ft. wide, and assays 4 ozs. 1 dwt. 16 grs. of gold per ton. The 410-ft. level north has been advanced 6 ft., or 799 ft. from the shaft ; the lode continues of a kindly appearance. The No. 2 winze in the bottom of this level has been sunk 5 ft. 6 ins., or 70 ft. 6 ins. below the level ; the lode occasionally yields a little quartz. The No. 3 winze in the bottom of this level has been sunk 3 ft. 6 ins., or 38 ft. 6 ins. below the level ; the lode is gradually improving, and now yields quartz of about 4 ins. wide, and assays about 15 dwts. per ton. The No. 1 midway winze has been sunk 5 ft. 6 ins., or 74 ft. 6 ins. below the level ; the quartz is fully 9 ins. wide, and assays 1 oz. 13 dwts. 22 grs. of gold per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay, on an average, 1 oz. 10 dwts. 11 grs. of gold per ton. The 410-ft. level north (west of the plat) has been extended 9 ft., or 108 ft. from the cross-cut ; the lode yields a little quartz, but as yet it is not enough to value. The stopes on this part in the back of this level produce quartz of about 8 ins. wide, and assay 2 ozs. 14 dwts. 15 grs. of gold per ton. The stopes on this same lode in the back of the 330-ft. level yield quartz of about 9 ins. wide, and assay 4 ozs. 1 dwt. 6 grs. of gold per ton. The stopes in the back of the 330-ft. level north (old part) produce quartz of about 12 ins. wide, and assay on an average 1 oz. 14 dwts. 15 grs. of gold per ton. The 270-ft. level south has only been driven 1 ft., or 630 ft. from the shaft ; the lode continues unproductive. The progress here has lately been very slow. I have now changed the contractor, and hope better results will follow. The No. 2 east cross-cut at this level has been advanced 3 ft., or 230 ft. from the level. The stopes in the back of the 270-ft. level south yield quartz of about 9 ins., and assay 5 ozs. 1 dwt. 6 grs. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 10 ins., and assay about 1 oz. of gold per ton. The machine rise in the back of the 270-ft. level north has been advanced 12 ft, 6 ins., or 40 ft. above the level. Haines shaft : This shaft has been sunk 8 ft., or 171 ft. below the surface. Surface : All the general work is progressing satisfactorily.—J. PRYOR.

BONNIE DUNDEE.—From mine manager's report for fortnight ending 25th October.—Have raised 35 tons of stone for the fortnight, about 9 tons of this is from the winze which we are keeping separate to crush by itself ; total stone in hoppers about 135 tons ; no change in water ; machinery in good working order.

BRATSBERG.—Report for week ending 19th December :—Hoffnung Mine : At No. 2 adit level the lode is at present yielding about ¾ ton per fm., being a slight falling-off to what it has been for some weeks past, which, however, we judge to be only a temporary change as the outlook is very promising. The rise in the back of this level is worth fully 1 ton per fm. There is a very strong lode at No. 3 adit level, but at present yielding less than ½ ton per fm., although good saving stuff. The rise in the back of this level is opening up a good lode, now worth 1 ton per fm. No. 4 level is worth ½ ton per fm. ; the lode is very promising. The rise here, going up against Ball's shaft is yielding about ¾ ton per fm., and very satisfactory progress is being made. Johannes Mine : The level on Howard, lode going west has been yielding well recently, but for the present it is worth about ¾ ton per fm., and shows good indications for the near future. The eastern level contains saving stuff, especially in the bottom of the levels ; hence we are hopeful of a speedy improvement taking place here soon. The rise going up in the back of the level continues to open out very satisfactorily, in fact better than the average value of the level ; present yield fully 1 ton per fm. Surface work and remarks : In consequence of the fire at the jigging machinery, practically all operations here are suspended, attention being now confined to sorting the ore as it comes from the mine, and piling same for further treatment next spring. Very good despatch is being made in carrying the ore to Skien, but the exceedingly early setting in of severe cold has, and is still causing us anxiety, as there is a good deal of ice already on the Bandak Lake. Two cargoes of ore will be forwarded in two or three days, and the Vidfarende is due to commence loading the first to-day. J. D. HOLMAN.

CANTABRIAN.—In consequence of the recent very severe weather, the surface being still covered with snow, and very cold, the dressing of the ore has been much interfered with, I have therefore suspended it for the present, and am piling the ore at surface so as to treat the same immediately fine weather sets in.

CHAMPION REEF.—Report for fortnight ending 8th December.—Mysore section : Carmichael's shaft has been sunk 3 ft. 6 ins. ; total depth, 212 ft. 6 ins. There is a slight indication of a change in the rock on the east side of shaft ; this being the nearest to the lode, is becoming mineralised. The hardness of the rock here still prevents us from making good progress, although we have 24 of the best coolies we can get, and two European miners employed. Ribblesdale shaft : Sinking 6 ft. 6 ins. ; total depth, 197 ft. The ground has been favourable for sinking during the last two months, but we are now getting into a harder band of rock. Garland's shaft : The sinking was suspended at this shaft on the date of last report ; since then a cross-cut has been driven 3 ft. 6 ins., which is the result of one week's work. At the commencement of the second week we cut into a large body of water, which rose 25 ft. in

the shaft in a short time. However, by driving the small engine at a good speed, and assisting it by placing a small steam pump in the shaft, we have been successful in getting the water low enough to-day to get in the cross-cut, which we find has holed into old workings and the lode. The old workings by all appearance do not reach the bottom of cross-cut, and we have been enabled to get several pieces of quartz from the lode which contain visible gold, two or three pieces being good specimens. The work of cutting through the lode will be pushed as much as possible, and further details as to the width and value of same will be reported in due form. Dalyell's shaft has been sunk 5 ft. 3 ins.; total depth, 187 ft. 6 ins. The lode continues very regular, carrying about 6 ins. of quartz on the footwall, assaying 3 dwts. per ton. The 160 end north has been extended 6 ft.; total length, 19 ft. There is a marked improvement in the lode, which appears to be getting stronger as the drift is advanced. Coromandel section: At the 320-ft. level, Coromandel shaft, the cross-cut has been driven 3 ft. 6 ins., and is now 7 ft. from shaft. The rock is very hard and clean. Since having passed through the branches of quartz in the hanging of shaft nothing of importance has been cut. We have been delayed two days, the pumps stopped for the cleansing of boiler and general repairs to the engine. Prospect shaft: The 290 end south has been driven 5 ft.; total distance from shaft, 96 ft. 6 ins. There is little or no change in the lode at this point since last reported. In the winze below this level we have followed the lode for several feet, which is almost flat. Assays from the lode, 2 ft. wide, give 1 oz. 5 dwts. per ton. At the 260-ft. level north the winze is still in old workings, which are dipping south towards the shaft. The portion of the lode left by the ancients on the hanging-wall is about 1 ft. thick, and assays 1 oz. per ton. The principal surface work at present consists of the erection of air-compressors stack, engine and boiler house, and fitting shop at the Mysore section, and is progressing satisfactorily.

COLAR CENTRAL (10th Dec.)—Eastern section, north division: New shaft has been sunk 11 ft.; total depth, 160 ft.; no lode to value in present bottom. South division, main shaft: Sinkiug has been resumed here; 11 ft. have been sunk, making a total depth of 279 ft. There is a small bunch of quartz in the south end. Finding the lode much disturbed at this point, we are starting to try further drivage in the west cross-cut at 260-ft. level. We also purpose opening up some quartz in the 180 ft. level by hand labour for the purpose of testing the underlie and direction of the lode. No. 3 winze has been sunk 6 ft., or a total depth of 107 ft. below 80-ft. level. The quartz in the bottom is about 2½ ft. wide, of no practical value at preseut. Drift north at 170-ft. level has been driven 15 ft., making a total of 50 ft. The end is letting out a good deal of water. Marden's shaft has been sunk 7 ft.; total depth, 256 ft. 6 ins. The quartz is coming in from the south end about 10 ins. big, and dipping north. Drift north at 240 ft. has been driven 10 ft.; total length, 57 ft.; no quartz to speak of in present end. Machinery at surface is working well.—A. S. B. Oakley.

COLORADO (15th Dec.)—The manager reports that there are now 68 men at work on 25 different points in the company's mines. The general appearance and outlook of the mines is improving, and in several of the workings high grade ore is being extracted. The various levels are being actively driven, and the width of the mineral veins is maintained. The manager calls particular attention to a continued improvement in the following points of working:—Brown adit level, Coughlin stope; Terrible mine, 15th level east; Terrible mine, No. 1 level, Prout's stope; Brown lode, Mammoth Tunnel level. Last sales of ore realised 300 ozs. of silver per ton.

ETHERIDGE UNITED (5th Nov.)—My last report was dated 29th October; your letter of 5th September was duly received. I cabled you last week as follows:—"Goldsmith's muzzin ortyx trial disabuse from Northstar nook rebutter amlofada wages." Meaning: "Goldsmith's mill starts again on 15th November; trial crushing from Northstar next month." Since my last report we have cut a large stream of water in the Caledonian Mine, and though we have been bailing for five days we cannot get to the bottom of the shaft. I believe we have struck the reef, for the last hole that was put in bored through 2 ins. of block mundic, and then into very soft country. This hole tapped the spring of water. To-day I believe the water is getting somewhat less. The total depth of shaft is 85 ft. Since we got flooded out I started the miners, who were in the shaft to sink a shaft for surface stone and to-day we bottomed on the reef at a depth of 28 ft.; it is 2 ft. 6 ins. thick. I shall try to put a crushing through this month. Should we be unable to get iuto the deep shaft this week, I shall send a team to the lighthouse for a pump. North Star Mine: Since the commencement the work done has been the shaft as been cut down to full size and cleared out 16 ft., and sank a further depth of 12 ft. The reef in the bottom is now 18 ins. iu thickness. I expect to have a trial crushing out before the general meeting. The water continues to be very troublesome.—M. Ferguson.

FLAGSTAFF (30th Dec.)—I can report good work again for this week, consideriug the number of men that I have. I have only nine miners now at work in the mine, and I have got out this week 63 tons of ore; 40 of first-class, and 23 second-class. Sixth level: This has been driven 16 ft. during the past week, which makes altogether 34 ft. past the new cross-cut. I think that I will find pay ore soon, as we are in good ground for ore. I have now a seam of iron 6 ins. wide, that extends the full height of the drift. It will not pay to save at present but is likely at any moment to come into good ore, as I said before it is in good ground. New stope: This place is looking capital, the ore is still continuing both upwards and downwards. I have sunk down 22 ft, but have stopped sinking on account of water which is coming in so fast that I caunot make any headway, so I have gone down in the rise and started a drift in, to tap it some distance below its present workings. I have also started the main seventh, and I think that I will be able to find ore here in the course of the winter.—A. L. Swope.

GLENROCK (12th Nov.)—Premier Mine: We have becn ready to crush for the past month, but owing to the recent heavy rains landslips have temporarily blocked the road between Macetown and the mine. Since last writing, on 30th October, I am pleased to report that an entirely new shoot of gold-bearing stone has been met with in extending our top level; it has developed into a good fair-sized lode. The mine manager reports: The (new) reef in the tuunel is about 2 ft. thick, with a little gold in it. I think it will improve shortlv, for the ground alongside of the reef is getting softer.—W. J. Farrell.

— Telegram received 29th December: "107 ozs. gold got from quartz and mullock in driving level."

GOLD FIELDS OF MYSORE.—Miue agent's report for the fortnight ending 8th December:—South shaft: 206-ft. level the drift north has been advanced 2 ft. 9 ins., total length, 21 ft. 3 ins. Work suspended after the first week, the last samples taken from across the whole width of lode gave, on being assayed, 1 dwt. per ton. The lode in the present end is very much disordered and unsettled. This change is probably produced by the intrusion of the band of schist, which was mentioned in the last report. Thc drift south at this level has been advanced 4 ft. 9 ius.; total distance from cross-cut 17 ft. 3 ins. Work suspcuded on the last of the month. There is very little chauge in the appearance of the lode, the quartz being very hard and flinty. From samples taken across the lode, the whole width of drift gave 3 dwts. per ton. The winze below the level has been sunk 4 ft. 3 ins., which is the result of a week's work only. The lode appears to be making a greater underlie, so we are now stripping down some of the hanging of the lode in order to follow the shoot of good ore. The average assay value from 4 ft. of lode on the footwall is 12 dwts. per ton.

GYMPIE GREAT EASTERN.—Fortnightly report of Mr. John James, manager, dated 13th November:—During the past fortnight the cross-cut at the 730-ft. level, to intersect the 1 South Great Eastern reef, has been advanced 17 ft.; total 314 ft. from the shaft. At 298 ft. from the shaft we cut the Diorite Dyke; it is a fair working ground. We should have the reef in about 30 ft. more cross-cutting; at this level the south drive has been extended 6 ft.; total 91 ft.; the reef is keeping about the same. The back stopes above this level north and south show a little gold. 690-ft. level: The back stopes going north above this level are showing fair gold; another month will clear all crushing stuff from here. I would recommend to stop crushing at the Decemben wash up, as there will be very little stone left to be taken out of the Great Eastern reef until we get the other reef opened on. This means the discharge of over 40 men. I hope it will be but for a short time. We wash up on Monday next. Everything about the mine, winding engine and battery is in fair working order. There are 71 men employed—61 on the mine and 10 at the battery.

INDIAN CONSOLIDATED (9th Dec.)—Phœnix section:—Stoping: We have suspended stope J back of No. 2 level for the time, the coolies being required at stope G bottom of No. 1, which has opened into a lode fully 5 ft. big of fair looking quartz. The better quality quartz lately got at the north end of mine in stope K still continues; lode 3 ft. wide of good value; this splice of lode, showing as it does, gives us hope of finding its continuance above, and with this object in view we shall do some work in midway level as soon as convenient. No change to note iu stope E, either in size or nature of lode. We shall during the coming fortnight have to secure this place by filling up, the hanging-wall being weak. Our stopiug ground above tramway level shows no falling off in extent or value, and we shall, if possible, increase our output from here. We are also breaking quartz from pillars here and there in the mine which are no longer needed. A rise has been started on a spur of stone at point E. I do not expect any large quantity of quartz, but what there is will be well worth taking out, although from its inconvenient position it will be slow. Our drivage is shorter this fortnight at No. 1, owing to some disagreement between the contractor and his men; another reason being the lode taking an abrupt turn, making the stripping of side of level necessary. 2 ft. 6 ins. only has been done; ground hard, but regular, and a decided improvement in the look of the lode is shown. The lode, which is 2 ft. wide, is composed of a jointy, slightly-mineralised black rock; the walls, both foot and hanging, are very defined and clean, casing of decomposed slate and quartz lying on both. Tramway level advanced 9 ft. 6 ins.; no change or improvement in it to note frou last report. Mill: I am pleased to say everything connected with milling since putting ou steam power has gone on well, no hitch of any sort taking place. Fuel is being delivered in sufficient quantities, and of a better kind than is usually the case. Our clean-up was effected without loss of time on the 1st inst., and 10 head of stamps started with water power the same day. Some slight repairs needed to winding engine have been done, and all surface work in good order.—J. Fry.

— (10th Dec.)—Colar section—No. 1 new shaft: The small engine has been put to work at this shaft. We have found the water and just resumed sinking. The last measurement was 173 ft. 6 ins. (*vide* report No. 98 of 2nd September last). We hope another 25 ft. of sinking will carry us through the hard run of ground into the lode formation, when we anticipate better progress. No. 2 new shaft: After a great deal of trouble with the water at this point, we got to work again on the 3rd December. The 210 ft. north has been driven 7 ft. 6 ins., or a total of 14 ft. from shaft. There is no quartz in the present end but a seam of decomposed country, letting out large quantities of water. The 210 ft. south has been advanced 10 ft. 3 ins.; total, 24 ft. 3 ins. from shaft. The quartz here is a good 3 ft. wide, but still poor, giving a trace of gold. We shall, I hope, start a rock-drill shortly at this point. No. 5 shaft—156 ft. north: West cross-cut has been driven 7 ft. 6 ins.; total, 30 ft.; the end is in large jointy ground. East cross-cut has been driven 2 ft. 6 ius.; total, 52 ft. 6 ins. We have passed through a few stringers of quartz, but nothing of importance thus far. The 425-ft. winze south: We have driven 9½ ft. from the bottom of the winze on a 5 ft. lode, worth 2 dwts. 14 grs. North: We have driven 6 ft.; the lode is 1 ft. 6 ins. wide, also assaying 2 dwts. 14 grs. The 450-ft. drive has been advanced 9 ft.; total, 49 ft. 3 ins.; the quartz has cut entirely out at this point, and we shall remove the rock-drill to the 210 ft. south in No. 2 new shaft to open up the ground there. New works: The main tank to supply water for condensing purposes for the new air compressor has been excavated, and we have commenced to build the walls. New air compressor site has been levelled, and we have commenced the loadings for the new machinery. Milling: It is with much regret we have been compelled to close the mill pending future developments, the grade of our quartz at present being too low to pay the cost of breaking and milling.—A. S. B. Oakley.

MONTE DEL ORO (23rd Dec.)—Fortnightly report:—Taylor's engine shaft: In the past fortnight all the preparations were completed, and the miners are now sinking below the 244-ft. level at a satisfactory rate, having already done 3½ ft. besides securing the ground with timber. Shaft No. 6: The total length of the 244-ft. level north of this shaft is 328½ ft., the advance for the fortnight being 18 ft; the lode is composed principally of a soft flookan and it carries

a stringer of quartz, averaging 3 ins. wide, the two samples from which yielded each 16 grs. of gold per ton on assay. The west cross-cut is 101 ft. long, of which 12 ft. have been driven in the two weeks ; notwithstanding, operations were retarded, in consequencc of the level filling with water while preparations were being made for sinking the engine shaft. No further lode has been met wit. The intermediate level south of No. 8 winze was extended 14 ft., making its length 57 ft. when driving in this direction was suspended, and the men put to drive uorth. A sample from the south level assayed 2 dwts. 14 grs., while another from the north gave a result of 6 dwts. 12 grs. of gold per ton. In the 186-ft. level north of this shaft the ground has become considerably harder for driving nearly the whole of the end being in quartz. The length of the level is now 480 ft., showing an advance of 16 ft. for two weeks. The two samples taken assayed respectively 1 dwt. 23 grs. and 2 ozs. 12 dwts. 6 grs. of gold per ton.

NEW DEVALA-MOYAR (9th Dec.)—78-ft. level drive west : During the time we were engaged in making the air pipe connections to resume driving the 116-ft. level west, we kept the drill at work here and extended this point 4 tt. ; total distance, 190 ft. ; reef poor. 116-ft. level drive west : We have now got the drill at work here, and have driven 1 ft. ; total distance, 74 ft. ; reef of low value. 116-ft level drive east : we are stripping down the side to get the footwall and carry the drive east. The stopes in 78 and 116-ft. levels as same as usual. In November we crushed 400 tons, and obtained 62 ozs. of sponge gold. Crushing has been resumed at the battery, and everything is working well.—R. B. JOHNSTON.

NEW EBERHARDT.—The manager reports, under date December 8th, as follows :—Mine : Total weight of ore assorted and put on the ore-dump for the week, 9 tons ; assay value of same, $37.71 per ton. The mine prospects have improved a little since my letter of last week, although our output quantity has not been increased. No. 2 winze from Gore level : This winze has been extended down during the week 6 ft. ; total depth, 28 ft. Owing to our prospects in the south working having improved somewhat, I have for the time suspended work on this winze and put the men to work on ore, but I fully intend to again resume operations upon this winze, the suspension only being temporary, thinking it better to work all the men on ore for the present. I now desire to hand you the following statement for the run commencing October 26th, and ending with the mill clean-up of the 28th November, 1890 :—Total weight of dry ore worked in pans, 231 tons ; total assay value of same, $11,149.35, or, per ton, $48.26. Bullion product : Standard value, $9,295.80, or, per ton, $40.24. Please find herewith shipping receipts for four bars shipped, total ozs., 6,380.16 ; standard value, $6,116.22.

NEW HOOVER HILL.—Report to December 20th :—Provost shaft : We are breaking a large quantity of low-grade ore around these old working. Sinking below the 50-ft. level south of shaft there is a small vein of quartz, which seems to be improving in depth. I found some stones to-day which showed gold. Driving scuth of this level there is plenty of quartz in the end, but as it is poor I have the men cross-cutting east to ascertain whether or not the best part of the vein is on this side ; the quartz continues, and is now panning $1 per ton.

NINE REEFS (10th Dec.)—Report for fortnight ending 8th inst.—Vyvyan shaft : The shaft has been sunk 1 ft. during the past fortnight, making the total depth below the 145 level 69 ft. 7 ins. The work in the shaft was stopped for some time owing to the unfortunate accideut mentioned in my last week's letter ; before resuming work it was thought advisable to put in some timber for dividing the shaft for the bucket road below the 145 level ; this work has been completed to the bottom of the shaft. The sinking of the shaft was resumed on the 6th instant ; the sinking is now being done by hand labour. The lode is still small in the bottom of the shaft. The assay this week is 1 oz. 18 dwts. 10 grs. Prospect pit has been sunk 9 ft. 6 ins., making a total depth of 40 ft. 9 ins. As it would be necessary to put in timber if this pit is sunk any deeper it has been decided to cross-cut to the lode, and a cross-cut east has been commenced.—H. P. HODGSON.

NORTH MEXICAN MILLING.—Mr. O. Hofmann, under date 12th December, writes from the mine :—I have been dangerously ill for three weeks in bed. They all feared for my life, and telegraphed for a doctor to Chihuahua, who stayed four days with me. I am improving, however, and hope to be able to start the mill personally. The belting came by freight to El Paso, where it now is. The irons for the pump rod have arrived. The bob is finished aud in place. Now they can commence with the rod, and when that is finished we will pump.

NORTH TOLIMA.—Report on work done for October :—Esperanza Mine—cost and returns :—Returns : Value of iuvoice No. 44, 30 tons, containing 3,874.90 ozs. fine silver, at $1 10c. per oz., $4,262.39 ; containing 38.10 ozs. pure gold, at $21 per oz., $800 10c. ; total, equal 1,012*l.* 10s. ; cost, as per statement, 901*l.* 1s. ; excess of returns, 111*l.* 9*s.*

OOREGUM. — Fortnightly report of mine agent, dated 10th December :—I beg to hand you the mine report for fortnight ending yesterday. Since the completion of the skip roads in Wallroth's shaft we have resumed work in all the different workings in this part of the mine with the exception of driving the 250-ft. level south, and this will be resumed as soon as we have cleared the *débris* accumulated. Wallroth's shaft has been sunk 1 ft. ; total depth, 25 ft. 5 ins. below the 250-ft. level. We have laid air pipes, and two machines will be put to sink this shaft from to-day ; the lode in present bottom is 2 ft. 6 ins. wide, assaying 6 ozs. 8 dwts. 10 grs. per ton. Main shaft : 250-ft. level north advanced 12 ft. 3 ins. ; total from cross-cut, 32 ft. 9 ins. ; lode, though still disordered, has somewhat improved in appearance ; 3 ft. wide, assaying 5 dwts. 10 grs. per ton. Winze in bottom 250-ft. level north sunk 5 ft. 3 ins. ; total, 21 ft. 3 ins. ; lode 6 ins. wide, value 10 dwts. 21 grs. per ton. No. 2 winze bottom 250-ft. level south, north Wallroth's shaft, sunk 5 ft 9 ins. ; total, 49 ft. 6 ins. ; lode 3 ft. 6 ins. wide, value 3 ozs. 3 dwts. 3 grs. per ton. No. 2 winze south Wallroth's shaft, sunk 5 ft. ; total, 42 ft. 6 ins. ; lode, 2 ft. 3 ins. wide, assaying 5 ozs. 11 dwts. per ton. Rise in back 250-ft. level north Wallroth's shaft, 6 ft. 8 ins. risen ; total, 69 ft. 11 ins. ; lode, 1 ft. 6 ins., value, 3 ozs. 9 dwts. 16 grs. per ton. Intermediate level north advanced 2 ft. 6 ins. ; total, 46 ft. 6 ins. ; lode, 1 ft. 3 ins., value 4 ozs. 5 dwts. 7 grs. per ton. This level has to-day been communicated with the rise reported above. Intermediate level south advanced 7 ft. ; total, 237 ft. 2 ins. ; lode, 2 ft. wide, worth 8 dwts. 17 grs. per ton. Low's shaft : Cross-cut west from 350-ft. level south, driven 17 ft. 5 ins. towards the lode. The 270-ft. level south advanced 8 ft. ; total, 232 ft. 2 ins. ; no lode. Winze in bottom this level sunk 5 ft. 4 ins. ; total, 15 ft. ; lode, 4 ft. wide, value, 5 ozs. 8 dwts. 21 grs. per ton. Winze bottom 270-ft. level, north-west of shaft, sunk 6 ft. 4 ins. ; total 67 ft. 2 ins. ; lode, 2 ft. 6 ins., value 2 ozs. 10 dwts. 2 grs. per ton. Winze bottom 270-ft. level north sunk 4 ft. 9 ins. ; total, 33 ft. 6 ins. ; lode. 1 ft., value 17 dwts. 10 grs. per ton. Cross-cut east from 250-ft. level south advanced 1 ft. 8 ius. ; total, 7 ft. 4 ins. At this point we intersected a branch of quartz 6 ins., assaying 4 dwts. 8 grs. per ton. We are driving south on it. Probyn's shaft : 450-ft. level north extended 8 ft. ; total, 14 ft. ; lode 4 ft. ; value, 6 ozs. 17 dwts. 18 grs. per ton. We have suspended this level, and put the machine to cut tip and cistern plats. When this is completed we shall resume the sinking. 450-ft. level south advanced 12 ft. ; total, 18 ft. ; lode, 2 ft. ; value, 1 oz. 12 dwts. 16 grs. per ton. 366-ft. level south advanced 23 ft. 6 ius. ; total, 339 ft. 4 ins. ; lode, 3 ft. ; value, 1 oz. 14 dwts. 20 grs. per ton. Winze iu bottom this level, sunk 5 ft. 3 ins. ; total, 11 ft. ; no lode. Cross-cut west from 300-ft. level south advanced 17 ft. 9 ins. ; total, 25 ft. 6 ins. Failing to discover the lode, we have suspended the cross-cut and resumed the driving of the level south. Judging from the workings in the 366-ft. level, we have a considerable distaucc further to drive before we rccover the lode. 230-ft. level advanced 1 ft. 6 ins. ; total 318 ft. 6 ins. ; no lode. Stopes : Main shaft : Back intermediate level south, cut 8 fms. ; lode standing average 2 ft. 6 ins., average value 2 ozs. 7 grs. per ton. Bottom intermediate level south, cut 7 fms. ; lode standing 2 ft. 6 ins. wide, value 1 oz. 19 dwts. 4 grs. per ton. Probyn's shatt : Back 300-ft. level south, cut 12 fms. ; average size of lode standing 3 ft. ; value 2 ozs. 1 dwt. 9 grs. per tou. Bottom 230-ft. level south, cut 23 fms. ; lode standing average 2 ft. wide ; value 1 oz. 13 dwts. 18 grs. per ton. Bottom 166-ft. level south, cut 22 fms. ; average size of lode standing 3 ft. ; average value 1 oz. 1 dwt. 6 grs. per ton. Back 166 ft. south, cut 13 fms. ; lode standing averages 5 ft. wide ; average value, 2 ozs. 12 dwts. 5 grs. per ton. Our return of gold for November was 2,725 ozs. from 1,297 tons of quartz.

RAVENSWOOD.—Battery : Working only part time ; crushed 160 tons ; obtained 78 ozs. from the blankets, more than half of it from grant ; no public work. Chlorination : Put through 52 tons, all from Mellanaeur and Black Jack ; obtained 56 ozs. ; all the plant in good order ; residues average 3 dwt. per ton, and cost reduced much lower.

MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

THE board have received from their local committee (Mr. R. Ballard, M.I.C.E.), dated Mount Morgan, Queensland, 31st October, 1890, the following :—No. 3 Immanuel is now being sunk night and day —three shifts of men of eight hours each—so there is not a moment's delay except from midnight Saturday to midnight Sunday. We have altogether 15 men. The shaft was 26 ft. deep on starting ; on October 31st it had attained the depth of 40 ft. In this shaft I propose to cross-cut for the reef, and put in levels at every 60 ft. deep. I believe the vein to be to the eastward of me. This ensuing month of November will give us a good notion of what we can do in it. I am delighted with my new management, and am pleased to report that a very exceilent start has been made. I mean to confine operations for the present to this shaft. At 60 ft. I mean to have a look for the vein, but I do not expect it will be very defined at that level as the country dips to the south. Booth's stone from Mount Victoria is coming in very slowly. Paton hopes to make a start on it in about a week, if they have got in enough to justify a start.

The board have also received from the local committee (Mr. R. Ballard, M.I.C.E.), dated Rockhampton, Queensland, November 15th, 1890, the following :—I entirely agree with you that we must get iuto richer ground at deeper levels before we spend a sixpence in any other works. I note the price of copper pyrites, which will be a useful guide when we attack that part of our programme. I am very pleased indeed to express my intense satisfaction with our new mine manager, which will eusure, I hope, the belief expressed in the last paragraph of your letter. During the fortnight we have made good progress with Immanuel No. 3 shaft. Better progress I never made before in the mine—indeed, never so good. On the 13th inst. the shaft had attained the depth of about 53 ft. At 43 ft. deep the rock got harder and assay No. 603 showed a pennyweight of gold and traces of silver in it. At 46 ft. we came into a brown ironstone which, by assay, gave us 9 dwts. of gold and 3 dwts. 6 grs. of silver to the ton. This was assay 604. This brown ironstone increased as a bunch, and after a shot or two into it it showed excellent stone, from which at 50 ft. deep, assay No. 606 gave 3 ozs. 3 dwts. 16 grs. of gold, and 14 dwts. 6 grs. of silver, being nearly 4 ozs. of bulliou to the ton. The bunch pinched again into a vein about 4 ins. thick, with good indications of a foot and hanging wall. I am not sure about this being the Immanuel, but thiuk it most likely to be a leader from the Immanuel. I agree with the mine manager in his report dated 13th inst., and quote his words : "We must not be too sanguine, but go down, peg away, and then in cross-cutting we may hope to find something better." It is, however, highly satisfactory to get such fine indications at this level, and I have every hope now of success in this shaft. I am putting up a little assay office, and hope to get the necessary plant cheap from the Tarangabar liquidators. We are not troubled with water now so much, having emptied our lower reservoir with a syphon. I return to the mine on Tuesday, the 18th inst., upon which occasion I shall consult with the mine manager, aud decide upon the level at which we shall put in our first cross-cut in No. 3 shaft exploring for the vein, for I am scarcely able to tell yet whereabouts I am, whether on the top of it, or, as I think more probable, a little to the westward. I shall also on the 18th make arrangement to employ two or three miners in sinkiug shaft No. 4 Immanuel, with a view to explore for the upper levels of the vein. You are awarc that shaft No. 4 is situated to the northward of shaft No. 1 and 2, while shaft No. 3 is situated to the southward of shaft No. 1 and 2. In conclusion, I consider things are lookiug very healthy, and it is quite on the cards that I may have good news for you this year before Christmas, which I surely hope.

THE debenture coupons of the Middlesborough Water Company (Middlesborough, Kentucky) due January 1st, 1891, will be paid at the offices of the Atlantic Trust Company, Wall Street, New York.

THOMAS THOMPSON,

STOCK AND SHARE DEALER.

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

LESTER AND HOOK are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

LESTER AND HOOK advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Also at 5, SPRING STREET, SYDNEY, N.S.W.

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Doubloon.—Certainly hold your Richmond shares.

C. A. (Exeter).—You are liable for the amount uncalled, which is 1s. 6d. per share. Only 6d. will be required by the first call.

Prosperous.—In the present state of the markct we advise you to hold. Work is proceeding as usual at the mine.

Circular.—We cannot speak as to their monetary position, and we know of nobody who would care to trust them.

Smart (Argyle).—The shares are quoted and dealt in on both the Stock and Mining Exchanges.

B. Newman.—Yes. A good purchase, we consider. You are entitled to the dividend if you purchase now.

Husty.—Hold for a rise.

R. A. Craig (Bournemouth).—Cannot advise you to buy those named. Keep the others.

Symbol.—Do not sell. The chances are they may improve after the meeting.

Fox (U. S. A.)—The risk is rather great. There are others with much better prospects, whose shares are selling at lower figures.

Simpleton.—Not as an investment, but as a first-class speculation. Hold your Tintos.

Truth.—We think well of them.

Hosier (Aberdeen).— Higher prices may be expected within the next two months. They are certainly very cheap.

B. A. Taylor (Carnarvon).—By realising now you will secure a profit. The question remains whether or not the profit should be taken. You know the risks of not doing so.

Benjamin.—At the first favourable opportunity we advise a sale. We think the shares cannot go much higher.

Centurion.—As a holder you can do nothing else. There is no market in them.

Falkirk.—We advise you to have nothing to do with No. 1. No. 2 is purely speculative, but respectably managed. See report in this issue of annual meeting.

Brewery Shares.—The most reliable list published, is that issued by Messrs. Martin and Phillips, 15, King Street, Cheapside. With this in your hands you can dispense with the publication you name.

Owing to the extreme pressure upon our space this week, caused by the desire of many companies to hold their meetings within the year 1890, we are compelled to hold over many interesting communications, reports of progress, &c. Our Table pages are also omitted, but all changes in prices are notified in our "Mining Market." We hope next week to recover all arrears.

The Mining World.

LONDON: SATURDAY, JANUARY 3RD, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE NEW MINING COMPANIES OF 1890.

MR. EDWARD ASHMEAD, F.C.A., of 2, Draper's Gardens, having completed his annual tables of the new registered mining companies of last year, supplies us with the following particulars from the same. The number of companies registered for mining, and exploring mineral lands for mining, but exclusive of companies for the making of, or trading in, metals, was 298, with an united nominal capital of 35,057,125*l.*, as against 378 companies, and 41,015,425*l.* capital in 1889. The following is a summary of the new mine companies of 1890 as compared with 1889:—

BRITISH MINING.

		1889.	£	
27	Metalliferous		664,300	Capital
22	Coal and Iron		1,992,100	"
9	Quarries		444,000	"
58	Companies		£3,100,400	Capital
		1890.	£	
28	Metalliferous		674,525	Capital
56	Coal and Iron		4,958,075	"
21	Quarries		1,939,125	"
105	Companies		£7,571,725	Capital

FOREIGN AND COLONIAL.

		1889.	£	
32	Europe		2,252,850	Capital
17	Asia		1,913,100	"
145	Africa		16,651,975	"
66	North America		9,390,200	"
32	South America		4,658,400	"
28	Australia, &c.		3,048,500	"
320	Companies		£37,915,025	Capital
		1890.	£	
24	Europe		3,587,070	Capital
19	Asia		3,455,100	"
43	Africa		5,277,450	"
63	North America		9,268,780	"
23	South America		3,509,000	"
21	Australia, &c.		2,518,000	"
193	Companies		£27,615,400	Capital

The object the 298 new mine companies of last year had in view was, as far as can be ascertained, as follows:—80 to mine for gold in a few cases associated with silver, 26 for silver, but in a few cases associated with lead, 14 for lead, 10 for tin, four for copper, two for quicksilver, three for manganese, three for antimony, one for cobalt, 69 for coal and iron, six for phosphates, one only for nitrate. Four companies explore for precious stones, and there are 22 quarries, including slate, stone, china-clay, and salt. 51 companies are for the purchase of mineral lands, and exploring for minerals. There were four companies out of the 298 that registered with 1,000,000*l.* nominal capital; nine having capitals between 500,000*l.* and under 1,000,000*l.*; 36 ranging between 200,000*l.* and 500,000*l.*; 45 more than 100,000*l.* but under 200,000*l.*; 33 in which the capital was exactly 100,000*l.*; 45 over 50,000*l.* but under 100,000*l.*, and 126 under 50,000*l.* The smallest company was one with a nominal capital of only 500*l.*

Sixty-one mining companies last year, out of the 298 that registered, appealed to the public by advertisement and prospectus for support, whose united nominal capitals amounted to 15½ millions sterling, a considerable fall off from former years. The following figures gleaned from the published mining prospectuses of the past four years show the number of companies that thus asked for support; the amount of their combined capitals, and how the capital was to be applied as to working capital and the vendors:—

In 1887, 89 companies, with 16 millions for capital, gave the vendors 74 per cent., and reserved for working 26 per cent.

In 1888, 101 companies, with 14½ millions for capital, gave the vendors 75 per cent., and reserved for working 25 per cent.

In 1889, 139 companies, with 23⅓ millions for capital, gave the vendors 77 per cent., and reserved for working 23 per cent.

In 1890, 61 companies, with 15½ millions for capital, gave the vendors 79 per cent., and reserved for working 21 per cent.

Mining investors ought to take a hint from the above figures, remembering that many companies fail for want of sufficient working capital.

MR. HOPKINS, C.E.—A SAD BEREAVEMENT.

IT is with great regret we have to record the death of the eldest son of Mr. George Hopkins, C.E., the chairman of the Richmond, the Flagstaff, and several other companies. Mr. Hopkins, jun., who was under 30 years of age, succumbed to an attack of inflammation of the lungs, accompanied by gastric and typhoid symptoms. He was a young man of great promise, and enjoyed the full confidence of his father, by whom he was entrusted with the supervision of important works both at home and abroad. He gave every promise of being a distinguished member of the profession he had adopted, and into which he threw the enthusiasm of his youthful energies and the devotion of his business life. The blow to his father is great, but if anything can mitigate its severity it will be the knowledge that he has with him in his bereavement the most respectful sympathy and the heart-felt condolence of multitudes of friends. The deceased, who was greatly loved and respected, leaves a wife and a child to deplore his loss.

The esteem in which Mr. Hopkins, senior, is held in mining circles has been significantly shown during the present week. On Monday he was to have presided at the meeting of Gold Fields of Uruguay—a company which he is gradually bringing into line as a prosperous concern—but immediately on hearing of his bereavement the shareholders unanimously resolved to adjourn out of respect to him until he could fix a date on which it would be convenient for him to meet them. The Richmond meeting on the following day was almost adjourned for the same cause, but, under certain special circumstances, was allowed to proceed. The Anglo-Mexican meeting was also to have taken place on Wednesday, but the shareholders decided rather to wait the presence of their chairman than to listen to a speech on the past year's workings from anyone else. It was, however, at the Flagstaff meeting, which was also adjourned, that the feeling of respect which shareholders in the companies of which Mr. Hopkins is chairman generally feel towards him was eloquently expressed by Prof. Vincent. The tribute paid by that gentleman to his esteemed colleague was not less touching than it was sincere. His sentiments will find an echo in the hearts of thousands who were not privileged to hear his words.

THE MARKET OUTLOOK FOR 1891.

LOOKING back is seldom a satisfactory or a profitable operation, and now that 1890 has gone over to the majority, we would suggest that the dead past should be buried in peace, and that our attention had better be directed to the future. In mining matters all the world lies before us. From China to Peru—east, west, north, and south, nature has deposited her vast mineral treasures for making men "rich beyond the dreams of avarice." The treasures are, for the most part, hidden, and require diligent searching for by scientists and miners, but if it were not so, they would lose much of their value, and there would be little scope for enterprise and industry. What investors have to do is to exercise care and discrimination; steadily refusing to associate themselves with "wild cat" adventures upon the promise of impossible dividends, and giving at least as much attention to the records of those whose opinions are quoted, and to the men who are in command as to the reports published, however promising. If this principle be adhered to, and if as a consequence promoters of a disreputable type leave mining alone, it is not too much to predict that the industry as a whole will command the respect which it is fairly entitled to receive, but which is frequently denied to it by unthinking people, because in mining the blanks outnumber the prizes. The prizes are, however, so valuable that they are well worth trying for. What class of joint-stock undertaking, for examples, can show dividend-payers like Mysore, New Guston, Yankee Girl, Cape Copper, Alamillos, Fortuna, Linares, or, to come nearer home, Great Laxey? People who, either because they are very rich or very timid, are content with low rates of dividend have the "sweet simplicity" of the Two and Three-Quarter per Cents., and the whole range of home railway debentures and preferences open to them. We write for those who are ready and willing to run moderate risks for the sake of obtaining big profits.

And for this class of investors the new year opens full of promise. In India, to begin with, the Mysore, Ooregum, and Nundydroog Companies are earning constantly augmenting profits. Balaghat-Mysore is turning the corner, if it has not already done so, and Champion Reef, Goldfields of Mysore, and Mysore Reefs are proving indisputably that the money expended in their development will not be long in bearing fruit. In Queensland there are four dividend paying mines—Gympie Great-Eastern, Day Dawn P.C., New Queen, and Mount Leyshon, whose shares stand at ridiculously low prices; while there are many more—Day Dawn Block and Etheridge United, for instance—with excellent prospects, standing at quotations that would only be warranted if the companies were well-nigh hopeless. With silver at its present price, and with every promise of a further permanent advance, there are dozens of silver shares well worth picking up. Just to name a few, we would mention Emma, Palmarejo, Flagstaff, Colorado, Dickens Custer and Viola, to say nothing of dividend-paying mines, such as Yankee Girl, New Guston, Montana, Richmond and Plumas Eureka. In the Republic of Colombia there are the Colombian Hydraulic and Froutino and Bolivia Companies paying regular dividends, and here and there throughout South and Central America there are mining properties which show every indication of rewarding those who have developed them. There is indeed no lack of opportunities for those who are on the look out for mining shares, which have been depreciated by influences which have no more connection with the mines themselves than Tenterden Steeple has with the Goodwin Sands. Dear money, and loss of confidence in the stability of great financial houses, naturally affect such shares as De Beers and Rio Tintos and other descriptions that are largely speculated in both here and upon the Continent; but that such influences should affect the whole range of quotations is absurd. One of these days investors will appreciate that fact, and then there will be a nearer approach to stability. In the meantime, those who place their money in undertakings which will bear strict investigation, and who are satisfied with their holdings, can afford to disregard the temporary ups and downs that result from outside influences.

VICTORY AFFAIRS.

WE have devoted over six columns this week to an extended report of the Victory meeting, although the pressure upon our space, caused by other important meetings, is unusually severe. It is probable that a calm fireside perusal of the case as presented for the board, and that presented for what, for want of brevity, we may call the Hallett party, will lead most of the shareholders to the conclusion which Mr. T. H. Watson, a gentleman of considerable social and commercial influence, came to, that whereas he had come to oppose the directors, the speeches of the malcontents had converted him quite the other way. Our conversion is not so absolute as Mr. Watson's, for we think the directors should have sent out the balance-sheet and report before the meeting; that they should not have left the meeting till the last day in the year; that they should have made a call rather than have issued debentures (although all the shareholders were asked to subscribe on equal terms), and that they should have posted the notices earlier than the 22nd. Apart from all this, the explanations of the board seemed reasonable, and though opinions may differ as to items of expenditure, yet the record of work as told both by the chairman and Mr. Larchin would not discredit directors of far greater pretensions, and ought at least to modify the ferocity of the criticism by which their management has been assailed.

We are bound to own that, like Mr. T. H. Watson, we nursed a sort of antagonistic feeling to the board, which we could scarcely dismiss, but as at the meeting the strength of their case became apparent, and the weakness of the opposite side even more so, the sentiment rapidly gained ground that the shareholders would do well to prefer such ills as they may have rather than fly to others that they know not of. It was impossible not to remember that the board had given every information as to the progress of the works in the fortnightly reports published regularly in our columns; that they (the directors) have always been visible at the offices at stated times, and (by appointment) at any time, and that their board meetings have been almost weekly. They have been paid for their labour, and, in our experience, few companies get their work properly done that do not pay those who do it. That the directors have made mistakes we

have shown; that they have neglected the company's interests the facts contradict. Now we entreat the shareholders to bear in mind one striking fact that arises out of every report that has ever been written upon the Victory Mine. That fact is this, that each and every person who has seen the property has described it as most valuable. The delays in realising its value were, to some extent, explained by Mr. Larchin. Those who were responsible for the dimensions and general construction of the old shaft are severely to be censured, for we do not hesitate to say that most of the later troubles of the company have arisen from its inefficiency. This shaft was, we understand, inaugurated when Mr. Hallett was one of the then directors. The new shaft is, however, now being sunk, though we could wish that its progress were more rapid. This is a point to which the board should give their earliest and best attention. Mr. Fenn, who has just returned from the mines, was present to supplement his report by personal observations, and we believe he was in a position to give some valuable information, but such was the clamour in the meeting that the interests of the mine seemed to be wholly forgotten in a series of personal remarks, of which we are bound in justice to say the Hallett party discharged the chief volleys.

The shareholders had the alternative presented of throwing themselves into the arms of the Hallett party, or of continuing their confidence in the board. Their choice will be made known at the adjourned meeting on Wednesday next, when the result of the poll demanded by the board on Mr. Hallett's amendment will be declared. Though we think the management of the board by no means all that could have been desired, yet between Mr. Whitten and his colleagues on the one side, and Mr. Hallett and his supporters on the other, those who, like Mr. T. H. Watson, judicially view the situation can have little difficulty in choosing. Instead of appointiug a hostile committee—Mr. Hallett more than ouce said it must be a committee of this kind, in other words a committee pledged to a foregone conclusion — and instead of disorganising the whole of the managerial arrangements as they exist, the safety of the shareholders is best sought in a strengthening of the board by the addition, for example, of a gentleman of Mr. T. H. Watson's calibre, and the infusion of a little more spirit and life into the operations abroad. It is much more easy to dislocate existing arrangements than to create new ones, so that it seems to resolve itself into this, that if Victory proprietors desire to see their shares rise in the market and their mine in a dividend position, their object should be rather to improve the old machinery by adding to it, than to replace it with machinery that is wholly new, and that may not work when put in motion. These are the considerations that have forced themselves upon us as the result of the declamatory speeches and noisy personalities of Wednesday's meeting, and they are the result of careful reflection upon what in the circumstances is the best and safest course for shareholders to pursue.

THE RICHMOND MEETING.

Unfortunately, owing to a sad family bereavement, Mr. George Hopkins was unable to be present at the meeting of the Richmond Company on Tuesday last, and the absence of their worthy chairman was a keen disappointment to the shareholders; for his knowledge of every detail connected with the property, and the easy and lucid way in which he imparts that knowledge to his brother-shareholders, makes it a pleasure from time to time to listen to his addresses. Mr. Hopkins, aided by his colleagues, has safely piloted the Richmond vessel over many a rough sea in the past; and his inability to be present at Tuesday's meeting was particularly to be regretted, inasmuch as it would have been his pleasure and privilege to report the favourable termination of the harassing litigation to which not only the Richmond Company, but many other mines in the same district, were subjected on the part, ostensibly of the United States Government, but in reality of certain legal gentlemen, who were desirous of reaping a financial harvest, at the expense of the mining companies. We have on severel occasions referred to the subject of these timber suits, and have pointed out to our readers the serious issues they involved. We need not, therefore, now recapitulate them. Suffice it to say, that had the suits terminated adversely to the companies, there is not the least doubt that the whole mining industry of Nevada would have been crippled.

The Hon. R. H. Stewart filled Mr. Hopkins' position with conspicuous ability, and amongst other things he drew attention to an important statement in Mr. Probert's last letter from the mine. Referring to the Williamsburg mine, Mr. Probert says:—"Ore has lately been struck at the bottom of the Bullwhacker, which had been abandoned, and which is said to be pitching towards the Williamsburg ground, so there is hope of a successful result to our prospecting in the latter. The new shaft is now down 200 ft., and it is intended to carry it down 200 ft. more before commencing drifting towards the Bullwhacker—150 ft. distant—and in other directions in search of ore." The works are, in fact, at the present time in such a condition that at any moment a stroke of the pick may lay bare one of those rich pockets of ore that have made this property famous. It should be borue in mind that when the Richmond Mine was earning regular dividends for its shareholders, its next door neighbour, the Eureka, was practically in barren ground; but recently a large body of ore has been struck on the Eureka property, and within the last 18 months three dividends have been paid.

As might naturally be expected, the litigation above referred to has for a considerable time past militated against successful mining operations on the Richmond property—indeed, pending those suits, work was almost at a standstill; and prior to that time the ore was of a somewhat poorer quality than the board had been accustomed to. Consequently there has been during the past few years a lean period as regards profits, but it is satisfactory to know that once again the company has entered the dividend-paying list. A half-crown dividend was declared at the meeting this week, and there is every appearance of good things yet in store for Richmond shareholders. It is worthy of notice that the above dividend is equal to about 8 per cent. upon the shares at the present price.

AFFAIRS IN SOUTH AFRICA.

(From our Kimberley Correspondent.)

Kimberley, 16th November, 1890.

The Turning of the Tide.

It is a very long lane indeed that has no turning, and although I run a very great risk of being contradicted in many quarters, I make bold to say that the outlook with regard to our commercial prospects is more hopeful than when I last wrote, and that is only 14 days ago. The October crushing is now known to be a little over 45,000 ozs., and although the over sanguiue predicted that it would reach 50,000, still now we know that the present monthly output can certainly be kept up, and that we can safely reckon on the Rand producing 450,000 ozs. per annum, we may consider the gold industry of that locality alone is quite sufficient to keep it before the world as one of the largest gold-producing districts extant. And we congratulate ourselves that this is not all. The De Kaap district is decidedly looking up. As you are aware, Pigg's Peak is not more than a dozen miles from Barberton, and the amazing returns of the crushing which recently took place there, has directed public attention to that recently much neglected district, and last, but not least, before the year is out we expect to get reliable information from Mashonaland. Nor can railway enterprise be left out of the calculation. Mr. Rhodes is now in the Transvaal, and it is expected that whilst there, some definite arrangements will be made so as to push on the several lines to the gold producing districts with all possible speed. On the 17th of next month, the line will be opened from Cape Town to Bloemfontein, the capital of the Free State. Very shortly after that ceremony has taken place, the Free State Volksraad will meet for the purpose of deciding the line of route which the line will take to reach the Vaal river. Then again, the Natal line is being rapidly pushed on to Coldstream, when it will be on the border of the Transvaal, and on this side the extension from here to Vryburg, in Bechuanaland, will be completed, and that will bring the railway to within 170 miles of Johannesberg. It is in the meantime, exceedingly difficult to say what is being done with regard to the proposed continuation of the Delagoa Bay line to Barbertou and on to Pretoria. The construction not being in the hands of an English company, the information we get is of a very unreliable character. Sometimes we hear that the work is going on satisfactorily; at other times rumours are afloat that the contractors find a difficulty in getting labour. It is now nearly two years ago that I prophesied in your columns that it would be 10 years before the line reached Pretoria, and I see not the slightest reason to-day to alter that opinion. It has never been announced, to my knowledge, that Paul Kruger has altered his determination that no other line shall enter the Transvaal until the line from Delagoa Bay to Pretoria has been constructed; but I again assert that it is quite possible that pressure may yet be brought to bear on the sturdy old President. When their lines are approaching him in different directions, he may think better of it. Indeed, it is suggested that Mr. Rhodes is in Pretoria for the purpose of showing him the folly of his obstinancy. And in this way recent events have proved that it is quite possible that the railway will be stopped at Vryburg for a much longer period than was at first anticipated. Whilst our Governor and Mr. Rhodes were in Matabeleland, two officers belonging to the Chartered Company were dispatched from Mount Hampden to Pongwe Bay for the purpose of ascertaining what difficulties there were in approaching the sea. These two officers have just come round by sea to Cape Town, and have reported that not only are there but few engineering difficulties in the way of constructing a line from Pongwe Bay to Mount Hampden, but that there is a practicable water way for vessels of small tonnage to within a very few miles of that fort. This report has completely altered the whole aspect of the question of reaching the Mashonaland goldfields, the distance being only 400 miles. There are difficultics in the way, however—difficulties of a political nature—the greater part of the territory through which the railway would run being claimed by the Portuguese, and it will be for Lord Salisbury to decide whether he will allow the Portuguese Government to bar the way to one of the richest goldfields in the world. Here it is asserted that if that difficulty is surmounted the railway will be commenced at once; and if Paul Kruger persists in being contumacious, and will not allow the approaching lines to enter the Transvaal before his pet line is completed, the result will

be very serious, inasmuch as the Transvaal goldfields will be practically deserted and the revenue of the State materially depleted.

THE RIVER DIGGINGS.

As many of your readers are aware, the original diamond diggings of Griqualand West were situated on the banks of the Vaal River, which can be reached from here in 24 miles. It is now some 20 years ago since the first diamonds were found there, but although the subsequent discoveries of what are known as the "dry" diggings at Colesberg Kopje (now Kimberley) and De Beers caused the river diggings to be practically abandoned, there has been a sort of floating population along the banks of the river for some 200 miles seeking for diamonds, with more or less success, up to the present day. In the trade it is admitted on all sides that the river stones are far more valuable than those from here. I will give you an instance. Yesterday I had in my hand a Kimberley stone that the owner sold for 30s. a carat, and thought he had a good price. To-day I had a river stone, for which the owner wants 12*l*. a carat, and yesterday refused 10*l*. About 40 miles from here is a locality known as Klipdam. It has only been prospected during the last few weeks, and to-day I was talking to a young man who has found there within the last month diamonds of the value of 1,200*l*. His expenses were not more than 30*l*., and he assures me that there are upwards of a thousand diggers working there within a radius of six miles, and that there is ample room for thousands more. That they are all so lucky as my friend I should not think of asserting, but the fact remains that the individual *débris* washer in Kimberley who finds his average of five carats a day, at, say, 20s. per carat, is hardly so well off as the river digger, who finds, on an average, five carats in a week, and gets from 12*l*. to 15*l*. per carat. Yesterday a river-digging friend of mine sold twenty-five carats at the latter figure. This raises the question of the actual extent of the diamondiferous deposit in this locality. The whole truth is no one knows. That the deposit stretches from the Vaal River on one side of us to Jagersfontein (Free State) on the other, everybody knows, but how about the enormous gaps that exist between one proved diamond mine and another over the whole of that vast district? Old experienced diamond diggers will tell you that the precious gems can be unearthed anywhere in the district if you only go deep enough, and positively recent discoveries go to prove the truth of this assertion. You are doubtless aware that the London and South African Exploration Company are the ground landlords of the greater part of Kimberley, and the sister town, Beaconsfield. Between this company and the great De Beers Company there have been of late many differences. In fact a lot of polite snarling has been going on. Whether there have been any serious complications it is hard to say, but, anyhow, it is a fact that the London and South African Exploration Company have suddenly resolved to open a diamond mine that has been known to exist behind our hospital for the past 16 years. How this will affect the great diamond monopoly time alone will prove.

THE ARGENTINE MINING GROUP—A WELL-PLANNED COMBINATION.

IT is proposed to amalgamate the whole of the interests of the four Argentine Companies, whose properties are centred in that Republic, with the object of securing the triune advantage of concentrated management, economical administration, and a certain proportion of fresh working capital. The full details of the scheme will a little later on be submitted to the shareholders. But in the meantime we have to say the combination is both bold and good. We do not know whether it originated with Mr. Batten, the chairman of the Central Argentine and Carpa Valley Companies, or with Mr. Hopwood, the chairman of the West Argentine, or with that great high priest of Argentine mining, Mr. Samuel Jennings, himself, but whoever conceived it deserves to be complimented alike upon his sagacity and his business acumen. It is the only way by which mining in the Argentine can be saved. What is the position? The West Argentine Company after a gallant struggle has practically adopted "the bag and baggage" policy, and gone as far afield as the Red Mountain District of California—a district prolific in productive mines, such as Yankee Girl and New Guston—in other words, it is very much like an unruly son who has failed to do any good in his own country, and has gone off to another, and is not without substantial prospects of redeeming the past. At the same time justice extorts the confession that there was a period when West Argentine shares could only be brought at 2*l*. 10s. The reefs, however, which were good, at the top became poorer in depth, and, as we have said, after a gallant struggle, but one that was not very much prolonged, the West Argentine Company has emigrated to California, though still retaining an interest in any success which may be achieved by the other companies, of which it was in fact the parent. Under the new scheme also the West Argentine directors have put it within the power of their shareholders to obtain a still further interest in the progress of mining in the Republic should they feel disposed to do so. We congratulate West Argentine shareholders on the fact that they passed a resolution on Monday by which in all probability Mr. Jennings will again be induced to join the board. We do not intend to go into the matters which separated him from his colleagues, but trust he may see his way to rejoin the directorate, for West Argentine without Mr. Jennings is like a watch without movement. Glenrock too, has left its Carolina mine having secured an interest in the Premier Mine of New Zealand, where its prospects (as we have of late several times pointed out) are of the most hopeful kind.

Come we now to the three companies which are still at work in the Argentine. For one reason, to secure better results than the past have produced, and for another, to exemplify that dogged tenacity of the English character of which West Argentine and Glenrock have given such poor illustrations. West Argentine Extensions, Central Argentine Gold Fields and Carpa Valley, refuse to acknowledge that they are beaten. Why should they? The prospects, according to all human reasoning, appear to be excellent, for, as Col. Howard put it, "You have opened the door." In other words, speaking after the manner of the clergy, they have come to the banks of the Jordan, and the tantalising prospect of the Promised Land appears on the opposite side. The leader, if not the law giver, in this case is Mr. G. H. M. Batten, under whose capable direction these companies have by a series of miracles of financial genius been thus far kept on their legs. Mr. Batten has conducted them so successfully through the wilderness of impecuniosity, that we feel perfectly satisfied if anything is to be got out of the Argentine mines he is the man to get it. It remains to be told that neither Central Argentine nor Carpa Valley, much less Argentine Extensions has yet had a fair chance. They were started with capital which proved insufficient because the ideas of the directors as to local charges and government dues were far exceeded. The companies appear to possess an admirable superintendent in Mr. Mellor. An immense amount of work has been done on the properties, and it is held forth with great show of reason that advantage has only to be taken of this to bring about those results which were originally foreshadowed. Now, it is the object of Mr. Batten and his colleagues to bring all three companies into line—in fact four if we include West Argentine itself. The company that will take the lead will be the West Argentine Extensions, and the others will be swallowed up in the general amalgamation. We should like to comment further upon the position in which these concerns find themselves, but the pressure upon our space is prohibitory. We advise our readers, and particularly those who may be shareholders, to read the three meetings as they appear in our supplement, and can promise them as the result much useful and interesting information.

NEW VISO TIN.

THE work done during the past sixteen months at this mine, as explained by the chairman to the shareholders on Tuesday last, has resulted in the laying open of six well-defined lodes of very good appearance, and yielding tin. We have on more than one occasion spoken favourably of this property, and see no reason for altering our opinion as the result of Tuesday's meeting. On the contrary, everything looks favourable, and the manager is apparently pushing on as fast as possible. The property, even at the present time, is producing very fair tin, and there is no doubt as depth is attained the mine will materially improve. Patience is required in mining, and if the shareholders are content for the present to adopt a waiting policy, there is a very good prospect that they will one day reap a reward which will more than satisfy them.

OSCAR GOLD CO.

THE shareholders of the Oscar Gold Company decided, on Tuesday last, to put their directors in possession of additional funds to carry on the work at the mine on a more extensive scale than has hitherto been the case. This decision was, no doubt, a wise one, for although they are, doubtless, disappointed that they have not yet received anything back for their money, except their share certificates, the fact remains that the mine is looking extremely well. We would refer our readers, and particularly those of them who are shareholders in the company, to the report of the meeting in our present issue. Mr. John Daw (the manager), in a speech which could not fail to impress one with his honesty, gave the shareholders a full account of the work done, and the present position of the property. This gentleman firmly believes in the ultimate success of the company—so much so, in fact, that he is a large shareholder. He recommends erecting additional machinery, and increasing the staff of men. It is a favourable feature with this company that the whole of the expenses—both at London and the mine—can be paid with 3 dwts. to the ton of ore, providing the 50 stamps are kept running. We look for better times for this company, and would advise shareholders to hold on to their shares.

WHEAL GRENVILLE AND ITS EASTERN SECTION.

AT a meeting held in Cornwall on 30th September last the shareholders decided unanimously to proceed with the development of the eastern section of their mine, where, according to all human reasoning, an absolute certainty lies before them. They also passed, with equal unanimity, a resolution to take up 1,000 shares at the market price of the day, by which the funds requisite would have been provided. If ever shareholders stultified themselves in this world, or set at nought the resolutions they had carried unanimously, those shareholders are

included within the four corners of the Wheal Grenville share list. The members of the committee themselves, we believe, were prepared to take a quarter of the shares, but the applications for the remainder were quite insufficient to justify the management in proceeding to allotment. Hence the only course left was to make a call, and this was done on Tuesday last to the amount of 2*l*. 10s. per share, payable in two equal instalments. Some question has been raised in Cornwall, as to whether a mine can make calls while it is paying dividends, but we do not think much importance need be attached to this. Some people are born to surmount difficulties; other people to create them. The Wheal Grenville committee are of the former class; the Cornish croakers are of the latter.

THE CHIAPAS MINING COMPANY.

The directors of this company met their shareholders on Tuesday last to give an account of their stewardship, and Mr. Pontifex, as their mouthpiece, made a very clear statement of the position. He informed the shareholders that the board had scarcely been in harness 12 months, and bearing this fact in mind we think it will be admitted they have done a very fair year's work. There have been difficulties to contend with, of course. What mining company does not have difficulties? There seems to be very little doubt as to the value of the property, but the question is how to get the produce to market. The mine is in a very inaccessible position, and a tramway will have to be constructed from the port up to the miues. That is a more imposing task than at first sight appears, for during several months of the year the intervening land is flooded and almost impassable, but in Mr. Pontifex and his colleagues the company possesses a board that will not shrink from difficulties, but will deal with and overcome them in a business-like manner.

PROSPECTS OF POTOSI.

Potosi shareholders met on Tuesday in a cheerful spirit, and listened with much satisfaction to the statements made as to the recent developments of the mines, and particularly in regard to the opening up of the Potosi Viejo lode. The difficulties which the board have had to encounter in bringing the mine to its present position would form an interesting chapter in a romance of modern mining. Let us hope, with Mr. Somes, that they are now for the most part overcome. Mr. Pryor has sunk the new shaft to a depth which enables him at least to test its real value—by which we mean its value in the mill as distinguished from the assays of samples. Since the report was issued, Mr. Pryor has telegraphed that from Potosi Viejo and Socorro lodes he has crushed 380 tons of quartz, with a result of 300 ozs., which, for a beginning is extremely good, particularly as the result was one of only 10 days' working, This 10 days' return is equal to that for the whole of the past month. The serious point of the business is the almost appalling loss of ¾ of an oz. of gold to the ton. This is not owing to bad management but to defective machinery. The board know the week spot, but a glance at their war chest shows that the remedy is not at command. Whether the mine is to work out its redemption from this state of bondage by its own produce, or whether, as would be more business-like, the shareholders find sufficient money to put up the best modern gold saving appliances, is the question which the chairman and the meeting alike left undetermined. Judging from the tone of the meeting it is probable that a spirited policy on the part of the directors would meet with an adequate response from the shareholders. Since the mill commenced working in November, 1889, the extraction of gold has been 6,000 ozs. Tuesday's meeting, taking it altogether, is the most encouraging the Potosi Company has held for years, and there is every reason now to suppose that the patience of the shareholders and the indomitable perseverance of Mr. Somes and his colleagues is within measurable distance of being rewarded.

ZAMBEZI CONCESSIONS.

Major-Gen. Barwell-Barwell presided at the meeting of this company on Monday, and gave the shareholders much information of value and importance. The enterprise, in the ordinary sense of the word, is not a mining but a prospecting company. It has concessions to sell after having previously surveyed and located the claims. To effect the latter, in order that the former may be brought about, an expedition started in November, 1889, which, under the direction of Mr. Crampton, overcame numerous difficulties, and arrived at Massi Massi, Kessi Kessi in the Manica territory about the middle of last June. At the present time importaut negotiations are being carried on "which will, no doubt, be of great benefit to the shareholders." In the meantime the object of the board has been to obey the Apostolic injunction, and "live at peace with all men." and this they have succeeded for the most part in doing, thauks to the tact and discretion of Mr. Crampton. At the same time the directors have felt it their duty to protest against the action taken by the Chartered Company in regard to the Manica Territory, which the chairmau said is within the sphere of Portuguese influence. We have no desire to thrust our head into a hornet's nest, and shall, therefore, rigidly abstain from expressing any opinion upon the dispute between this company and the Chartered Company; but the eagerness of both enterprises to plant themselves firmly in this part of Africa seems to show the great value that is attached to its gold-bearing capacities. In the meantime the board are determined to maintain the rights of the company, whatever those rights may be, and they invoke the confidence and support of their shareholders, which, of course, will not be withheld.

GOLDEN GATE AFFAIRS.

Wherever confidence is lacking in the ultimate results of the attempt to extract from the bed of Feather River its gold contents, it is evidently not amongst the shareholders of Golden Gate themselves. The report was unanimously passed without discussion, and without a single question being asked. The meeting might, in fact, have been brought to a termination after the speech of Mr. Frank Hodgkinson, but we are glad it was not, for valuable contributions were made to the information of the shareholders by Mr. Pechey, one of the directors, and by Mr. Hewett, who has within the last few months visited the property. In our full report the shareholders will find all the information they can possibly desire about Golden Gate affairs. The confidence felt by the directors and shareholders in the management of Col. McLaughlin we share to the fullest extent. We have been impressed by the sincerity and truthfulness of his reports and telegrams; and though he may be twitted by some of our contemporaries, anxious to crack jokes even though the laugh be against themselves, about his continual references to the weather, yet this, as Mr. Hodgkinson said, is the keynote of the whole position. Given suitable weather, and Feather River will yield up some at least of its treasure; given unfavourable weather, and that result must be postponed, as, in fact, it has had to be during the past season. About June or July next the aspect of this company's affairs should materially change, and so also should the price of its shares on the Market.

THE MONEY MARKET.

City, Friday Evening.

1890.

The year just closed will leave a memory behind it, several years of prosperity, with the accompanying over speculation, having culminated, as usual, in a crisis, which, as we have before pointed out, would have been more far reaching in its consequences than we care to contemplate had not the position been grasped firmly and resolutely with consummate ability by the Bank of England, which finds a fitting sequel in the address presented to the governor on Tuesday last from the Stock Exchange. The address truly stated that the prompt action of the governor and directors of the Bank had saved the City from a panic, and well we remember the feeling of relief when the Bank arrested the headling fall in prices which the ill-judged policy of some joint-stock banks had precipitated on the Wednesday following the announcement of the difficulties of Messrs. Baring Bros. and Co., and it gave vent the following day to a proposal for a testimonial to Mr. Lidderdale. The matter was afterwards pressed, but he decliued to receive auy such recognition of his services; hence the form the movement has now taken. Mr. Lidderdale's reply awards the credit to others; his co-directors, Lord Rothschild, who interceded with the Bank of France, and to those who joined in the guarantee for himself, he says he is "thankful that he was able to do his duty. There is no need for reference to the events which occurred, they are of such recent date, and still so vividly before us, but taking the monetary year, it has been one of frequent changes in the rate of discount. There was an alteration nearly every month, except in May and October, and eleven changes took place. The average rate was over 4½ per cent., the highest for many years, mainly due to the greater demand for financial and commercial purposes, the export drain of bullion and the crisis in November last. The failures at the Stock Exchange during the year have been 24 against 26 in 1889, and the total failures in the United Kingdom have reached 894 against 818 in 1889. Money has been comparatively easy for the close of the year, and has fallen away since, although the Bank return shows a slight decline in the reserve, aud a fall of nearly 5 per cent. in the proportion to 37 per cent.

The past year has been a memorable one in financial circles, and will be remembered as a year of strikes, and for the partial collapse of the eminent firm of Messrs. Baring Brothers and Co., owing to the state of affairs in Argentina. There has been an almost general falling away in prices in both investment and speculative securities. The main causes for this we may briefly mention as the Portuguese affair, the Spanish crisis, the resignation of Prince Bismarck, the Servian difficulty, the Silver Currency Bill of the United States and the crisis in the States, and finally, but by no means the least important, the crisis at Buenos Ayres. The year commenced with a serious strike and most appropriately closes with the Scotch Railway strike, which has now practically collapsed. The Portuguese affair has gradually dissolved under the firm guidance of Lord Salisbury, and on the restoration of the king's health one difficulty of the Spanish crisis was also removed. The retirement of Prince Bismarck at first it was thought would affect the triple alliance, but these gloomy news fortuuately proved unfounded. The Servian difficulty (Queeu Natalie), however, is still unsettled, and may even yet prove a cause of danger. The Silver Bill was at first thought likely to cause a "boom" in American Railroad and other "silver" securities, and, in consequence, dealers and others purchased most extensively, but the expectations proving a failure, the market became "top heavy," and great difficulty was experienced in unloading, several failures being announced. Argentine affairs

have attracted attention throughout the year, and created a great deal of anxiety, but after the revolution, when Dr. Celman had been replaced by Dr. Pelegrini, there was some recovery in prices, but the rise in the premium on gold at Buenos Ayres to 300 per cent., and the suspensions of the National Banks of the Uruguay and Argentine Republics caused a fresh drop, which finally culminated in the firm of Messrs. Baring seeking assistance at the hands of the Bank of England, who, with the other leading banks, formed a guarantee fund more than sufficient to cover the firms liabilities. The Funds and Colonial Inscribed and Indian Government securities were well maintained. International Loans were higher, but South American Loans receded 15 to over 20 per cent. Railways were not so good as in January last, on account of the strikes, and the rise in the cost of materials, wages, &c., while American show some heavy reductions. Mexican and Grand Trunk stocks also show a loss. Brewery issues, Eastmans, Hammonds Meat, Nitrates, Oceana Land, and Industrial Undertakings were heavy from various causes. Very little business has been reported in the past week, owing to the holidays and the arrangement of the account, but prices have ruled firm at a trifling advance.

The Money Market to-day was quiet as regards further business. There was the usual amount of internal activity, but rates were nevertheless weaker, loans being 3 to 3½ per cent., and bills of three months' hardly 3⅝, ¾.

The Bank of England to-day sold 50,000*l.* in German gold. Bar Silver again advanced, and closed at 48¼d. Rupee Paper was firmer, also the Indian exchanges.

Dealings on the Stock Exchange to-day, have been on a very small scale, but prices have ruled firm. Consols on which the contango is light, have fallen ⅛, but the Two-and-a-Half per Cents., Indian Stocks and Rupee Paper were, ¼ to ½ higher. Very little difference is noticeable in the Foreign Government department. but many stocks are now quoted ex the dividend. Home Railways opened good, and a disposition to purchase was shown for a time, but sellers coming forward a reaction set in, the final prices being unsteady, but above Wednesday's levels, excepting Brighton "A," which fell ⅝ on dividend rumours. Hull and Barnsley rose ¾, and the rest ⅛ to ⅜ per cent. An improvement is shown in the American Railway Market, notably Milwaukee, New York Central, Northern Pacific, and Texas Pacific, which rose 1, but Louisville shares fell ½ on dividend rumours. Grand Trunk stocks were a trifle lower, but the Mexican were unchanged. Ottoman Banks were better, and Hudson's Bay improved, but Bell's Asbestos, Eastmans, Salt Union, and Primitive Nitrates were heavy.

We are informed that Messrs. R. H. Traill and H. G. Thomson were declared defaulters upon the Stock Exchange to-day.

Annexed are the final quotations to-day :—Consols Account, 95⅞, 95⅞; Egyptian Three-and-Half per Cents., 92, 92¼; Egyptian Unified, 96, 96¼; French Three per Cents., 94, 94½xd; Hungarian, 90¼, 90¾xd; Italian, 91⅝, 91⅞; Mexican Six per Cent., 92½, 93; Peruvian Corporation, 10½, 11½; Peruvian Corporation Preferred, 29½, 30½; Russian, 1873, 97¾, 98¼xd; Portuguese, 56⅞, 57⅛xd; Spanish, 74⅝, 74¾xd; Turkish, 1871, 98¼, 98¾xd; Turkish Defence, 101½, 102; Caledonian, 119⅛, 119⅜; Great Eastern, 89⅛, 89⅜; Great Western, 162⅞, 163⅛; Brighton "A," 161, 161¼; North-Western, 178¼, 178¾; Metropolitan, 75½, 76; Metropolitan District, 28¾, 29¼; Midland, 147¾, 148; North British 52⅜, 52⅝; North Eastern, 166¾, 167; South Eastern "A," 96¾, 97; Nitrate Railways. 16⅜, 16⅝; Mexican Railway Ordinary, 46, 46½; Grand Trunk 9⅛, 9⅜; Grand Trunk First Preference, 57⅜, 57⅝; Grand Trunk Second, 38½, 38¾; Grand Trunk Third, 21, 21¼; Canadian Pacific, 75, 75¼; Denver Preferred, 58¾, 59¼; Erie, 19½, 19¾; Milwaukee, 52½, 52¾; Lake Shore, 113½, 114; Louisville, 74⅛, 74⅜; Atlantic First, 31¾, 32¼xd.; Ontario, 15½, 16; Ohio, 18½, 19; Norfolk and Western. 54⅞, 55⅛; Reading, 16⅜, 16⅝; Reading Five per Cent. Bonds, 88, 89; Union Pacific, 44, 44¼; Wabash Preference, 17½, 18; Ottoman Bank, 14 3/16, 14 1/16; Anglo-Telegraph, 48¾, 49¼; National Telephone, 4¼, 4½; Hudson's Bay, 18, 18½; Suez Canal, 94, 95xd.; Guinness Ordinary, 307, 310; Allsopp's, 44, 46; Bryant and May, 13¾, 14.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

NEW GOLD HILL MINING COMPANY.

SIR,—I think it advisable in the interest of the shareholders to inform you that a telegram has been received from Salisbury, North Carolina, stating that parties there are buying shares in the above company in London. This is very important news. A telegram has also been received from a gentleman in London to the effect that "Barnhardt cut rich." Further important news is expected shortly, when the shares will have a great rise.—I am, &c.,

A LARGE SHAREHOLDER.

London, 2nd January, 1891.

"SHADY COMPANIES."

SIR,—If a company postpones its meeting until the last day, or one of the last days, of the year, I always think there is something shady about it. It betokens a desire to avoid criticism by calling shareholders together at a time when few of them can attend. I have been summoned this week to no fewer than nine companies' meetings, some of them held at the same hour and on the same day. This may not be done to shirk awkward discussion, but it looks uncommonly like it. I place companies that call their meetings on December 27th, 28th, 29th, 30th and 31st in the category of those that call them for Saturday, when most of the shareholders are out of town, or at the West End, when their offices are in the City. That such companies are shady may not be your opinion, Sir, but it is that of

ONE WHO DOES NOT LIKE IT.

January 1st, 1891.

YURUARI SHAREHOLDERS.

SIR,—I am of opinion that all shareholders in the above company will be delighted that they have read Mr. Douglas's letter in the MINING WORLD of 21st inst.

I was also misguided by Mr. Watt's letter of 22nd March, and as the return from the mine after that date was very favourable, I invested in a few hundred shares in July, fully expecting a *fair return* for my money, but, alas! I, along with others, am doomed to disappointment—only in the meantime I hope.

I am willing to assist Mr. Douglas, should he deem it advisable, to call a meeting of those shareholders in and around Glasgow who are unfavourable to the present management, and I trust that by our united effort we may come to some satisfactory arrangement with Mr. Watt.

I have only one question to ask that gentleman, and it is this : Why did not I receive a proxy?—I am, &c.,

JOHN F. EWING.

24, West End, Park Street, Glasgow.

GOLD MINING IN INDIA—A NEW GOLDFIELD.

SIR,—I notice in your last issue you make certain favourable remarks with reference to gold mining in Mysore, namely, to the brilliant results attained by the Mysore, Ooregum, and Nundydroog Companies.

Another goldfield is now being opened out in India, and it may interest some of your readers to learn something about the same. I hope, therefore, you will find space in your next issue for the insertion of this letter, which coutains all the information on the subject I have at my command.

From time to time references have been made in the English newspapers to the goldfield I now refer to, and sooner or later we are likely to hear more of the matter, as some of the companies at work hope to obtain quotations on the English market. It is situated in the district of Chota Nagpore, about 300 miles from Calcutta, and, if the hopes of the experts are realised, it will vie in richness with the Mysore field.

For many years it has been known that gold existed in the district, and many of the natives have obtained a living for years past by washing in the streams for the precious metal. A day's washing would produce gold to the value of 4 to 6 annas, and those engaged in the work have hitherto been content with these profits.

The construction of the Beugal Nagpore Railway threw a lot of European engineers and contractors into the district, and attention was drawn to the gold obtaiued by the natives. An expert was soon sent up, and his opinion obtained, and this was followed up by the formation of a prospecting syndicate, and the purchase of the mining rights of a large tract of land. This syndicate has now beeu formed into a company, and named the Sonapet Gold Mining Company, Limited. Shafts have been sunk on this property, and the assays obtained have so far been very satisfactory. It has a good board of directors, and the agents are a firm of the highest repute in Calcutta, It has a capital of Rs-12,12,000. The value of the shares is Rs-1 each, but they have stood as high as Rs-25 each, and are now down again at Rs-1 8 annas.

The Chota Nagpore Gold Company is the next important one on the field. It started with a capital of Rs-50,000 only, in Rs-1 shares. These shares have been as high as Rs-17 each, and now stand at Rs-10 8 annas each. It is said that the Sonapet Company have purchased the entire property (of the Chota Nagpore) for the sum of Rs-512,000.

Besides the above there are 11 or 12 other companies, a list of which I give you below, together with their quotations on the Calcutta market on the 3rd inst.

In August and September last business in these gold shares occupied the eutire attention of the Calcutta market, and the latest advices from India state that another such a boom is shortly expected.

It is also said that the Government think so favourably of the enterprise that they have lent it their countenance by issuiug a circular to all district officials on the spot to do all in their power to assist the progress of the industry.

In conclusion, and for the information of those who may be inclined to go in for a gamble in these shares, I would add, there are two known firms of stockbrokers in Calcutta, namely, Messrs. Place, Liddows and Co., and Messrs. Skinner and Co.—I am, &c.,

CALLAO BIS, LIMITED.

LATEST REPORT AND RETURNS.

ADVICES dated 11th December state :—Mine still looks very promising, showing visible gold at every point. 10 stamps supplied from three points, viz. :—No. 2 level west, No. 1 level west, No. 1 east. Mill results : 158¾ tons of quartz yield 319½ ozs., or 2 ozs. per ton of quartz. Lode has a strong appearance at every point. Surface work : Everything pushed with energy to despatch the work as soon as possible.

A telegram received 2nd January states as under : Ten stamp mill, 380 tons, yield 555 ozs. Mine is improving.

REPORTS OF MEETINGS.

RICHMOND CONSOLIDATED MINING CO.

SATISFACTORY TERMINATION OF THE "TIMBER SUITS," AND NO FURTHER DIFFICULTY ANTICIPATED—DIVIDEND OF 2s. 6d. PER SHARE—EXPLORATION AND PROSPECTING WORKS STEADILY PROCEEDING.

THE ordinary general meeting of the shareholders of the Richmond Consolidated Mining Company, Limited, was held at Cannon Street Hotel, on Tuesday.

The Hon. Randolph Henry Stewart presided.

The SECRETARY (Mr. Hubert Akers) read the notice convening the meeting, and the report of the directors was taken as read.

SYMPATHY WITH MR. GEORGE HOPKINS IN HIS BEREAVEMENT.

The CHAIRMAN: Gentlemen, in meeting you to-day, I have, in the first place, to tell you with what regret I find myself in this position, and I am sure the shareholders present will join with me in feeling the great loss we have in not having Mr. Hopkins, our chairman, present on this occasion. He had intended to be present, but I am sorry to say he has met with a great family affliction. His eldest son died last Saturday night, and the funeral has not yet taken place; under the circumstances, therefore, Mr. Hopkins did not feel as if he could come to a public meeting of this sort. I trust, however, gentlemen, unworthy as I am, that you will accept me in his place, for I am also sorry to tell you that the vice-chairman, Mr. Benjamin Broughton, who, as most of you know, has been connected with the company ever since its foundation, is laid up, and his medical adviser will not allow him to travel in this inclement weather.

THE "TIMBER SUITS."

You have all, gentlemen, had the report sent to you, and I trust that in the few remarks I am about to make you will forgive any shortcomings on my part, being called on at the eleventh hour to preside over an important meeting of this sort. I will, in the first place, call your attention to the first paragraph in the report with reference to the determination which your board expressed during the last two years, and which you were good enough to ratify, that no statement of accounts or reports of proceedings of the company should be published so long as the timber suits, brought by the United States Government against them, were pending. This, I am happy to say, has proved very good policy. We should only have been playing into the hands of our enemies if we had exhibited those reports, or given them any information as to our affairs. As you already know, that policy has borne good fruit, because last month the suits against the company were dismissed; and we are, therefore, now able to submit to you without any fear the accounts and our balance-sheet. With regard to these timber suits—although most of you know what they were, perhaps I may recall to your recollection a few points connected with them. Doubtless it was very wise policy on the part of the United States Government not to allow timber to be wasted by being recklessly cut down in all directions; but in the case in point it was not timber—it was merely stunted growth, fit only for the use to which we put it, namely, as fuel, and I think I may say, without fear of contradiction, that a more reckless or discreditable act on the part of any Government was never instituted. They threatened by the action they brought to

CRIPPLE THE WHOLE MINING INDUSTRY

of Nevada, and had it not been for the firm attitude shown by the different companies, the Eureka amongst others, the chances are we should have had our mines taken from us. The suit brought against us actually claimed damages from us for more than the whole amount of dividends we have ever paid. That, I think, will show you that the action was a reckless one, and a disgrace to all concerned. You will see in the report a letter, which the directors thought you ought to see, from the Attorney-General at Washington to Mr. Henry Rives, dismissing him from charge of these suits. I may tell you that this gentleman was the author of the suits, and that there is not the slightest doubt in the mind of any honest individual that these suits had no foundation whatever, but were simply brought with the view of getting fees and costs for lawyers, and I think I may call your attention to the fact, which will corroborate this statement—that in the Report of the Committee of the Senate which we had printed, and which was sent to each of the shareholders on the 15th May, 1889, certain information and letters were given showing that this was the origin of the suits. I am happy to be able to inform you that I believe now there is not the slightest chance of these suits being renewed; they have brought discredit upon all those concerned in prosecuting them, and the Attorney-General at Washington has given a very proper snub to the attorney who was the cause of their being instituted.

FAILURE OF THE AMERICAN LEAD CORNER.

If you look a little lower down the report, you will see some remarks with reference to the failure of the lead corner in America, which threw a large quantity of lead upon our hands. I may explain to the shareholders that our custom is to sell it "forward"—that is to say, it has to be paid for on arrival at New York. It goes by sea from San Francisco, and, therefore, it is a matter of some months before we receive payment for it. This lead corner was established, and it collapsed, and the consequence was when the lead arrived the man who had bought it was unable to fulfil his engagement, and the lead was thrown upon our hands. We have sold it again, and it has been paid for luckily, as it has fallen about 2*l.* a ton since.

LATEST NEWS FROM THE MINE.

The next paragraph to which I must call attention is as to the exploration and prospecting work which is being carried on at the Richmond Mine and the Williamsburg Mine. Mr. Probert, in his last letter, speaking of the Williamsburg Mine, says:—

"Ore has lately been struck at the bottom of the Bullwhacker, which had been abandoned, and which is said to be pitching towards the Williamsburg ground, so there is hope of a successful result to our prospecting in the latter. The new shaft is now down 200 ft., and it is intended to carry it down 200 ft. more before commencing drifting towards the Bullwhacker—150 ft. distant—and in other directions in search of ore."

With reference to the Richmond Mine—a few men are at work taking out a little ore on the tribute system, but not enough is produced to keep the furnace going for any length of time, and it has been found more advantageous to sell the ore, especially as a fair price is obtained for it owing to its containing limestone, which is useful as a flux. The results obtained, however, are but small and no improvement can be expected until fresh bodies of ore have been discovered. The ore in our mine has always been found in detached bodies—in pockets—and at any moment

A STROKE OF THE PICK MAY FIND ONE.

The last big find we had was in 1881, but, as a matter of fact, we were within 3 ft. of that find two years previously. You know what mining is; it is a lottery. One stroke of the pick does it, and in our case what we have to do is to hope that we may yet come upon some of those large bodies which we have found in times past. You will observe at the end of the report a paragraph referring to the Eureka Company. The Eureka Company and ourselves are down something like 1,050 ft. in the ground, and we have come down there to the water level. They have now requested us to take common action with themselves with the view of pumping the water out and exploring those levels. I will not say more at present upon that subject, because it is in the hands of Mr. Probert, and any remarks we make at this meeting might militate against his successful action on our behalf with the Eureka Company. I do not think there are any more remarks for me to make with reference to the report, but I shall be happy, as far as I can, to answer any questions respecting it, and meanwhile, I will simply move "That the meeting receive and adopt the report of the directors and statement of accounts for the two years ending 28th February, 1890." (Applause.)

PROPOSAL TO ADJOURN.

Mr. THOMAS LLOYD: I should like, if you will allow me, to move that this meeting be adjourned for a month, so that we may have an opportunity of hearing Mr. Hopkins, who, I am sure, could tell us many things that would be of interest to us. I am very sorry to hear of his loss, and can feel for him very much.

Mr. J. G. WEIR: I beg to second that proposition. Perhaps you can inform me what prospects there are of ample supplies of ore from other properties in the district of our smelting furnaces; or is the territory really worked out. If so, then our shares are of very little value; but if, on the other hand, there is plenty of material, then there is hope for us.

Mr. ARTHUR HEIRON: Before putting that resolution to the meeting, if you could give us some information as to Mr. Hopkins' own desire it might help us in voting upon it.

A SHAREHOLDER: I think it would be well to pass the accounts to-day, and I would suggest to the proposer of the resolution to adjourn, that he should extend the time to two months.

Mr. EDWARD BOWER (director): We have not the slightest objection to an adjournment. No one regrets more than Mr. Hopkins himself that he has not been able to be here, but I do not quite see the policy of adjouruing the meeting. You have all the information that we can possibly give you; you have the accounts, and if we get any further information we will give it to you. If, however, you desire to adjourn, we will readily fall in with it.

50,000*l.* AVAILABLE FOR RE-INVESTMENT.

Mr. DAVIES: I believe you have a sum of 50,000*l.* available for re-investment? What do you intend doing with it? Do you propose to buy other mines with it?

The CHAIRMAN: That is what we are in negotiation about at the present time.

Mr. DAVIES: I thiuk the best thing would be to leave matters as they are, and give the 50,000*l.* to the shareholders, because I know the too frequent result of mining speculations.

The CHAIRMAN: The question before the meeting is the adjournment, and if you wish the meeting adjourned we will be glad to fall in with your wishes, but I would suggest one thing, and that is that we should pass the dividend. (Hear, hear.) Our accounts are made up to the end of February, and in the ordinary course we shall have another meeting in May.

A SHAREHOLDER: I think that will meet the case.

Mr. BOWER: If anything important transpires you will be called together at once.

The proposal to adjourn was then withdrawn.

QUESTIONS.

Mr. CUFF: I observe the item of insurance has increased from 10*l.* or 12*l.* to 207*l.*

The CHAIRMAN: Since the fire in the Eureka Company's works took place we thought it wise to increase our insurance.

In reply to Mr. WEIR, who repeated his query as to the supplies of ore from other mines for the smelting works,

The CHAIRMAN said: That is a most difficult question to answer, because with a mining industry you cannot tell what the supplies are likely to be in the future. We naturally conclude that there will be plenty; for you do not suppose that a great mining district is to be snuffed out in a moment. Smelting has been carried on regularly for a great many years, and in all human probability it will continue to do so. But you remember the advice of Artemus Ward—"Do not prophesy unless you know."

SOME IMPORTANT POINTS.

Mr. HEIRON: I am sure all the shareholders will endorse your remarks. You say the accounts have been kept back until the United States Government determined whether the timber suits should proceed or not, for fear it might help the enemy's side. This was, undoubtedly, good policy. May I ask whether that has also interfered with the operations at the mine—in other words, whether during the time these suits were pending we had practically stopped work?

The CHAIRMAN: Yes.

Mr. HEIRON: Then our mining profit for the year might have been much more?

The CHAIRMAN: Quite so.

Mr. HEIRON: As regards the investment of the reserve fund, I am quite sure from the conduct of the board in the past that they would not invest the money injudiciously. (Cheers.) The Eureka Company is a big concern in the States, but we get no information about it in London — doubtless you know what success they are attaining? It might help us to know whether they are doing much good for their shareholders in America, or whether they are under a temporary cloud like ourselves.

The CHAIRMAN: They were attacked by the Government as well as ourselves.

Mr. HEIRON: I am referring to the ore in their ground—whether they have experienced the same trouble that we are experiencing, namely, the absence of profitable ore?

THE EUREKA COMPANY.

The CHAIRMAN: As a matter of fact, Eureka for several years were without ore when we were in full swing, but recently they have struck a large body of ore, and have paid three dividends within the last 18 months.

The report and accounts were then adopted unanimously.

The CHAIRMAN proposed the re-election of Mr. George Hopkins as a director.

Mr. BROUGHAM seconded the motion, which was carried unanimously.

The CHAIRMAN next proposed the re-election of Mr. Broughton.

Mr. BOWER seconded, and the motion was carried.

Mr. COLEE moved the re-election of the auditors, Messrs. George Broom and James Fraser.

Mr. WEIR seconded the motion, and inquired as to their remuneration.

The CHAIRMAN: 25 guineas.

Mr. HEIRON moved "That a dividend at the rate of 2s. 6d. per share, free of income tax, be, and is hereby, declared, payable on and after the 1st January next to the shareholders on the register on the 23rd December."

Mr. BROUGHAM seconded the motion, which was carried *nem. con.*

A RESOLUTION OF SYMPATHY.

Mr. HART proposed the following resolution:—"That this meeting hears with the deepest regret the cause of the absence of their esteemed chairman, Mr. Hopkins, and desires to express its sympathy, and condolence with him and the other members of his family in the sad loss they have sustained by the death of his eldest son."

Mr. APPLEGATE seconded the motion.

The CHAIRMAN: In putting this resolution to the meeting I need hardly say how cordially the directors, who have served with Mr. Hopkins for so many years, endorse every word that has fallen from the gentlemen who have moved, and seconded it.

The resolution was put, and carried.

Mr. BROUGHAM proposed a vote of thanks to the chairman.

Mr. WEIR seconded the motion, which was carried, and with the brief reply of the CHAIRMAN, the proceedings terminated.

NEW VISO TIN, LIMITED.

THE CHAIRMAN MAKES A SATISFACTORY STATEMENT OF THE WORK DONE, AND HOLDS OUT ENCOURAGING PROSPECTS FOR THE FUTURE.

THE second ordinary general meeting of the shareholders in this company was held at the Charing Cross Hotel, London, S.W., on Tuesday, 30th December, 1890.

Col. A. E. Ross presided.

The SECRETARY read the notice convening the meeting.

CHRISTMAS FESTIVITIES.

Col. HERSCHEL: Before you begin your remarks, Mr. Chairman, I hope you will allow me to say a word or two. I believe I shall be in order when you hear what I have to say, as it may possibly save you making a speech needlessly, for I wish to move: "That this meeting be adjourned to this day fortnight, or some other time which may be convenient for the shareholders." It is a most inconvenient time to call a meeting in the middle of the Christmas holidays, and if any gentleman will second the motion, the feeling of the meeting can be taken on the matter.

The motion fell through for want of a seconder.

The report and accounts were taken as read.

THE CHAIRMAN'S STATEMENT.

The CHAIRMAN: Gentlemen, I must express my regret that Major Heane, one of our directors, has unfortunately not been able to attend here to-day on account of illness. Turning to the statement of accounts you will find the capital authorised 192,000*l.* and issued 180,000*l.* The reason I allude to it is this—on the last occasion I said all the capital had been subscribed for. That was true, and is true. All the capital offered to the public was subscribed for, but when this company bought the property from the Viso Tin there were debentures, and we were compelled to set aside a complete number of shares in payment of those debentures, as the holders of them could, if they had wished, have taken their quota in fully-paid shares of this company. That accounts for the 12,000 shares which were authorised in addition to the 180,000*l.*, and of which 3,014 were taken in the manner I have said. I do not know that there are any matters on that side of the account that require elucidation, but, of course, if any gentleman wishes an explanation, I shall be most happy to give it. *Per contra*, we have the price paid for the purchase of the property, which, in point of fact, was paid to, in shares, the old shareholders. There is also the expenditure for the 16 months—agency and superintendence, which means, of course, expenses out there. The salaries include the secretary's salary, and other expenses at home. Directors' fees speak for themselves. Rent, rates, and taxes in London and Spain need no remark, neither do the other items which follow.

WORK DONE AT THE MINE.

With reference to the directors' report, we present to you a detailed report from our manager at the mines, and I think that report is so exhaustive that we cannot do better than take our stand upon it. You will remember that Capt. Josiah Thomas, who is the captain of the Dolcoath Mine in Cornwall, the richest tin mine in the world, inspected this Viso Tin ground, and, after a very careful inspection, he gave it, as his opinion, that we should concentrate all our energies upon the lodes. Capt. Josiah Thomas stands very high as a practical tin miner, and in that advice we have the advice of the most able man in the mining profession. Since then we have endeavoured to carry out his advice to the fullest extent. We have prosecuted our researches on the lodes as distinguished from the alluvial. The alluvial is very good in places, but in other places it is very shallow. The alluvial mining, so far as we are at present able to estimate it, is not perhaps advisable to carry on except as a bye-work, or the work of tributers, and we have, therefore, followed the advice of Capt. Josiah Thomas, and have concentrated our attention on the lodes. In the report you will see the manager states he has opened, mostly by contract work, in the underground galleries a length of 1,100 yds. That 1,100 yds. means a very great deal, for there are several lodes there which are very hard, and great difficulty is experienced in getting through them. Well, he says he has opened up 1,100 yds., and has "found, and partially laid open, six well-defined lodes of very good appearance and yielding tin, four of them being by their larger yield and general character more especially indicative of permanent productiveness when opened more fully in length and depth." That is his opinion at present. Of course, as you all know, you are subject to great disappointments in mining, and great surprises. A lode may begin poor, yet you may work for some time and then suddenly come across a rich bunch of tin. All that it is possible for any of us to do is to go along straight ahead, acting on the best advice we can get.

FAVOURABLE INDICATIONS.

You will observe in the paragraph following the one I have just quoted he speaks in the very higest manner of these lodes. He is a man well known in Cornwall as of great ability, and giving that as his opinion, the opinion of a practical miner who has had considerable experience, we cannot but look on it as extremely valuable. He goes on to say that "there are other new tin mines in this province, and in the same formation, which are opening out very satisfactorily, and a large outlay has just been made in erecting the plant necessary for their development." About 40 or 45 miles south-east of us a Dutch company have located themselves. They have found the indications so good that they have spent 25,000*l.* in machinery, and they intend to push on the development of their property thoroughly. Then, again, there is another point. A shareholder in this company, who holds over 1,200 shares, who is also a practical miner, went out to Spain and looked through our property, and he was so impressed with it that he has now settled himself in Spain, at no great distance from us, as a practical tin miner, and it was partly through his report that we purchased this property. The first duty we had to perform, of course, in taking over this property was to get it registered in the name of the new company in Spain. I need not tell those who have been there, the delays attending all such things in that country. Another company I know was three years in getting a water concession passed. We have done all we possibly can to satisfy the Spanish authorities, and no doubt in time we shall have exhausted their requirements, and then we shall get the property registered. Our rights, however, are there, and the property has to be registered, and it will be done. Meantime we are in full possession of the property, and all the privileges belonging it. I do not know that there is very much more. I may say that I know the ground intimately because I have been all over it, and I know myself that

THERE ARE SOME VERY VALUABLE LODES

on that property. The thing is to get down sufficiently low, and into them sufficiently far, to be able to strike the rich tin. It must be there, otherwise how is it that so much tin is found in the alluvial, not here and there, but all over it. Where must it have come from? It must have come from those lodes, and must have come from above. Therefore, I am perfectly certain there are some very strong lodes on that property, and my opinion is that our manager is working in the right direction to obtain good results. I have received a letter from our manager, in which he says:—

San Antonio: The new adit near the river is being driven south in a large quartz vein. How large we cannot say. The quartz contains large patches of tin. Sometimes it comes out in bunches, 3 or 4 lbs. weight. Seeing this point looks so kindly, I think it should be continued. San Guillermo: The deep adit having been driven a long distance in unremunerative ground, I have recently turned to driving a cross-cut west, and it is now in a solid and remarkably massive lode, yielding arsenical pyrites in large quantities and spots of tin."

With regard to Col. Herschell's motion, we have not selected this day from choice. We are compelled by the articles of association to hold a meeting within the year. I do not think it is within the power of the directors, and I do not think it is within the power of the shareholders, to alter the date of the meeting, but we are compelled to hold the meeting within the year, and that accounts for the meeting being held to-day. I do not wish to detain you any longer, except to say we have every reason to believe that the prosecution of work along these lodes will yield very good results. Mining takes time, and people must not expect to open out lodes and get a lot of paying tin in a short time.

PATIENCE IS REQUIRED IN MINING

as in many other things. All I hope is that we shall have a little patience shown, and we shall meet with a good result within this coming year. If there is any question I can answer I shall be happy to do so. I now beg to move "That the report and balance-sheet be received and adopted."

Mr. DAVEY (director) seconded the motion.

A SHAREHOLDER'S QUESTIONS.

Col. HERSCHELL: I am very pleased to have heard your speech as regards its tone, which has been by no means so exuberantly

anticipatory as we have heard on previous occasions. We have been led to expect again and again, immediate results, and we have never had them. I am very glad from what you say that we are to exercise some more patience. If we look at it in that way, perhaps, it will not be so disappointing in the future. I should like to know if you, having been on the spot, and knowing the property, if you are satisfied that 400*l*. worth of tin in 16 months justifies all that we have heard respecting this property. I shall also be glad if you will intimate to your manager on the spot when he speaks of sending home parcels of tin that he should name the quantity contained in the parcel. We do not know whether the tin or the ore in the parcels sent home are of 1 lb. or 1 ton.

THE CHAIRMAN'S REPLY.

The Chairman: Col. Herschell asks if I am satisfied with the tin produced in 16 months. Considering that when we commenced upon that work an immense amount of dead work had to be gone through, I do not think it is so bad. Capt. Josiah Thomas had not seen these lodes two years ago. Since he saw the property and gave his advice, we have followed that advice as being the best thing we could do. Col. Herschell wishes us to intimate to our manager to notify us as to the quantity the parcels contain. As a matter of fact, the parcels that have come home have been close upon 2 tons each time. They are called parcels of tin, and I believe it is a mining expression. It has nothing to do with the "parcels post."

The motion was then put to the meeting and carried.

Mr. Chamney moved the re-election of the auditors, Messrs. Theobald Bros. and Miall.

Major Crookenden seconded the motion, which was carried.

A vote of thanks to the chairman closed the proceedings.

THE OSCAR GOLD CO., LIMITED.

SHAREHOLDERS DECIDE TO RE-CONSTRUCT THE COMPANY — THE MANAGER'S VIEWS AS TO THE PRESENT POSITION AND FUTURE PROSPECTS.

The third ordinary general meeting of the members of this company was held at Winchester House, Old Broad Street, on Monday, 29th December, 1890, for the purpose of receiving the report of the directors and balance-sheet for the year ending 29th November, 1890; to elect a director and auditor, and for other purposes; at the conclusion of which a special meeting was held for the purpose of considering, and of passing resolutions to re-construct the company.

Mr. F. Hodgkinson presided.

Mr. C. Harrison Smith (secretary) having read the notice convening the meeting,

THE CHAIRMAN MAKES A BRIEF STATEMENT.

The Chairman said: Gentlemen, as we have before us to-day a second meeting, which is perhaps the more important of the two, we will not dwell longer than you think it necessary in asking questions concerning the accounts, and so forth. You have a very full report from the board and from Mr. Daw particularly, whom we requested to make a very full report of the operations at the mine. We also have the advantage of Mr. Daw's presence here to-day, and he will be glad to answer any and all questions you may ask as regards the expenditure, the results, and the present position of the mine. I will simply move: "That the directors' reports and accounts, as presented, be received and adopted."

Mr. Hewlett (director) seconded the motion.

A SATISFIED SHAREHOLDER.

Mr. Stewart: We are all of one opinion to-day, and we are more than satisfied with the state of things, because we feel that in you, Mr. Chairman, we have one who has united himself with our cause from the very first, and the excellent way in which you have stuck to it proves to me that you are very earnest. It is a very gratifying circumstance that, during the last year or so, you have proved not only the existence of the metal itself, but the quantity which has arrived from time to time is such as to justify better hopes for the future.

A DISSATISFIED SHAREHOLDER.

A Shareholder: I entirely dissent from the sentiments of the gentleman who has just spoken. I am quite dissatisfied with the state of affairs as set forth in these accounts. I went in for these shares not a year ago. I have paid calls to the amount of 2s. 6d., and I fully expected that we should have something more tangible to-day, than to be called upon to raise the value of these shares.

The Chairman: I think that will come under the second meeting. All we have to do now is to consider the report and accounts, and discuss matters relating to them. I quite agree with you as to the disappointment, but the meeting now is to accept or reject the report and accounts, and later we shall be very happy to hear what you have to say on the other point.

The Shareholder: All I wish to say is that I entirely dissent from the remarks of the last speaker.

Mr. Coleman: How many directors have we on the board?

The Chairman: Three—Mr. Hewlett, Mr. Vaughan Williams, who is ill in bed, and myself.

The Shareholder: As the thing is so unfortunate, I think we should go as near the wind as we can in expenses, and I do not see why we should have three directors. Two should do as well. (No, no.) I know it is a very small number, but I think we could do with one less. We have a very good manager, a very good secretary, and a very good chairman, and I think if there were one other gentleman it would be sufficient.

The Chairman: I quite agree with you as to cutting down expenses, but as regards directors, three is little enough, because one may be ill or be prevented from attending, and one director cannot meet by himself. Of course it is a question for the shareholders to decide. We have been

VERY FAITHFUL TO OUR DUTIES.

We have done everything in our power to make this thing a success. We are all in the same boat. We want to do what is best, and we ask you to express your opinions freely. We have done all we can, and are too largely interested to let the thing go astray. (Cheers.) If anyone has anything to say about the accounts now is the time.

Mr. Simmonds: There is an item of 160*l*. law expenses, can you tell us what that is?

The Secretary: Those expenses were chiefly incurred by going to the Court to get the debenture scheme past.

A Shareholder: Can any cause be given for the unfortunate position the company is in?

The Chairman: The cause is that the 2s. we have uncalled has been pledged for the security of the debenture-holders. That pertains really to the second meeting, when Mr. Daw will give you the causes why we have not been able to do what we expected last year, and also the present position of the mine.

The motion was then put to the meeting, and carried unanimously.

The Chairman then proposed the re-election of Mr. Vaughan Williams as a director.

Mr. Hewlett seconded the motion, which was carried unanimously.

SPECIAL MEETING.

The meeting was then made special, for the purpose of re-constructing the company. The scheme set forth in the resolutions provided that "the nominal capital of the new company shall be 40,000*l*., in 160,000 shares of 5s. each, with the usual power to increase and reduce the same." "The consideration for the said sale and transfer shall be the payment of the sum of 9,310*l*., by the allotment to the liquidator or to his nominees of 100,000 shares of 5s. each credited with 1s. paid thereon and leaving a liability of 4s. per share and no more, and by the allotment to the liquidator or to his nominees of 17,240 shares of 5s. each in the new company, to be issued as fully paid, and the payment and satisfaction by the new company of such of the debts and liabilities of this company, and the costs of winding up as the assets in the hands of the liquidator may be insufficient to satisfy, and of any sums which may become payable to any dissentient shareholders. The new company shall also issue to the holders of debentures in this company debentures in the same form and for the same amounts as the existing debentures, any arrears of interest being paid in cash." "Every shareholder in the old company to be entitled to one share in the new company with 1s. credited as paid thereon, for every share held by him in respect of which 3s. has been paid or called up, and also to procure to be allotted to every member holding fully-paid shares in the old company, as his nominee under the contract hereinafter mentioned, one share in the new company credited as fully-paid in the books of the new company for and in respect of every fully-paid share held by him in the old company."

VIEWS OF THE MANAGER.

Mr. John Daw, jun. (the manager), said: Mr. Chairman and Gentlemen, having heard the chairman's remarks, and as you no doubt have studied our reports with the accounts which have been laid before you, I know that you, like myself, are disappointed in not having ere this received some of the money back which has been spent in developing your property. I must admit, acting as your manager, and at the same time being a large shareholder, I fully anticipated showing a higher return of bullion, and had not circumstances, over which we had no control, viz., the meeting with numerous dykes, which disturbed and altered the direction of the lode, making it not only difficult to follow, but at the same time causlng extra expense and loss of time, we should have fulfilled the prospects held out at our last yearly meeting. Although I have given you a full report I will now add as a supplement to that report a few remarks, and I think after you have heard what I have to say, you will agree with me that our prospects are far more certain now than they have ever been before. I have often heard remarks to the effect that it is no use spending money in Norwegian mines—especially gold mines. Why these remarks have been made I am at a loss to understand, especially as a great number of the copper, silver and phosphate mines have proved a great success, in fact, I can name some which have, since they commenced operations, left a profit of several hundred thousand pounds, and one or two over a million. Certainly it has not been a gold-producing country, still the fact remains that gold was found in Norway during the reign of Christian IV., that in the 17th century two mines were worked near Kongsberg for gold, and one is at the present time producing silver containing a large percentage of gold. In 1705 some stones with visible gold were broken from the Aardal Mines in the Sognefjord, while in 1758 a few thousand grammes of the precious metal were extracted from quartz from a mine near Eidsvold. The rivers in the north were known to contain gold as far back as 1734, and in 1867 Dr. Telly Dahll, a Government expert, visited and examined those rivers, and, I understand, gave a most favourable report. I may also inform you that most of the minerals in the country contain gold, in many cases of an appreciable value. Hence, although we are working in a new district, and in a country where gold mining has been limited, there is sufficient data to prove that this metal has been found in different parts and in sufficient quantities to warrant further exploration. Mining, however, for this metal remained dormant until it was found on Bommel in 1883. The history of the different compauies is so well-known that I need not refer to it here, but confine my remarks to the property in which we are all interested. The Oscar Company started in 1884, but it was not until July last year that gold was found

EVENLY SCATTERED THROUGHOUT THE QUARTZ;

before that date it was found in bunches or nests. In July, 1888, I purchased, on behalf of the directors, a new track of land in which we secured three new lodes. These, with the permission of the board, I named after our three directors. Here the geological formation is a kind of porphyric granite with an unusual proportion of quartz. As explained in my report, we have done a little work on each of these lodes, but confined our attention chiefly to Hodgkinson. When we began to work the lode was ouly 3 ins. wide, but it soon opened out to as many feet. The quartz was in two sections, the one assaying ¾ oz., and the other ¼ oz. to the ton. Our work went on very smoothly until we reached about 80 to 100 ft. below the surface when we met a dyke which destroyed all traces of the lode. What we did, how we found it, and what we have done, and are doing, our report explains. We find in this lode galena as well as copper, and iron pyrites varying from small quantities to 1 per cent. of the whole mass. Their assay value has

varied from a few ounces to over 100 ozs. to the ton, hence my reason for advising the erection of concentrating machinery, because these concentrates, if saved and treated, would considerably add to our returns. I am glad to be able to state that there is every reason to believe as we get deeper the dykes will have a weaker influence on the lode, or at any rate we shall understand them better, which will save time and money. From our report you will have noted that we have only been working on a small scale for 18 months, still, during which time, we have crushed 2,176 tons of quartz, and extracted 686 ozs. of gold, equal to between 6 and 7 dwts. to the ton. Now, considering the very little work done, I hope you will allow that this result gives me the right in predicting a great success for this lode. From our first level in Hodgkinson's lode, we have driven a cross-cut out towards Hewlett's lode, and we are expecting every day to strike the lode. Should it at this depth, viz., 150 ft. from surface, fulfil the promises indicated from the little work done at surface, it will prove one of the successes intimated at in 1884. On William's lode we have driven a level along its course, but so far have not found any gold to value. I, however, look on this lode as one of the master lodes of the district, and that we may, with a certain amount of confidence, look forward to good returns. In our report you will see I have called special attention to Agnes shaft. This is, without any doubt, one of our vital points, hence I cannot too strongly recommend you to carry through the proposed plan of work. This shaft has been sunk in a small valley, with the intention of cutting the Williams, Hodgkinson and Hewlett lodes, and as time is money, I advise that you should authorise me to erect machinery to enable us to use rock-drills, and also concentrators to save our rich concentrates. I also advise you to

INCREASE OUR STAFF OF MEN.

At the present timc we have only about 30 miners, and if you were to increase them by 30 or 40 more, it would be very advantageous. Since I left the mines, my assistant, Mr. Bluett, has furnished me with the latest information, and I am pleased to tell you that he has struck some rich stuff in a stope in back of 150-ft. level north, and that the latest assays are :—Sample taken from bottom of shaft, 1 oz. 8 dwts. 18 grs.; 200-ft. level north has varied at the different points from 2 dwts. to 1 oz. 4 dwts. 20 grs. per ton ; the same level south from 4 to 6 dwts. ; the 150 south, trace only ; ditto north, from 5 to 7 dwts. ; while the winze, stopes, &c., show an average value of about ¼ oz. to the ton.

THE MANAGER INTERROGATED.

A SHAREHOLDER : Do you consider that the present appearance of the mine is promising ?

Mr. DAW : Yes.

The SHAREHOLDER : The former workings were [bunchy ; do you consider Hodgkinson lode is a true reef ?

Mr. DAW : Yes, I certainly think so.

Mr. STEPHENS : With reference to this Agnes shaft, are you going to group the whole of the lodes to that shaft ?

Mr. DAW : Yes, I consider that one of our most important points.

Mr. STEPHENS : Then in sinking this Agnes shaft, it is really one of the keystones to get at the whole object of what we have been looking for.

Mr. DAW : Quite so.

Mr. SMITH : That being so, I think things look favourable, because I think that in time, although we have had such bad luck, you may be able to send us some better reports. In reference to those lodes, they appear to be lodes that go from 6 ins. to 2 or 4 ft. in width, which is rather extraordinary. Is that really as the sinking continues, and do the lodes continue to be regular in size as you find them to extend from 6 ins. to 3 or 4 ft. ?

Mr. DAW : Lodes always vary, but in Hodgkinson's it has continued almost the same. I have great faith in Hodgkinson's lode, and also in Hewlett's, but still my fancy lode is Williams', although up to the present I have not been able to do anything with it.

Mr. STEWART : Have you any difficulty in getting labour ?

Mr. DAW : No, not at all.

A GOOD FEATURE.

Mr. SIMMONS : What quantity of gold per ton will pay all the expenses at London and at the mine ?

The CHAIRMAN : If the 50 stamps are kept running 3 dwts. will pay.

Mr. SIMMONS : That was the original estimate, but will it pay at this greater depth ?

The CHAIRMAN : Well, the mine is nearly dry notwithstanding the depth. I have been out there twice, and seen every point open, and if it had not been for this interference of the green stone dyke we should be in a better position to-day. When we lost the lode, of course, Mr. Daw had to search for it. Well, now we have found it, but the same thing may happen again. I do not want to make the thing appear any better than it is, nor any worse, but the lode now looks better than for many months past.

A SHAREHOLDER said it seemed to him rather ridiculous that the company should be re-constructed so often. This would make the fourth time it had been re-constructed, and although he was only a small shareholder, he thought they should know when this sort of thing was going to end.

The CHAIRMAN : If you are only a small shareholder, of course, you are not so deeply interested as some of us. A good deal of the bad luck pertained to the old Oscar Mine, but this is really

A NEW MINE

in a new place. We have been working not quite 18 months upon it, which is not much time to develop a mine, so that a good deal of the bad luck in re-construction belongs to the old company.

Mr. SIMMONS said he was one of the original shareholders, and his shares had cost him a great deal of money, but after the statement Mr. Daw had made, he was very much disposed to feel that if they did not go on now they would be doing a very foolish thing.

The CHAIRMAN then proposed the following resolution :—"That it is desirable to re-construct the company, and that with a view thereto, the company be wound up voluntarily."

Mr. STEWART seconded the motion, which was carried unanimously.

CALLS.

Mr. SIMMONS asked how the calls in the new company would be made.

The CHAIRMAN said 3d. would be payable on application ; 3d. on allotment ; and the other calls would not exceed 3d. or 6d. at the most.

Mr. SIMMONS proposed that the remaining resolutions be passed *en bloc*.

Mr. LEAKE seconded the motion, which was carried unanimously.

Mr. SIMMONS, in proposing a vote of thanks to the chairman, directors, and office staff, said he had always received the fullest information from the secretary or clerks on applying at the offices of the company.

The motion was carried unanimously.

The CHAIRMAN having replied, the proceedings closed.

LATEST REPORT.

The following report has been received from the mine, dated 24th December :—Hodgkinson lode : The dip of the lode in shaft continues as reported last week. Ths quartz is nearly 3 ft. in width, and the assay value has increased from 7 dwts. to 11 dwts. 13 grs., while samples containing galena have shown as high as 3¼ ozs. Such an improvement in bottom of the mine speaks hopefully for future returns. The quartz in 200-ft. level north is 3 ft. wide, and has an assay value of 3 dwts. 22 grs. This is also an increase on previous assays. The same level going south has a lode over 4 ft. wide. A very strong lode of hard bluish quartz, assaying from 5 to 7 dwts. gold per ton. The 150 level uorth is now carrying a lode 2½ ft. wide. Several stones containing galena and showing gold have been broken from this working during past week ; assays give value as 6 dwts. 12 grs. The quartz in 150-ft. level south has increased to nearly 2 ft. in width ; assays though show value as less than 2 dwts. per ton. The end is, however, again looking very promising, so that an early improvement may be expected. In stoping in bottom of 100-ft. level north some rich ground has been opened on ; the lode is 30 ins. wide, and several large stones have been brought to surface, which, upon examination, was seen to be covered with fine specks of gold. All other workings are as last reported.

WHEAL GRENVILLE MINING CO.

SHAREHOLDERS SUPPORT THE BOARD BY THEIR PROXIES, BUT NOT WITH THEIR MONEY—A CALL IS THEREFORE MADE TO PROVIDE £15,000 FOR THE DEVELOPMENT OF THE EASTERN GROUND.

A GENERAL MEETING was held at the Offices, No. 7, Union Court, Old Broad Street, on Tuesday, to transact the ordinary general business of the company. Notice was also given that at this meeting a call would be made to provide funds for the development of the Eastern Section of the mine.

Mr. F. G. Lane, in the regrettable absence of Mr. Goold, the chairman, through illness, presided.

Mr. D. JULYAN (secretary) read the preliminary notice.

The statement of accounts for 12 weeks ending 18th December was read, also the agents' report.

The CHAIRMAN : Gentlemen, you have now heard the agent's report and also the statement of accounts. If it had been the good fortune of your committee to have succeeded in the attempt they made at the last general meeting to issue 1,000 shares, so as to provide capital for developing the eastern section of the mine, the accounts now presented would have assumed a very different form. From the large support the committee received in proxies in favour of their scheme, they thought that a greater amount of financial aid would have been forthcoming than was actually the case. They were quite prepared to have issued the 1,000 shares provided the shareholders had come forward even to the extent only of three-fourths of the amount. Having received the support of holders of over 4,000 shares, I repeat, they calculated that their proposal would have been supported financially, but such was not the case. The scheme proved a failure, and your committee took it for granted that it was not one that was appreciated by the shareholders, although I again say the proxies justified them in thinking otherwise. We were, however, determined not to lose any time in the development of the eastern section. The lords had given us a good premium to proceed with the work, and we have continued doing so by making arrangements by the purchase of large quautities of machinery, for the setting to work of the various ends driving east, to come under the shaft which we have been sinking by boring machinery (though this is very expensive), so as to be able to develop the ground in an energetic manner. All this has been going on, and no delay whatever has taken place. The balance-sheet now presented to you shows what is apparently a very bad result of the last 12 weeks' working, but it is only what your committee expected. I am sorry to say that, in consequence of the very severe weather, we have been delayed in our dressing operations.

BAD WEATHER AFFECTS THE RETURNS.

Hence the sale of tin for the past quarter has only been 113 tons 9 cwt. 1 qr. 13 lbs. for 6,440*l*. 11s. 6d. Since these accouuts were made up we have made another sale of tin, and although your committee rather differ from your auditor as to whether that parcel should be included or not, yet to be on the safe side we have felt we must adopt your auditor's figures, and exclude that tin from these accounts. The parcels sold on the 24th December, a week after the accounts were made up—a portion we felt, at all events, should go into these accounts. However, as our auditor disagrees with us in that respect, and as he is more the servant of the shareholders than of the directors, we have been quite willing to present the accounts to you in the form he has chosen to adopt. We are willing to accept his statement, and ask you to do the same, believing tho ultimate result will be very gratifying to you, and show a state of affairs at the next meeting far different from what is submitted to day. You will perceive that the costs are made up to the 18th December and the sales of tin only to the 10th December. Now if the sale of tin had been made up to the 18th inst. instead of the 24th which could have been done (only we

should have been going out of our usual practice in selling small quantities), these accounts would not have showed

A LOSS ON THE WORKING OF 302*l.* 12s. 11d. AS THEY DO.

We have here an expenditure of 6,743*l.* 4s. 5d. against receipts 6,440*l.* 11s. 6d. We shall ask you to accept these accounts as they stand. The expenditure on the eastern section during the quarter amounted to 1,261*l.* 11s. If we had raised the money, as we expected to do at the last meeting, that sum of1,261*l.* would not have appeared in these accounts as against the revenue of the mine, but rather would have appeared in a separate account altogether as against the amount we should have raised. Then there is the cost of Tresavean machinery, 3,600*l.*, and West Condurrow engine 300*l.*, makiug a sum of 5,161*l.* 11s. The accounts represent that as the balance against the mine. It is really not so ; it is against capital, but we have no capital, and we are going to ask you to-day to provide it. If you accept these accounts as now presented we shall have at our next meeting to present to you a sum of 1,200*l.* for tin sold subsequent to these accounts being made up, but really a portion of it falls into them. The sale was delayed, because the severe weather caused a stoppage of our dressing machinery, and there was also an accident to our stamps early in the quarter, which resulted in a week's delay. The balance now presented as against the mine, 154*l.* 9s. 5d., is the real balance of revenue and costs during the present quarter as presented by the accounts. The

BALANCE OF THE EASTERN SECTION ACCOUNTS, 5,161*l.* 11s.,

is made up of the purchases made so as to carry on work there. The liabilities show a balance due to the bankers of 1,155*l.* 1s. 10d. ; lords' dues on tin sold to 10th December, 260*l.* 18s. 7d., and a loan of 1,500*l.* That was made by our respected chairman, Mr. Goold, for the purpose of securing the contract we had made of 3,600*l.* for Tresavean machinery, and that was a payment on account ; balance of the purchase money Tresavean machinery, 2,100*l.* ; purchase money for West Condurrow machinery, 300*l.* ; aud on the other side assets *nil*. We might fairly put in a portion of that tin, but as we did not know how to divide it, and as there were no means of dissecting the quantities it has been left out altogether. Such is the statement of accounts we have to present to you to-day. We ask you to accept it, because they are the best that can be presented under the circumstances, and because, by taking these accounts as they now stand, at our next meeting we shall be able to show you

A VERY DIFFERENT STATE OF THINGS ALTOGETHER.

The tin sold on 24th December will come into the next accounts, and against that we shall only have a portion of the current month's cost. As regards the report, there is nothing very material to call atteution to in the working of the mine during the past quarter. The 220-fm. level and the 205 have been driven for speed by boring machinery, and the progress is rapid. Our captain informs us that we are driving at the rate of 2 fms. a week. The ground being hard that speed is very good. The 190 is being driven by six men, and this end is also proceeding in very good ground, the lode in these three points being of the same value as at the last meetiug. The ends are opeuing up large quantities of ground, but we shall not be able to avail ourselves of them fully, because of our desire to push on the levels and come under the shafts in the eastern section, so as to communicate therewith. If we were to stop the ends so as to stope the ground we might raise a great deal of ore, but our object is to go under the new shaft, and from the 190 it will take at least 12 months. The 220 and 205 will take fully 18 months or more, but in the meantime we shall be raising tin from those parts, but not in such quantities as we shall be able to do when we can stope the ground now being opened up. The 178-fm. level is beyond the new shaft, therefore stoping has been adopted in that level. The 150 is worth 10*l.* ; the 130 driving east 15*l.*, but that is a shallow level. The stopes have varied but little during the quarter. As regards the eastern shaft, since the meeting you will find we have communicated it from the 150 upwards. We are now cutting it dowu and making the shaft 14 ft. long by 7 ft. wide, and we have now about 33 fms. to complete that bargain. We shall then have one of the finest shafts in all Cornwall, capable from surface, not ouly of having skiproads, but pumps and all the other appliances which modern ingenuity has devised for economical and safe working. We shall also have the means of lowering the men to and raising them from their work, which will also be a great all-round advantage. (Hear, hear.) We are still communicating with the 165 from the 150 by sinking a winze, and a winze also from the 165 to the 178 in line with the shaft, so that no delay has taken place. Although we are not carryiug the shaft its full width we are not delaying our sinking, neither shall we do so, for we wish to meet with the 190 by the time it comes up perpendicular with the shaft. As regards our pitches, we have 81 men at work at a tribute of 10s. 5d. in the £. At our last meeting we had 72 men, at a tribute of 10s. 7d. That shows there is a trifling improvement in the character of the ground and in its value. Our chief object is to push on our ends to get into this eastern ground. We are doing that with the greatest possible expediency, and intend, with your assistance, to rapidly proceed with this work, so as, at the earliest possible moment, to place our mine in a very different position to what it is to-day. The work may take us two years to do, but probably less. In the meantime the ordinary western workings of Wheal Grenville proper will be proceeded with, and

PROFITS AS MADE WILL BE DIVIDED

amongst the shareholders. Our purpose is to keep the eastern section entirely separate from the workings of Wheal Grenville proper. I propose: "That the statement of accounts, now presented to the meeting, be received, approved, and adopted, and circulated amongst the shareholders." (Cheers.)

Mr. Doré seconded the motion, which was carried without discussion.

A NOVEL EXPERIENCE FOR WHEAL GRENVILLE.

The Chairman : It is many years since we made a call in Wheal Grenville—in fact we never anticipated that we should have to make one again. We have gone on for the past nine years paying regular quarterly dividends, and our workings have proceeded with great regularity. Improvements have at times taken place in the mine when larger dividends had been paid ; at other times fluctuations have occurred, and then the dividends have been less. These fluctuations are incidental to mining, but now, taking the great work upon us we have decided to do, we must ask you to find means so that it may be carried on in a proper manner. The lord of our property has seen the necessity of this work being carried on rapidly, and come forward and offered us a suspension of dues for two and a half years, provided we do a certain thing—that is, raise a certain sum of money, not less than 12,000*l.*, to have this work rapidly earried out. It would be very easy for us to make small ealls, but our lord would, naturally, say, "We wish, if we submit to 2½ years' suspension of dues that the full amount be forthcoming." Our landlord is merely a life tenant in this estate. Singularly enough, the late lord, uufortunately, died on the very day the notices were sent out to the shareholders, endeavouring to raise the capital, his successor, however, came forward and said, "I will adopt the plan of my predecessor. You do your portion and I will submit to the 2½ years' suspension of dues." The offer was very liberal, and therefore instead of mincing matters we come to you not for small calls, but for one of 2*l.* 10s. per share, and thus give the assurance to the lord that the capital is provided to do as he wishes and as we wish also. It is proposed to make the payments easy. The amount provided will be 15,000*l.*, and we propose to make one call of 50s., payable to the bankers, Messrs. Bolitho, Williams and Co., of Camborne, as follows : 25s. on or before 15th January next, and 25s. on or before Thursday, 26th March next. The call payable on 15th January will have to meet this sum of 5,161*l.* 11s. due now from the general account. We therefore cannot take a call of less amount.

Mr. Bellingham (member of the committee) seconded the motion.

DISCUSSION.

Mr. Gray asked if the calls could not be made in three instalments.

The Chairman pointed out the reasons that had induced the committee to make the call as stated, and said that in this case no discount would be allowed. They had to pay the past indebtedness incurred on eastern section account, to provide for the erection of stamps, and a variety of other things. It was possible they might do with a less call, but it was not advisable to do so.

Mr. Bumpus expressed the opinion that they should finish with calls before they thought of paying dividends.

Mr. Doré (member of the committee) said that to make this call was a matter of honour as regards the lords, and a matter of expediency as regards the company. The latter would be in a much stronger position with money always at command to take advantage of those cheap purchases of machinery which could alone be secured for cash payments.

The Chairman said the committee, although holding quarter of the mine, did not wish to dictate to the shareholders, but rather that the shareholders should dictate to them.

The resolution was carried unanimously.

The Chairman said that although the accounts showed a loss, the agents, he believed, have done their best, and with great heartiness he proposed to them the usual vote of thanks.

Mr. Gray seconded the motion, and it was carried unanimously.

Mr. Bumpus proposed a cordial vote of thanks to the chairman, which was carried unanimously.

THE ABSENT CHAIRMAN.

The Chairman : I believe your confidence in me extends also to my brother committeemen. I regret that Mr. Goold, our worthy chairman, is not here to day, and that the cause of his absence is an indisposition from which we all trust he will soon recover. The shareholders have had great results from this mine in the past, and when our plans are brought to completion, I believe they will have still greater results in the future.

THE ARAUCO CO., LIMITED.

THE COMPANY IS MAKING PROFITS.

The fourth annual general meeting of this company was held at Winchester House, Old Broad Street, E.C., on Tuesday, December 30th.

Col. J. T. North (chairman of the company) presided.

The Secretary having read the notice convening the meeting,

The Chairman said : Gentlemen, as is the case with all such large uudertakings as this railway has been, you generally find that you have to use more money than you really make your calculations for in the first place. But I am pleased to state, from advices received of contracts made and coal worked up to the end of the year, that a profit will be made at the rate of something like 10 per cent. on the preferred and 7 per cent. on the ordinary shares. With the increased get of coal promised—and we are going now on the cablegrams we have received—the profits are now showing somethiug like 10 per cent. on the preferred and ordinary stock of the company. The Government asked us to do more than we expected we would have to do, and they gave their guarantee. Mr. Hicks, who was the manager, has lately returned from the railway. He is the man who has built the line, and who knows more about it than anyone else. Mr. Hicks tells me that if we take the amount out of our earnings which we did not expect to have to expend, we may estimate to make something like 12½ per cent. on the preferred, and 12½ per ceut. on the deferred or ordinary shares in the next year. We have received this from the coast ; from the Calico mines for 1891 the calculation is that we shall put out 173,000 tons. We have already made contracts with the Government for 52,000 tons, and altogether we have made contracts for next year for 94,000 tons at prices giving us large profits. We have spent already out of earnings this year over 29,000*l.* on extra work, consequent upon the demands of the Government. We think we have finished that spending of money, and we believe we have got a very good prospect in the future for this railway. Of course the railway has cost more money than we expected. I will now eonclude by moving the adoption of the report.

Mr. Edward Edmondson seconded the resolution, which was carried unanimously.

Messrs. Nicholson and Smith, having been re-elected as directors, and Messrs. Price, Waterhouse, and Co. as auditors of the company, a vote of thanks to the chairman and directors closed the proeeedings.

THE CHIAPAS MINING CO., LIMITED.

THE ARRANGEMENT WITH THE MESSRS. MALDONADO—PROGRESS IN SPITE OF VEXATIOUS DELAYS.

THE second ordinary general meeting of the above company was held at the Office, 10, St. Helen's Place, E.C., on Tuesday, December 30th.

Mr. Edmund A. Pontifex (chairman of the company) presiding.

The SECRETARY (Mr. W. Auld) having read the notice convening the meeting,

The CHAIRMAN said: Gentlemen, although it is about 16 months since the general meeting was held, at which you authorised us to entirely complete the arrangements with Messrs. Maldonado and Sons upon certain modified terms, yet, in point of fact, barely 12 months have elapsed since we got into harness, and were able to take any definite steps towards ordering machinery for the mine, and beginning to develop the property which you have acquired. Although the terms, which we then approved of, had been substantially arranged by Mr. William Frecheville with Messrs. Maldonado ou the spot, yet, when we came to formulate those terms, and to endeavour to arrange a legal agreement which would carry them into effect, Messrs. Maldonado raised certain points and insisted on certain conditions being imported into them, which required very considerable discussion aud negotiation, and in order to facilitate this Mr. O. Maldonado came over herc, and he was busily engaged with us for several weeks, and it was not (as the report states) until the 24th December last year that a definite agreement was concluded with him. Mr. Jebb, one of our joint managing directors, was over here at the time, and he returned shortly afterwards to Mexico, and at once took steps to order machinery there. Some little delay occurred in regard to ordering the machinery. It was ordered of a firm iu America, who afterwards somewhat drew back from their contract, and, finally, we ordered it of Messrs. Fraser and Chalmers. to be constructed by them at their works in the United States. We thought it desirable to order it of an American house instead of an English firm, because they understood the peculiarities of the shipment to the port in Mexico, where it has to be delivered, and they were able to promise delivery iu a shorter time than we could get an English firm to undertake to do it in. The machinery was duly constructed. The most important part was the saw-mill, because, until we got the saw-mill up to the mine, we were unable to prepare the timber for the foundatiou for the mill, which was to follow.

FRASER AND CHALMERS' MACHINERY.

We were very anxious indeed that Messrs. Fraser and Chalmers should have the machinery there before the wet season began, but they were only able to deliver it a very short time before the rains commenced, the result being that only a part of the saw-mill has been got up to the mine up to the present time, the rest of the machinery is lying at Ermita, and will be taken up as the wet scason is over. In the meantime a certain amount of development work has been carried out at the mine, which you will see is stated in Mr. Jebb's report. There has not been any very great amount of work done, because, as he points out, and as was mentioned by Mr. Frecheville, nature has done so much towards opening out and developing its mineral deposits, that all the ore that could be required to feed the mill could be extracted as soon as the mill is ready to receive it, without spending a great deal of money in previous preparations.

DEVELOPMENT WORK IS SATISFACTORY.

Such devolopment work as has been performed has shown satisfactory results. They have sunk a pit some 20 ft. below the water level, and, I think, extending some 20 ft. below that which Mr. Frecheville thought it safe to work. The difficulties which I have mentioned in the way of transport brings us face to face with the most serious part of our position. I think there can be no question that we have in the Chiapas Mine onc of the most extraordinarily rich auriferous copper deposits—abundant in quantity and rich in quality—that exists; but, like many of these very valuable deposits, there is always some drawback or other. It exists in a very inaccessible position, and unquestionably we find that the difficulties of transport are greater than we had looked for, not so much the transport in the hilly parts as in the low and flat-lyiug lands. There we find that for several months in the year the land is flooded, and becomes a morass, and is practically impassable, and we shall have to face the position that we shall have to construct a tramway on the port ou the River of Ermita up to the mines—at all events, up to a place called Solusuchiapa, which is about 11 milcs bclow the mine on the road down to the river. What that will cost we cannot tell at the present time; it all depends on the route that thc line will have to take, and upon the earthworks, and so forth, which will have to be performed. Iu order to ascertain all the information upon that point to enable you to come to a conclusion, we, several months ago—I think as early as in Junc last—cngaged Mr. Hardy, a railway engincer, who has had a great deal of experience in Mexico and the United States in the construction of railways, and especially the cheaper kind of railways, to examine the whole country and report upon the most practicable route.

THE RAILWAY.

He was what appearcd to us a very long time making this preliminary survey, and we got impatient, and cabled him that what we wanted was somethiug to enable us to come to some approximate idea of the cost of the construction of thc line. He informed us, in reply, that the country was infinitely more difficult to examine than we had any idea of. For instance, in many cases, in order to make his preliminary surveys, he had to be let down by a rope from one point to another to take his levels. The country was discovered in dense tropical forests, and he had to cut a route to see to take his line at all, and then perhaps having cut that route, he found some obstacle in the way, so that although he had occupied what appearcd to us a great deal of time, it was inevitable, and he lost none whatever, and in that statement he appears to be entirely borne out by Mr. Jebb, who tells you in his report that Mr. Hardy has worked with great vigour night and day, and has lost no time whatever. Until we have his final report, it would be unwise for us—in fact, it would be altogether impossible for us to give you any definite idea of the cost of the tramway, or of the arrangements we propose to be carried out. There is, I believe you are all aware of the fact, an affiliated company working in the immediate neighbourhood called the Zone Company, and they are willing to combine with us in the cost of constructing this tramway, which is just as nccessary for them as it is for us, and so soon as we are in a position to lay before you a scheme we shall ascertain from them exactly what it is they will be willing to do, and we shall then be able to suggest to you something practicable, which will enable us to utilise the extraordinary mineral wealth that we have at our disposal. Only to-day we have received a letter from Mr. Stockdale, who is our superintendent at the miues, in which he says that he is afraid the railway will cost a good deal of money; but the shareholders should congratulate themselves that they have a property which will warrant such an expenditure. I think there can be no doubt about that, and had it not been that your property is situated in this somewhat difficult and inaccessible position, there is no question that Messrs. Maldonado and Sons, the vendors, would have asked you a very much larger sum for it than that which you succeeded, by Mr. Frecheville's exertions, in purchasing it at. I am afraid that you will think that the information I have been able to give you is somewhat meagre, but you see the position we are in, and until we have got the final report, which we hope to receive iu the course of a few weeks, we are not in a position to lay anything very definite before you. All I can, therefore, do at present is to assure you that we are doing our very best for your interests, and I have no doubt whatever that in a very short time you will be amply satisfied with the results. I do not know that I need particularly call your attention to any points in the accouuts. You will see that there are still a considerable number of shares unissued which will be valuable for the purposes of the railway by-and-by. We have issued 213,000 ordiuary shares out of the 250,000 which we had to issue. You will find rather a large amount in the account for "calls in arrear." A considerable portion of those arose out of a misunderstanding with regard to certain shares, and most of those calls have been paid since.

MODERATE OUTLAY.

The expenditure in London, you will see, has been very moderate. The machinery, and so forth, up to date has cost us about 6,100*l*. That is the original outlay. We cannot apportion the cost of getting it to the mine; but I am afraid you must face the fact that the cost of transport up to the mines will be a very heavy item. There is the item "cash remitted to San Juan, Bautista, and mines," which our accountant has not been able to appropriate to the proper departmental heading, because we have not yet got the particulars. Our articles compel us to hold a meeting withiu three months from the time at which the accounts are closed. Inasmuch as the accounts have to go from the mine to San Bantista, where Messrs. Maldonado are acting as our agents, and from there to the City of Mexico, where the mining laws of Mexico compel us to have an office, and from Mexico here, where they have to be appropriated, it is perfectly impossible iu the three months to get the accounts thoroughly posted up, separated, and charged to the several different departments in the way they should be. I believe it will be necessary to alter the articles of association in some respects in consequence of the legal arrangements between Messrs. Maldonado and ourselves. When we ask you to meet for that purpose, we shall probably ask you to alter the articles so as to extend the time between the dates of closing the account and the date of holding the meeting, so that we may give you more satisfactory details than we are able to give you now. With these observations I beg to move "That the report and accounts be adopted." (Cheers.)

Mr. JAMES W. SKELTON seconded the resolution.

DISCUSSION.

A SHAREHOLDER called attentiou to the large item of 1,125*l*. in the Mexican account for agents' commission at St. Juan.

The CHAIRMAN said it was a large item, but it could not be avoided. Messrs. Maldonado and Sons said it was necessary to have offices there, and they insisted as part of the contract that they should rceeive 1,500*l*. a year to cover all those expenses.

Mr. MACDOWALL wished to know whether there was a prospect of any more ore being remitted?

The CHAIRMAN: I am afraid we cannot get any more ore until the tramway is completed. That, of course, cannot be duriug the rainy months.

Mr. HURST: Can you give us any explanation with regard to the item of 995*l*. in the exchange account?

The CHAIRMAN: That is a mere book entry. It is the difference of exchange between the dollars here and what they realise out there. That would be upon the amount remitted, which was about 11,000*l*.

The resolution was then put and carried unanimously.

Mr. MACDOWALL: How long will it be before the railway is completed, and before we can look for any return for our money? (Laughter.)

The CHAIRMAN: In the course of a month or so we shall be able to speak better than we can at present, but I am afraid it will not be finished soon enough to enable us to pay a dividend for the next couple of years.

Mr. HURST then moved the re-election of the auditors, Messrs. Monkhouse, Goddard and Co.

Mr. MACDOWALL secouded the motion, which was carried.

AN AMENDMENT LOST.

Mr. TAYLOR: I think, gentlemen, that we ought to settle the amount of the directors' fees at this meeting. We, as business men, certainly cannot expect them to give their valuable services for nothing, especially at a time when the affairs of the company require so much attention. I therefore beg to move that until the erection of the machinery, the remuneration of the directors be at the rate of 850*l*. per annum. They will no doubt arrange among themselves as to how that sum is to be divided. (Hear, hear.)

Mr. SCHOFIELD seconded the resolution.

Mr. MACDOWALL thought thc amount too large, considering the present state of the company, and moved, as an amendment, that the remuncration of the directors be 500*l*. per annum.

Mr. MARKS secouded the amendment, which was lost by a large majority.

The original resolution was then put and carried.

The CHAIRMAN: On behalf of myself and co-directors, gentlemen, I beg to thank you for the resolution which you have just passed. I may say that when Mr. Taylor was good enough to propose 850*l*. per annum that was by arrangement with us, and I think it is the lowest

fee that any board of directors, entitled to the confidence of the shareholders, could possibly receive. (Hear, hear.) It is by no means adequate to the amount of time that I, speaking for myself, have to give to this business, nor to the amount of responsibility that I have to undertake; and it is only in view of the fact that I believe that when the company is so prosperous that you would be able to remunerate our exertions on a much more liberal scale, that I could pretend to devote the time required for so small a remuneration. I know that is the view of my colleagues also, and I do not see that asking you for 850*l.* between all of us is anything unreasonable. (Hear, hear.)

Mr. C. G. HALE said he would be very glad to be rid of the position of director, and resign his seat in favour of any competent man who could devote the necessary time and trouble for even the same fees. Things must be looked at from a business point of view; and to go there and devote the attention he had done, representing as he did seven-eighths of the whole capital, was certainly a thing he could not, nor would not, continue to do. If those gentlemen would find a better man to take his place he would be very pleased to retire, and he very much regretted that there should have been any question amongst shareholders with regard to remuneration.

Mr. MACDOWALL said he moved the amendment without the intention of casting the slightest slur upon the directors. (Hear, hear.) He stood there as the representative of holders of 10,000 shares, and did not think it was out of place to move the amendment he had done. It was only reasonable that they should get some slight return for their money, or some near prospect of it at all events. He was sorry the thing had been taken in a wrong light.

Mr. HAMILTON moved a vote of thanks to the chairman.

Mr. RIDER HAGGARD seconded the resolution, which was carried unanimously.

The CHAIRMAN, in reply, said he hoped that before very long the services of the board would result in bringing to shareholders satisfactory returns for their investments in the enterprise.

The meeting then terminated.

ANGLO-MEXICAN MINING CO., LIMITED.

MEETING ADJOURNED TO ALLOW MR. HOPKINS TO BE PRESENT.

THE ordinary general meeting of the shareholders of the Anglo-Mexican Mining Company, Limited, was called at the City Terminus Hotel for Wednesday, to receive the report of the directors and the statement of accounts to 30th June, 1890, and to transact the general business of the company.

After waiting some time for a quorum, it was ultimately decided to adjourn the meeting until that day fortnight.

It was proposed that Mr. Lloyd should take the chair, but several of the shareholders expressed a wish to hear Mr. Hopkins on the subject of the company's affairs.

Mr. LLOYD, however, stated that the last news from the mine was very satisfactory, and extracts were read from the last mine report, which were satisfactory.

MR. HORNCASTLE has sent us a copy of his monthly circular, which merits the good opinion we have expressed of former issues.

REPORTS OF MEETINGS.

THE WEST ARGENTINE, LIMITED.

EXCELLENT PROSPECTS OF SILVER LEDGE MINES—AN ARRANGEMENT AS TO WEST ARGENTINE ASSETS — A COMBINATION SCHEME—MR. JENNINGS ASKED TO RE-JOIN THE BOARD.

THE ordinary general meeting was held on Monday, at the City Terminus Hotel.

J. T. Hopwood, Esq., J.P., D.L. (chairman of the company), presided.

W. P. OWEN, Esq. (secretary), read the notice of meeting.

A SPEECH IN THREE DIVISIONS.

The CHAIRMAN: Gentlemen, we have delayed calling you together until this very late period of the year for two important reasons, the first being that we wanted to lay before you the latest news both from the Argentine and the Silver Ledge properties—the latter being your new acquisition in the Red Mountain District of Colorado, and also because we have very important negotiations pending, which only at a very recent date have arrived at such a stage as would enable us to place them before you. Otherwise we should like to have met you much earlier, as has been our custom. I will divide the few remarks I have to make into three heads—one touching the Argentine proper as you have hitherto known it; the second as to the proposed combination of companies and the debentures; and the third as to the Silver Ledge property.

WITH REGARD TO WEST ARGENTINE,

as you have hitherto known it, you are aware that all our Argentine staff have been disposed of. They have either returned home, or have found other employment. The only person of importance left is Mr. Yeldham, our former accountant, who is in charge of the machinery and property generally, to see that they are kept in order, and that the interests of the company do not suffer. We, of course, had very great faith in our extensive properties there. I am exceedingly sorry we have had to go elsewhere, and possibly some of you will feel inclined to think that our faith in that direction comes up to the schoolboy's definition of faith as given in his reply to an examiner who asked him what it was:—"Faith is the power given to us of believing that which we know to be untrue." (Laughter.) Well, we could not know what there was beneath the ground until we had tested it. We did our best, and I may congratulate you on the one hand, using the old adage about meat and poison—that the very high premium upon gold in the Argentine has been of great benefit to us, for 100*l*. has been doing the duty of 200*l*., and at times of nearly 300*l*. This has enabled us to be very economical in the expenditure of your money. You know that all prices at Buenos Ayres are considered in gold, but up country, in the Carolina, paper does its duty, and you get the same upon paper as you did when the premium upon gold was lower. That and the

23,000*l*. OF GOLD WE HAVE BEEN ABLE TO WIN FROM THE ARGENTINE

property has enabled us to have a reserve of capital which put us in a position to go into the Colorado district. We have now, under your sanction and direction, removed all our staff and located ourselves at Silver Ledge, in Colorado. I pass to the second division of my subject. You are aware that

FOUR COMPANIES WORKED ON OUR ORIGINAL ARGENTINE PROPERTY.

The Glenrock Company worked at the north end of the Carolina; afterwards they took a position further south, a little to the south of our present adit. When that was not remunerative, or likely to be so, they went to the seventh department and tried the Encantadora, but that too was not successful, and, like cautious birds scenting prey afar off, they found something in New Zealand and took their rapid flight there, where I trust they may meet with abundant success in the Premier Mine. The other three companies are the Extensions, the Central Argentine, and the Rio de la Carpa, The Extensions Company has done a good deal of work, and at one time appeared to be on the eve of great success. They were working 3 miles to the north-east of us. The Central Company was working in the Canada Honda, 5 or 6 miles to the east, and the Rio de la Carpa 3 miles again to the east of that. I have visited all these places with the exception of Nueva Carolina. The Canada Honda to my mind has the greatest promise of anything in the Argentine, for this reason:—We have tested all the so-called reefs that were within our financial power both in the second and seventh departments, and unfortunately they have not been successful, but there is a very curious fact connected with the second department, that whenever there is a very heavy shower of rain you can almost test any stream or river and get a show of gold. The gold must come from somewhere, and I cannot help thinking that in the countless ages of the past the rains have washed the upper gold-bearing strata of these hills into the deep valley. Canada Honda lies between two ranges of hills, one running north and south, and there is no other place into which this gold could be washed. Mr. Morales got a considerable quantity out of it, but the present company has been working at a deeper level than that at which Mr. Morales worked. A very able report has been sent home by Mr. Mellor, which appears to be truthful and well drawn, and it seems to me also that he is on the threshold of success. Unfortunately, I think that company started with too little capital. With regard to the Rio de la Carpa, a great amount of work has been done, but after a considerable period it was thought that these three companies should form a combination. A committee was appointed to consider the practicability of such a course, and approached our company, and we have received

AN OFFER FOR ARGENTINE ASSETS.

We hold 10,000 shares in the Extensions Company, 20,000 shares in the Central, and 21,000 shares in the Rio de la Carpa. It was of course impossible for them to re-construct or to combine without making a proposition to us. On account of the shares we hold, and after considerable discussion, the offer, subject to the combination being carried through, they made was that we should sell the whole of our Argentine interests for 2,000*l*.—200*l*. on signing contract giving option in cash, and the rest within three months. The directors did not think this good enough, but thought they should retain an interest in the old property; so, after much deliberation, we at last arranged that a royalty should be had from the Argentine property upon all mineral products. Whatever is won from that property we get a proportion of it, with actually no expenditure whatever. Of course, all this is provisional; but even then we were not satisfied, for the directors had an eye to the future; and as the parent company has flown elsewhere, we thought it just possible that the offspring might do the same. Hence, after considerable discussion, it was arranged that wherever the company, which is to be the leader in this combination, went we should receive also a royalty there. I do not think that a bad proposition, because if any metallic products are won, you will get a proportion. The royalty is 1 per cent. Then we come to

DEAL WITH THE 53,000 SHARES.

Some time ago we thought we had the power of distributing them amongst you, but then arose the difficulty of the debentures, one half of the shares being held by the trustees for the debenture-holders, and we were tied up. It has been proposed that in the event of this combination company meeting with your approval—(of course, I am speaking of it simply as an option, but I want to state the facts as accurately as I can) that you should have the right to apply for the quota to which you are entitled, equivalent to the distribution of the shares. They would be assessable at 2s. 6d., but in no case at more than 2s. 9d., and it is only within the last fortnight that this has been arranged. That has been one reason why we have delayed this meeting so long. I heartily commend this proposal to your acceptance. The cash payment of 2,000*l*. will help us to pay off the debentures, and it would be very desirable to clear them off, because, in any arrangement for continuation, they would be a charge upon the Silver Ledge property, and also because the interest payment is heavy. It would be a great advantage to this company if it could start free of encumbrance, because otherwise the first earnings of the Silver Ledge Company would not be available for the ordinary shareholders. This brings the second part of my subject to a close, subject to questions that may be asked. The third part deals with

THE SILVER LEDGE PROPERTY.

You are aware that our arrangement with the vendors was that we should form a syndicate with 15,000*l*., of which 7,500*l*. was to go to them in ordinary shares, and 7,500*l*. to us as preference shares for providing necessary working capital—we to take the first earnings of Silver Ledge to repay the 7,500*l*., so that practically, with ordinary success, our venture in Colorado will have cost us nothing at all. Of course there has been delay, as we were obliged to take every precaution. The Americans are very much quicker than we are in starting a new thing, for we in England like to be on the safe side. The great difficulty was about the machinery. Suppose the arrangement with the vendors had not been carried out, it was a moot point whether, if we erected machinery upon this property and the vendors chose to take it all back, they could seize our machinery also. We consulted both English and American lawyers, and it was at last arranged that in case of default the machinery would be absolutely our own. Another cause of delay was the inclemency of the season, and the long time it took to get the stores from the spot and the buildings put up to protect the machinery. There was also a breakage of the pump, which has since been repaired,

and the mine is now dry. By this season we were to have everything ready for an output, but my opinion is that all mining estimates as to time are fallacious.

WORK DONE.

At the same time the shaft has been sunk 155 ft. 70 ft. from the surface there has been driven a level 90 ft. in one direction, and 85 in the other. It is proposed to drive a second level 60 ft. below that, and then to sink the shaft 50 to 60 ft. yet deeper. The last report to hand is dated December 21st. The silver assayed 29 ozs. and 46 per cent. of lead; another assay gave 56 ozs. of silver and 29 per cent. of lead; another, 2 ozs. of silver and 28 per cent. of lead; the last assay was 2-10ths of gold, 53 ozs. of silver, and 22 per cent. of lead. That seems to be very promising. (Hear, hear.) We have had additional properties handed over to us or arranged to be so. One is the Star, and we have a third share in the Turquoise Mine, and both are considered valuable claims. Then we have fewer shares to give to the vendors than were originally arranged for, although we have additional properties. We have photographs here which can be examined by shareholders after the meeting, and will give them a pretty correct idea of what has been done on the mine. I conclude with the expression of a hope that you will give to the combination companies your most cordial support, and I believe with good management great success will be the result. I beg to move, "That the report of the directors and the balance-sheet, now presented, be received and adopted."

Major COTTON (director): I second the motion.

VIEWS OF A FORMER DIRECTOR.

Col. HOWARD: Knowing the locality perhaps better than anyone in the room I wish to say that this combination scheme seems to me to present the only chance there is of making anything out of the Argentine property. Nature has played some extraordinary games, so that the best experts have been deceived by the appearance of the reefs and of the country generally. Not only have our own men been deceived, but a French engineer, of the very highest experience, who was sent over there by a large French syndicate, was also deceived. He believed the Carolina Mine to be really valuable, and if we had been inclined to sell it at the time we could doubtless have got a good price for it, but, contrary to all expectations, the quartz became poorer as depth was attained, and at last became worthless. Experience in almost every other part of the world has been quite the contrary. I do believe there is a future for Canada Honda. At present Central Argentine appears on the point of great success, and if the combination is carried out this company will benefit by that success, if achieved. I do not think there is a chance of this company doing better.

IMPORTANT QUESTIONS.

Mr. PENN-GASKELL: How many other shares are there beside the 53,000 we hold? I understand that when these companies came out the shares were not very well taken up. I suppose you propose to make a call to pay off the debentures. I think that will be the better policy. (Hear, hear.) We ought to be told why three of the directors have resigned. I should like particularly to know why Mr. Jennings (who has always taken an active part in this company) has resigned, and whether it was owing to any difference of opinion between himself and his colleagues.

Col. HOWARD: The shares have been calculated as carefully as possible in proportion to the interests of the various companies.

Mr. PENN-GASKELL: That does not answer my question.

Mr. BATTEN: There are about 90,000 shares in the Extensions Company, and a similar number in the Central Goldfields, and also in the Carpa Valley, though some are not issued. In dealing with the combination, respect has been had to the proportionate rights of all concerned, and the exact figures will be submitted later on.

Major V. COTTON: They will all be contributing shares.

Col. HOWARD: We hold 53,000 shares out of a total of about 180,000.

Mr. DYETT called attention to the calls in arrear, 1,982*l*., and asked whether they were good. He also thought the debenture interest very high and suggested an effort should be made to get it reduced to 6 per cent. The directors were receiving 750*l*., which he thought heavy, as also the legal charges (316*l*.) He wished to know what the caretaker was to receive.

Mr. LIMOND: In the event of this call of 1s. being devoted to the paying of debentures, what money is available for unforeseen contingencies in connection with the new property?

A SHAREHOLDER: How are you proposing to deal with our assets in the Argentine for the benefit of the shareholders?

REPLIES.

The CHAIRMAN: It has been proposed to pay off the debentures so that the company may be entirely free from debt, and that the earnings of Silver Ledge may go direct to the shareholders. As to the resignation of directors, Dr. Ball had to go to Canada on business that occupied him several months, and sent in his resignation while away. Mr. De Lissa had to go to Australia, and resigned for the same reason, and Mr. Jennings is present, and will answer the question himself. The calls in arrear are all due from substantial people, and will be paid with interest. The directors' fees are for 15 months, but at the present time there are only three directors, who simply receive 100*l*. a year each. If you think that too much, say so. (Cries of "No, no.") Mr. Yeldham, who is left in charge of the property, receives 200*l*. from all the companies, of which we pay a certain proportion. We have an ample capital to work Silver Ledge, and the first earnings up to 7,500*l*. all come back to us. We were taking steps in Buenos Ayres to dispose of the machinery, but at present the proposed combination propose to take it and to give us 2,000*l*. It had to be conveyed up an almost inaccessible country, and there were practically no roads from La Toma.

WHY MR. JENNINGS LEFT THE BOARD.

Mr. JENNINGS: The chairman has put upon me the duty of telling you why I resigned my seat upon this board. I do not for one moment place a higher value on my opinion and judgment than I do upon the opinion and judgment of my late respected colleagues, but I have had a great difference with them as to the mandate, which the shareholders gave them on a former occasion in respect to the Argentine property. I believe it was the wish of the shareholders that they should stop work, but I did not consider that that justified them in abandoning wholly our interests in the Argentine Republic, because I know there are many shareholders in this company who believe that, notwithstanding our want of success, there is a strong possibility of something happening which may give a new and, possibly, a considerably enhanced value to our property, and how foolish we should then appear if we scuttled out of it now. I was in a minority, and I also had the duty of watching over the interests of the debenture-holders as co-trustee with Col. Howard. I did not think that the board having given authority to their manager to discharge all the European staff, and place the interests of the shareholders in the hands of a native caretaker, was a policy in which I could concur, and that is the reason I resigned. There is now suggested to you a combination of all these interests, and the chance is to be given to you of taking either the one course or the other according as you choose, and this is possibly the next best thing that could be done. I would have preferred the company to have held its own to see the result of work done by other concerns. I would have waited, in fact, until success or failure had attended their efforts, and if they had failed we should not be in a much worse position than we are in now. (Hear, hear.)

Col. HOWARD differed from Mr. Jennings in thinking that this company was wholly abandoning its Argentine property, for it did hold a substantial interest in the combination which had been formed. If success came they would get the benefit of it at once, and if failure, they would have got paid to some extent for their interest.

The CHAIRMAN, in reply to a question, said that no doubt the company had the right to transfer its concessions as it had done before. The shareholders would have the right and privilege of applying for shares in the combination as already described.

Mr. JENNINGS: Gentlemen present will please to remember that my resignation took place at a time when this scheme was never dreamt of. (Hear, hear.) I resigned upon the fact that the board had passed the resolution absolutely to abandon the Argentine, but since then they have taken steps to minimise the evil course upon which they started, and I am only too glad to know it.

The resolution for the adoption of the report was then put and carried.

BOARD REDUCED TO TWO.

The CHAIRMAN proposed the re-election of Mr. Chemery as a director.

Mr. CHEMERY said that urgent private business would prevent him from again serving, though he thought that with the Silver Ledge property the shareholders might yet be pulled through their difficulties.

Mr. J. A. Shaw, the auditor, was re-elected, on the motion of a SHAREHOLDER, seconded by Mr. SWINBORNE.

MR. JENNINGS UNANIMOUSLY ASKED TO RE-JOIN THE BOARD.

A SHAREHOLDER: I have great pleasure in proposing that Mr. Jennings be requested to re-join the board. I think a unanimous vote from this meeting will have great effect with him.

Mr. CARPENTER seconded the motion, which was carried by acclamation.

Mr. JENNINGS: This resolution which you have carried was totally unexpected. The board have tried very hard to get me to reconsider the matter, but up to the present moment I have felt I could not do so for many reasons, but now I appear to be in a somewhat different position. I hope you will not ask me to give a decided answer to-day, but I will consider the matter favourably, and if I can see my way at all clear I will consent to serve you again, for I am full of hope and confidence that this company will yet prove successful. It is a difficult matter to bring four different sets of shareholders into line upon anything. You showed great confidence in your directors when you practically gave us a blank cheque to acquire the Silver Ledge property; your confidence has been justified for we are now in possession of two properties instead of one. Secrecy was absolutely necessary, for if it had gone forth that an English company was negotiating for this particular property you would not have been in the position you are in now. The directors deserve your heartiest thanks. Let me consider as to whether I can re-join the board, and I will do so if I can. (Cheers.)

A DIFFICULTY REMOVED.

Major COTTON: One of the difficulties with Mr. Jennings is that he is a trustee for the debenture-holders, but if we pay them off, that difficulty will at least be removed.

The CHAIRMAN stated that the substitution charge arranged in conjunction with the trustees for the continuation of the debentures was not one in the interests of the company, and that therefore the final call would be made and the debt liquidated as speedily as possible.

To this the meeting assented with acclamation.

Mr. CARPENTER said he thought the chairman had stuck to the ship with great courage. (Cheers.) He proposed a vote of thanks to him, and this being put was carried unanimously.

The CHAIRMAN: I thank you for your attendance to-day, and rejoice at the harmony that has prevailed. I wish you all the compliments of the season, and trust when we meet again it will be to record our substantial success.

Prior to the foregoing, an extraordinary general meeting of the West Argentine Gold Company, Limited (in liquidation), was held at the Cannon Street Hotel, when the liquidators appointed for winding-up the company, pursuant to section 139 of the Companies Act, 1862, laid before the meeting an account showing their acts and dealings and the manner in which the winding-up has been conducted during the preceding year.

Col. Howard presided, and the accounts were unanimously adopted.

THE CENTRAL ARGENTINE GOLDFIELDS, LIMITED.

THE COMPANY STARTS WITH TOO LITTLE CAPITAL, AND SUFFERS FROM DELAYS AND DIFFICULTIES, WHICH ARE NOW PRACTICALLY OVERCOME—PROPERTY BOUGHT SOLELY FOR SHARES FROM WEST ARGENTINE CO.—OFFICE EXPENSES IN LONDON REDUCED TO £170—VALUABLE SERVICES OF MR. MELLOR, BUT FURTHER MONEY MUST BE FOUND.

THE ordinary general meeting was held at Winchester House, on Wednesday, for the transaction of the ordinary business of the company.

George H. M. Batten, Esq. (chairman of the company), presided.

B. PEYTON WARD, Esq. (secretary), read the notice of meeting. The directors' report was taken as read.

STRUGGLING WITH DIFFICULTIES.

The CHAIRMAN said: The history of this company has been very completely put before the shareholders in the reports of the board and of Mr. Mellor, presented at the general meeting last year, and at this meeting to-day. It is a history of a continued struggle against adverse circumstances, causing difficulties and delays, which were not foreseen, and which neither the board nor the company's manager could control. These difficulties have been fully explained in the reports, and I do not propose to discuss them further now, but I will make a few remarks as to the position of the board and their responsibilities. Judging now after the event, it is easy to see that the original sin of this company was, like that of many other companies, the provision of what has proved insufficient working capital. Had we foreseen that it would have taken months to clear our plant and machinery from the Custom House at Buenos Ayres, months to obtain railway trucks to carry it to Villa Mercedes, months to obtain waggons to convey it thence to Canada Honda, I need hardly say that we should not have consented to go to allotment on a working capital of 25,000*l*. But I could not have believed that such delays could possibly occur under a civilised Government and administration. And on this point I may say that all who subscribed their money towards this capital were fairly warned of the amount on which an allotment would be made, for it was stated on the face of the prospectus. You will remember that when our prospectus was issued the West Argentine Company were working rich ore and were winning considerable quantities of gold, and their shares were at a premium, so that we had good grounds for believing that we had also a good chance of early success. Another point to which I would draw attention is the fact that not one penny of the subscribed capital was diverted from its proper object, namely, the carrying on of the operations of the company. No cash was paid to vendors, promoters, or anyone else. The consideration paid for the property was in shares, and shares only, which shares could only be valuable in the event of the company realising divisible profits. The West Argentine Company, who were the original vendors, and the Trust Company, who were the intermediate vendors to our company, were satisfied with receiving these shares, which is a proof of their confidence in the property of the circumstances of which they were best acquainted. I venture to say that the arrangements made for the administration in London were of the most economical character.

LONDON EXPENSES NOMINAL.

The fees of the directors, until profit should be earned, were fixed at the rate of 100*l*. a year each; the expenses for the office were on a very low scale. During the current year the directors have drawn no fees at all, while the salaries of the secretary, accountants, clerks, and office rent have amounted to only 170*l*. When we found matters were at a standstill owing to Custom House delays at Buenos Ayres, we deputed one of the board, Mr. H. St. J. Wileman, to proceed to the spot, a step which, though, of course, it cost money, we have had no reason to repent, since it was entirely owing to his exertions and local influence that the plant and machinery were freed from the Custom House and conveyed by rail and road to their destination. Mr. Mellor's report will have shown you that they were not all delivered until July, 1889. Meanwhile Mr. Mellor had much work to do in demarcating the company's property, obtaining labour, housing his men, making roads, &c. What he has done since is fully detailed in his report. I have referred to the working capital as having proved insufficient, but I may say that had it all been paid we might have found it sufficient to produce profits. The non-payment of calls, amounting to nearly 4,000*l*., has put the directors into what I may call a cruel position. We had either to leave the current wages unpaid, and to stop work, or else to find money out of our own pockets, as we have done. But, of course, this method of providing funds could not be continued, and Mr. Mellor has been obliged to suspend operations. Although the pay dirt in the lower part of the Canada Honda has not proved remunerative, Mr. Mellor strongly advocates the continuance of driving operations until we get past Morales' workings, and into virgin soil. He also recommends driving adits through the Cerros del Oro and Paso del Rey, where the appearance of the quartz reefs is promising. But, of course, none of this work can be done without money. Unless further funds be obtained it will be necessary to abandon the field, and to throw away all the good work that has been done, and all the money that has been spent.

VALUE FOR THE MONEY.

If the work is carried on that money will not have been wasted. It is represented by buildings, roads, machinery, plant, dams, sluices, drains, &c., all of which are useful and necessary in the prosecution of the enterprise. It is to this question of raising further funds that the board has for some time been directing its attention, but we felt no scheme would be efficient which did not do something either to relieve the company of some of the dead weight of 70,000 vendors' shares, or in some way bringing the holders of those shares under contribution. About 21,000*l*. has been expended in the development of the property and the administration of the company, and it is but fair that the vendors, or those who hold the vendors' shares, should be asked to support the undertaking and bring it to a commercial success, unless they wish to see their shares become absolutely worthless by the abandonment of operations just as they are reaching that stage. The first step was to approach the parent company, namely the West Argentine, which holds 23,000 of these vendors' shares. I am happy to say the directors of that company met us in a most friendly spirit, and subject to the sanction of their shareholders, have offered to give up the whole of their shares on the following conditions. 1st, that the arrangement should include the purchase of all their rights and interests in the Argentine Republic, together with all their plant and materials for the sum of 2,000*l*. 2nd, that they should retain a light royalty on the mineral products, which may hereafter be won; and 3rd, that their shareholders should in virtue of the shares belonging to that company be entitled to subscribe a fair proportion of the new capital on the same terms as other contributors. The next step was to endeavour to bring about an amalgamation of the properties of three companies now carrying on operations in the Argentine Republic, namely, the Gold Fields Company, the Carpa Valley Company, and the West Argentine Extensions Company. It is evident that this measure must lead to economy by putting the three companies under one board in London, and under one management in the Argentine Republic. Whatever capital is available could then be concentrated on such works or on such part of the whole field as might seem most likely to be profitable.

THE AMALGAMATION.

Such an arrangement has been provisionally agreed to by the directors of each of the three companies, and a means of carrying it out without any great expense has been put forward. It is this, that one of the companies should purchase the rights and interests of the other two by the issue to it of shares carrying a small liability. The company, which is in the best position to act as the purchasing company, is the West Argentine Extensions Company. It has the machinery all ready provided under its articles of association. The existing shares in that company have a liability upon them which would correspond with the liability thrown upon the new shares it would issue, so that all the shares would stand on the same footing. The upshot of the arrangements, if they are carried out, would be the establishment of one single company in the Argentine Republic in the place of four, holding the properties, rights, and interests of those four, with a sufficient working capital to carry on operations at the point, or points, where they are likely to lead to good results. Indeed, we hope to do more than this; we hope to raise sufficient capital not only to carry on the work in the Argentine Republic, but also to invest in another undertaking elsewhere, so as to provide, as it were, a second string to our bow. We are in a position to obtain options for what we are led to believe will be very profitable enterprises. These are under examination, and with the whole details of the scheme will be carefully considered. You may imagine, gentlemen, that it is not an easy task to bring four different companies into line, to drive, as it were, four horses abreast, in these negotiations, to bring which to a successful issue the board of each must have the consent and co-operation of their shareholders. I am informed that the shareholders of the West Argentine Company have authorised their board to sell their rights and interests in the Argentine Republic for the considerations which I have mentioned, but that they have done so with considerable reluctance. I have been assured on good authority that the plant and machinery alone which they would part with for 2,000*l*. if the scheme goes through cost at least ten times that amount f.o.b. in London. It is therefore an excellent bargain for the purchasers, provided they can utilise it, and probably what reconciles the shareholders of the West Argentine Company to the arrangement is that they are to have the option of subscribing for their fair proportion of the new shares and thus retain their interest in the undertaking which benefits by the bargain. When all the details of the scheme have been completely arranged they will be placed before you clearly and fully, and you will then be called together to pass the necessary resolutions for carrying it into effect. We shall lose no time in the matter, and hope that it will not take many weeks to put it into proper form for submission to you. I have now only to move "That the report and accounts be received and adopted." (Cheers.)

Genl. FRASER, C.B. (director): I second the motion.

The CHAIRMAN: We should be glad to hear any remarks from Mr. Jennings.

MR. JENNINGS ENDORSES THE BOARD'S PROPOSALS.

Mr. JENNINGS: Mr. Chairman and gentlemen, as you have called upon me to speak I will just say this, that the scheme that is put before you is, in my opinion, most excellent. It enables you to follow out the admirable plan which has been suggested by our able manager, Mr. Mellor, to complete the work upon the Canada Honda alluvials, which we have all believed to be exceedingly rich. I remember at the period when the property was first brought to my knowledge I had in my possession for a considerable time a very large quantity of alluvial gold which was taken from these alluvials, and some lumps of the precious metal, which, in fact, were nuggets as large as walnuts. I have never seen anything which looked so like a profitable venture as that, and when the chairman of the West Argentine Gold Company went out to the Argentine (I believe one of your directors, Col. Howard, was with him) they themselves washed a certain portion of the pay dirt, and obtained a very good show of gold. Now, if this scheme is carried through the result will be that all those who are concerned in that portion of the large area which the West Argentine Company had under their concessions from the Government, will have the opportunity of still retaining their interest. I think it is very wise on the part of your board not to confine themselves absolutely to that, because there is no doubt that the amount of money spent by the West Argentine Company in the Carolina Mines and the mines to the north of it in the seventh department—although so large a quantity of gold has been taken out as the result of that expenditure, and although they have had as much as 3 ozs. crushings at times—as they went deeper and deeper into the ground the gold became less and less, and finally it was unprofitable to work. But the influences there caused by the great granite upheaval in the immediate neighbourhood would not affect the ground further away to the south, where the property of the Gold Fields and the Carpa Valley is situated. There it is not improbable that good reefs may be found (they exist, we know), and they may not give out in depth as those further to the north have done.

ARGENTINE SHOULD BE TESTED STILL.

I think, therefore, there should be a strenuous effort made to ascertain the character of those reefs, and also to prosecute the levels.

Mr. Mellor thinks that about 10,000*l.* would be ample to do all that work; but while you are about a business of this nature it is just as well that you should do it thoroughly, and not be content with just enough to see whether you will have success or not; but that you should make provision for something very much more likely to lead to profitable results, and I am very glad to hear that your directors do contemplate such an issue. I think the provision that the West Argentine shareholders should also have a right to apply for their proportion of shares in this proposed scheme is a wise one. Of my personal knowledge, I know a great number of them who firmly believe that this Argentine field will yet prove a success, and, after all, what a small amount has been spent upon it!

IT IS SO.

It is nothing when you come to consider the money spent upon other gold fields; and with a fresh accession of capital, I do think success will be likely to reward further efforts. (Hear, hear.) I most heartily hope that we shall all put our shoulders to the wheel, and bring this proposition of the directors to a complete financial success, and I shall certainly do my part. (Cheers.)

VIEWS OF AN EYE-WITNESS.

Col. HOWARD (director): Having spent a considerable time on this property on two occasions, I should like to call attention to one special reason why work should not be given up at the present moment. The Canada Honda is a large basin through which runs the bed of an ancient river, in which wherever it is touched gold in smaller or larger quantities is found. In some places there are 16 ft. of overburden, or black earth, making it difficult to get at it. In order to carry out the work on a remunerative scale it was necessary to begin a long way down the valley, and the expense needed to drain the bed of the old river and to come up to the spot where the best gold was known to be lying was considerably more than was expected. The sluice boxes were swept away by a frightful flood to which that country is occasionally subject, and the result has been that, instead of being in good paying ground we are only at the mouth of it. As knowing the ground well, and as having washed out pay dirt, I believe it only wants a small sum more to put us into a very different position from that in which we are now. It is unlucky that funds should have run short just as we are opening the door; but *we are* opening the door, and it only wants a little of your assistance to get well inside and secure satisfactory results.

The CHAIRMAN: We received a letter from Mr. Mellor on Monday, in which he says: "If I had not been compelled to stop the works I should have been at Morales' workings by the end of January." However, the defaulters would not pay up, and we were obliged to shut up for the time.

Mr. PROBYN: Col. Howard mentioned that the accident washed away machinery. Is that preventible, or are we liable to that sort of thing again?

Col. HOWARD: Precautions would have to be taken, and, at the time, Mr. Mellor was new to the country. The river sometimes rises 20 ft. in a couple of hours, but having once been bitten he will, in future, take care to protect himself as far as possible.

The CHAIRMAN: He has done so.

The report was unanimously adopted.

The CHAIRMAN proposed the re-election of the retiring directors, which a SHAREHOLDER seconded, and it was carried unanimously.

Mr. JENNINGS then proposed, and Mr. PROBYN seconded, the re-election of the auditors, Messrs. Edwards, Jackson, Browning and Husey, which was also agreed to, and, on the motion of Mr. JENNINGS, Mr. Batten and his colleagues were cordially thanked for their services.

CARPA VALLEY EXPLORATION CO.

RELATIONS BETWEEN DIRECTORS AND MANAGER—THE DETAILS OF AMALGAMATION SCHEME FULLY SET FORTH.

AN ordinary general meeting of the shareholders in this company was held at Winchester House, Old Broad Street, on Wednesday, 31st December, 1890.

Geo. H. M. Batten, Esq., presided.

The SECRETARY (B. Peyton Ward, Esq.) read the notice convening the meeting. The directors' report was taken as read.

The CHAIRMAN: Gentlemen, before entering upon the general question to-day, I should like to refer to the statement in this report of the reasons given by Mr. Mellor for dismissing Mr. Sutherland. We did not make that statement on our own behalf, but merely stated that those were the reasons given by Mr. Mellor. On that point a letter has been received from Mr. Sutherland, who seems to have been grieved by it, and he says "it contains a gross libel," and that "these charges are wholly untrue, and there can be no justification for publishing the statement." I can only say, gentlemen, that our report does not say anything on our own account, but we merely repeat the reason given by our manager for his dismissal of Mr. Sutherland.

ALLUVIALS.

I have just presided at a meeting of the shareholders of our sister company, the Central Argentine Gold Fields, in which some of you are shareholders, and at the risk of boring those who have attended that meeting, I shall have to repeat much that I had to say there. The difference between the two companies is that this is essentially an exploration company, and started with a much smaller working capital. The report which has been presented to you has told you what exploration work has been done, and it is unnecessary that I should go over that ground again. When we selected the alluvials as the first part of the property to be examined, we did not do so without careful consideration. The obtaining of alluvial gold is usually a less expensive task, and is easier and more quickly accomplished than driving adits and levels through quartz reefs, and we had hoped that the Carpa Valley alluvials would quickly bring us in some returns, or at any rate afford sufficient evidence of there being a valuable property to be worked ourselves or put on the market. Unfortunately this has turned out not to be the case, and when that was proved to our satisfaction, or rather to our dissatisfaction, we had to consider what was the next step to take. The disastrous and unforeseen delays which took place in getting our plant and machinery on to the field of operations had naturally led to unprofitable expenditure, for we had, of course, to send out a manager and European assistants and to pay their salaries before we could fully utilise their services. It was only by deputing one of the board, Mr. H. St. J. Wileman, to proceed to Buenos Ayres that the delays were by his energy and influence overcome at the Custom House and on the railway. Then, as you know from the report, we had to house our labourers, make roads, provide water and incur other preliminary expenses. When, therefore, we learnt that the exploration of the alluvials had proved abortive, we had to consider our financial condition before commencing operations elsewhere. The cash in hand had come to a very low point, and money was due for work done. It was therefore necessary to call up the balance of the money subscribed for working capital, and though that call has not been very promptly responded to, we have been enabled to pay our way. I am sorry to say that a considerable portion of the arrears are likely to be irrecoverable. Mr. Mellor has urged us continually and strongly to attack one or more of the reefs in the Barrancas Largas, of the value of which he holds a very high opinion. We did not think it right to commence this work unless we could see our way to carry it through.

A PROPERTY OBTAINED ON THE BEDROCK BASIS.

He estimated that this would require 2,500*l.*, but, as you are no doubt aware, estimates are apt to be exceeded, and we thought it wiser to defer embarking in this expenditure with the limited means at our disposal. There is in the immediate vicinity of our reefs one of the same character, which is being opened out by another company, Messrs. Siches and Co., and we thought it more prudent to await the result of their operations. A very wise old Latin maxim says, *Fiat experimentum in corpore*; well I will not say *vili*, but *in corpore alieno*, which, being freely translated, means: "Get your experience at somebody else's cost." This mine of Messrs. Siches has been carefully examined and reported on by Mr. Mellor, and he has formed a good opinion of it. You will see from our report what he says about it. It is certainly encouraging, but we are hampered for want of funds. Now, on this subject of funds I would like to make one or two observations. On the prospectus it was distinctly stated on what amount of subscriptions we should go to allotment, so that no subscriber can say he was misled on this point, and if we have made a mistake all the shareholders are partners in that mistake. I would next observe that not a penny of the working capital has been diverted from the operations of the company. No money was paid to vendors, promoters, or anybody else. The purchase-money for the property was paid entirely in shares, which could have no value unless the operations of the company produced divisible profits. The West Argentine Company and the Trust Company from which we purchased the property, were satisfied with taking fully-paid shares, thereby showing their confidence in the prospects of the undertaking, and thereby instilling confidence into us.

LOW COSTS.

The expenditure on the London administration has been kept at the lowest point. The directors have not drawn any fees during the whole of this year, and the expenses for office rent and establishments for the year have been only 130*l.* I do not think, therefore, that we can be charged with extravagance here. Nevertheless the fact remains that we cannot hope with the funds at our disposal to prosecute our exploration to the point of commercial success. The attention of the board has been directed to this question, and a scheme has been devised by which, with your assistance, we think the object in view may be accomplished. You will see from the accounts that we are weighted with 80,000 shares issued as fully-paid to the vendors. We do not think that any scheme would be efficient which did not do something either to relieve the company of this weight, or in some way bringing the holders of these shares under contribution.

HOW MONEY HAS BEEN SPENT.

About 7,500*l.* has been spent in one exploration of the property, and it is but fair that the vendors, or those who hold the vendors' shares, should be asked to support the undertaking and bring it to a commercial success, unless they wish to see their shares become absolutely worthless, and to abandon the undertaking and sacrifice all that has been spent upon it. I will now repeat to you what I have already said to the Gold Fields shareholders as to the scheme which we propose to carry out. The chairman here explained the scheme as in the previous meeting of the Central Argentine Gold Fields Company, and concluded by moving "That the report and accounts be received and adopted."

Mr. BROGDEN (director) seconded the motion.

No questions being asked, the chairman put the motion to the meeting, and it was carried.

The CHAIRMAN then proposed the re-election of Genl. Alexander Fraser and Mr. Wm. Probyn as directors.

Col. HOWARD seconded the motion, which was carried.

Col. HOWARD proposed the re-election of the auditors.

Mr. T. WATKIN DAVIES seconded the motion, which was carried.

On the motion of Col. HOWARD, seconded by Mr. DAVIES, a hearty vote of thanks was passed to the chairman and directors.

The proceedings then closed.

POTOSI, LIMITED.

UNABATED CONFIDENCE OF THE BOARD IN THE MINE—6,000 OZS. OF GOLD PRODUCED—GREAT PROSPECTS AT POTOSI VIEJO—TELEGRAMS, SPECIMENS AND RETURNS.

THE fourth ordinary general meeting was held on Tuesday, at Winchester House, for the purpose of receiving the directors' report and statement of accounts up to 30th June last, and for the election of directors and auditors.

S. F. Somes, Esq. (chairman of the company) presided.

Mr. J. BRYCE WILKINSON (secretary) read the notice of meeting.

THE OUTLOOK BRIGHT.

The CHAIRMAN: Before putting the resolution, gentlemen, you

will expect from me a few remarks. On the last day of 1889 I had the pleasure of wishing the gentlemen then present a happy new year. I hope it has been so for all or most of them, though unfortunately Potosi has not contributed thereto in the degree anticipated. Still I believe that, having read the report of the directors and the remarks of Mr. Pryor, you will be inclined to look upon our position as fairly encouraging for a beginning, because although we have waited a very long time it is yet but *a beginning*, for we have only during this year begun thoroughly opening the Potosi Viejo, which, so far, is the chief lode. We have had all sorts of difficulties to contend with. There was a great deal of surface work to be done, which has now all been carried out and completed. Then we had rains which were excessive, and which put a stop to almost all outdoor work. The mill was delayed for a time, and the rains also interfered very seriously with the carrying out of the tramwork to the mine, but Mr. Pryor writes that all is completed now, and that he has sunk the new shaft which will enable him, as he says, to deal with the best part of the mine, and we presume that before now he is at work upon it.

A GOOD TELEGRAM.

Since issuing the report we have received the following telegram from Mr. Pryor dated 12th December :—

"380 tons of quartz crushed from Potosi Viejo and Socorro lodes. 300 ozs. of gold on hand for fortnight ; 20 stamps running ; 10 days' work."

There is another telegram due on 1st January. The above in itself proves what we state in the report, that all Mr. Pryor's advices seem to foreshadow an early improvement in the returns. You will recollect that for the whole of the past month we obtained only 362 ozs., but now in 10 days we have 300 ozs., which certainly is an immense improvement, so that we hope we may look forward to something like 600 ozs., or perhaps more for the full month. The most serious difficulty we at present have to contend with is

THE LOSS THAT TAKES PLACE IN THE TAILINGS.

If Mr. Pryor be right in his calculations we are losing in them fully three-quarters of an ounce to the ton. That is a matter that needs urgently to be looked into, and there is no doubt that we ought to have the best gold-saving appliances, but we have not been able to get them since Potosi, Limited, was formed, because the money went so much faster in the work than we expected it would do. That, however, is a serious question, and one which we must do our best to remedy ; but for that purpose and for others we must have further means. I have here (exhibiting an unusually large and rich specimen of quartz containing much visible gold) a specimen of the quartz taken from the bottom of the mine, sent quite unasked for by the directors. Mr. Pryor was not ordered to take out a fine specimen of the quartz, and send it home that we might produce it at this meeting, but he refers to it in the extract which we gave you from his report :—

"By the mail leaving here on the 26th inst. I am sending you a plan and section of the old Potosi lode, also a large *sample of quartz* from the deepest point. The former will fully show you the extent of workings up to date, and the latter will confirm what I have always stated, that the greater the depth the more valuable and promising is the quality of the ore."

That has invariably been the case with a really good and established lode. Not only that, but as he says, the

LODE HAS OPENED OUT TO 3½ FT. AT THE BOTTOM.

All experts will tell you that is always a most favourable feature. At Peru where we were working before the last re-construction, the lode on the surface was 12 ft. wide, and it narrowed down to very little indeed, but this one began at 18 ins. to 2 ft., and has been opening out until it is now the width Mr. Pryor states. We feel now that we really are on that part of the lode where we should begin to get good returns. Any gentlemen who like to look at this sample after the meeting will see how wonderfully rich it is. I consider it is equal to El Callao quartz in its best days. Mr. Scriven, who has seen the Callao lode itself, thinks this more promising in appearance, and you will see for yourselves that this stone is full of gold. A few hundred tons of this would soon put everyone in good spirits and the company in a flourishing condition. We are still hoping for that result, and certainly we have never had such a large specimen as this home before, and never anything to compare with it in either richness or quality. Altogether

THE INDICATIONS ARE MOST FAVOURABLE.

I repeat, the specimen was not ordered home ; but Mr. Pryor, finding it at the bottom of the shaft thought it advisable, and very rightly so, to let us see it, and I am very glad we have it here that the shareholders may look at it. (Hear, hear.) Coming to the question of accounts, I think the shareholders will all be very well satisfied with the *expenditure* as charged. We wish the *receipts* were larger, but I believe we may count upon your finding no objection to any item on the *expenditure* side. (Hear, hear.) The outlay has been kept down to the lowest ; the cost of mining and milling has, of course, increased, and the latter appears as a fresh item altogether ; but

WE HAVE GOT BY THE MILLING NEARLY 6,000 OZS. OF GOLD.

We only began to work in November, 1889, and these accounts are only to the 30th June last. In future we shall have 12 months' returns in the accounts. One debit which I think may have attracted attention is that of Government dues. You will remember that we have purchased the surface rights, and you see there is a debit for same of 2,482*l*. Thus for a sum under 2,500*l*. we are now relieved from royalties, which cost us 1,200*l*. a year, so that in a year we practically get back half of the redemption price. The item "Government dues," is battery dues, for which we have had to pay 178*l*. The great difference that would strike anyone, as it did me, on comparison with last year's accounts, is the increase in the *general expenses* in Venezuela. Those for seven months came to 1,227*l*., and for 11 months, to make them equal with the report last year, they would come to 1,929*l*., against 499*l*. There you will see an increase of 1,100*l*. That is made up of the items—repairs and renewals, export duty, transport and shipping of gold. Those items represent over 1,000*l*. of the difference. With the exception of that item, I think there is nothing that calls for remark, but I shall be happy to give further explanation, if required. Reverting to the present position of the company, you all know pretty well that the available funds are by no means large. If, as we told you in our previous report, we were getting better returns (and we ought, without doubt, to reach what we were getting before, viz., 1½ ozs. to the ton), we should be soon in a flourishing condition, and have no anxiety about capital. We have a lease of 20 stamps in the Yuruari mill up to the end of next September, so that we have plenty of time before us. We can go on working and, I hope, producing well, but there is no doubt that with the promising features there are in the mine, and the tendency of Mr. Pryor's reports in which we place the greatest confidence—I say, there is no doubt we ought energetically not only to push the mine forward to supply to their full capacity the stamps we are using, but that we ought as soon as possible to put up our own mill and so be independent of Yuruari. We are working in a very friendly way with them, but we have to remember that we pay them 1,000*l*. a year for the use of their mill, and that is 5 per cent. on the cost of a new mill. If we found the capital we could soon put up a 20 or 30-stamp mill, and should then have the benefit of all the latest and most ingenious gold-saving appliances. We believe the assay of tailings would then present a very different aspect from what it does.

LOSS IN THE TAILINGS.

Actually the quartz upon which we are now working is producing 1½ ozs. to the ton, but we are losing nearly half of it, if Mr. Pryor's assays are correct. That ought not to go on, but I do not know that we can prevent it with the stamps we are at present using. This serious loss is a subject that presses the directors to consider what scheme can be devised to give us sufficient capital to go on and develop this splendid lode, and treat its produce efficiently. We have a piece of Socorro quartz here, taken from near the surface, in which there is a little gold to be found. On this lode also, as we increase in depth the richness increases. On Potosi Viejo we are now down barely 300 ft., which is a mere nothing. Callao is down over 1,000 ft. We have been unfortunate in not coming upon the right spot hitherto, but Mr. Pryor has always insisted that

POTOSI VIEJO IS THE PLACE WHERE WE SHOULD WORK,

and this (referring to the specimen) is a convincing proof that he is right. We have not, as directors, lost confidence in this mine. (Cheers.) If we had 20,000*l*. at our back we should feel exceedingly happy, for we have the firm conviction that we could then develop it into a paying concern. (Cheers.) It has been trying enough I know to the patience of the shareholders, but still more trying has it been to that of the directors who have had to bear the responsibilities of the situation, as well as the mortification of the great disappointments and delays that have occurred. (Hear, hear.) We have had to go on hoping against hope, but now I believe there is

THE BASIS BEFORE US OF SUBSTANTIAL SUCCESS.

There is every reason to believe we shall see our way during the coming year to bring about a better state of affairs for the company, and it is with this confidence I beg now to move "That the report of the directors be received, and the accounts passed." (Loud cheers.)

Major SCRIVEN : I have great pleasure in seconding the proposition.

Mr. TREDGOLD : You have not propounded any scheme for raising additional capital.

The CHAIRMAN : Not at present.

RELATIONS WITH YURUARI FRIENDLY.

Mr. TREDGOLD : I am surprised the use of the Yuruari mill costs us only 1,000*l*. a year. The chairman of that company a few weeks ago told the shareholders that by arrangements made with this company the Yuruari Company was saved 3,000*l*. or 4,000*l*. a year.

The CHAIRMAN : Yes, that is because we sell them wood. They pay us so much per cord, which is a great saving to them, because they have no wood near them. That was chiefly the ground upon which Mr. Hugh Watt came to me, wishing also to have Mr. Pryor to manage their company, and I may here say that we have always got on in the most friendly way with Mr. Watt. (Hear, hear.) We have abundant wood for our own purposes, and can afford to sell them what they require.

The report was unanimously adopted.

Mr. BALL : I have much pleasure in moving the second resolution, "That the retiring directors, Mr. S. F. Somes and Mr. G. S. Duff, be, and they are re-elected directors." It is not necessary to expatiate upon the services of these gentlemen, and particularly of our chairman. (Cheers.)

Mr. RUGG seconded the motion, which was carried by acclamation.

A GOOD EXAMPLE.

Mr. FRY : I think the directors set a good example in the matter of their fees. (Cheers.) That might be added to the resolution. (Laughter.)

Mr. BALL : That will come in better in the vote of thanks to the directors at the end.

The CHAIRMAN : I thank you, Mr. Ball, and you, Mr. Rugg, for the kind manner in which you have proposed and seconded this resolution, and the shareholders for the manner in which they have carried it. I reply also on behalf of Mr. Duff. We are much obliged to you for the cordial manner in which you have re-elected us to our seats on the board. We have proved to you, at any rate during 10 years' service, that we do not desert the ship, and we are determined to stick to it to the last, and hope we shall yet see it sailing gallantly along. (Cheers.)

Mr. HOOPER proposed "That Messrs. Turquand, Youngs and Co. be re-elected auditors of the company."

Mr. ELLIOTT seconded the motion, and it was carried unanimously.

The CHAIRMAN : That completes the business, and I thank you for your attendance.

SERVICES OF MR. SOMES NOT FORGOTTEN.

Mr. WATSON : I beg to propose a vote of thanks to our chairman. We are indebted to him for the able manner in which he has carried out his duties, and we all have the confidence he has that we shall ultimately see a successful issue for this company.

The motion was seconded, and carried by acclamation.

The CHAIRMAN: I again assure you that we shall continue to devote our best energies to the interests of the company.

LATEST REPORT.

Under date 12th December, Mr. Pryor writes from Peru:—I was never better pleased with the appearance of the two principal lodes. Socorro is slightly smaller, but improved in quality, with remarkably regular walls containing nearly 2 ft. of quartz, which at this small depth is of a ferruginous nature. It shows unmistakable signs of holding in depth, and may be expected to harden as it does so. As to Potosi Viejo, this lode maintains its character both in promise and performance. After dividing into two shoots, both of good milling quartz and both between regular walls, it now seems disposed to reunite in depth into one body. The quartz, though, of course, varying in value, is of the nature of the sample which I had the pleasure of shipping to you on the occasion of my last report. (N.B.—This is the sample which was shown at the meeting of shareholders.) I believe from this that the lode is about to assume a more regular formation, which will render it easier to follow and cheaper to work. My faith in this lode is stronger than ever, and I only wish that I had the means of obtaining, by the immediate development it deserves, those results which, under present circumstances, can only be slowly and patiently wrought out. Water is on the increase in the mine, and although I hail this as one more sign of permanence, yet it naturally hinders work by forcing us from time to time to hoist water instead of quartz. At this rate I shall soon have to lower a small steam pump to dry the mine periodically.

The following is a copy of telegram despatched 26th December:—"690 tons of quartz crushed from Potosi Viejo and Socorro lodes; 600 ozs. of gold remitted; 20 stamps running; 18 days' work."

N.B.—The above shows that beyond the heavy loss in tailings, referred to at the annual meeting just held, the quartz has yielded fully 17½ dwts. per ton.

THE NORTH-EASTERN BULTFONTEIN, LIMITED.

"TROUBLE OF QUITE AN EXTRAORDINARY NATURE"—THE QUESTION WITH THE DE BEERS MINE.

THE second ordinary general meeting of the North-Eastern Bultfontein, Limited, was held at Winchester House (Room No. 141, First Floor), Old Broad Street (instead of at the Cannon Street Hotel), on Monday, the 29th day of December, to receive the directors' report and statement of accounts to the 30th September last, and to transact the general business of the company.

Mr. C. J. Posno presided.

Mr. PERCY H. HORLEY (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, in discussing the business of this meeting, we have to bear in mind that the statement shows mainly, as you will find, the sums expended on account of the acquisition of claim ground, the cost of sinking shafts, and of making tunnels, and the expenses connected with the purchase, transport and erection of plant and machinery. It took the best part of the period under review to accomplish the necessary preliminary work before any washing could be attempted. The company, you will recollect, was formed eighteen months ago, and I would point out to you that it differs from other diamond mining companies, whereof accounts for late years have been published, in this material point, that whereas such other companies generally operated on claim ground which had already been worked upon, the North-Eastern Bultfontein had acquired what was mostly virgin ground, and had therefore all the preliminary work to do from the top downwards. Now

THE COMPANY HAD FOR ITS FIRST OBJECT,

the carrying into effect of an agreement with the London and South African Exploration Company, in respect of 200 claims which had, never been worked. Mr. Townshend Griffin, our managing director, travelled out to South Africa, and made observations on the spot, with assistance derived from Mr. Goldie, a gentleman of very great experience in South African diamond mining. He and Mr. Townshend Griffin were so pleased with the ground, the original 200 claims to which they had given their attention—that they strongly recommended the acquisition of more of such ground which was immediately adjoining. The effect was that 471 more claims were marked out, so that the number has risen to the important total of 671, as shown by the statement in your hands.

TROUBLE OF QUITE AN EXTRAORDINARY NATURE,

however, came upon us. The Bultfontein Mining Board began the trouble by objecting to our occupying a site, where we had erected a washing gear; and at a later period the De Beers Company made a claim to the ownership of the very claims we had commenced to open up, seriously interfering with our work and arresting it. We had acquired those claims in good faith, as the London and South African Exploration Company had leased them to us in good faith, and when we were checked the London and South African Exploration Company undertook to defend us. We are now informed—I am happy to be able to state that this question was fully argued out at Cape Town. It came on for hearing in the middle of this month, and the Supreme Court has given judgment in favour of the London and South African Exploration Company. (Cheers.)

IT IS ONLY A TELEGRAPHIC SUMMARY

that has come to hand as yet, but it is to this effect, that the leases of the London and South African Exploration Company are binding on the claim-holders, and on the mining boards; therefore no claim-holder can substantiate a right to more claim ground than to 30 ft. by 30 per claim granted to him by the terms of his lease. I am aware that some of the financial papers have been differently advised, and have published statements that may be misleading. You may have seen them, and that is why I think I am bound to refer to them; but I have no doubt that when they discover they have been misinformed they will correct the statements they have made. I do not know that I can tell you more unless you ask me questions. I am at your service to answer any questions you may put, if, in your opinion, I have not touched on all the points on which you desire information. Of course, I have said that the money has been expended mainly on getting ready, as it were, for the future on a block of claims which has grown to such an extent that whilst we were dealing with the first parts they have doubled and trebled. To give you some information of the work that has been done down to date, and where the money has gone, I may tell you that the Goldie shaft is down to 646 ft. Then there is a shaft called Shaft No. 2, which is down 638 ft.; and there is another shaft, which they have been good enough to christen the Posno Shaft, which is down to 530 ft. We have also 3,872 ft. of tramway line, and there are 18 tunnels, measuring some 2,846 ft., so that you see that the money has been laid out with regard to the future, and that if we have found 10,000*l*. worth of diamonds in the yellow we are so much the better pleased.

THE IMPORTANT POINT FOR THE FUTURE

is that in all these tunnels and shafts we are in the blue. We have some blue on the floor, and we are engaged in adding another 10,000 loads from another part of the works to our floor at the present moment. I beg leave to move, "That the report and statement of accounts, as rendered, be and are hereby received and adopted."

Mr. BERNARD HENRY SCHRÖDER: I beg to second the resolution.

THE QUESTION OF APPEAL.

Mr. W. TADDER: May I ask whether the decision of the Supreme Court is final, or whether there is any appeal?

The CHAIRMAN: There is an appeal from the Supreme Court to the Privy Council here; but we have reason to believe, that the De Beers Company have submitted to the judgment.

Mr. HALDENSTEIN, who here entered the room, remarked that he had been to Cannon Street Hotel to attend the meeting, as the circular which he had received stated that it was to be held there.

The CHAIRMAN said that after the notice conveuing the meeting was sent out the directors found that all the rooms at the Cannon Street Hotel were engaged. They then decided to hold the meeting at Winchester House, and sent out fresh notices to that effect. He was sorry if they had not reached all the shareholders.

Several SHAREHOLDERS stated that they had not received the latter circular.

The CHAIRMAN remarked that the secretary had sent them, and then reiterated the information he had previously given.

Mr. W. TADDER: Do the proceedings affect the whole of our 671 claims referred to?

The CHAIRMAN: Yes; that matter may be looked upon as settled in our favour.

A SHAREHOLDER: I presume there will be no registration of fresh claims until we are satisfied about the judgment of the Court, and the appeal against it? (Hear, hear.)

The CHAIRMAN: I take it that the decision is final. Whether the claims be registered or not, under this judgment they properly belong to the North-Eastern Bultfontein Company.

After some further discussion,

Mr. HALDENSTEIN said: I see in the balance-sheet several items I do not like. (Hear, hear.) I see the 671 claims have been purchased for 68,150*l*.

The CHAIRMAN: Only 21,666*l*. has been paid in respect of them.

Mr. HALDENSTEIN: Then, taking your own words as correct, you have paid one-third of the purchase-money for a tenth of the claims. (Hear, hear.)

The CHAIRMAN: We have not. We paid the 21,666*l*. on account of the whole. (Oh, oh.) We have really got possession of the whole of the claims, and have been working them in part. We have physical possession of the whole of the block. The rights of the vendors to lease out the claims, and of our possessing them under our lease, has been argued out in Court, and settled in our favour.

OUR TITLES ARE PERFECTLY GOOD.

Mr. TADDER: If it turns out that the right of the London and South African Company to lease their claims to us turns out to be bad, shall we have a claim against that company for the money we have paid them?

The CHAIRMAN: That is a difficult question to answer—(hear, hear)—at present, and I am not prepared to answer it in the face of the judgment of the Court. The Court says we are justly entitled to the claims, and there is an end of the matter so far as I see.

Mr. HALDENSTEIN: Do you think you were justified in calling up more capital when you knew of these difficulties?

The CHAIRMAN: We had every reason to believe that our title was perfect, and I believe now it is perfect.

A SHAREHOLDER: Has there been any difficulty as to the registration of the 65 claims?

The CHAIRMAN: None whatever.

Replying to a shareholder,

The CHAIRMAN said that the accounts had been audited both here and in South Africa.

Mr. PARROTT: Do you intend to go on working the mine, or allow operations to be suspended till we know more of our legal position?

The CHAIRMAN: We are going on working now.

Mr. PARROTT: Operations have been stopped, have they not?

The CHAIRMAN: Yes; they have been interfered with by the action of the De Beers Company.

Mr. HALDENSTEIN then moved an amendment that the report and accounts be not adopted until further details were given.

AMENDMENT LOST.

Mr. POPE seconded the amendment, which was put to the meeting and lost by a large majority.

The original resolution for the adoption of the report and accounts was then put and carried.

The CHAIRMAN having announced that the directors and auditors would continue to hold office until 1891, in accordance with the articles of association of the company,

Mr. HALDENSTEIN moved, and a SHAREHOLDER seconded, a vote of thanks to the chairman, which was carried, and the CHAIRMAN having briefly responded, the meeting separated.

THE ZOUTPANSBERG EXPLORATION AND GOLD MINING CO., LIMITED.

DIRECTORS, THOUGH UNPAID, WORK HARD AND SUCCESSFULLY FOR THE SHAREHOLDERS—ENCOURAGING ACCOUNTS OF THE PROPERTIES BY THE CHAIRMAN, AND ALSO BY MR. FRECHEVILLE, WHO HAS VISITED THEM.

THE ordinary general meeting was held at the City Terminus Hotel, on Monday, to transact the ordinary business of the company. Notice was also given that after the ordinary general meeting, an extraordinary general meeting of the company would be held for the purpose of considering and, if thought fit, passing, with or without modifications, the resolution following :—

"That the capital of the company be increased from 151,500*l*. to 226,500*l*. by the creation of 75,000 new shares of 1*l*. each, to be called preference shares, and that there be attached to such preference shares the right as from the date of allotment thereof respectively, to a fixed cumulative preferential dividend at the rate of 10 per cent. per annum on the capital paid up thereon for the time being, and also to a further dividend at the same rate per cent. as any dividend from time to time declared on the capital paid up on the ordinary shares, and to rank, both as regards dividend and capital, in priority to the ordinary shares, and any shares hereafter created, and that the directors be, and they are hereby, authorised to dispose of the said new shares to such persons and on such terms and conditions as they think expedient."

F. A. Gillam, Esq. (chairman of the company), presided.

THOMAS F. DALGLISH, Esq. (secretary), read the notice of meeting.

SPECIAL REASONS FOR DELAYING THE MEETING.

The CHAIRMAN : You have all had before you the directors' report and the balance-sheet, which were prepared as soon as we received the full audited accounts from South Africa. The accounts are made up for a period of 19½ months to the 30th June last, and contain particulars of the expenditure of the company's money and of the properties acquired. We would have wished to have met you earlier, but inasmuch as our engineer, Mr. Frecheville, who has been absent, could not return to England until last week, we thought it would be of advantage to you for him to be present at this table to give any explanations you may desire as to the properties of the company, all of which he has personally investigated. He is now here, and will supplement my remarks on the properties in which we are interested. He is one of the few men in England who knows the country, and he can give you full evidence that we have the best properties there.

MR. FRECHEVILLE'S VISIT.

You have no doubt studied his reports and plans which are attached to our report, and from these you will have gathered with satisfaction that the properties possessed by this company are considered valuable and of great promise. All we want now is a favourable market in order to realise them to advantage. Before going into details as to the properties held by, and into the working of the company, it might be well for me to say a few words concerning the creation of this company and the objects for which it was formed. A few well-known prospectors, whose names appear on the report, and who have been for many years in South Africa, more particularly engaged in the Jagersfontein Diamond Mine, had been occupied with the development of the reefs, next to the Eersteling farm, on the western border of the Zoutpansberg district, one of the first properties in the Transvaal from which gold had been taken. They acquired mining rights, and opened out several of the reefs, of which the Fair Maid of Perth appeared to be of special value. After being for some time occupied in this part of Zoutpansberg, they formed a very favourable opinion as to the prospects of the district lying east and north of the Frischegewaad and Waterfall farms where they were working. Strange to say this part of the Transvaal was at the time little known. Even less was known of it than of the goldfields of Matabeleland. The district offered few inducements for traders, and a good portion of it was the hunting ground of the Boers. From what the prospectors heard, and from what they themselves had seen as far as they were able to explore, this country appeared to possess every good indication of rich mineral wealth. Under these circumstances Mr. Malcolm Clark came to London with the intention of finding capital to support himself and his partners in their contemplated operations. Seeing what had just occurred at the Witwatersrandt district where quite an unknown and neglected piece of country had been suddenly turned to such enormous value, it was thought not improbable that similarly rich discoveries might be made in the Zoutpansberg district which, from the results already obtained from Eersteling, promised so well. The outcome was that the prospectors formed this company, and brought into it all the properties they possessed in Frischegewaad and Waterfall, and two of them engaged to give the company their services free for one year to prospect further north and east. It was also arranged that one of their number should go up to Matabeleland with the object of obtaining, if possible, a concession from Lo Bengula. The general idea was that they should prospect and find the properties, and that the shareholders should finance them. If any of the properties or claims pegged out proved after investigation to be thoroughly sound, it was arranged that the company in London should float them into sub-companies to work and develop. I need not mention that the main inducement to the arrangement was the securing of rights in Matabeleland, but the acquisition by the managers of the Goldfields of South Africa, Limited, of the concessions from Lobengula prevented the enterprise being carried out.

OPERATIONS OF PROSPECTORS.

In consequence, the operations of the prospectors were for the time confined to the Transvaal and to the Orange Free State, where some of them were located. The first venture undertaken was to secure the lease of the Vogelsfontein farm adjoining the Jagersfontein Mine. From the surface indications of this farm it was evident that there was a deposit of blue ground similar to that found in the adjacent mine of Jagersfontein. Whether it was diamondiferous or not remained to be determined. The prospectors gradually and economically proceeded to open up this farm. As you will see from the drawing, the main reef of the mine has been traced for some distance, and at the present moment work is going on in order to determine the other limits. Some time back a few loads of the blue ground were washed, and two diamonds were found, and at the present moment there is a quantity of blue ground on the floors, which will be washed as soon as pulverised. This work could no doubt have been carried on more expeditiously, but it was preferred to proceed with caution, so that little money should be spent until a fair judgment could be formed of probable results. Progress has consequently been slow. Should the results turn out as we hope I need hardly point out that the profits of this company may be considerable. Meanwhile, for a little outlay the Zoutpansberg Company has the chance of securing a very large prize. About the time of the formation of this company Johannesburg was at the height of its prosperity. The rich leaders of the banket were being crushed with extraordinary results, and similar banket reefs had been traced west of Johannesburg to the Potchefstroom district. It was considered that even if these reefs should not prove as rich as those at Johannesburg, yet through being so much nearer to Kimberley and railway communication, they could be worked with greater economy. Many blocks of claims had been pegged out at Potchefstroom, and those known as the Witkoppies, which had been developed, were considered to be of the best. The prospectors consequently purchased this block of claims, the merits of which can be seen from Mr. Frecheville's report. Although other claimholders in this district floated their claims, acting on Mr. Frecheville's advice the board deferred taking this step, as, after subsequent examination by experts, they did not feel sufficient confidence that the district would as yet prove to be payable, viewing the large expense of mining caused by the high rate of wages and the great cost of fuel and stores which then prevailed in the Johannesburg district. This course has proved a wise one, as the experience gained on these fields by the working of other companies has shown that the reefs if they average 10 to 12 dwts. per ton could only pay with reduced working expenditure. The cost of holding these claims is small, and the prospects of successful working and realisation has improved without this company having incurred expense beyond that of paying the licenses, and doing the required protective work. It is now said that the working expenses of many of these mines has been reduced to as low as 6 to 9 dwts. to the ton.

YIELD OF ORE.

Therefore, as Mr. Frecheville has estimated the yield of this property at 10 dwts. to 12 dwts., it ought later on to be capable of being worked at a good profit. After securing the Pochefstroom property the prospectors proceeded to Marabastad to prepare for exploration in the Zoutpansberg district. More work was done on the Frischgewaagd and Lower Waterfall property in order to further develop and prove the reefs, and some other claims were secured in the vicinity. In the meantime diggers who had gone to the northern and eastern district of Zoutpansberg reported the discovery of a large belt of gold-bearing country as to which the advices were most glowing. All over this country, which extended in a so-called mineral valley lying along the Murchison range, there were remains of old workings, while the surface reef indications were very rich. In a very short time the whole of the country was pegged out by diggers. Mr. Malcolm Clark and his colleagues were early on the spot, and the directors were advised by them that they had obtained the refusal of the most valuable property there, and had also acquired other claims for this company. Their letters were all of a very optimistic nature as to this new belt, and as to the claims they had secured. The directors, however, had already come to the conclusion that it was necessary to have the best professional advice they could obtain to ascertain the exact merits and prospects of the Zoutpansberg district in general, and of the properties so far acquired in particular. They consequently secured the services of Mr. R. J. Frecheville, formerly H.M. Mining Inspector in Cornwall, &c., who from his valuable and varied experience would be able to advise the directors as to the best steps to be taken. This was the more necessary, because of the inflation prevailing at the Cape, which was of such an extreme nature that it was imperative to exercise the greatest caution in order to avoid serious mistakes. Well, gentlemen, Mr. Frecheville proceeded to the Cape, and investigated the properties already acquired, upon which you see he reported favourably. After some unavoidable delay he arrived at the Murchison range and joined the prospectors. Mr. Malcolm Clark with his colleagues were impatiently waiting his arrival, as the board would not sanction the acquisition by them of any property until Mr. Frecheville had had an opportunity of seeing it himself. Mr. Frecheville, after inspecting the Murchison Crown Reef, strongly recommended the board to acquire this property, the surface indications being very rich. As the funds of the company then in hand would not enable them to carry out the purchase, the directors agreed to lend the company sufficient money on easy terms, viz., at 5 per cent. interest, and without any hampering conditions, to enable us to acquire this valuable property, which would otherwise have been lost to us. As to the other claims and refusals secured, Mr. Frecheville advised that they should not be taken up, as owing to the remoteness of the district only rich properties could for some time to come be worked at a profit. Acting upon this advice, the board declined most of the other properties under offer so as not to involve the company in heavy expenditure for licenses and development, which, owing to the great cost there of mining, showed but little chance of present success, The board would not, and will not, undertake to form sub-companies, except when they believe that the business is sound, and promises early success. On Mr. Frecheville's return to England his report to the board on the Murchison Crown Reef warranted them in at once forming a company to take over this property.

FORMATION OF MURCHISON COMPANY.

The Murchison Crown Exploration and Gold Mining Company was, consequently, registered for this purpose, and for taking up as opportunity offered other exploration business. The company was formed, without any promotion expenses, with a total issued capital of 100,000*l*., of which the Zoutpansberg Company received 45,000 fully-paid ordinary and 375 founders' shares for the property. The Murchison Crown Company was provided with an available working capital of 40,500*l*. to start with. Our report does not fully explain the circumstances under which this working capital was subscribed. It might be gathered from it that the shareholders of this company were the first to provide this capital. The facts of the case, however, are that the whole 40,500*l*. working capital was guaranteed free of commission or promotion money by the directors and other friends, the option, however, being reserved to the shareholders to take up in proportion to their holding one

half of the amount. Of this option the sharcholders fully availed themselves, and the directors and their friends provided the remaining moiety. The company, therefore, started with ample means to do business. In the working of the reef, and in the future results of the Murchison Crown Company we, therefore, are largely concerned, for reckoning that this company holds over 600 of the founders' shares we are approximately interested to the extent of one-half in the business. The 2,000 tons of ore taken from the outcrops of the property are certainly very rich, and two independent sets of assays of the different piles have averaged 6 ozs. per ton, though if the ore mills only 2 ozs. it will he very satisfactory. How far this reef extends, or what it is likely to be in depth, we cannot at preseut say, as this is a matter about which the company's experts have not yet arrived at a conclusion. The expenses on the property should, however, be covered by the present output of the ore, and this, and the fact that the Murchison Crown Company is concerned in other enterprises which may turn to value, will, it is hoped, be a source of large profit to the Zoutpansberg Company.

CONTEMPLATED EXPEDITION TO MANICA.

The Murchison Crown Company have it in contemplation to send an expedition to Manica in conjunction with a company that has the right to locate claims in that country. Your directors had hoped to realise from the 45,000 ordinary shares of the Murchison Crown Company a very large sum of money which might have been available for distribution by way of return of assets. A depression in South African matters, however, set in and the board have therefore held these shares for realisation at a more favourable epoch. The general depression has been so rapid that the directors have been prevented from disposing of the other properties the company has kept, but I may tell you that negotiations have been going on with regard to the amalgamation of the Frischegewaad and Lower Waterfall property with the well-known Eersteliug farm belonging to the Balkis Company, and it is probable that this amalgamation, which would be of great advantage to both companies, will eventually be carried out, in which case this company would receive a large and remunerative consideration. During the falling market, which has supervened, there was little that the prospectors could do. It was of no use looking into fresh business, which was certain to decline in value. It is, however, a long lane that has no turning, and the directors believe that this depression has almost reached its limit. Properties for which the most ridiculous sums were asked can now be had for a mere song. The directors find there is no difficulty in getting business, the difficulty is to discriminate aud to secure business of a sound and approved nature, and unless it is believed to be of this description the board will certainly not take it up. Meanwhile the contract with the vendors having expired the directors have arranged that the company's business should be re-organised in South Africa.

WELL SERVED ON THE SPOT.

It has been settled that the prospectors should form themselves into a committee at Johannesburg for the purpose of consultation and to advise the directors. The board have, as you are informed, been fortunate enough to secure the services of Dr. Magin, a gentleman of high standing and capacity, the correctness of whose views on South African matters they have had occasion to gauge aud approve. This gentleman has now consented to act as business agent and local consulting engineer of the company. He has already done great service in having all the accounts of the prospectors put iuto proper order. He will, in future, act as local adviser to the board and committee, and all further business will be first subunitted to him for approval. Dr. Magin has been at great pains to examine several proposals which might possibly have suited this compauy, the terms being extremely remuucrative if he could have given the business his approval. It would be too long for me to go into any of these various proposals, all of which we have examined into thoroughly before concluding to decline them, nor would it be fair to other companies to explain here the reasons. The board, however, feel sure that these investigations will in time lead to the company making some good acquisitions. The company has now contracts with the prospectors by which they undertake to look out for fresh properties, and when required to proceed to any districts where it may be advisable to take up business, their remuneration entirely depending upon profitable results. While this compauy has thus a good organisation for undertaking fresh and successful business, it cannot, pending the realisation of its present assets, which may also require some financing, entertain new business, without determining with you how the requisite means are to be best provided. The depression appears to have reached bottom, and it is certainly an appropriate time to broach this matter to you. You will see from the balance-sheet that the company was formed without any great working capital, it having becu considered that 20,000*l*. would be sufficient iu the first iustance, with the intention, as exploration went on and demanded it, that further capital should be found. When the purchase of the Murchison Crown Reef was recommended by Mr. Frecheville, as already stated, the directors at once came forward to supply the company with the means to secure that property which otherwise would have been lost to the company, and subsequently the necessary capital for current expenses has beeu supplied by the board, as explained, on terms most favourable to the company iu order to continue the development and protection of its properties.

FRESH BUSINESS.

To take up fresh business, however, it will be obligatory to provide further means which shall be available when wanted, and this the directors propose to do in such a way that the increase of capital will fall as lightly as possible on the shareholders. In order to effect this they have had to consider many schemes, and they recommend the proposal which has been brought forward for your considcration in the report, and notice convening this meeting. It is not intended in the first instance to issue more than 25,000*l*. of preference shares, being at the rate of one preference share to six ordinary shares, and as there is no immediate hurry for money it is not proposed to call up for the present more than a few shillings per share. The balance will be called up as fresh business presents itself, or as the requirements of the company have to be provided for. In this way, as the business contemplated by the board is not one that will involve much cash outlay, the company will be provided with ample means to do fresh business when desirable. Meanwhile it is to be hoped when the time comes that the present properties will meet with favourable realisation. To both ends the directors will continue to lend their earnest endeavours. The directors have shown their confidencc in the ultimate success of the company iu the manner they have supported it up to the present time. They are quite prepared to wait for the result, and have as yet asked for no remuneration for their services, preferring to accept no fees until favourable realisations take place. They have confidence that in the future good busiuess will be done, aud they ask from the shareholders their cordial and full support. In conclusion, I beg to move, "That the accounts and report be received and adopted," and I shall be very pleased to give any further information which you may desire. (Cheers.)

Mr. YEOMAN: I second the motion.

VIEWS OF MR. FRECHEVILLE.

Mr. FRECHEVILLE: The report of the directors and the speech of the chairman will have placed you in possession of all material facts touching upon the operations of your company, so that there remains but little for me to say. However, as I have had the opportunity of visitiug your various properties whilst I was in South Africa, I will say a few words about them. The Zoutpansberg district, as you are aware, is quite a new one. There is practically very little mining in the district—certainly no deep mining. Some very rich finds have been made, but as mining has not been carried to any depth it is impossible with any degree of accuracy to forecast its future. Your properties in Zoutpansberg, from my personal observations, have been very carefully selected, and present as good if not better chances of success than any others in that part of South Africa. (Cheers.) With respect to the Murchison Crown Company, in which, as your chairman has informed you, you hold a very large interest—its surface indications were remarkably rich. The small amount of development works, so far done, has resulted iu about 2,000 tons of quartz being mined and at surface, the average assay is about 6 ozs. to the ton. The manager also reports another 1,000 or 1,500 tons of similar quartz as standiug in the mine. Operations are now going on with the object of ascertaining the permanency of the reef in depth or otherwise. On the Frischegewaad and Lower Waterfall properties, situated some distance to the west of the others, you have a very valuable block of claims. There are

SEVERAL GOLD-BEARING REEFS,

the principal one being the "Fair Maid of Perth," which has been traced and opened on by the prospecting pits for about three-quarters of a mile, carrying gold throughout at several points in paying quantities. This reef in the adjoining farm of Eersteling is known as Button Reef, and was one of the first properties opened out for gold in South Africa. It was worked, and a considerable quantity of gold extracted, hut at that time a Kaffir war broke out, and operations were only resumed after the rich discoveries at Johannesburg. That reef runs through your property aud the Eersteling, and it is undoubtedly the main reef of that part of the district. You have been fortunate enough to secure the only available water-right in the vicinity. You have a fine stream of water running through one of your Mynpaeht, which is amply sufficient for all milling purposes both for yourselves and ueighhours, so that you have in this one particular practically the command of that portion of the district. Tnat explains your Zoutpansberg properties, but you have others.

OTHER PROPERTIES.

For instance, you have near Klerksdorp, in the Pochefstroom district, a block of claims, in which the outcrops of a banket reef can be seen of about 450 ft. The average panuings were 10 to 12 dwts., but at some points I got pannings from 3 to 4 ozs., and in a pit sunk to a depth of 15 ft. the average of the whole reef was 1 oz. to the ton. The prospectors, local men, have a very high opinion of that reef, because of that very rich leader that accompanies it, but the whole reef, for the entire length exposed, averaged from 10 to 12 dwts. At that time such a class of ore could not have been worked remuneratively at Klerksdorp, but in that part of South Africa there are now much greater facilities than there were then, and I am informed that the expenses have been brought down now so that 10 to 12 dwts. stuff yields a good profit. In the Orange Free States the Vogelsfontein property is being opened up for diamonds, and they have been discovered. In fact there is a large deposit of blue ground, and it is precisely of the same character as that of Jagersfontein, and you cannot tell the difference. That there are diamonds in your blue ground has been proved by the washing of a few loads. Several thousand loads must be washed before you can know whether you have a paying diamond mine or not. Your local committee are men of very good reputation in the couutry, and of long experience, and they have the opportunity of having the advice of Dr. Magin, a mining engineer, who I consider to be one of the most able and experienced men in South Africa to-day. I think, therefore,

YOUR ORGANISATION IS TOLERABLY PERFECT,

and that you will have an excellent opportunity of enquiring into the merits of, and taking hold of any business that may be submitted to you from there. (Cheers.)

The report was unanimously adopted, and on the motion of the CHAIRMAN, seconded by Mr. VAUGHAN, the retiring director, Mr. Yeoman, was unanimously re-elected.

The election of the auditors, Messrs. Cooper Bros. and Co., was proposed by a SHAREHOLDER, seconded by Mr. PIXLEY, and carried unanimously.

EXTRAORDINARY MEETING.

The notice of the extraordinary meeting was then read by Mr. DALGLISH, and was for the purpose of passing, if thought fit, with or without modification, a special resolution as given above.

The CHAIRMAN proposed the resolution.

Mr. SISTERSON seconded the motion, and said: You only suggest calling up 25,000 shares and a few shillings on that, so that the burden will not press heavily on the shareholders.

The motion was carried unanimously.

Mr. THORN, in proposing a vote of thanks, complimented the chairman on the full and frank manner in which he had placed the whole position before the shareholders. It was not always that this was done, and therefore when done it ought to be suitably recognised. The chairman had gone fully into matters, and had not, as was frequently the case, omitted crucial points which he ought to set forth.

Mr. CORNFORTH seconded the motion, which was carried, and the meeting closed.

THE IQUIQUE SILVER CO., LIMITED.

A SATISFACTORY STATEMENT AS TO THE POSITION OF THE MINE.

THE second general meeting of the proprietors of this company was held on Tuesday at Winchester House.

Mr. E. C. Haines presided.

The SECRETARY (Mr. F. R. Alexander) read the notice calling the meeting.

The CHAIRMAN said that he had to announce with regret the absence of their chairman, owing to a very severe cold, which prevented his speaking. He trusted that he himself, although also suffering from hoarseness, would be able to fulfil the chairman's duties to their satisfaction. As the shareholders would see by the balance-sheet, the total expenditure at the mine for the past year had been 7,727*l*. 8s. 7d., and he would give them some of the details which were not mentioned in the balance-sheet. That sum included the total amount which had been expended on the mine, including the house expenses, materials, goods for the supply of their shops, provisions for their workmen, working expenses at the mine, the amounts paid to their men (they employed 55 men at the present time), and the manager's salary, from which they had deducted the amount of profit which they had made by the sale of provisions to their men. The item of machinery in transit was the value of

TWO INGERSOLL DRILLS, WHICH HAD BEEN SENT OUT FOR USE AT THE MINE.

They had no expensive machinery; all their ore was taken down to the smelting works, and they were thus able to economise largely in that respect. The London administrative expenses amounted to 892*l*. 6s. 3d. The directors' fees were included in that amount; the directors received 100*l*. per annum, and the chairman 150*l*., making 450*l*. altogether; the rent was 50*l*.; stationery, 50*l*.; salaries for the bookkeeper and secretary, 220*l*. The directors had also included 50*l*. for Mr. Pope's fare, the auditors' fees and certain other expenses amounting to 133*l*. The legal expenses included the expenses in connection with taking steps to make good the titles of the property in Chili, about 80*l*., and telegrams, being cost of wires received from and sent to Chile, and postages amounted to 80*l*., which, after deducting the interest on cash deposit and transfer fees, left a balance of 892*l*. 6s. 3d. On the other side the only item of importance was calls in arrear 326*l*. At the time the balance-sheet was made up it was that amount, but since then it had been reduced to 225*l*.; the other items explained themselves. The workmen did not draw the whole of their money, but took metal clips, which they exchanged for goods at their shops. There was 180*l*. in that way owing to the men. The item for directors' fees on that side showed that

FOR TWO YEARS THE DIRECTORS HAD NOT DRAWN THEIR FEES.

With regard to the working of the mine, the period embraced by the balance-sheet was from August 21st, 1889, to August 31st, 1890, and for a greater part of that time they were working at high pressure, night and day. At the present time, however, they were only working single shifts, and had greatly reduced the working expenses. There had been some serious labour difficulties which had caused a rise of wages, and a deal of damage had been done, although

THEIR COMPANY HAD NOT SUSTAINED ANY GREAT DAMAGE FROM THE INCIDENT.

The resignation of their engineer, Mr. Lewin, through family reasons, had necessitated the engagement of an interim manager, and the directors thought that was a time for effecting some economies in the working of the mine. They therefore appointed Mr. Pope, who had been working as mining captain, and did away with the post of consulting engineer altogether. Mr. Pope went out on July 31st, and took stock on that day, and as he did not wish to take stock one month after, the valuation of their stock was taken from that date. With the balance-sheet was sent out a letter dated 21st October, which he had no doubt all the shareholders had read, and since then they had received other letters from the mine, the latest of which was dated November 18th, Mr. Pope up to that day having had most of his time taken up with going over the work of his predecessors. In the report was mentioned the San Vicente, one of the three mines which they were at present working. The work continued the same with the exception of one of the levels from cross-cut No. 2, where their manager reported that the lode was wide and well-defined, and a gradual improvement had taken place within the last few metres. In the 23-metre level the lode gave 5 marks to the cajon, but in the 32-metre level the manager reported that the lode had become broken up. From the assays which they had made they had got 85 marks per cajon, or 197 ozs. to the ton.

THEY HAD IN HAND $2.000, WHICH HAD BEEN INCREASED, ACCORDING TO THEIR LATEST ADVICES, TO $4,000.

Their manager gave some further interesting details with regard to the way in which that amount had been earned. He sent down to the foundry every month the amount of metal which had been raised in that mine, and for the month of October it was sold for $3,331. The metal before it was sent down was picked over and put in heaps, which of course varied in the amount of silver contained in each. The shareholders might perhaps be interested in hearing the amount of silver contained in the three heaps extracted in the month of October. The first heap contains 57.11 metrical quintals, from which they got 43 marks to the cajou, equal to 107 ozs. to the ton. The second heap, containing 25.22 metrical quintals, gave 139.77 marks to the cajon, or 344 ozs. per ton; and another lot, containing 4.65 metrical quintals, gave 342.32 marks to the cajon, or 844 ozs. to the ton. Those assays were comparatively rich, although small when compared to what had been obtained on neighbouring properties. At the present time their ores gave an average of 2 per cent. of silver, while on neighbouring mines it had been as high as 20 per cent.; and the total amount which they had received had been $3,331. The directors did not know how the second month's figures were arrived at, but they knew the amount was $4,000. The mining laws of Chili were altered from the first of the present year, and although they were not working the denounced mines, they were obliged to pay the small royalty, which amounted to $10 per annum on each. So they paid $50, or 4*l*. 10s. per annum, for the denounced properties. On one, the Laurita, their manager attached the greatest importance, as he estimated that the silver lodes from the Leonor and Sara Mines were verging together there. He (the speaker) thought he could congratulate the shareholders upon the present condition of the mines. When he met them last year no silver had been worked, but on the present occasion he was able to report that they had got into the silver region, and they had worked sufficient silver during the last two months to pay their working expenses, and

THEY HAD STILL A FAIR CAPITAL IN LONDON.

He trusted that the results would continue as satisfactory as they had been recently. All mining was in one respect a gamble, but he thought that the Iquique Silver Mine was a fairly good gamble to the holders of the shares in the mine. Everyone who put money into a mine ought to be able to take the loss as well as the gain, and not to blame the directors of the company if the mine should turn out unsatisfactory, as it was impossible for the directors of a mining company to see into the earth. He trusted, however, that the results would prove satisfactory now they had got into the silver, and trusted they would have the same success as had been gained by other mines in the vicinity. He concluded by moving the adoption of the report and statement of accounts.

Mr. H. LUND seconded the resolution.

In answer to questions,

The CHAIRMAN said their mine was conducted in a Spanish country, and the mining words used were, therefore, technical Spanish terms. A cajon was 6,400 lbs., or about 3 tons. The board would endeavour in future to make their reports as simple as possible, but the shareholders would understand they were very lengthy, and the directors gave them in the terms used for fear of creating an erroneous impression. With regard to the telegrams received from the mine, they were always published immediately the directors were assured of their *bonâ-fide* character, but

THE DIRECTORS CONSIDERED IT BEST NOT TO PUBLISH ANYTHING THAT MIGHT LEAD TO A SUDDEN RISE IN THE PRICE OF SHARES UNLESS THEY WERE ASSURED OF ITS ABSOLUTE TRUTH,

and any rumours which got about without being officially published emanated in no way from the board.

The resolution was unanimously approved, and

A vote of thanks to the chairman and board of directors closed the proceedings.

THE WASSAU (GOLD COAST) MINING CO., LIMITED.

THE ordinary annual general meeting of this company was held at the Office of the company, 147, Cannon Street, E.C., on Tuesday, the 30th December, 1890.

It being merely a *pro forma* meeting, the only business transacted was the re-election of a director and the auditor.

It was unanimously resolved to adjourn the meeting to May or June next.

KETCHAU (PAHANG) CORPORATION, LIMITED.

ALLEGATIONS FROM UNKNOWN QUARTERS.

THE ordinary general meeting of this company was held on Wednesday at Winchester House.

Genl. BARWELL presided, and said that the shareholders were no doubt aware of the allegations which had been made against the company shortly after its formation, which prevented to a great extent the public subscribing for the shares, and caused many who had subscribed to withdraw. They accordingly employed Mr. Becher to make a report on the property, which had been communicated to the shareholders by circular. All explorations which had been made had been conducted on a most economical scale, and directions were given that the exploration expenses for 12 months were not to exceed 3,000*l*., which would show that the directors exercised every care in that way. Their property adjoined the Raub Mine, from which such good results had been obtained, and the board had every reason to believe, according to the results of the assays which had already been made, that they would have as satisfactory results. The exact boundaries of their concession had not been surveyed, but they owned 100 square miles, of which only five had been explored, which was sufficient for the formation of many subsidiary companies. Had it not been for the fact that they had been hampered for money, owing to the calls not having been paid, they would have been, in all probability, paying a dividend.

THE DIRECTORS HAD DRAWN ONE-THIRD OF THE FEES TO WHICH THEY WERE ENTITLED,

and these fees had been invested by them in shares of the company which he thought was a sign of what they thought of the property personally. The board did not know by whom the allegations had been made. The results which they were now publishing ought to raise the market value of the shares, and in the present state of affairs he saw no reason why the calls should not be paid in. After this meeting, if they still remained unpaid, the board would forfeit the shares, and proceed against the holders to recover the payments overdue. He concluded by moving the adoption of the report, which was carried unanimously, and

A vote of thanks to the chairman and board of directors closed the proceedings.

LATEST NEWS.

Advices from the mine are satisfactory; prospects are encouraging. Samples 25 lbs. 8 ozs. Strike made in Bukit Siam yielded 24 ozs. retorted gold; have placed to your credit,

THE ZAMBESI SOFALA CONCESSIONS CO., LIMITED.

POSITION AND PROSPECTS OF THE COMPANY—THE ACTION OF THE CHARTERED SOUTH AFRICA COMPANY—THE LIKELIHOOD OF RAILWAY CONSTRUCTION.

THE ordinary general meeting of the Zambesi Sofala Concessions Company, Limited, was held at Winchester House, in the City of London, on Monday, the 29th day of December, 1890.

Major-Genl. W. Barwell Barwell presided.

Mr. T. J. FORD (the secretary) read the notice, and the report of the directors was taken as read.

A COMPANY WITH VALUABLE CONCESSIONS.

The CHAIRMAN: Gentlemen, it is my duty to move "That the report of the directors and the statement of accounts, now presented, be and are hereby received, approved, and adopted." The circulars which the board have sent round to the shareholders from time to time have given you pretty nearly all the information as the directors received it. It will be seen from the report the impossibility of any tangible results being as yet obtained, but you must bear in mind that this is not a mining company, nor even altogether a prospecting company, but is simply a company having valuable concessions to dispose of, and our first duty was to send out competent persons to locate claims, and secondly, to dispose of such claims as early as possible at the best price. As to the first, owing to the political situation it was not until November 21st, 1889, that we were able to start our expedition to the Mozambique, and owing to the South-East African Coast being extremely unhealthy at that time of year, death, disease and political complications, all combined to throw almost insurmountable obstacles in the way of success. Mr. Crampton, however, the leader of the expedition, overcame them all, and on the 15th June, 1890, reached Massi Kessi, in the Manica territory. As to the second, your board are now engaged in important negotiations with people of high standing and influence, who are desirous of interesting themselves to a large extent in this company. These negotiations, if carried to a successful issue, and from what has passed we are pretty confident as to the ultimate result, will no doubt be of great benefit to the shareholders of this company. Shareholders may naturally feel impatient, but I am sure you will see for yourselves how impossible it was to force on events. The board has had at times extremely anxious work, for to avoid friction, and to keep up friendly relations, and smooth and harmonious working, has required all the tact, patience, courtesy and firmness of which your directors and Mr. Crampton were capable; to the latter gentleman the thanks of the board are due for the way he has succeeded in keeping in the most excellent terms with the Portuguese authorities, and the Mozambique Company's officials on the spot. Both at Lisbon and in the Mozambique we are happy to say that we are on the best of terms with the authorities. The present political situation, however, still requires most careful conduct on the part of your board, and to move surely, we have perforce to move slowly; when such large political interests are at stake, your directors feel that they are steering the ship down the rapids—a false move at the helm means shipwreck.

THE CHARTERED COMPANY.

As regards the Chartered Company, your directors, in view of the friendly relations that have hitherto existed between the Portuguese authorities, the Mozambique Society, and your company, have, for the protection of your interests, addressed H.M. Government on the subject, and have protested in the strongest terms against the action taken by the Chartered Company, although, doubtless, immediately such action was known to Lord Salisbury, he, as Secretary of State for Foreign Affairs, would have drawn the attention of the Chartered Company to the agreement entered into between the British and Portuguese Governments, which agreement clearly defines and recognises the Manica country as belonging to Portugal. But if one thing were wanting to prove to us the value of our concessions it would be the anxiety displayed by the Chartered Company to become possessed of this "Naboth's vineyard." Have they not enough with their enormous concessions in Mashonaland and Matabeleland? The Chartered Company are credited, rightly or wrongly (probably rightly), with being very shrewd and knowledgable people—yet instead of developing their own huge concessions, what do we find?—their agents in Manica trying to get concessions from the native chiefs, and their explorers reported to be in large numbers in that country. As far as our information goes the Portuguese have been in possession of Manica for 200 years, and, moreover, have carried on mining operations there for very many years. Mr. Crampton, writing from Massi Kessi, says the "whole district is honeycombed with small shafts and workings" (extract). With a Foreign Minister of Lord Salisbury's calibre, I do not think we need fear but that the Chartered Company will be swiftly brought to its bearings, for rest assured, gentlemen, if such a precedent were permitted England would rue the day—for filibustering is a game that others can play at.

THE EXPEDITION.

With regard to our expedition, gentlemen, which, as I have told you, we were unable to get under weigh until November, 1889, owing to almost insurmountable difficulties with the authorities at Lisbon (all of which difficulties you directors are pleased to say have been most amicably and satisfactorily arranged) arrived on the coast of Africa just as the rainy season had commenced, and many weary months were lost before carriers could be found to face the journey into the interior. At starting, the expedition of this company was orgauised in conjunction with that of the Gaza Concession Company, thus securing the duplication of the chief and second in command; the economy, efficiency, and joint working thus gained is obvious, the interests of the two companies being identical; and most fortunate did the arrangement prove, for when death and ill health deprived the Sofala Company of its leader, and second in command, their places were at once filled by the officers of the Gaza Company, enormous expense and great delay being avoided. These two gentlemen proceeded with 150 natives from the Island of Chiloane to the mouth of the Pungue River, *viâ* Beira, Neves Ferreira, Sarmento, stations of the Mozambique Society of Lisbon, and after many hardships and difficulties arrived on the 17th of June at Massi Kessi, in Manica, our latest letters from them being dated July 18th. Mr. Crampton was retaining about 30 natives, and had constructed a store there, making it his headquarters, and starting his prospecting expeditions in different directions preparatory to leaving the company's claims wherever favourable and satisfactory mining ground should be discovered.

COUNTRY DESCRIBED.

Your directors were pleased to see that in the draft convention between the British and Portuguese Governments the question of a light railway from the mouth of the Pungue river to Massi Kessi was mentioned, and there seems little doubt in the minds of those best informed on the spot that a light serviceable railway will be constructed by the Portuguese Government; if so, it will traverse the territory in which this company's concessions are situated—and to overrate its importance to this company would be impossible. That the country is enormously rich in gold seems absolutely certain, but to enable it to be efficiently worked machinery is necessary, and to get machinery up the country would be both costly and difficult without the light railway; happily, it is said that so alive are the Portuguese authorities to the necessity of such a railway, which is, moreover, reported of extremely easy construction, that it is expected to be put in hand very soon. From Massi Kessi to the coast at the mouth of the Pungue is about 250 miles, a mere trifle when compared to the distance of many South African mines from their ports. A light railway once constructed, it can easily be seen how enormously it would add to the value of our property. While the present state of things lasts you may rely upon your directors keeping all expenditure down as much as possible. The prospecting work and the selection of claims will, we believe, be sufficiently well and quickly carried on by Mr. Crampton and Mr. Harrison. The latter gentleman, who is reported to be a very able mining engineer, was engaged by Mr. Crampton on the spot. These two gentlemen, or even one of them, with a party of natives would be sufficient to select claims, for it must be borne in mind that we have the power to renounce a claim if found barren, and select another. A plan has to be made of claims selected, and a register is kept by the Portuguese authorities on the spot, and their seal is attached to the plan. The agency of the company on the coast at Chiloane, for the purpose of keeping up communication with the expedition, and for purposes of supply, is in the hands of a gentleman of great experience, and who the board have been informed is an able and trustworthy person. The difficulties of getting communications quickly, or accounts all up to date, are at present insurmountable; we must hope that a change for the better in this respect will soon occur. We trust that shareholders will have patience, and encourage the board by giving them their confidence and support. We shall then have no fear of the result, for we feel convinced that the property is a good and a valuable one. I may mention that Mr. Crampton is on his road home, and he will be here we expect next week. Mr. Crampton is coming home to consult with the directors about the location of the claims and other matters, which are as much political matters as anything else. I beg to move the adoption of the report and accounts.

Mr. GILMAN secouded the motion, which was carried.

Dr. THORNE moved and a SHAREHOLDER seconded, the re-election of the auditors, Messrs. Ford and Rhodes, at a remuneration of 20 guineas.

The CHAIRMAN: I may mention, gentlemen, a matter that I forgot in my speech, which is that we have practically

SOLD A CERTAIN NUMBER OF CLAIMS.

A SHAREHOLDER: How many?

The CHAIRMAN: Possibly 140 claims; certainly 40, but possibly 140. We had better not say too much about it at present, but I thought I would like just to tell you. (Applause.)

A SHAREHOLDER: Just one other question. Will the claims, if sold, belong to the Sofala or Gaza Companies?

The CHAIRMAN: They will share alike. They will be equally divided.

Mr. LEGGATT proposed a vote of thanks to the chairman.

Mr. HAGGARD seconded.

The motion was carried.

This terminated the meeting.

THE ZAMBESI (GAZA) CONCESSIONS CO., LIMITED.

THE SISTER COMPANY.

THE ordinary general meeting of the Zambesi (Gaza) Concessions Company, Limited, was subsequently held.

Genl. Barwell Barwell again presided, and made an exactly identical speech as at the former meeting, and concluded by moving the adoption of the report.

The motion was duly seconded.

Mr. LEGGETT called attention to the items in the balance-sheet of this company and that of the other company, relating to the journey to Lisbon to confirm a concession, and inquired if that journey cost them as much as 1,500*l*.

The CHAIRMAN replied that there were two journeys of three persons to Lisbon, which were not entirely to confirm a concession. The question then was whether they were not going to lose everything, and the journeys undertaken were really to save the company. They had had to pay heavily for it, but he thought the results were quite worth the money. Of course, the solicitor's (Mr. John Hart) law charges were quite distinct from his expenses in connection with his journeys to Lisbon.

Mr. LEGGATT asked if there was a firm foundation for the statement that the claims of that company were such that the directors considered them perfectly safe from any impending difficulties of a political nature.

The CHAIRMAN: I should say at present that the claims are absolately safe. I do not think in the preseut political state that it would be well to go into details, but the directors are convinced that they are perfectly safe.

Mr. LEGGATT expressed satisfaction with the chairman's answers.

The CHAIRMAN: I think, perhaps, it might be satisfactory for you to know that the price we are getting for these claims is 500*l*. apiece.

The auditors, Messrs. J. and F. Ford and Rhodes, having been re-appointed, the proceedings terminated with a vote of thanks to the chairman.

VICTORY GOLD MINING CO., LIMITED.

A LONG AND NOISY MEETING ENDS IN THE DEMAND FOR A POLL ON AN AMENDMENT HOSTILE TO THE MANAGEMENT—VIEWS OF ALL SIDES FREELY EXPRESSED.

THE third ordinary general meetiug was held at Winchester House on Wednesday.

A. Whitten, Esq. (chairman of the company), presided.

Mr. S. P. GILBERT (secretary *pro tem*) read the notice of meeting.

PRELIMINARY OBJECTION.

Mr. GEORGE HALLETT: Mr. Chairman and brother shareholders, I rise to a point of order. I question whether this meeting is properly and legally called, and refer you to Article 54, in which it states seven days' clear notice must be given, specifying the date, place, and hour of meeting of the business.

The CHAIRMAN: I do not doubt that you have all received a copy of the report which was sent to you on the 18th of December.

Mr. HALLETT: I question the legality of the meeting.

The SECRETARY: Eight days' notice was given.

The SOLICITOR said the board could not be responsible for the time the shareholders received their notices; all they could say was, as the chairman had stated, that they were posted on the 22nd.

Discussion on this point was continued for some considerable time, some of the shareholders stating they had not received their notices in proper time, aud others stating that they had, but it was pointed out that about Christmas time the postal arrangements are not quite so perfect as at other times, and ultimately the matter dropped.

Mr. HALLETT enquired why the balance-sheet was not circulated; and another SHAREHOLDER said it was not a balance-sheet at all, but simply a cash account.

The SECRETARY read the balance-sheet, and stated that the printers had not delivered the copies in time, but some were in the room, and available for the shareholders.

A SHAREHOLDER: Why have we only a cash account? A balance-sheet, according to the articles, is bound to be submitted to us. (Hear, hear.)

The CHAIRMAN: It is bound to be submitted to the meeting, and we are submitting it now.

Mr. HALLETT: Is it signed by the auditor?

The CHAIRMAN: Yes, by the auditor, the chairman, and the secretary.

Mr. HALLETT: What is the name of the auditor?

The SECRETARY: Lionel Lemon, of the firm of Lemon and Brough, and the requirements of the articles have been fully complied with.

Col. TAMPLIN: It is impossible to follow figures read out at a public meeting. (Hear, hear.)

The CHAIRMAN: There is no item in the statement of accounts that has not been checked by myself and audited by the auditors. As regards the development of the mine I feel sure no one will question the genuineness of Mr. Fenn's report. It is so important that I propose to read it to the meeting.

Col. TAMPLIN: We have all had this, and it is a waste of time to read it.

Mr. HALLETT: The idea is to keep us here until we are disgusted, and go home.

CHAIRMAN WILL ACT FAIRLY.

The CHAIRMAN: I shall allow every member the opportunity of asking any question, and demanding any explanatiou, but, in the interests of common justice, I appeal to the fair-minded portion of the audience to listen to what I have to say. (Cheers.)

SPEECH OF THE CHAIRMAN.

The CHAIRMAN then said: Gentlemen, I do not doubt that you have all received a copy of the report, which was sent to you on the 18th December. That report fairly conveys information as to the nature of our proceedings and the position of the company; but there are some points on which I desire to offer further remarks, not only for your own information, but for the satisfaction of absent shareholders. I will read the directors' report, so that every item may have due consideration. (The report was read.) The balance-sheet in your hands represents the income and expenditure for the 12 months under review. It shows in every particular the moneys we have received and the charges incurred. There is no item that has not been checked by myself, and vouched for by our auditor. As regards the development of the mine, no one, I venture to say, will question the genuineness of Mr. Fenn's report. I will read it to you. (The report was read.) It is true we have not arrived at the goal that we have been striving to attain. But I ask you to remember, gentlemen, that when we took charge of the property, aud it was not for long that we did obtain actual possession from the Venezuelan Government — nothing had been commenced even to develop the property in a practical manner. We had virtually to begin at the beginning, and when we look at what has been done in the past year it cannot be doubted that the progress made has been very considerable. If would have been glad news if I could at this moment tell you we had struck the lode, and, great as the disappointment is, we must not be so inconsiderate as to despair of success—a success which our miners are striving with all their energy to hasten.

BOARD HAVE DONE ALL THEY COULD.

We have been the custodians of your property for upwards of two years, and we have done all that could be done, aye, all that could be reasonably expected of us, iu so short a time, with the funds at our disposal, and considering the nature of the climate, and the character of the rock our miners had to deal with. It took years and years to develop the El Callao Mine, and that with vast expenditure and large establishments; but success came in the end, and we may reasonably look for a like happy result for Victory! The gold is there, and we must not dream of suspending operations until it is found. We have kept the good ship afloat with full sail trimmed, and have directed her course through safe channels to the distant shore of promise. Bear in mind, gentlemen, that we are anxious for success for our own sakes as well as yours, and we look for no gain or advantage that is not shared by every member of the company alike. As to the mineral wealth of your property, it will be sufficient if I simply call to your recollection the names of eminent men and others who have visited and reported on it.

THOSE WHO HAVE REPORTED.

First, there were Messrs. Danby, Skertchley, and Monsieur Nasson. Then Admiral Powell, who was accompanied by Capt. Penberthy, the underground mining captain of El Callao, who, when in England, offered his services as the manager of the Victory property, as he considered it possessed facilities for economical working greater than any other mine in the neighbourhood. Walter Ness was then specially selected and nominated by the Scotch shareholders to visit the property on a fee of 500*l*. Coming down to a later date, Messrs. Barry and Hallett, two of the then company's directors, went, and it was also well reported on by Mr. Howard Hill, now the manager of the Sheba Mine. During the existence of the present company, you have had the reports of Messrs. Lund, Russell, Larchin, Fenn, and Nicholls, who is now in charge of the property in Venezuela, and who is so confident of success that he has written more than once advising the board not to part with a single share. It will be seen, then, that the shareholders, as regards the value of their property, are as well informed as ourselves. Your debenture debt is now reduced to 5,000*l*. only. The directors hold their meetings every second week regularly, and during the 52 weeks under review there were 35 meetings, besides which they attend the office frequently and at all hours to see to the business in hand, and to receive shareholders. The books of account and the share registers are kept regularly posted. Our remittances to the mine are made by the first mail steamer leaving in each month, and the expenses are kept down to the lowest possible figure. The business I have to bring before you is:—To pass the accounts for the year, to nominate director to fill up vacancy on the board, and to consider the advisability of nominating a committee of shareholders to consult with the board as to our position and prospects, and the desirability of shipping additional machinery to expedite the work, and further to elect an auditor. Under ordinary circumstances my remarks would end here, but I have had placed in my hands, by a member of my family who holds 750 shares in the company, a letter, issued to the shareholders by Mr. George Hallett, and signed by another shareholder, which I would prefer to believe, and know, was written under a misapprehension of facts. If, however, the statements contained in the letter are deliberately made, I denounce it as scurrilous, mean, and libellous in the highest degree. He raises a clamour against everybody and everything, and I challenge him to prove that we have either neglected our duties to the shareholders or exceeded the powers under which we act for them. In paragraph 1 of Mr. Hallett's letter he asks the shareholders "to form a committee of investigation as to the real value of your property, and to ascertain what use has been made of your money." The names of the gentlemeu, who, in response to the request of the directors, have signified their wish to join a committee of investigation will presently be made known to you. As regards the value of your property, I will draw your attention to the following statement made by Mr. Hallett, at a general meeting held to receive his report:—

MR. HALLETT'S VIEWS.

"Having had the ground cleared, Mr. Barry and himself went up to the lode on the Altamira property. They were simply struck by the extraordinary appearance of that lode. A great deal of ore had been broken, and it was lying about, and they could see the gold actually sticking out of nearly every piece of rock there. (Hear, hear.) It was the first time he had seen anything like that. It happened to be slightly damp, and they could pick out any piece of rock and find visible gold in it. (Hear, hear.) As regards the state of the Altamira lode, Mr. Barry and himself had been very careful not to say anything to surprise the shareholders, and throughout the report they had under-estimated the extraordinary riches of the property, because they did not think it right to draw anything like a faithful picture of the extraordinary riches of the mine. People would cavil about it if they had said all that they could truly have said about it. The lode at La Cruz was 6 ft. wide with free gold to be seen all through it. (Hear, hear.) Then there was the lode called after Mr. Lambert, that was 8 ft. wide, full of gold throughout.

CHAIRMAN'S POSITION.

These lodes were in the Altamira property alone, and the veins could be seen cropping out of the hill to a height of about 300 ft. There was another lode in the same property, running parallel. This lode had been gone down upon for 40 ft.; it was 6 or 7 ft. wide, with visible gold throughout, and running at right angles there were several little lodes, the outcrops of which could be easily traced, and there might be other lodes covered over by the *débris*." As regards the question as to how the money has been disposed of—I need only refer to the report before you. Paragraph 2 of Mr. Hallett's letter refers to the fact that the present company succeeded the "Victoria, Limited," and the "Victory Gold Company, Limited." This is true; but we are not discussing the management of the past, but of the present company. When those companies were floated I was still in India. I had nothing to do with their management, nor had most, if any, of the directors of the Victory Company. But Mr. Hallett had. He was a director of the Victory Gold Company, and held that post until he was disqualified aud had to retire. Since which time he has shown the utmost animus to everybody and everything connected with the company, and hence his present proceedings. In paragraph 3 Mr. Hallett states that: "We bought the mine, with machinery and stamps ready erected to commence working"; but in paragraph 6 he says: "We do not even know whether the 20 stamps sent out have ever been erected." There is something wrong here, and I will not puzzle myself or you to endeavour to explain it. Mr. Fenn's report was in Mr. Hallett's hands when he perused his letter; and this is what Mr. Fenn states, and states clearly and correctly: "There are 15 head of stamps erected complete, with all necessary couplings, also five head of stamps which have not as yet been fixed, making a total of 20 head of stamps. Put this against Mr. Hallett's

statement, and which is most to be relied upon? Then Mr. Hallett says: "Yet after nearly three years we are without results. In other words, the money has been wasted." I have already spoken on the subject. In the face of what has been placed before you, the statement is preposterous. I ask him if we have done, or caused to be done, anything foreign to the nature of the company? Or have we exceeded the powers entrusted to us by the articles of association? Or have we made any misstatement, or concealed any material facts from the shareholders? This replies to paragraph 4 of Mr. Hallett's letter as regards ourselves; and with reference to his attack on the mining staff in Venezuela, I say unhesitatingly, on behalf of our absent workmen, that it is absolutely false. In paragraph 5, in using the expression "we shareholders,"

DIRECTORS LARGE SHAREHOLDERS.

Mr. Hallett would seem to imply that the directors are not also shareholders. I and my children and members of my family are all shareholders, and hold little less than a thousand shares, and I protect their interest in common with the interests of every member of the company. Mr. Hallett asks if we "can expect to get anything back in the shape of gold from the mine." In reply, most certainly we expect to. All our enquiries and advices lead to promising results. It is true the property embraces extensive forests of timber, of such exceptional beauty and value, that if we could find a quick and cheap transit for it to England the money spent in mining would be covered over and over again. This is referred to in Mr. Fenn's report, and let us hope that the projected railway will effect this at no distant date. In the meantime we are looking to gold as the immediate source of profit. It may sound very grand, and may read very well in print, to exclaim, as Mr. Hallett has done in his paragraph 6: "If there is gold there let us have it." But speaking to you, gentlemen, as men of experience, I ask, if this is either sense or reason? Does he expect us to go and bring home gold in our pockets? It is like a child crying for the moon, and reminds me of a popular advertisement:—"When you ask for a thing see that you get it." As to what has been done, and is being done, have we not given particulars in our fortnightly reports? It would tire you to recapitulate them. "Good directors—good officials" Mr. Hallett writes. It is difficult to estimate Mr. Hallett's idea of goodness in directors. He might be inclined perhaps to apply that term to a set of men who would not press him to pay his calls, or who would fall into his own estimation of his ability to hold any appointment under the sun. But this, I say, that if it is intended, as it seems to be, an attack on our *bona fides*, it is both base and contemptible. Not only has he attacked us in this precious letter, it would seem, but he has had recourse to the columns of a daily paper for a similar purpose. Again, I say, such conduct is contemptible. For a period of over 30 years I have been connected with the Press, but never have I prostituted my pen to defame the character of my fellow man. It is worse than a man attacking you with a knife. He seeks only your blood, but the venomous scribbler attacks your honour, your credit, and your reputation.

A SHAREHOLDER: Are we listening to a report of the Victory Company, or to a Methodist sermon? (Oh, and laughter.)

The CHAIRMAN: You are listening to a matter of fact statement of the company's provision.

Mr. ALSTON: In the balance of accounts, interest and debentures is put down at 818*l*., and in the cash and contra account 625*l*.—a difference of 193*l*. How is that accounted for? Sundry debtors are put down 190*l*., and later on 169*l*.

WHAT THE BOARD HAVE DONE.

Mr. ROBERT LARCHIN (director): In seconding the adoption of the report I will touch upon one matter only. Mr. Hallett, when at the mine, reported to you the position in which he found it. A shaft was down 40 ft., and you have read, doubtless, the rest of his report and his letter. When I went to the mine to complete the purchase of the surface rights there had been a lapse of two years between my visit and that of Mr. Hallett. The condition of things I then found was that instead of the shaft being 40 ft. from the surface it was 160 ft. It was 6 ft. square, and was a source of such constant trouble and expense through breakages that Mr. Nicholls and myself—both of us accustomed to practical mining, and I having been accustomed to the erection of mining machinery for over 35 years (before Mr. Hallett was born), and Mr. Nicholls being an old and tried miner—I say, we found we had to condemn that shaft. We recommended the sinking of an entirely new shaft, which, instead of being 6 ft. square and utterly unworkable, should be carried down 12 ft. by 8 ft., with proper divisions, and room for the skip-road, ladders, &c. That shaft is down 105 ft., fitted with duplicate pumping machinery, so that when one set is at work the other can be overhauled and repaired. A level has been driven 6 ft. by 7 ft., 200 ft. to cut the lode, which Mr. Hallett said could be traced as an outcrop. We have erected a tramway underground and also at surface, the latter being for a large portion on massive hard wood trestling. We have put up the 15 stamps, completed the dressing machinery and saw-mill, and erected the boilers and engines—

ALL OF WHICH WORK HAS BEEN DONE DURING THE LAST 18 MONTHS

—that is during the reign of the present board. I will defy any man to say that more work, or better work, or cheaper work could have been accomplished in the time. (Cheers.) I call attention to this in justification of the board in face of the strictures that have been passed upon them. They have been charged with squandering the company's money. On the one hand it has been said that they have been wasting money by sending it out too fast, and on the other that they have been losing time by not sending it out fast enough. We did hope to have told you that at the depth of 100 ft. at the bottom of the shaft we had cut the lode, and judging from the underlay, as seen at surface, and where we have seen it in the adit, and have sunk a winze for nearly 60 ft. As soon as we get that communication with the lode and put in a rise, and are able to open stoping ground east and west, we shall be in a position to keep the stamps at work.

MR. HALLETT'S PREDICTIONS.

When Mr. Hallett was on the mine two years previously, he stated what to me was utterly impossible, that in four months' time from this 6 ft. shaft, the whole of the stamps would be erected and making full returns. Mr. Hallett may say that he does not understand practical mining, in which case I can account for his statement; or he may say he does, in which case I cannot. (Cheers and laughter.) I have now shown you the work the board have done. We have Mr. Fenn here, who is a practical miner, and anyone asking practical questions can have from him full and practical answers. (Cheers.)

MR. LARCHIN'S PREDICTIONS.

Mr. HARRUP: I would remind Mr. Larchin that he went to the mine in 1884, and in one of his numerous reports and circulars said: "Mill running on quartz averaging over 3 ozs. to the ton." In 1885, he says: "Assays have been made, and the quartz gives over 1½ ozs. to the ton, and there are 100,000 tons of ore in sight."

Mr. LARCHIN: When we started this mine we were recommended by an engineer of some standing to try stamps of a novel order, which unfortunately, did not answer.

Mr. HARRUP: I do not attach so much importance to that, but why are you in 1890 sinking shafts, when as far back as 1882 and 1884 the names of Mr. Larchin and Mr. Gilbert appear here to reports that we have thousands of tons of rich payable ore?

The SECRETARY: I never made a report in my life. (Hear, hear.)

Mr. HARRUP: There are lots of contradictions in the various statements made. If made by our directors wilfully, they are no longer worthy of our confidence; if made without enquiry, on the faith of other people, equally are they unfit to be directors when they can be so misled.

PERSONALITIES.

Mr. HALLETT: My character has been rather traduced during the remarks of our worthy chairman, who has rather mistaken his vocation, for he ought to have been in the pulpit instead of presiding at a meeting of this kind. (Cries of "Oh!" and no personalities.)

Mr. FRY: I rise to a point of order. As a shareholder in this company, knowing none of the gentlemen who have been speaking, I object strongly to personalities of this kind being indulged in. (Loud cheers.)

Mr. HALLETT: The report refers to the progress of the mines, which, I suppose, means 3 ft. or 6 ft. a fortnight, but I have a letter from a gentleman well qualified to give an opinion by his mining experience, who says that that rate of speed is ridiculous. It is quite true I have written letters to the papers, but I have put my name to them, and that cannot be called going behind a man's back. If the chairman thinks it is he knows where he can get redress. I am not going to be sat upon or shut up by any board, for I think I have just as much common sense as anyone who is here. I may not be so old as Mr. Larchin, but I am going to stick to the company. The report says, "Large sums are being expended on surface operations." When, how much, and where were they expended? I defy Mr. Larchin to answer this. There were little or no surface operations going on in 1886 when I was there, and judging from the reports no great surface operations have been conducted since. Mr. Gilbert and Mr. Larchin have both been connected with this company in all its phases and are responsible, for practically they have had the conduct of affairs. I have nothing to say about Mr. Nicholls or Mr. Fenn, and am glad the latter has come here to make a statement, and I hope it will give us information. I have never received his report, and I will take my oath on the Bible to that effect. (Cries of "Oh, oh.") Postage has cost a good deal, but none of the money has been spent in sending me information.

MR. HALLETT HEATED.

I am a little heated in this matter—(hear, hear)—because I take it personally and I am a large shareholder. The report says, "That the directors take a deep interest in the welfare of the company apart from their holding of shares, which is a large one." I should like to know when they bought that holding, and the price they paid for it, because any man can become a large shareholder at little cost now. "On several occasions a continuance of the work has been in danger." How could this be when all the time they had an unmade call, but instead of making it they attempted to raise 10,000*l*. by debentures? Did the shareholders call that proper management? (No.) They ought to have made the call, and then raised the mortgage. They say they secured financial aid, but that is untrue. They say we are welcome to appoint a consultative committee to go into the matter of rock-drills and air compressors, but we want the committee to enquire into the company from the foundation. We want to know how our money has been spent, and we must have a committee composed of men who oppose the directors.

Mr. FRY: That does not sound like a fair proposal. (Hear, hear, and laughter.)

A SHAREHOLDER: What we want is an impartial committee. (Cheers.)

Mr. HALLETT: If you saw the letters I have received from dissentient shareholders—why I am surprised they put such strong language on paper. If anything has convinced me I am right it is the support I am receiving and have received from the shareholders. I represent, at this time, over 20,000 shares, and some who have sent proxies to the board have withdrawn them. I have no doubt when we appoint our committee we shall have the whole mass with us. (Cheers and laughter.) We must have a change, for it is no use listening to soft speeches any longer. I think it extraordinary that the auditor's certificate should have been given by the chairman, and not by the auditor himself. What is the auditor appointed for but to see that the accounts are properly kept. I do not want to cast a slur upon the auditor, but I think that Mr. Lemon should have been appointed by the shareholders, and I have no doubt that not the least objection would have been raised. I say these things are irregular. Mr. Nicholls seems to have only one shift of miners, and yet the wages are 350*l*. a month.

A SHAREHOLDER: And they are all ill. (Laughter.)

Mr. HALLETT: I suppose that is in the doctor's bills. It is really too much to have a financial statement put into one's hands in a meeting.

A SHAREHOLDER (to Mr. Hallett): Are you an honest man? (Laughter and Oh!)

Mr. HALLETT: Yes, sir; I am an honest man. (Laughter.) I wish to know if Mr. Nicholls is also managing Aaron's Reef.

The SECRETARY: No, he is not.

Mr. HALLETT: Mr. Nicholls writes: "You must understand I am not enjoying good health, but I do not mind so long as I am pleasing

the directors." I had no idea we had such a martyr in our service. "I am as anxious to cut the lode as you are, and with proper management it ought to have been cut years ago." I quite agree with him. But whose fault is it? I pass on to the cash account, for the statement presented I do not dignify by the name of a balance-sheet. By presenting it at this meeting simply I call it sailing very close to the wind. There is an item of preliminary expenses, 1,200*l*. I went out in 1886 to purchase the mines with Mr. Barry, and find on my expenditure list the following entry, made at the time :" Registering the company, 63*l*. 6s. 8d."

A DIRECTOR : The truth is that it was not registered.

MR HALLETT PRAISES THE BOARD.

Mr. HALLETT : I could identify the official to whom I paid the money. Now, I do not wish it to go forth that I cavil at everything and do not give praise where praise is due. I say that great praise is due, and ought to be given, and I give it myself to the board of directors for the only good act they, in my estimatiou, have done since they have beeu in office, and that is for purchasiug the surface rights for 1,000*l*. (Cheers.) That is a very good piece of business indeed. (Cheers.) Wages and salaries, as compared with the previous year, have doubled ; they were 4,418*l*., and they are 8,000*l*. Certainly we have not doubled the result. The directors have taken 616*l*. for fees, as against 760*l*. the year before, and nearly every one of them lives in London. They say a good man ought to be paid ; but why should gentlemen in some other companies give excellent work without payment, when their companies are declaring no dividends, and why should we be not similarly served ? We will not be niggardly when we get something ourselves. I do not see why we should pay 299*l*. for rent, when last year it was 267*l*., and when the accommodation is as small as you will find it if you go to the office and look. It seems incredible to think that a large accountant in the City of London should pass some of these items. I shall demand to see the cash accouut signed by him.

Mr. LEMON (auditor) : There is no cash account signed by me, but this (holding it up) is in the ordinary form.

EXPENSES CRITICISED.

Mr. HALLETT : I am not putting any blame on the auditor. As regards freight, I have no doubt that is satisfactory, and. as to provisions and stores, whereas as last year they were 415*l*., this year they amount roughly to 1,000*l*. Travelliug expenses are 368*l*., which is large considering the fare out and back is only 40*l*. Postages and sundries are almost double, and what are the sundries which are here put in a mass ? The legal expenses are 100*l*. for eight months, or at the rate of 150*l*. a year.

The SOLICITOR : That is not a paymeut made to the present solicitors. I wish it had been. (Laughter.)

Mr. HALLETT : I wish so too. (Laughter.) Provisious 582*l*. for eight months. On the matter of rent, I should like to know what proportion is paid by Aaron's Reef Company. I see their name on the door. According to what we pay, I should judge that property in Broad Street Avenue is about the most valuable that can be found. We have been precious unlucky in getting into such offices. In fact, there has been a steady increase in rent—abominably steady. (Laughter.) From 1888 to 1889 it was 267*l*. ; from April, 1889, to March, 1890, it was 299*l*., and for the eight mouths in the present year it amounts to 582*l*.

The SECRETARY : No, no ; read the figures.

Mr. HALLETT : 334*l*. I beg your pardon. I made a mistake by reading out from the wrong row of figures. (Laughter.)

A VOICE : That is not the only mistake you have made. (Hear, hear, and laughter.)

Mr. HALLETT : The total for two years and eight months for rent will be 900*l*. I am fighting the battle of the shareholders.

A VOICE : "Bosh."

Mr. HALLETT (fiercely) : You say "bosh," do you—that applies to the directors, and not to me. The directors in two years and eight months have taken 1,526*l*. ; wages and salaries, 15,000*l*. ; travelling expenses, 735*l*. ; mining dues, 445*l*. ; rent, 900*l*. ; provisions, 1,699*l*. ; stores, 816*l*. ; and sundries, 1,130*l*. Sundries form the largest item, but directors' fees come a good second. Then we have freight, 1,054*l*. ; legal expenses, 311*l*. ; printing and stationery, 232*l*. ; postage, 229*l*. ; cables, 184*l*. ; and suspense account, 910*l*., which will give you a pretty correct summary of our expenditure for two years and eight months. We ought to know what has become of the 13,000 shares reserved for Venezuela and Trinidad, and the unallotted balance of the 3,801 shares. These accounts require looking into, and only a committee can do it. I move—"That the shareholders refuse to accept the report of the directors ; that the adoption of that report be adjourned *sine die* until a committee appointed by the dissentient shareholders go thoroughly into the accounts and report to the shareholders in general meeting, and when the shareholders have adopted their report they will then consider as to whether they should adopt that of the directors." I hope it will be a strong

COMMITTEE ENTIRELY FROM THE DISSENTIENT SHAREHOLDERS.

(Cries of "Oh.") The names should come from us, and it is of no good for anybody to send in uames to the directors. We ought to appoint that committee ourselves, and to have nothing to do with the directors. (Cheers.) It is our duty to save the credit of the company by appointing a committee to inquire strictly, honestly and conscientiously into the doings of the directors. I will name Mr. Law, Col. Tamplin, myself—("No, no," and "Yes, yes")—Dr. Jagenski, Mr. Gurney, Mr. F. J. Kent, and Mr. Alston. I will tell you why I have put my name forward—because they have cast a slur on me in saying that I have issued a libellous report. Will any others come forward ? Let us have men who can put their fingers on sore places—Mr. Palmer will join—I think I have put my finger on a bad place—(hear, hear, and laughter)—and I shall not withdraw it until I have exposed the whole thing.

Mr. HATHERLEY : Do not have your committee too big.

Mr. HALLETT : Will Mr. Lansdown, join ? You represent Bristol shareholders holding 20,000 shares, and that will make 40,000 altogether.

Mr. J. S. KENT seconded the amendment.

A VAIN APPEAL TO SHAREHOLDERS TO HEAR MR. FENN.

Mr. KLENCK : I think we should be regular at these meetings. Statements have been made that want explanation. We have a motion to adopt the report and amendment, but we have also here a gentleman (Mr. Fenn), who has just returned from the mine, and it is most important to hear what he has to say. (Cheers.) We ought certainly to know something about our property before it is depreciated still more in the eyes of the public, as it certainly will be by such a meeting as we are holding to-day. Before we hastily legislate

LET US HEAR MR. FENN.

If the shareholders think well to appoint a committee afterwards let them do so, but let it be a fair one.

THE AMENDMENT.

Mr. HALLETT : Mr. Fenn can give his statement afterwards. I propose "That the adoption of the report be postponed *sine die* until the committee of investigation appointed by the shareholders have made their report to a meeting of shareholders, and it has been adopted by them."

Mr. FRY : I claim my right to discuss the balance-sheet before you put such an amendment.

Mr. KLENCK : Will the meeting hear Mr. Fenn afterwards or now (Cries of "Afterwards.")

A SHAREHOLDER : We always take a liqueur afterwards. (Laughter.)

Mr. KLENCH : I had hoped Mr. Hallett would have wound up his criticisms with some practical suggestions, and that as he has been to the property he would have given valuable information, which would have led to good results. His statements to-day, and those he made after his visit to the mine, to my mind, do not coincide. I have had an opportunity, through your confidence, of being behind the scenes here. I was elected a director of the Victory Company, and served until I resigned. Now,

AS ONE OF YOUR LATE DIRECTORS,

I am in a position to give you some information. In the first place the money spent upon the old shaft has been utterly wasted. It was not of the right dimensions, and when they got it down to a certain point they could neither work through it nor obtain air in it. If you take the report signed by Mr. Russell, who was then our manager last year, and resigned from ill-health, you will find that at that time Mr. Nicholls was left alone. He was then under manager, and the latter found it necessary to sink a new shaft of the proper dimensions, and this has been done. It was on my suggestion that the surface rights were purchased, and the result is that instead of making heavy payments to the Government year by year we have now a freehold property, and I ask you to hesitate before you throw it away. (Cheers.) Any gentleman who has been to the mine knows very well that we have a valuable property there.

JUSTICE TO THE MANAGER.

Mr. Nicholls has been working hard for 12 months—a fact I know, not only from his report, but from private advices. I challenge Mr. Fenn to say that Mr. Nicholls is not a practical miner and an honest and hardworking man. I ask you not to be drawn off the scent, but to stand by the mine a little longer, and I am sure that good results will come by way of the new shaft.

SHORTCOMINGS OF DIRECTORS.

I complain of the directors not having sent out the report and accounts, and not having put in the names of the retiring directors and those offering themselves for re-election. They have not given us the means of knowing how we are to carry on this mining future with so small a balance in hand. I ask you to accept the directors' report in your own interests, and also the balance-sheet. (Uproar.) Then appoint your committee, and let them report to an adjourned meeting, after which you will be in a better position to come to a just and reasonable decision than you are to-day.

A WARNING.

By all means do I advise you to avoid the threatened litigation. If you once commence it you will waste the company's funds, you will jeopardise the property, and you will make your shares of even less value than they are to-day.

Mr. HALLETT denied that he wished to go into litigation, but what he wanted to obtain he was determined to have by all the means at his command.

Mr. LEMON said that some questions had been raised as to the certificate appearing in the report. His balance-sheet bore his certificate, and the cash account was not of his rendering. Still that cash account had been drawn up fairly, and showed what had been done with the money received. (Cheers.)

A SHAREHOLDER COMES TO VOTE AGAINST THE DIRECTORS, BUT DECIDES TO SUPPORT THEM.

Mr. T. H. WATSON : I came to this meeting with a very strong feeling of dissatisfaction, like that felt by Mr. Hallett, who has been speaking so long this afternoon, but while I have been sitting here I have been comparatively converted. I should be sorry indeed if a committee were appointed who had the same spirit of antagonism towards those into whose conduct they should *judicially inquire*, as has been manifested by Mr. Hallett. (Loud cheers.) I should have been in favour of a committee of inquiry, but if the same spirit is to be imported into it which has been manifested in Mr. Hallett's remarks I fear the interests of the company will not be well served, but perhaps will comparatively be ruinously dealt with. (Hear, hear.) I think that at all times in public companies shareholders have a right, which they ought to exercise, to know all particulars, both respecting the accounts and respecting the working of the mine, and I am of opinion that in the case before us, the results having been *nil*, it would have been advisable to-day to have appointed a committee : but if you are going to appoint a committee of partisans only, then results will accrue that are disastrous. I think we ought to know more than we do, although I believe to-day there is not a shareholder present who would not have been satisfied to wink at all that has been done, and the manner in which the money has been expended if we had had satisfactory dividends. (Laughter.) Nobody would have been anxious about a committee, but not having had a dividend we are all dissatisfied.

[Some amusement was here created by one of Mr. Hallett's friends

leaving the meeting, and by the attempt of that gentleman to induce him to return.]

CONDUCT OF SHAREHOLDERS STIGMATISED.

Mr. WATSON (after a pause): I have attended a few meetings in my time, but am not aware that I have ever attended one at which the conduct has been equal to what we have seen to-day. (Hear, hear.) I think there are those present who from their appearance are intelligent gentlemen, but they have not so acted, and I must say they are principally supporting Mr. Hallett, with whom they appear to be more in sympathy. (Laughter.) When we come to a meeting as men of business we ought to try and transact it in a sensible way. I must say that of the amendment and the motion for the adoption of the report, I infinitely prefer the latter. I came prepared to oppose the board, but I have been

THOROUGHLY CONVERTED THE OTHER WAY.

(Cheers.)

Mr. LAW said that when he saw in the directors' report a wish expressed that there should be a committee of consultation, he at once wrote to say he would like to be one of its members. He had seen this company through all its vicissitudes, and if he were placed on that committee it was his intention to do what he could to make the mine a success, and certainly he would not take a step to the contrary. He did not wish to lose his money, for he believed the gold was there. (A VOICE: So do I.) They, however, must go to work in the right manner to get it, and that would be the object of the committee of enquiry.

VOTING AND POLLING.

The CHAIRMAN was about to put the amendment, when the words were added, on the suggestion of Mr. KLENCK, "Three to form a quorum." He then put the amendment, but did not declare the result, though, at the same time, it was in favour of the Hallett party.

The CHAIRMAN demanded a poll, and, after a great deal of cross table talking, said the result would be announced at the same time and in the same building on Weduesday next at three o'clock.

During the discussion as to the taking of the poll there was a scene of great confusion. All the shareholders left their seats, and strong personal observations passed between the conteuding factions.

Ultimately a vote of thauks was passed to the chairman by the meeting, which had lasted from three o'clock until a quarter to six.

It will be observed that no remarks were listened to from Mr. Fenn, who had just returned from the mine.

We understand that the voting of shareholders *present* at the meeting gives a majority for the directors of about 5,000 votes, and it is expected when the proxies are added this figure will be greatly iucreased. The exact figures will be aunounced on Wednesday next.

ESMERALDA, LIMITED.

IMPORTANT WORK ACCOMPLISHED—THE MILL WILL SOON BE SET TO WORK—SHAREHOLDERS PASS A STRONG RESOLUTION AGAINST THOSE IN ARREARS OF CALLS—GOVERNOR COLCORD'S CONFIDENCE IN THE MINE—OUTLOOK FOR 1891 BRIGHT.

THE second ordinary general meeting was held at Winchester House, ou Tuesday, for the purpose of receiving and adopting the directors' report and accounts, and transacting the ordinary business of the company.

Samuel Crowder, Esq. (chairman of the company), presided.

Mr. FRANK FULLER (secretary) read the notice of meeting.

WORK BEFORE THE RE-CONSTRUCTED COMPANY.

The CHAIRMAN: I need not remind you that this is the first annual meeting of a company that was formed for carrying out a special work, and I congratulate you on the accomplishment of the first section of that work. The company was formed to pump the water from the Del Monte shaft, and run a drift from the Del Monte shaft, a distance of 1,200 ft. to the Durand Mine in order to drain it. At the time we left the Durand Mine, at the very lowest point we had reached, there was good ore at the bottom of the winze, and it was in order to drain the water from that mine that this work was undertaken. The report that has been laid before you, although it is short, yet in few words really conveys the gist of what I have to say, and informs you briefly of the work that has been done. The work we had first to undertake was the pumping out of the Del Monte shaft. That, I need hardly say, was a formidable undertaking. After we had started we found that the upper strata was so full of water, that it was with great difficulty we could get down even with the enormous pumps and machinery we had—17-in. pumps, and in order to get the water out of the shaft, for the first month those pumps were driven at the rate of 9½ strokes a minute. To those of you who are technically acquainted with these matters that statement will convey a great deal. At a depth of 500 ft., without a break down for a month, continuously, we worked the 17-in. pumps, and that I think you will say was no mean task. (Hear, hear.) Our machinery stood it, and I can tell you it is as good as auy of its kind on the Pacific coast. We theu had to commeuce the drift towards the Durand shaft, and it was expected that wheu we had got to 400 ft. we should have cut the same wa ter-bearing strata that was feediug the Durand Mine. This did not prove to be the case, and we had to drift 1,100 ft. before the Durand was drained. That, of course, while in itself rather disappointing, has its bright side, as it shows that the ground is well formed, and

THE VEINS ARE OF THE TRUE FISSURE ORDER.

At the time of the formation of the company the directors told you, aud our general manager who was then present told you also, that we anticipated, while runuing these drifts, that we should cut se veral veins. I am happy to inform you that we have cut a vein, which the manager speaks of in the most favourable terms as showing probabilities of a most promising outcome. Now, although the directors hoped at this meeting to be able to inform you that the mill was again running, I am sorry to say we cannot tell you that, but we can tell you this—that we are working in ore, and by the last telegrams and letters (which I shall read) from the superintendent, the prospects at the present moment are extremely favourable. It is quite true that, as with individuals so with companies, the first year of their existence is one that is often full of troubles and worries. (Laughter.) The directors and superintendent, and everyone connected with the company, have had great anxieties and great labour in order to overcome the difficulties which lay before them both in pumping out the shaft and iu running the drifts, for to run a drift 1,100 ft. or 1,200 ft. you will acknowledge is not a matter of child's play. Since we started this company we have driven altogether 2,500 ft. of drifts, for we set ourselves out to achieve the draiuing of the Durand Mine, and reaching the ore there, and also cutting and following this vein, of which I have already spoken. Our machinery at the present time is in first-class order, and is everything that can be desired. I should like to read some extracts from the manager's reports, as these are more authentic than anything I can say. If I made a statement it would only be matter of opinion, whereas, in reading you the words of our superintendent, you get the facts of the case straight from the mine. The manager cables (Dec. 23rd): —"Connection has been made with the Durand. We have 200 ft. of backs;"—that means 200 ft. of virgin ground above us, and free from water, where we only expected 165 to 175 ft.—"The winze is looking well. The average asssays for the week are 1½ ozs. of standard gold per ton. The ore body is 1 ft. wide, and the new Monte vein is looking very promising. The Durand, south of the winze, is not looking quite so well—the ground being broken." We are sure to get these changes, and must expect them. "The south drift at the lowest level is 4 ft. thick, and the face of the drift is looking very favourable." Now, telegrams, to my mind, are most unsatisfactory, because it is very difficult to describe in a few words the true position of a mine, but here we have the last letter of the superintendent, dated December 9th, which I will read:—

"As soon as connectiou is made, we will drift south on the ledge at the lowest level in order to cut the ore chute going down in the Durand winze, and at the same time to prospect the ledge. There has been a decided improvemeut in the Durand winze this week; the vein is stronger, being 3 ft. wide, and the ore streak is widening. Though it is not so exceedingly rich in small spots as it has been, the ore is becoming more general, and there is more of it; in fact, the winze at present looks more promising than it has been since we started work there a month back. The fact that the ore is more evenly distributed through the quartz leads us to hope and expect that it will now be more permanent."

This letter was accompanied with the assay certificate, which showed that one assay being the average value of 10 ins. of the ledge gave 4½ ozs. of standard gold to the ton, and another gave an average assay of 1½ ozs. standard gold to the ton. Mr. Colcord in a letter received this morning writes:—

"I thank you and the other members of the board most heartily for your many kindnesses to me, and feel highly complimented on being requested to continue in your service, and assure you that so long as I am continued in your employ, I shall do all in my power in future as in the past to make a success of the enterprise."

To show

MR. COLCORD'S CONFIDENCE IN THE MINES,

I may mention an interesting fact. You will see by the papers that he has been elected Governor of the State. It is not geuerally understood in England what that means, but a Governor of a State of America has power equal to, if not greater than that of the President of the United States in his own particular district; it is, in fact, a most important office; the state of Nevada is one of the largest iu the Uniou. Consequently, if he had wanted to get away from our mines through not having confidence in them, or from any other cause, there would have been an excellent opportunity for him to have done so at this time. He could simply have pointed to his election as Goveruor of the State, and said he was no longer able to perform his duties to the mine. He could then have gracefully retired and no one could have said a word; but, instead of that, so confident is he of its future, that he prefers to continue his connection with the company. (Cheers.) There is one item in the balance-sheet which, perhaps, needs a little explanation—the large amount represented by unpaid calls. (Hear, hear.) This is due to the fact that the balance-sheet was made up six days after the date the call became due, and during the months of June and July, as we know, many people are away, so that the calls were not paid up so quickly as they ordinarily are. Perhaps the most of us have not paid-up our calls this year so quickly as we should have done in other years, and in better times, aud the directors have felt great difficulty in bringing extra pressure to bear upon shareholders when they were williug to pay, and promised to pay in the near future, whereas if they had been compelled to pay up at the moment disastrous results might have accrued. The calls have since come in, and we have financed the company to the present date. The manager writes:—"There is every appearance now that the ore-bodies will continue downwards, in which case we have so far developed 2.0 ft. of virgin ground. When this is exhausted (he here refers to the tunnel scheme) we shall be able to run a tunnel which will give us 600 to 700 ft.—really about 1,000 ft. of backs—and with this work in view, we have secured the necessary ground and have had the surveys made for the work." During this year the directors have taken out what are termed "tuunel rights"—that is to say, they have secured the ground for running a tunnel to drain our own mines and the district all round. Those tunnel rights give us great advantages, as in running the tunnel (it will be run by somebody else if not by us) we shall have the right to all the minerals that are discovered on its course, and for 1,000 ft. on either side. That of course is a very important matter as regards the future of the company. In conclusion, I think I may say that

THE COMPANY BEGINS 1891 WITH VERY GOOD PROSPECTS,

and although we have not attained all we anticipated, yet we have overcome many difficulties and have reached a point at which success is within our grasp. (Cheers.) There is one word more I should

like to say. Many shareholders are continually asking how it is the shares are so low in the market. Naturally, it would occur to anyone who did not think the matter out, that it must be due to some weakness in the company itself, but really it arises from the very strength of the company. The fact is that many persons who have been holding mining shares (and they are always speculative) have found an utter impossibility to sell them at any price, whereas for Esmeralda shares you can always obtain a price. (Hear, hear.) You can sell 10,000 Esmeraldas any day within a penny of the quoted price. (Cheers.) The brokers will always make you a market in them. The consequence has been that many weak holders have been forced to find money for other investments and have come on the market and have sold our shares, and thereby kept down the price constantly and persistently, and that is clear to those who are behind the scenes and able to see the current of the market, really what has depressed them. No sooner do the shares spring a little, or show a tendency to go up, then there are so many who are pressed for money and who sell our shares, because, perhaps, at the time they can sell no others that they hold. (Hear, hear.) I now beg to move "That the report and balance-sheet be received and adopted." (Cheers.)

SHAREHOLDERS THINK THEIR FELLOW SHAREHOLDERS SHOULD PAY UP.

Mr. LANCE: Are the calls paid up?

The CHAIRMAN: Not all of them, but to within about 1,000*l.*

A SHAREHOLDER: It looks like "heads I win; tails you lose." If the company succeed they will pay up, and if it fails they will be *non est.*

The CHAIRMAN: It is difficult for directors to proceed to extreme measures. (Hear, hear.)

Mr. LANCE: I paid my calls immediately I was asked, and naturally supposed that other shareholders would do the same. If not, why not put the law in force? (Cheers.)

The CHAIRMAN: I can quite see the feeling of the meeting, and it is a very natural feeling. It is one that, as a shareholder, I entertain myself. The shareholders now having expressed that feeling, the subject need go no further, because the directors will immediately notify to the shareholders who have not paid that stringent measures will be taken against them.

Mr. LANCE: I suggest that a fixed time should be given them.

The CHAIRMAN: The directors see the feeling of the meeting. If you were in the position of a director and you found shareholders very much pressed, you would feel how hard it was to come down upon them and forfeit their shares. I acknowledge it is wrong not to do it, and I do not shelter myself under the plea of right, but at the same time it is hard for men to have their shares forfeited. Still, having received the expression of opinion which the shareholders have manifested we shall immediately issue a notice, and if calls are not paid within a few days the shares will be forfeited.

Mr. ALSOP: Perhaps we could assist you by passing a resolution—"That the arrears be now enforced, pursuant to the articles of association." That will take the responsibility from the directors if a resolution of that sort were passed.

The CHAIRMAN: I shall be very much obliged to you if it is passed, for a great responsibility will be removed from us.

VIEWS OF SHAREHOLDERS.

Capt. HARRISON: The accounts are dated 17th December. They were issued on Saturday, so that they could not be received before Monday morning. Christmas week intervenes, and you are asked to come here on the following Tuesday to pass them. It is usual for accounts to be in the hands of the shareholders for a longer and more convenient period than that. Then I want to know why it is that, for the purpose of auditing accounts in London, you have a Manchester auditor. As regards the prosperous condition of the company spoken of by the chairman, the company was re-coustructed in 1889, with a capital of 500,000*l.*, 17s. 6d. credited as paid. The value of the shares now, even with the 1s. 6d. paid, is 2s. 3d. on the market, or, less that amount, 9d. This prosperous compauy, with a capital of 500,000*l.*, its marketable value is, with the calls paid, 18,750*l.* The chairman has explained the arrears of calls, and it is more satisfactory than I expected to find that they are now about 1,000*l.* I think it also desirable that the proposed resolution about them should be passed. It is not fair to those who pay their calls promptly to be put in the same category as those who pay six months after date. Has auy ore been crushed during the past 12 months?

The CHAIRMAN: None at all, and I may say it was not anticipated any would be.

Capt. HARRISON: Is this all that has been spent on the mine—12,000*l.* (Yes.) I think there ought to be a workiug account as well as an assets and liability account. You say Mr. Colcord has been appointed the local director, but has he a salary?

The CHAIRMAN: No salary is fixed—the appointment is honorary.

EXPENSES IN LONDON.

Capt. HARRISON: I cannot see why the expenses should be so large in London. I was in America last autumn, and if I had got within 1,500 miles of this place, I should have gone to see it. I believe that 500*l.* a year instead of 1,500*l.* ought to cover all the London expenses. Anybody will say that that is out of proportion, for there cannot be a great deal of work to do! (Laughter and oh!) I think the time has arrived when there should be some investigation into the position of the company. I bought 2,000 shares at 9s. 4d., and never sold or bought one since that transaction. But I should like to know how it is that those shares which should be 10s. 10d. (with 1s. 6d. paid) are now only worth 2s. 3d. Either the mine is badly managed or it is not the property it is supposed to be. In either case we can thoroughly understand the depreciation of the shares. We have favourable reports continually, and here you are going from bad to worse. Possibly, later on, I may move a resolution.

The CHAIRMAN: The last speaker raised the question why the meeting was postponed, but the report gives the reason. We had hoped to get the mill to work, and to announce that fact to you, and there was no urgent necessity for calling the meeting. As to the price of the shares, the gentleman seems to think that because he paid 9s. 4d., and has since paid 1s. 6d. in calls, that therefore they should be worth 10s. 10d.

Capt. HARRISON: I did not say that. (Oh.)

AN APPEAL TO THE REPORTERS' NOTE-BOOK.

The CHAIRMAN: I will appeal to the reporters as to what you really did say.

The notes were read out of Capt. Harrison's speech as before given.

Capt. HARRISON: I said there must be some reason for the depreciation.

The CHAIRMAN: What you said is down on the notes, and it is also within the memory of the gentlemen present. (Loud cries of "Hear, hear.")

Capt. HARRISON: I did not intend that.

The CHAIRMAN: That is quite another matter; but that is what you said.

Capt. HARRISON: I said there must be some reason for the depreciation.

The CHAIRMAN: I do not think the reason for the depreciation is far to seek. If you look at the state of business affairs generally, and if you look at the market value of other shares, you will see that Esmeraldas have a better record than the most of them. I do not see how a gentleman by any process of proper reasoning can add the original cost of his shares to the calls he paid in a re-constructed company, and then say they ought to be worth the combined amounts. (Hear, hear.) Companies are not re-constructed save under the urgent necessity of finding further capital. The gentleman said he very much wished he had gone to the mine. I wish so too. If he had gone I can assure him he would have spoken in a different strain to-day. I have been to these mines and tell you frankly that not only I, but every expert who has been there, describes the district as the most promising you can find. The evidences of mineral wealth are greater than they are in almost any other part of the Western States, and I tell you again, what can be verified by documentary evidence, that there have been millions sterling in gold taken out of the tops of the hills where we are working to-day. (Cheers.) If that is not sufficient evidence for people to spend their money in a speculative mine, I do not know what evidence they can desire to have. I only hope that the gentleman when in America again will go there and see the place.

Capt. HARRISON: I certainly shall do so. (Hear, hear.)

JUSTICE TO THE WORK OF THE STAFF.

The CHAIRMAN: He has spoken of London expenses, but I ask him to refer to any company of similar dimensions and he will find that our charges are lower than theirs. He also says the work in London could have been little or nothing in a company of this character, but how greatly has he misapprehended the real state of affairs. In the starting of a company the office work is very heavy, as new accounts and new books have to be opened throughout. We have, I believe, over 2,000 shareholders, each of whom has a separate account in our books—that account being in the ledger, and also in the day book and right away through, and that work has had to be put into these 12 months, and has been paid for out of the London expenses set down here. I do not think it a fair thing to say that that charge is excessive. (Loud cheers.)

DIRECTORS COMPLIMENTED.

Mr. HEIRON: I rise for the purpose of congratulating you on the lucid statement you have made to the shareholders, and I think that the way in which the affairs of the mine have been conducted since the inauguration of the company does credit to the directors and all concerned. I say that not because I am interested in saying it, but because I really think so. I have had as much experience, perhaps, as Capt. Harrison in mines, and can sympathise with the difficulties of directors where the seat of operations is so far from where the directorial board is placed. I hope that the future results of this company will be satisfactory to all concerned. It is a pure speculation, and no one is wise who will attempt to prophesy about it. As regards assays—I pay little attention to them, for what I want really to see is the result of a mill run. At the same time, the chairman's remarks as to the mineral wealth of Nevada in the past are fully justified by the published facts. How many stamps have we at our mill? (20.) There is a debenture loan of 9,491*l.*, and I have an idea that that has soon to be repaid. I also presume there are calls to be made at once, because the payments were fixed before the company came into existence, and the next will be due January 25th, and evidently from the position of affairs the money will be wanted. As regards Governor Colcord's position, I agree that it is important, and that he evidently must have faith in the concern. Is he interested as a shareholder, and to what extent?

DEBENTURES.

The CHAIRMAN: He holds 1,000 shares. As to the repayment of the debentures, part has already been paid, part will require to be paid, and part the debenture-holders will be glad to carry over.

Mr. ALSOP: It would be more satisfactory if the accounts were sent out in greater detail. The item (650*l.*) seems large, but the fees of directors appear to be small, and to coincide with what the chairman said as to the moderation of the charges.

A SHAREHOLDER: I think it mistaken policy for shareholders to try and pick anything to pieces before that thing has fallen away. (Hear, hear.) I bought 1,000 shares, and am told you could not buy them to-day at the present market price.

The CHAIRMAN: I do not believe you could.

The SHAREHOLDER: Perhaps that will give some relief to Capt. Harrison's mind. (Laughter.) You said parts of the debenture debt were cleared off, but it is a shame to pay 8 per cent. for money, when the money is, really due from our own shareholders. You have 3,000*l.* loans at interest; what security have you for them, and do you get a better rate of interest than 8 per cent.? I can well see that the expenses in London are to a great extent accounted for by the excessive labour of the year, and probably there will be a reduction.

A SHAREHOLDER: The balance-sheet is mixed up so that I cannot understand it. How can expenses be an asset? They should be a separate item.

The CHAIRMAN: The auditor is present and the form of accounts has been adopted by him. In our opinion he occupies one of the highest positions in the profession. The security is ample for the loans, and the directors take the responsibility. Eight per cent. is the average—10 per cent. in one case and 6 per cent. in another. (Cheers.)

LOANS AND SECURITY.

Mr. BALL: I think we ought to know where our money is, for the item is unusual. I shall press for the details, and I should also like the details of mining expenditure to be given. (Cheers.)

The CHAIRMAN: Part of that money was lent to the Humboldt Company, a subsidiary one to this, and we have security of their uncalled capital and other assets. I do not think I should be called upon to answer such a question, but still I do answer it.

Mr. BALL: I object to our money being lent to another mining company. (Hear, hear.) Why has the outlay on the mine not been included to 31st July? The accounts say "not including accounts owing on the 31st July paid in August."

The CHAIRMAN: The directors have ample security for the money lent to the Humboldt Company. It was lent from selfish motives, so that our interests might be advanced. (Hear, hear.) They were working on our property, and by our assistance they were enabled to go on developing it. That property will now come back to this company with all its improvements. (Cheers.) I am quite willing to give all possible information, but if you do not trust your directors, turn them out.

Mr. BALL: I do not think you should put it in that way. We are entitled to all the information we can get, and I am pleased to see that you are answering the questions so frankly and fully. (Cheers.)

The CHAIRMAN: I must apologise, but still you must acknowledge that the directors must either be trusted to some extent or must not. You have a perfect right to ask for information, and I am not wishing to withhold it.

Mr. BALL: It was certainly not asked for through any feeling of distrust of the directors.

The CHAIRMAN: As to the details of expenditure, I will instruct the secretary to have them printed and sent to the shareholders. The July accounts cannot be included, because they are paid only on 4th August.

AUDITOR EXPLAINS.

Mr. MATHER (auditor): This is in no sense a revenue account. It was impossible to have one this year. If you brought in the amount due to the end of July and not then paid, you would have to show it on the other side as a liability. As long as you are not dealing with this as a revenue account, it did not seem necessary to go into details. With regard to the form of the balance-sheet, let the shareholder who has complained obtain as many balance-sheets of other companies in the first year of their operations as he can, and if he finds there is any serious difference in the form, I will admit that he may have a grievance against the auditor, but, in the meantime, I simply content myself with saying it is the ordinary form adopted. (Hear, hear.) It is not possible to bring into a mere working account a revenue account, because there is no revenue to bring in, and, therefore, all your expenditure can only be treated as part of your assets.

Another SHAREHOLDER congratulated the chairman upon the patience he manifested in face of the great amount of ignorance that had been displayed at the meeting. ("Oh!" and laughter.)

The CHAIRMAN: As far as our finances are concerned, they are all right. We have plenty of money to go on with. At the present moment we have 26,000*l*. (Applause.) Of course, I cannot prophesy as to when crushing will commence, but I hope most sincerely that within a very short time we shall be able to send you notice that the mill has begun to work. (Hear, hear.)

The motion for the adoption of the report and accounts was then put to the meeting and agreed to unanimously.

IMPORTANT TO SHAREHOLDERS IN ARREARS.

Mr. ALSOP: I think I had better now put my resolution, viz.:—"That the arrears of calls be enforced, pursuant to the articles of association, and that the interest thereby imposed be enforced."

Mr. LANCE seconded it, and it was carried with unanimity.

The CHAIRMAN: You may depend upon your views being carried out.

On the motion of Mr. SEYMOUR, seconded by Mr. ALSOP, Mr. John Mather was unanimously re-appointed auditor of the company.

The CHAIRMAN: That is all the business, gentlemen, and it only remains for me to thank you for your attendance. I hope I have answered, as far as lay in my power, all the questions you have put to me. (Loud applause.)

JUSTICE TO HARD WORKING DIRECTORS.

Mr. S. GREEN: There is one duty which devolves upon us to perform before we separate, and that is to propose a hearty vote of thanks to the chairman and directors for what they have done for us. (Applause.) I myself feel, and I am sure my brother shareholders do, that we should be neglecting our duty if we did not thank them for managing the affairs of the company so well under anxious circumstances. We know it is not in mortals to command success, but I think you will agree with me that the directors have done all in their power to deserve it. (Cheers.) I do not think anybody could devote himself more thoroughly to the work than our chairman does. At any rate, we must all know that gold mines and silver mines are speculative, and especially those in Nevada, and we must not throw upon the directors the blame if our hopes are not realised. I am sure if they can be realised by the work of the directors they will be. (Applause.)

The motion was duly seconded, and carried with enthusiasm.

The CHAIRMAN: I must once more thank you for the kind manner in which you have proposed and carried this vote of thanks. It will be my pleasure, as it is my interest, to do all I can to advance the welfare of this company. (Cheers.)

The meeting then closed.

FLAGSTAFF, LIMITED.

TRIBUTE TO MR. HOPKINS AND HIS LATE SON—THE MEETING ADJOURNED.

PROFESSOR VINCENT, in opening the general (adjourned) meeting of shareholders, held at the offices of the company, Dashwood House, New Broad Street, on Monday last, said: Gentlemen, it is matter of much surprise that I find myself acting as your spokesman to day. I have to announce, with feelings of deep regret and sorrow, that our able and esteemed chairman is detained at home through a heavy domestic bereavement. His eldest son, George, died the night before last, after only a few days' illness. Barely a fortnight ago, when in robust health, he was seized with a chill, which rapidly led to inflammation of the lungs, and this, again, apparently developed gastric and typhoid conditions — the whole resulting in the sad event we have now to deplore. I have, for a number of years past, had the pleasure of the acquaintance of Mr. George Hopkins, jun. (I spoke to him, I think, the very day he was taken ill), and from my knowledge of him, of his ever courteous and kindly bearing, his scholarly attainments, and his remarkable powers for administration of responsible business undertakings—public or otherwise—he was, to me, a most interesting and delightful personality. The effect on our worthy chairman, of the loss of such a son—he was only about 30 years of age—may, at least in some degree, be imagined. To add to the sadness of this event, a young wife (with one child, only a few months old) is among the many who will mourn his untimely loss. I have, in this instance, ventured upon details to an extent which, perhaps, in ordinary circumstances, would be held to be beyond the bounds of delicacy, if not of propriety, for one must be very careful about invading the sacred precincts of private sorrow, particularly such sorrow as this; but I have felt justified in every word I have said, from the exceptional, I might say remarkable, fact that our chairman, in the conduct of industrial enterprises, especially when in the form of companies, is a guide so eminent, able, and trustworthy, as to enjoy a world-wide reputation, and therefore anything seriously or sadly affecting him could not fail to be of keen interest to his multitudinous friends. Every one here to-day has, not only in this company, but doubtless in other companies as well, listened to his lucid and powerful business statements and been encouraged by his benignant and fascinating eloquence. From the details I have given I believe you will far more fully appreciate the profound and heartfelt sympathy which is so entirely due from each and every one of us to our excellent and distinguished chairman, and, if I might add, to his family also, in this hour of his and their surpassing sorrow. Coming to the object of our meeting here to-day, you will have learned from the notice sent out that it has been called *pro forma* only, merely to comply with the law, and will be adjourned till some day in the coming month—January—of which, as intimated, due notice will be given. Let us hope that we will be cheered and gladdened on that occasion by the presence of our chairman. (Applause.) I have very recently returned from the mine, and left all there going on exceedingly well; but, under existing circumstances, I will not go into any particulars now. When our general meeting takes place, however, I shall have something of interest to communicate—something, I trust, that will prove worthy of your acceptance. Thanking you all for your presence to-day, I beg to announce the adjournment of the meeting.

HOLLOWAY'S OINTMENT AND PILLS are beyond all doubt the most valuable and most convenient medicines that travellers can take across the seas to distant climes, for change of climate and the new conditions and surroundings of life to which they will be exposed will assuredly give rise to great disturbances of the system and to such especial morbid states of the blood and constitution generally as will render the use of these effectual remedies highly necessary, for they will find in them a ready and safe means of relief in most of the diseases which afflict the human race, and with them at hand they may be said to have a physician always at their call.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A FAIRLY BUSY WEEK—MARKETS MOVE UNEVENLY—SPECIAL NOTES ABOUT CERTAIN MINES—A GOOD OUTLOOK FOR MINING SHARES.

THE chief characteristic of the Mining market this week, has been one of cheerfulness, with not too much business to sustain it. Though in many cases shares have risen, the decline in some instances has taken a good deal of winking and blinking to get over. At the opening of the week the aspect of affairs was not altogether bright, but later on when the crushings came from India, and were followed by those from South Africa, the feeling of confidence revived, more particularly when it was seen that in each case the sum total was an improvement upon the previous month. The returns from India are distinctly better, and the large number of companies in South Africa that are now steadily crushing, is beginning to impress the public with the idea that these mines are being worked to develop their intrinsic worth, and not to dazzle the London market. In South African shares there has been a moderate advance, with slight exceptions, almost along the whole line.

A good deal of attention has been attracted to Zambesi Concessions shares, which have nearly donbled their price during this week. We understand that the Gaza Sofala Companies have negotiations in hand for the sale of considerable portions of their property, which is situate in Manicaland. Next week we hope to be in a position to give more details. In the meantime we may point out that if these sales are carried through large returns, in the shape of either dividends or bonuses, will be made to the shareholders.

The Land shares have for the most part been unsteady, and Diamond shares have moved unevenly.

The Indian crushings are viewed favourably by brokers and by experts. Mysore and Ooregum show an increase, and Nundydroog a decrease. Balaghat is 100 ozs. better than last time. The chief feature in these crushings is the respectable appearance put in by Mysore Reefs. The former crushings were made with an old Elephant battery, now discarded ; but the present one of 600 tons, yielding 106 ozs., or 3½ dwts. to the ton, from the plates only, has been made by the improved Sandycroft stamps, of which 20 are erected. Mysore Reef shares are not to be despised.

Ooregums have been firmer on the week, but other shares are somewhat lower. Call letters (6d. each) are said to be in course of preparation by the Mysore West and Wynaad companies. The shareholders, of course, knew that this money would be required for the development of their Tank Block property.

In the general Foreign market the feature to-day has been Almada shares, which have been difficult to buy at quoted prices, and which ought to be much firmer during the progress of next week. The latest news from the mine is very good. It reads badly at first, bnt as they say in the romances—mark what follows. The lode in the end is not so solid as it was, and instead of producing 20 tons to the fathom, it produces 15 tons ; but the average grade has increased from 39 ozs. of silver per ton to 60 ozs. This would be a value of about 12*l*. a ton, and consequently the lode instead of being worth 20 tons at 7*l*. is worth 15 tons at 12*l*., showing an increase of 40*l*. At a point 140 ft. above the 24 level, the manager has started a cross-cut with a view to intersect this ore shoot, which he expects to do in about 20 ft. of driving, and its accomplishment may be shortly expected, and the announcement should make the shares much better than we quote them to-night. Capt. Davey has gone out to view the mines on behalf of Messrs John Taylor and Sons, the managers, and by this time should be on the spot. In view of the late discovery his report may be looked forward to with special interest.

There has also been a good deal of business in New Gold Hills. Don Pedros mark a rise, and the satisfactory news we publish from Elkhorn this week sufficiently accounts for the improvement that has taken place in the price of its shares. From this mine telegrams have come almost daily. Golden Gate and Golden Feather also mark a rise, and St. John del Reys were up on the meeting, no doubt owing to the market appreciation of the fact that the directors have faced the full exigencies of the position in a bold and comprehensive manner. Tolima shares are also up, but the record is not complete without mentioning that on the down grade have been Colorado, El Callao, Flagstaff, Linares, and one or two other descriptions. The Copper market has been weak, but Quebradas improved when it became known that Mr. Hugh M. Mathieson had accepted the chairmanship of the company.

Australian shares have been flabby. The Etheridge telegram is good. The manager has evidently cnt into a body of ore 6 ft. wide, and, of the 100 tons at surface, the assay taken has been 2 ozs. per ton. Milling will be commenced forthwith.

Since the meeting last week, Wheal Grenvilles have risen 2½ and seem likely to go still higher. These shares have no doubt been the feature of the Cornish week. Tincrofts are also better, but not so Carn Brea, East Pool, Wheal Agar and West Kitty, which are all down.

The profit of 288*l*. made by Wheal Crebor is highly satisfactory, and points, if we mistake not, to early dividends. The discovery which has led to this result was made by Mr. Bawden, who came forward when the shareholders were getting disheartened, and offered to work the mine on his own account for a short time. The shareholders are now reaping the benefit. The action of the Duke of Bedford in relinquishing the arrears of dues, and also in foregoing dues for the next two years, unless the mine pays a dividend, is highly commendable. Prince of Wales Mine, unfortunately, does not come out so well, though the prospects are bright. Any day a discovery may be made here which will turn a loss into a substantial profit.

The South Condurrow Mine has this week declared a dividend of 2s. per share. The mine commenced paying dividends in July, 1875, since when 17*l*. 2s. 8d. per share has been divided, exclusive of the dividend just declared. The prospects for the future are encouraging.

The outlook for next week is decidedly hopeful, and we incline to the opinion that many cheap shares, whose merits we have so often set forth, deserve special attention by those who look for a profit on the market rise rather than for dividends.

KAFFIRS.

Business has been active in this class, and on the returns being made known several of the shares improved. Judging from the

present outlook, it would not take much buying to cause a considerable improvement in Kaffir shares generally. It is the opinion of several good mining men who have just returned from South Africa that, with careful management, the returns from the Randt might be doubled within the next year. The Robinson Company has declared a dividend of 4s. Pigg's Peak continue to be actively dealt in.

Business.—Those that have risen are as follows :—Pigg's Peak, Ordinary, ⅛; Pigg's Peak, Preference, ¼; Sheba, 1/16; City and Suburban, ⅜; Durban Roodepoort, ¼; Geldenhuis, ½; Jubilee, ⅜; Jumpers, ⅛; Langlaagte, 1/16; Main Reef, 1s.; May Consolidated, 6d.; Robinson, ⅛; Witwatersrandt Knights, 1/16; Wolhuter, ⅛.

The falls are as under :—Crown Reef, ⅛; Forbes' Reef, 1s.; Glencairn, 2s.; Great Gold Zone, 2s. 6d.; Johannesberg Pioneer, ¼; and Moss Rose, ⅛.

South African Lands.

This class of investment has been almost entirely neglected if we except Ophir Concessions, Zambesi Gaza, and Zambesi Sofala, in which some active dealings have taken place at improved rates. The market closes with a firm tendency.

Business.—The falls are in the following :—Bechuanaland ⅛, British South Africa 1/16, Exploring ½, Goldfields of South Africa ¼, Oceana ¼, Silati River 6d., Sutherland Reef 1/16, Transvaal Lands ⅛, and Zoutpansberg 1/16.

The only rises to note are in London and South African ¼, Moodies 1/16, and Ophir 1s. 6d.

Diamonds.

There has been but very little doing in this description, and although prices have varied daily in De Beers, there is only a 2s. 6d. change on the week. New Jagersfontein and North-East Bultfontein have risen, but do not close at best.

Business : A rise is shown in Gordon of 2s., New Jagersfontein ¼, and North-East Bultfontein 7/16 ; whilst the only fall is in De Beers of ⅛.

Indians.

There have again been some active dealings in Indian shares, and prices have been better than they close this evening. There can be no doubt that with the present satisfactory returns from this field, and with the likelihood of further improvement ere long prices should go higher. There appears to be a disposition to purchase Ooregums, and it is the general opinion they are cheap at present prices.

Business.—A fall has to be recorded in Balaghat of 6d.; Champion Reef, ⅛; Glenrock, 1s.; Goldfields of Mysore, 1s. 6d.; Mysore West, 9d.; Mysore-Wynaad, 3d.; and Nine Reefs, 3d.

The only rises are in Ooregum Ordinary of 5/16, and Preference 3/16. Others are as last quoted.

Australians.

The chief change of the week has been in Gympie Great Eastern, which fell in consequence of the report that the manager had dispensed with the services of 40 miners. They, however, recovered somewhat, but still show a fall on the week. Kangarillas have been again offered for sale. No other change to note.

Business.—The following have receded :—Australian Broken Hill, 1s.; Gympie Great Eastern, 1s.; Kangarilla, 1/16; Mosman, 3d.; and New Queen, 6d.

The only rises are in British Broken Hill of ¼, and Cumberland 3d.

Copper.

Copper shares have seen several changes, and in nearly every instance close lower. As usual Rio Tintos appear to have been the

touchstone of the market. The shares have had a serious fall, being ¾ down on the week.

Business—The following show a decline :—Bratsberg, 6d. ; Capes, ⅜ ; Copiapo, ⅛ ; Namaqua, ⅜ ; Panulcillo, 1/16 ; and Rio Tinto, ¾. The only improvement is in Quebrada of ⅛.

GENERAL FOREIGN SHARES.

There has not been much business in this class if we except Almada, Callao Bis, Don Pedro, Gold Hills, Golden Feather, and Tolima. The market, however, appears ripe for a general improvement if the public come in to buy shares and take them up. There are many shares one might now buy to advantage, but the public appear slow to purchase.

Business.—The shares that have fallen are as under : Almada, 3d. ; Colorado, 6d. ; El Callao, ⅛ ; Elmore, 3d. ; Flagstaff, 9d. ; Linares, ¼ ; Orita, ⅛ ; Pahang Corporation, ⅛ ; Venezuelan Austin, 6d., and Zaruma, 6d.

Those showing a rise are the following : Don Pedro, 4s. ; Elkhorn, 1/16 ; Golden Feather, 1/16 ; Golden Gate, 1/16 ; Idaho, 3d. ; New Gold Hill, 6d. ; Palmarejo, 6d. ; Pestarena, 3d. ; Potosi, 3d. ; Spitskop, 9d. ; St. John del Rey, 6d. ; and Tolima, ½.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT.—A telegram, dated 7th January, gives last month's return of gold as follows :—"330 tons of quartz produced 486 ozs. of gold." The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of November, which realised 1,510*l*. 1s. 4d.

INDIAN GOLD MINES (GLASGOW).—Cable from the mines :—"December total amount crnshed is 800 tons, yielding 117 ozs."

MYSORE.—A telegram, dated 5th January, gives last month's return of gold as follows :—"3,250 tons of quartz produced 4,844 ozs. of gold, also 472 ozs. from tailings, making together 5,316 ozs." The company have sold the gold obtained in the month of November, which realised 20,754*l* 8s.

MYSORE REEFS.—A telegram, dated 8th January, gives last month's return of gold as follows :—"Crushed 600 tons ; obtained 103 ozs. of gold, plates only."

NUNDYDROOG.—A telegram, dated 7th Jannary, gives last month's return of gold as follows :—"975 tons of quartz produced 1,406 ozs. of gold." The company have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of November, which realised 5,597*l*. 1s.

OOREGUM.—The company has received a telegram, dated 2nd January, giving last month's return of gold as follows :—"1,313 tons of qnartz produced 2,847 ozs. of gold." The directors have sold the gold produced in November for 10,426*l*. 1s. 3d.

COLONIAL MINES.

DAY DAWN P.C.—A cable gives the result of this company's crushing for the fortnight ending January 3rd, viz. :—"767 tons, 1,050 ozs. Lost seven days through holidays and overhauling machinery." (Estimated value, 3,570*l*.)

ETHERIDGE UNITED.—Telegram from the mine, dated January 7th, 1891 :—"Mill running all right. Caledonian ore assays, 2 ozs. per ton."

GYMPIE GOLDEN CROWN.—Cable :—"200 tons, 132 ozs." (Estimated valne, 475*l*.)

KANGARILLA.—The directors advise the arrival of Mr. D. D. Rosewarne in Adelaide, and forward a copy of the first cablegram received from him :—"Mine looking first-rate. There is an abundance of first-class ore, sufficient to warrant the concentrating works. Remit by telegraph 4,000*l*. Can contract immediately for the erection of machinery." Instrnctions will now be given to order the necessary machinery, and the amount asked for will be remitted.

MIDAS.—Cable from the mine : "Yield for week, 80 ozs."

MOUNT ALBION SILVER.—A telegram from the manager shows work done during four weeks ending 24th December :—"Shut down 12 days for repairs ; shall be able to resume work to-morrow ; 437 tons of ore raised, containing 14,000 ozs. silver ; 525 tons of ore smelted, containing 18,000 ozs. silver, producing 80 tons silver-lead bullion, containing 15,000 ozs. silver. Shipped per Taroba, 44 tons silver-lead bullion containing 8,100 ozs. silver ; and 15 tons silver ore containing 2,450 ozs. silver."

MOUNT MORGAN EXTENDED.—A cablegram from the mine manager states :—"Things are improving. No. 3 shaft, Immannel vein, 81 ft. deep ; assay gold, 19¾ dwts. per ton."

ST. GEORGE.—Cable from general manager :—"No. 2 level north has been driven 9 ft. I shall probably commence stamping 20th January."

FOREIGN MINES.

ANGLO-SAXON.—A cablegram has been received to the effect that 247 tons of stone were crushed in fourteen days, the yield of gold being 410 ozs. It is presumed that the battery was not crushing during the Christmas holidays.

DON PEDRO.—Telegram : "Marianna, 7th Jannary : End of 50 fms. cross-cnt is cleared. Stopes nearly finished, driving 50-fm. cross-cut, which is expected to intersect southern part of No. 8 lode during the month."

ELKHORN.—Cable from Capt. Plnmmer :—"Bullion shipped for week ending the 3rd January, 1891, $9,000 (nine thousand dollars.") Further information from Capt. Plummer : "Mill worked 27½ days during month of December, and crushed 1,020 tons of ore, producing bullion amounting to $37,200 ; smelting ore ; produced 195 tons of the value of $12,870 ; total produce, $50,070 ; total expenses $22,070." Letters from Capt. Plummer since the date of his last report state :—"The mine is looking very nicely throughout. The 1,050, which at present is the chief point of interest, looks very well indeed ; the vein is 20 ft. wide ; it looks as if we had cut into a very rich section. At all events we have seen nothing like it at any of the other levels."

GOLDEN GATE ALLUVIAL.—Letters of allotment and regret for the new issue of capital were posted this evening (January 8th, 1891.)

GOLDEN LEAF.—A telegram from Mr. F. Henry Longmaid, the manager at the company's Empire property, recently re-opened, states :—"Dnring December the mill worked 60 stamps for 26 days, and the yield was as follows : Bullion, $10,000 ; sundries, $500 ; total, $10,500. The working expenses for the month were $7,500—$3,000." Therc was also expended on capital account, $2,500. The manager adds :—"Prospects are encouraging. Output increasing."

GOLDFIELDS OF URUGUAY.—December result :—3,700 tons of ore crushed ; 545 ozs. of bullion produced ; value, $6,500 ; 56 stamps running 29 days.

ISLAND BLOCK.—A cablegram has been received to the effect that during last month 200 ozs. of gold were obtained, the total expenses at the mine being about 37½ per cent.

MAMMOTH.—The manager, Capt. Johnston, reports by wire that the bnllion prodnced and sent to bank for the month of December amounted to $23,450."

MESQUITAL DEL ORO.—December mill-run : — 49 stamps crushed 1,403 tons ; bullion produced at clean-up, 1,282 ozs.

NEW EBERHARDT.—I have received your letter of 11th December referring to the November run. $3,500 was net profit. Mine prospects are very much better ; weekly ontput, quantity, 22 tons ; the average is $47 per ton ; expenses during the month of December, $2,700.

NEW QUEBRADA.—It is announced that Mr. Hngh M. Matheson, of Messrs. Matheson and Co., has accepted the chairmanship of the Quebrada Railway, Land and Copper Company, Limited, vacant by the death of the late Hon. T. C. Bruce.

PASZOWA (GALICIAN) PETROLEUM.—The company has received advices from their manager in Galicia, dated 31st ultimo, to the effect that the new well, recently started, has struck very fine shows of oil at 107 metres depth, and that the oil has alrcady risen 50 metres high in the bore-hole.

Pestarena United. — The returns for December were 495 ozs. 7 dwts. 20 grs. from 640 tons, equal to 15 dwts. 11½ grs. per ton—viz., Pestarena Mine: 415 ozs. 17 dwts. 14 grs. from 469 tons, or 17 dwts. 17 grs. per ton. Val Toppa Mine: 79 ozs. 10 dwts. 6 grs. from 171 tons, or 9 dwts. 7 grs. per ton.

Pinos Altos Bullion.—The out-turn for the week ended 27th ult. was $7,500.

Pittsburgh Consolidated.—Cablegram from superintendent: "Will start mill 3rd January."

San Bernardo.—The following telegram has been received from Judge Costigan, the company's counsel in Colorado:—"Titles are in order, and property has been transferred to the company."

Silver Bell.—The company has removed to No. 74, Gresham House, Old Broad Street, E.C.

United Mexican.—Telegram: "San Cayetano:—Gross returns for week ending 27th December, $4,890; expenditure for week ending 20th December, $5,050; loss for week ending 20th December, $1,880. El Cubo:—Gross returns for week ending 27th December, $7,100; expenditure for week ending 20th December, $4,910; profit for week ending 20th December, $2,590.

Venezuelan Austin.—Since the mill recommenced crushing on the 1st October the following are the results up to the 19th ult., viz.:—Tons crushed, 7,343; ozs. of gold obtained, 3,140.05.

Yuruari.—The secretary advises receipt of telegram from the mines, as follows:—"Return for fortnight, 750 ozs.—Pryor."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Pioneer.—Result for December, 711 ozs.

Spes Bona.—Result for December, 860 ozs.

New Primrose.—December crushing, 1,108 ozs.

Jumpers.—Obtained 3,414 ozs. of gold during December.

Robinson.—The result of last month's crushing is 6,530 ozs.

Roodepoort.—December crushing, 1,215 ozs., 23 days running.

Kleinfontein.—Crushings for last month resulted in 260 ozs.

Heriot.—The result of last month's crushing is 300 ozs. of gold.

Nigel.—The result of last month's crushing is 1,108 ozs. of gold.

Langlaagte.—The result of last month's crushing is 4,750 ozs.

Stanhope.—The result of last month's crushing is 369 ozs. of gold.

Princess Estate.—Crushing for December resulted in a yield of 860 ozs.

Crown Reef.—The crushing for last month shows a result of 3,000 ozs.

Kimberley Roodepoort.—The result of last months' crushing is 1,215 ozs.

Central Langlaagte.—Crushings for December:—2,050 tons, yielded 675 ozs.

City and Suburban.—The result of last month's crushing is 900 ozs. of gold.

Wemmer.—December results:—515 tons 980 ozs., 15 stamps working for 252 hours.

Worcester Exploration.—The result of last month's crushing is 860 ozs. of gold.

United Main Reef Roodepoort.—The result of last month's crushing is 790 ozs.

Geldenhuis.—In December this company crushed 900 tons, producing 430 ozs. of retorted gold.

Wolhuter.—Cable advices announce the company has struck a reef at 266 ft., assaying 2 ozs. 11 dwts.

May Consolidated.—The yield of gold during December was 2,025 ozs. from 70 stamps running 19 days.

Durban-Roodepoort.—The yield last month was from 1,625 tons, milled in 26 working days. The result is 1,406 ozs.

Forbes Reef.—During December 1,300 tons of quartz casing and surface soil were passed through the mill, yielding 308 ozs. of gold.

Central Montrose.—The crushing for December with a 10-stamp battery was 292 tons, yielding 390 ozs. of gold. Expenses on revenue account were 600*l.*

Graskop Mill and Mining.—A cablegram announces the result of the December crushing, as follows:—"Crushed 650 tons; yield 294 ozs.; estimated cost, 510*l.*"

Ni-Wot.—Cablegram:—"Result for the month, working 25 days, running an average of 48 stamps, 580 ozs. amalgam, 45 tons concentrates, and 45 tons smelting ore."

Simmer and Jack.—The company announce the removal of their London office to 33, Cornhill, E.C. Cablegram:—"Obtained 2,563 ozs. gold during the month; 80 stamps."

Salisbury.—The crushing for last month was 530 ozs., and the mill worked only 15 days, Great damage was done by floods to the dam, but the damage has now been repaired.

Jubilee.—Result of last month's crushing is 1,056 ozs. of gold. Have declared a dividend of 10 per cent., payable the 12th day of February to all shareholders registered on the 5th day of January.

Wassau (Gold Coast).—The yield of gold for the months of September and October last was 165½ ozs., of the nett value of 631*l.* 19s. 2d. During these two months the mill worked 42 days, and crushed 364 tons of ore, giving a yield of 0.46 ozs. per ton.

Thomas Reef.—Report, dated Barberton, 6th December: During the past week a plat has been cut at bottom of shaft, in the eastern side, so as to be able to fix a windlass at this level, which will be known as the 54-fm. level. About 2 ft. of sinking has also been done.

Oriental and Sheba Valley.—In reply to a cablegram asking the reason of the poor returns for last month, and how the new 60-stamp mill was working, the manager has telegraphed as follows, viz.:—"Dump has been found mixed up with bar; ore improving in quality as developed; new mill working splendidly."

Glencairn.—The November crushing is 400 ozs., instead of 240 ozs. previously declared. The London agents announce receipt of following cable:—"December crushing for 20 working days, 467 ozs." The mine is still looking well: samples are being taken at least every 50 ft. along the line of reef, and during the week have had several good results.

Pigg's Peak Estate.—A cablegram, in cipher, has (Thursday) been received from Barberton, which states:—"Crushing commenced yesterday." This is understood to refer to the battery of 10 stamps recently hired from the Havelock Company, which commenced work on 5th January. The 1,280 ozs. of gold obtained during the month of November have realised the sum of 4,833*l.* 10s. The 1,280 ozs. of gold obtained during the month of November have realised the sum of 4,833*l.* 10s.

Transvaal Gold Exploration and Land (8th Dec.)—Bullion: A parcel of melted gold, weighing 829 ozs. 7 dwts., value 3,110*l.*, was forwarded through the Standard Bank on the 31st December. This gold was part of November's produce. Mill: The battery and pans were working full time. Transport was active, and the stock of ore on the battery dump increasing. Cablegram from the general manager:—"During December mined 250 tons, battery working 23 days double shifts; crushed 675 tons, the ore yielding 600 ozs., and pans (from rich ore and tailings) 550 ozs.; total for month, 1,150 ozs."

United Langlaagte.—Manager's report for November: The mill ran 28⅛ days; crushed 4,440 tons of ore; and returned an output of 1,550 ozs. 4 dwts. of smelted gold, or an average of 6.98 dwts. per ton. The expenses for the month amounted to 17s., 5.95 per ton treated, inclusive of development, and left a profit of 1,575*l.* 1s. 7d., exclusive of redemption. The new block of quarters, containing four rooms and a kitchen, is now completed and in occupation. The mill is running splendidly, and all machinery is in good working order. November crushing, 1,550 ozs. 4 dwts. of smelted gold from 4,440 tons. The crushing for December was 5,000 tons, yielding 1,536 ozs. of gold.

COMMERCIAL NOTES.

Metals.

The Metal market has been fairly active during the current week. Bank rate has been reduced to 4 per cent. Bar silver declined to 47⅝d., and has since recovered to 48⅛d.

Copper has been easier. G.M.B. Warrants sold from 52*l.* 15s. to 51*l.* 15s. cash, and from 53*l.* 7s. 6d. to 52*l.* three months, closing to-day at 51*l.* 12s. 6d. cash, and 52*l.* three months. We quote English tough, 57*l.* to 59*l.*; best selected, 59*l.* to 61*l.*; strong sheets, 65*l.* to 66*l.* India sheets, 61*l.* to 62*l.* Yellow metal, 6d. Ore, regulus, &c., 9s. 3d. to 10s. 6d. per unit.

Tin has been fairly active. Straits improved from 91*l.* 7s. 6d. to 92*l.* cash, and 92*l.* 15s. three months, but has since declined to 90*l.* 17s. 6d. cash, and 91*l.* 7s. 6d. three months. To-day's prices are 90*l.* 12s. 6d. cash, and 91*l.* 2s. 6d. three months. The Dutch market has been quiet at 55fl. to 55¼fl. for both Banca and Billiton. The trading company's next sale of Banca will be held in Rotterdam on the 29th inst., and consists of 28,300 slabs, of which 1,000 slabs are refined. English ingots, 94*l.* 10s. to 95*l.*

Tin Plates in good demand, and quoted 18s. for ordinary brands, Liverpool.

Spelter steady, at about 22*l.* 10s. to 22*l.* 15s. for ordinary brands ex ship here.

Lead dull and easier. Soft Spanish, 12*l.* 15s.; soft English, 13*l.*; L.B., 13*l.* 10s.; sheets, 14*l.* to 14*l.* 5s.

Quicksilver dull. Rothschild still quotes 9*l.* 5s.; seconds, 8*l.* 18s. 6d. to 9*l.*

Antimony quiet, 71*l.* to 72*l.*

Dividends Declared and Announced for Week Ending January 10th.

Adelphi Bank	9 per cent.
Alliance Bank	8 per cent.
Anglo-Australian Bank	10 per cent.

NORWEGIAN MINES, 1890.

TRANSLATION of abstracts from an article in the *Morgenbladet*, 29th December, 1890, the principal paper in Norway :—

"The Bratsberg Mines have been returning their ores about 20 per cent. in the crude state, but from the commencement of the new year they will import cokes and smelt the ores at the mines. A complete and modern smelt works has been erected, with water-jacket furnaces, Mánhe's converters, &c., together with an electro-depositing plant for refining, whereby they will obtain 5*l.* more per ton for the copper, besides securing the silver and other noble metals which are present. The Guldnocs Mines (one of the oldest and largest properties in the country) : The development of this property has been continued. These mines are not far from the point where the Bergen-Christiania Railway will pass through Thelemarken. Gold mines : On the Bömmel Island three companies have been working, viz., the Oscar Gold Company, Limited ; the Haugesund Gold Syndicate, Limited ; and the Bömmelö Bergvoerksselskab. The latter, in conjunction with the Scandinavian Exploration Company, Limited, who have been making some trials near Hille, have suspended operations. The Haugesund Gold Syndicate, Limited, worked their mines early in the year and in the fall on the so-called Haugesund lode. They have met with some rich bunches, but the quartz, unaccompanied with visible gold, has been poor. The prospects for this company are not without promise for the future, as the average value so far has been from 6 to 8 grammes to the ton (¼ oz.). The Oscar Company has worked with great energy and under skilful management. They have chiefly confined their work to the new lodes in Risvig, particularly Hodgkinson lode, which has been sunk to a depth of 300 ft. and opened by levels about 400 ft. Owing to the frequent throws in the lode the development has been difficult. The broken quartz has yielded 21,300 grammes, and has varied in value from 10 grammes to 30 grammes to the ton. They have produced gold from the commencement of operations. The extensive arrangements which such an important development demands, any surplus over the expenditure cannot be expected, but the results obtained are so encouraging, that capital will not be found wanting to work this property, and we may look forward to the re-opening of Oscar and Daw's Mines. It is very important that these interesting lodes will be thoroughly tested, and a perfect knowledge of them secured, so that the numerous other lodes which now are idle, for want of energy and capital, may be worked. We should consequeutly thank the English company and its manager for the good example they have given the inhabitants of Norway."

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR DECEMBER.

A CABLE has been received from the mine to the following effect :—Ore shipped, 580 tons ; value, 16,500*l.* ; mine expenses, 3,270*l.* ; estimated profit for the month, 13,230*l.*" Mr. Harvey, in his monthly report of the Yankee Girl and Robinson Mines, says :—Yankee Girl, No. 4 level : Drifting is being carried on in the south-west and north-east drifts." No. 5 level : Good ore continues to be broken from the back of the stope. No. 5½ level : A winze has been sunk 20 ft. in the bottom of west drift. Good ore is being raised at this point. Winze : Stoping is being carried on from the ends of winze sunk from 5½ level to No. 6 level. The length of stope is 50 ft., with an average thickness of 12 ft. of shipping ore. No. 6 level : Prospecting is carried on to the north-east of shaft on ground possessing favourable indications for mineral. Winze : Drifting is being continued in a south-east direction. At a point 40 ft. below No. 6 level, fair ore continues to be taken out. No. 7 level : Prospecting with the diamond drill is being pushed in various directions. Engine shaft : The removal of water from the shaft has been resumed. Robinson : The engine shaft is now 40 ft. below No. 4 level. No. 2 level : Drifting is being pushed south of shaft, fair ore is being met with. Stope : The stope has now a leugth of 50 ft. The ore varies in thickness from 1 to 14 ft., making a probable average of 3 ft. 6 ins. throughout. Good ore continues to be raised from this point. No. 3 level : A winze is being sunk in the north drift, on a fine streak of orc. The stopes and drifts south continue to look well. No. 4 level : A cross-cut has been driven from shaft 160 ft. to the ore-break. About 12 ft. in thickness of medium grade ore was passed through ; the ore assayed from 8 to 70 ozs. silver per ton. Drifting has not yet been commenced on the ore. Surface : Considerable improvement work has been done at surface. A coucentrator, consisting of crusher, rolls, screens, elevator, three of Bradford's jiggs, two percussion tables, with steam boiler and small engine for driving plant, have been erected ; also a well-built mill-house for the concentration of low-grade orc from the Robinson Minc. The new hoist and cage work well. A cable from Mr. Crawford, from Denver, just received, states :—"There is no reason for decline in shares here, Mine is improving better than ever. We have not found ore body below slip. We have struck fiue body of ore No. 4 Robinson. Some cars recently shipped from Robinson assays 1,090 ozs. of silver per ton. The mines look splendid."—B. MCNEILL, Secretary.

PAT-PAT GOLD MINING CO.

IN order to properly test the value of this reef, we have decided to sink a main shaft in a favourable position, north of the reef, which will not intersect the reef until it has reached the depth of 200 ft. We propose, however, to put in cross-cuts every 50 ft. and tests will be made from these points as the work progresses. The size of the shaft is 10 ft. by 4 ft. in the clear, and will be divided into three compartments, viz. : one for pumps, one for winding, and one for ladder way ; during the fortnight 12 ft. of this work has been done. This shaft will probably drain the water on the line of reef for 3 or 4 miles, which will enable us to sink deep shafts at other poiuts at a comparatively small cost. In order to successfully cope with the water difficulty, a suitable 12 h.-p. engine has been selected, which I expect will be on the mine next week. A 6-in. drawing lift and plunger pump for 200 ft. workings will be obtained as soon as possible. The timber for foundations, &c., will be procured as soon as practicable. Until the engine is required to work the pumps, we propose to employ it in cutting timber for the shaft, buildings, &c., we therefore selected a suitable saw bench, which we hope to have in working order shortly. We are now breaking out a parcel of about 20 tons from the same place from whence the sample was taken which assayed nearly 17 dwts. per ton. This lot will be fairly taken from the full width of the reef, and thoroughly mixed in a heap. A sample of 2 tons will then be taken by cutting through the centre of the heap, we should thus obtain a fair average sample of the stone. We hope to deliver it at Mr. Cass's mill by the 18th inst. The new shaft has been sunk 9 ft. ; some nice looking quartz leaders now in the bottom. Will sink shaft about 40 ft., then drive east for the reef. We are clearing and levelling the ground for the engine, saw bench and buildings. Have cleared and repaired 3 miles of road, and have about half a mile more to do ; we will then have a first-class track from the railway station to the mine.—W. J. BEGELHOLE, Mining Engineer.

A telegram was received in London on Monday, 5th January, from Calcutta : "3 ozs. of gold per ton on 2-ton trial."

NEW GUSTON CO., LIMITED.

OUTPUT FOR DECEMBER.

THE mine superintendent, Mr. Harvey, cables to the following effect : —Ore shipped, 520 tons ; value, 13,400*l.* ; expenses, 3,100*l.* ; estimated profit for the month, 10,300*l.* Mr. Harvey, in his last report, states :—"No. 5 level : We have a very productive piece of ground for over 70 ft. in length north of the Robinson boundary, and the winze close to the boundary continues to look fine. There is a rich streak of ore, from 8 to 18 ins. thick, going down in the bottom of this winze. A car of ore from this place, sampled in Silverton, assayed, per ton, 830 ozs. silver, 3 3-10th ozs. gold, 15 per cent. copper. No. 6 : We are raising ore from the stope in this level, which runs from 50 ozs. to 150 ozs. of silver per ton. We are driving the level to the south in fair ore, and the drift looks very promising. Eugiue shaft : On the 18th December the contractor finished his contract of sinking 100 ft. below No. 6 level ; drifting will be commenced to the ore-bodies as soon as possible." Mr. Harvey concludes his report in the following words :—"The general prospects of the mine are decidedly good. The property improves in value as development work is being pushed forward. The mine looks better, and is of greater value to-day than at any period before in its history." Other working points are looking well.—B. MCNEILL, Secretary.

IT is announced that the share certificates of Elmore's French Patent Copper Depositing Company, Limited, are ready to be exchanged for allotment letter and all bankers' receipts. The offices of the compauy are at 64, Cannon Street, E.C.

BRITISH MINING INTELLIGENCE.

EAST BLUE HILLS (7th Jan.)—During the past week the work throughout the mine has been carried on regularly, and the various stopes and pitches producing about the same quantity of tin. The new lode is somewhat smaller, but the leader continues from 4 to 6 ins. wide, and very good in places. In the 40 cross-cut the water in the last few days has increased gradually, and we hope it is an indication that we are near the new lode, which we hope to cut here shortly.—W. NANCE.

EAST GRASSINGTON.—The following report, dated January 7th, has been received from the mine manager:—Hammond shaft: In the 47 level west the lode is somewhat narrower in consequence of being in the middle of the nip passed through in the upper workings. The lode is to-day 12 ins. wide, yielding 15 cwts. of lead ore per fm. Stope in back of level yielding 12 cwts. of lead ore per fm. King's sump: Drivage and stope eastward producing together 30 cwts. of lead ore per fm. No. 2 sump is sunk 25 ft. 6 in. below the 47, in a lode averaging 18 in. wide, carrying highly congenial matrix well charged with first quality ore, which when cleansed will assay 80 per cent. lead. This is encouraging for deeper operations. Drivage and stope in the 37 east, worth together 21 cwts. of lead ore per fm. Harris' main engine shaft: In the 47-fm. level east, the side branch having joined in junction with the main lode, and forming together a much stronger and richer lode than seen for some time; worth to-day fully 18 cwt. of lead ore per fm., and improving. Taking into consideration that we have 40 yds. of backs here for a considerable distance towards our eastern boundary, our prospects cannot but be considered as highly encouraging. Stope in back of level worth 12 cwt. of lead ore per fm. Stopes in back of 37-fm. levels worth together 28 cwt. of lead ore per fm. Dressing and smelting operations proceeded with as fast as the inclement weather will permit.

GAWTON (8th Jan.)—The lode in the 105-fm. level driving east is over 7 ft. wide, composed of quartz, mundic, and ore, altogether a strong, promising lode, and yielding 12 tons per fm. The stope in the back of this level east of rise is yielding 10 tons of mundic per fm. The lode in the stope west of said rise will yield 10 tons of mundic per fm. The lode in the stope in the bottom of the 93 east is yielding 9 tons of mundic per fm. The stope in the back of this level will yield 8 tons of mundic per fm. The stope in bottom of the 82 east will yield 11 tons of mundic per fm. Stope in the bottom of the same level east of cross-cut will yield 10 tons of mundic per fm. The stope in the bottom of the 70 east is yielding 9 tons of mundic per fm.—G. ROWE.

LEADHILLS (5th Jan.)—Brown's vein: The 145-fm. level north of Jeffrey's shaft continues in a vein above 4 ft. wide, charged with dark stone and very small spots of ore. The stope above the 145 south of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 10 cwt. of ore per fm. The two stopes above the 115 north of Wilson's shaft are each worth 5 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft shows a vein 5 ft. wide, of an enticing nature, and worth 30 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are worth 20, 20, and 25 cwt. of ore per fm. respectively. The rise above the 130 south of Jeffrey's shaft is without ore, but shows kindly quartz. The stope above the 130 north of Wilson's shaft is worth 10 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft continues in a vein 3½ ft. wide, charged with ore and spar, worth 20 cwt. per fm. The stope below the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 10 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, mixed with quartz, but still too dried and hard for ore. The 70-fm. level south of Wilson's shaft is in a vein only 1 ft. wide, and unkindly for yielding ore, but anticipate a change for the better before very long. The 35-fm. level south of Flat Rod shaft is in a vein 4½ ft. wide, composed of kindly quartz and spar, with ore worth 60 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 50 cwt. of ore per fm. Sarrowcole vein: The stope above Gripp's adit north of George's Roust vein is worth 6 cwt. of ore per fm.—T. NEWBIGGING.

MID-DEVON.—Report for week ending 3rd January:—Surface: Pumping wheel greatly impeded by ice, and almost stopped until cleared. The thaw on Weduesday night effectually freed the machinery, and allowed it to work effectively. A Shaft: Water rose and filled the 80 during enforced stoppage; it has since been drained to the bottom of level. C shaft: The 50 east has been driven by nine men 4 ft. 9 ins.; total distance from cross-cut north, 30 fms. 1 ft. 6 ins.; The strata is easier for progress, having less capel intermixed, and more friable garnet, axinite and quartz, and arsenical mundic. The No. 3 stope, worked on by six men, still equals 3 tons per cubic fm.; the strata is rather hard, but still contains large deposits of chlorite, which indicate a greater yield of ore.—J. NEILL.

PHŒNIX UNITED (3rd Jan.)—In the setting report the manager states:—We have at various points seven pitches at tributes, varying from 8s. to 12s. in the £ for tin.

ROMAN GRAVELS (8th January).—Very good progress is being made in the 155-fm. cross-cut cast in the direction of the lode, its measurement from shaft to-day being 3½ fms. The 140 north is driven 70 fms. from the cross-cut; the lode in the forebreast is in three divisions and disordered. We attribute this to the probability that the end is at or near the junction of the East and Roman veins. Each division shows a nice mixture of lead-ore and blende. The two stopes in back of this drivage are each worth 1 ton per fm. The winze in the 125 north, coming down at a point 18 fms. in front of above forebreast, is 6 fms. 2 ft. deep, lode in present bottom producing 1 ton per fm. The 140 south is driven 71 fms. 2 ft., the vein in present end being 3 ft. wide, producing nice cubes of lead-ore and blende. The lode at the 125 south is 2½ ft. wide, very wet at present, and producing saving stuff for lead-ore and blende. The stopes in this level are just as when reported last week, and the same may be said of those at work in the 110-fm. level. A considerable improvement has taken place this week in the drivage south from Jones's winze in the back of the 80 south, the forebreast to-day being quite worth 3 tons of lead ore and 1½ tons of blende to the fm. The two stopes in back of this drivage are worth 1½ ton of lead ore, 1½ ton of blende, and 2 tons of lead ore and ½ ton of blende per fm. respectively. This bunch of ore is, geologically speaking, further south than the 95 and 110-fm. levels, so that if it continues in depth, which we shall take the earliest steps to prove by means of a winze, the said levels will be sent forward to open up what will certainly prove to be a big shale bunch. In consequence of the continued severity of the weather we are unable to sample more than 50 tons of lead ore to-day.—A. WATERS.

SOUTH DARREN (8th January).—The stope under the 142 level west is worth 1½ tons of silver lead-ore per fm. The stopes above this level are worth respectively 1 ton, 15 cwt., and 10 cwt. of silver lead-ore per fm. The stope in the 130 level west is worth 15 cwt. of silver lead-ore per fm. This stope is close to the end, and a good lode is gone into the end of the ground. Both the 130 and the 142 ends look very promising for driving, there being a good lode in both ends. Surface work is still hindered by the frost.—J. MITCHELL.

WEARDALE.—Report on mines for week ending 3rd January.—Ore raised for week, 67 tons; ore dressed for week, 23 tons; smelt mill and surface work standing on account of frost.

WHEAL METAL AND FLOW (7th Jan.)—During the past week we have drawn the spare pitwork to surface, and erected poppet heads, cased and divided shaft, and repaired horse whim. The surface operations have been greatly impeded on account of the severe frost.—S. P. CURTIS.

WHEAL UNY (7th Jan.)—We are still sinking; lode unaltered since last reported. No change in any other point now in operation. We sold at yesterday's ticketing 12½ tons of tin at 54l. 15s. per ton. We should have done better, but for the Christmas holidays and frost which followed.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (11th Dec.)—Extracts from a letter from the superintendent.—Mine: I have the pleasure to inform you that, according to all appearances, we seem to have made a very important discovery at the 24 level north on the 100 lode. At a point 5,216 north 4,932 east we began to find ore, which has been gradually increasing in width, and in a drivage of 23 ft. to 24 ft., it is now at least 5 ft. of solid ore, and is producing between 3 and 4 tons of mineral for every foot driven. The grade seems to be very fair, a general sample of about 10 tons having assayed 39.2 troy ozs. silver per American ton. We are driving the breast at the rate of 2½ ft. to 3 ft. daily, and everything that is blasted down is taken to the spalling floors, and very little waste rock is rejected. Reduction: The battery samples are showing a very good grade in the ores passing through the mill, but as we had a big pile of stamped ore of lower grade, the improvement has not yet been materially felt in the leaching department, but will surely begin to tell on the bullion returns shortly.

ANGLO-MEXICAN.—The superintendent at the mine, writing on the 30th November, says as follows:—East drift, 814-ft. level: Mr. Wm. Ham, the foreman of the mine, has no change to report in the appearance of this drift; the average width of the ore is about 7 ft. The grade I am sorry to say is rather low, as you will note from the returns of the assay office. West drift, 814-ft. level, has been advanced by the machine drills 6 ft. during the past week, making the total distance 174 ft. The face shows several feet of ore, the assay value of which you will note from assay office returns. Surface drift, above Santa Herlinda tunnel level, advanced during the past week 61 ft., making the total distance, 61 ft. East drift, on the main vein, above Santa Herlinda tunnel level, advanced during the past week 38 ft., making the total 48 ft. Work in these two drifts is being pushed ahead as rapidly as our limited number of available labourers will permit. You will note that the results of samples taken from these workings during the past week prove the existence of high grade ore. Ore has been extracted from the stopes above 814, 726, 572, and 506-ft. levels, where Mr. Ham has no changes of importance to report. The superintendent also cables on the 6th inst. that the December output amounts to 47,044 (dollars).

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manage reports for the fortnight ending Nov. 13th:—Block 96.—Engine shaft: Contract to continue to 500 ft. has been let, and work started yesterday. 370 level west: Chamber in 13 ft. from shaft, and completed. Contract let to drive 200 ft., and started yesterday. 280 level west driven 17 ft.; total, 232 ft. Lode in face 5 ft. wide, and showing chlorides and small slugs of sulphide of silver ore. A third shipment, consisting of 8¼ tons of ore, containing 18,700 ozs. of silver, was made to London, making in all from this level to date 14 tons of ore, containing 80—112 ozs. of silver. Winze started 222 ft. from shaft, and sunk 7 ft. through lode consisting of calespar, iron gossan, and galena. Rise, northerly section, risen 10 ft.; total, 52 ft.; lode smaller and rising more rapidly in very hard country. Block 95: Shaft sunk 9 ft.; total, 57½ ft. Seams of gossan coming in, apparently making for a formation. Block 99: Cross-cut from shaft driven 6 ft.; total, 24 ft. Cut what looks like a lode formation underlying south. Both dams on the property are full to overflowing.

— Report for the fortnight ending 27th November:—Engine shaft sunk 16 ft.; total, 461 ft.; underlay of lode dipping much faster, being now at an angle of 45 degs.; country easier to work. The 370-ft. level west driven 39 ft.; total, 52 ft. Lode formation carrying calcspar about 1 ft. in thickness. The 280-ft. level west driven 9 ft.; total, 241 ft. Lode continues 5 ft. wide, the face being now in very good-looking ironstone and gossan. Winze No. 1 sunk 12 ft.; total, 19 ft.; country very hard and difficult, and water troublesome. Rise northerly section risen 11 ft.: total, 63 ft.; at about 55 ft. up struck a vugh containing a body composed of calcspar, ironstone, gossan, and galena, mixed with small slugs of sulphide of silver and chlorides, a bulk assay of the whole yielding 1,329 ozs. of silver to the ton. The vugh has since been passed through, and galena shows along the west side of rise. Block 95: Shaft sunk 9 ft.; total, 66½ ft. Passed through a flat shoot of calcspar and fluean underlying slightly north-east. Block 99, shaft: Cross-cut extended 8 ft.; total, 32 ft.

BRATSBERG (29th Dec.)—Hoffnung Mine: Since my last report the customary Christmas holidays have intervened, and, having only had two and a half working days, there has been but little done, and consequently there is little or no change to report to-day. Carriage of ore to the lake has been done at the recent rate, but of course much checked for the week, on account of the holidays. The Vidfarende was loaded on the 24th inst. In reference to the damage by fire to the dressing machinery, I regret to have to say that by examination we find it more extensive than reported on the 6th inst., and I fear it will delay the resumption of dressing operations until the 1st of May at the earliest; it is, however, satisfactory to be able to say that the property was insured.—J. D. HOLMAN.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 8th November.—No. 7 tributers have been stoping from the back of No. 5 south-west level. The reef is not looking so well as when last reported on, being more broken up and mixed through the formation, but we may get a change here for the better very soon. The tributers in the No. 5 lease have been rising from the old stopes and sinking the underlie; they expect to break through to the rise in a few days, when they will start stoping. The rise has been put up a further distance of 10 ft., making a total of 35 ft. since they started, and they have sunk the underlie a further depth of 20 ft., making a total of 38 ft. from the straight shaft; they have had about a foot of reef in both underlie and rise, but of poor quality. In the company's stopes from the back of No. 6 south-west level we have had from 8 to 10 ins. of stone mixed through about 10 ft. of formation; face of stope looking about the same at present. Have sunk the winze from the No. 6 south-west level a further depth of 11 ft. with two men one week, and four the other, making a total of 65 ft. from the level. We have had an average of about 2½ ft. of reef carrying a fair quantity of mineral, and showing gold. There is about a foot of reef on the eastern side, and 3 ft. on the western side in bottom of winze at present. Have driven the No. 7 south-west level a further distance of 16 ft. with four men, making a total distance from old underlie 54 ft. Have had a little stone in the formation, and some leaders in the hanging-wall country, but no defined reef. I think there is a little improvement in the ground in the end at present, and hope to make good headway with the level during the next fortnight. I have had one man stoping from No. 6 north-east level along the North Queen boundary on from a foot to 18 ins. of good stone; there is about a foot in the face at present, but it is getting very narrow, and is now about 3 ft. wide. Have raised about 33 tons of stone for the fortnight; 13 tons of this is from the winze, making a total in hopper and at the mill 168 tons. Machinery in good order.

CAPE COPPER.— November report. — Ookiep: There is no material change to notice in the 117-fm. level east of 64 winze. The ground continues favourable for progress. The rock in the 105-fm. level (No. 6) north of main east level is composed chiefly of quartz and iron, containing spots of yellow and purple copper ore, The ground in the 105-fm. cross-cut north-west from the top of 72 winze is looking a little more favourable for copper ore, and has since the last report yielded a few stones of copper pyrites. The stope in back of 105-fm. level east of 68 winze is producing 5 tons of high quality copper ore per fm. The drive and stope in back of 92-fm. level east of 41 winze is yielding 12 tons of copper ore per fm. The stopes in the 92 and upper levels continue to yield well. Trial Mines: Springbok: The ground in the 59-fm. level north-west of south-west cross-cut No. 2 is again yielding a little copper ore, but not to value. The 59-fm. cross-cut north-east of south-east level is still yielding stones of copper ore. Kotzees Mine: The rock in the 25-fm. level west of shaft having become unfavourable for copper ore it has been suspended. To prove the productive ground passed through in this driving in depth, we have resumed the sinking of the shaft below the 25-fm. level. Nababeep south: The 59-fm. cross-cut south-east of north-east level continues to yield a little saving stuff. The driving of the 59-fm. level north-east of shaft has been temporarily suspended to enable us to prove the ground opposite the present cross-cut, viz., north-west at this depth. Ookiep east: The stopes in the 58 and 66-fm. levels are producing large quantities of mineral, worth about 1½ tons of copper ore per fm. Spectakel: The 86-fm. level south-west of No. 1 winze is producing about ½ ton of copper ore per fm. The stope in 36-fm. level east of Kelly's shaft is yielding 2½ tons of copper ore per fm.—Capt. HENWOOD.

— Returns for November.—Ookiep, 1,760 tons of 26 per cent. Arrivals at Swansea.—The Glance, Carmelita, and Abercarne. Arrivals at Port Nollotb.—The Cubana, Andaman, and Foxhound.

DAY DAWN P.C.—Report for fortnight ending 22nd November:—The output of quartz is 1,219 trucks—to the Excelsior mill 1,134 tons, to the Defiance mill 50 dray loads. Machinery and everything in connection with the mine is in good order.—T. LESTER.

ESMERALDA (23rd Dec.)—The manager writes:—The connection between the Del Monte and Durand was completed a few hours after my last writing. There is now a strong draught down the Durand and up the Del Monte, giving good air in the face of the main drift. This makes a saving of a cord of wood per day, as, before we broke through into the Durand, we had to keep the blower running constantly. We continued the main drift south, turning it a little to cut the ledge again, which we have done this morning, and will now drift on the Durand ledge. The face is 1,306 ft. from the shaft; progress for the week, 40 ft. The Durand winze contiuues in ore, last week's assays running up to 4½ ozs. of gold per ton, with an average for the week of 1½ ozs. from about 1 ft. of the ledge; it is down 51 ft. There is a favourable change in the New Monte drift this morning, and the ledge looks better and more promising than it has since we encountered the fault. It is now swinging round again to its former course, and widening. It was extended 15 ft. during the week, making a total of 437 ft.

FLAGSTAFF.—Copy of report, datcd 20th December, received from A. L. Swope 5th January.—I have the pleasure of again reporting fair progress, both in the number of tons mined and the number of feet driven in the main, sixth and other places. The new stope is still turning out a fair quantity of good ore—in fact, it is all first-class ore from this place. I have mined this week 59 tons, viz., 33 tons first-class ore, and 26 tons second-class. The drift that was started in from the rise to cut the hanging-wall is now in 22 ft. I have struck ore, most of which is first-class; this goes to show that the ore will extend further down in that direction. I will try and sink on it, as the water here does not seem so strong as it was above. Sixth level: I think that we will strike ore in main level soon as we are in good ground for ore; the rock is stained all through with small specks of iron, which is a good indication; number of feet driven the past week, 15. Seventh level: I have onlyione man at work here; the rock is very hard, and work progresses slowly; number of fcet driven the past week, five. Most of the men are going to Salt Lake for the holidays, so there will not be very much headway made in the next two or three weeks. Some of them leave to-morrow, the 21st, the rest leave on 22nd; if they all go down I shall not write again until they come back.

GYMPIE GOLDEN CROWN.—Report for fortnight ending 20th November:—I have to report that work on the Crown and March reefs at the 240-ft. level is being carried on as usual, some very good stone being obtained from the March reef during the past week. We are constantly crushing with five head of stamps; the other 20 head of stamps are engaged on public stone. Although there has been but little rain for some months we have still a good supply of water for all purposes. Everything about the machinery and the mine is in good order. From the washing up on the 6th inst., 200 tons gave a return of 132 ozs. 18 grs. smelted gold.—T. RAMAGE.

HARRIETVILLE (30th Nov.)—Fortnightly report: The following progress has been made during the past fortnight:—Mons Meg Mine: The drive north of tunnel J has been extended 20 ft.; total, 499 ft.; the lode formation here is 6 ft. wide, carrying a vein of soft ferruginous quartz and sandstone on the hanging-wall, which averages ½ oz. of gold per ton, and is 1 ft. wide. The foot and hanging-walls are fast bearing away from one another, and there is every appearance of there being a junction of two lodes here. We shall for the present follow the auriferous vein on the hanging-wall, and cross-cut later on to the footwall. The prospects at tbis poiut continue to be promising. Guerdon: Tunnel J has advanced 17 ft. towards the Guerdon lode, making a total of 308 ft. from the Mons Meg main lode. The ground is very hard. We have started a rock-drill in tbis end and fair work is being done, although an improvement may be looked for when the men become more accustomed to the machine. South Mons Meg Mine: The drive north of the lower tunnel has advanced 34 ft.; total, 118 ft.; the lode here has broken up into small quartz leaders, which are poor. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has been extended 22 ft., making a total of 827 ft. The footwall for the last 10 ft. has carried a massive quartz; lode, 4 ft. wide, which however is poor. We are employing a rock-drill in this end. The ground is hard and water copious. The drive south of tunnel D on the Jackass main lode has advanced 23 ft.; total, 158 ft.; the lode has become disturbed in the end, and driving has been suspended pending the completion of the necessary work preparatory to sinking a winze and commencing to stope. This drive has now passed through a shoot of auriferous quartz 94 ft. long, and of very good quality, averaging 2 ft. in width, and assaying from 16 dwts. to 24 ozs. 16 dwts. per ton. This is by far the most importaut and encouraging discovery which we have made since the company commenced operations. The lode is compact, and the gold well distributed throughout the stone, and everything points to the permanency of the shoot, and to its proving of high quality. During the month five stamps have been employed crushing the stone obtained from the new shoot as the driving progressed. Rock-drills: The rock-drilling machinery is working admirably, and there is no difficulty in keeping three machines at work simultaneously. Clean-up: We shall clean up to-morrow for the month's crushing, and anticipate a considerable increase on the previous month's returns.— T. G. DAVEY.

MYSORE (17th Dec.)—Mining operations for the fortnight ending 13th December:—The 770-ft. level north of Incline shaft has been driven 19 ft. 10 ins., and communicated with Rowse's shaft. This level has also bcen driven east on the flat lode 6 ft. in a lode 3 ft. wide, and estimated to be worth 1 oz. The 700 north of Rowse's shaft has been driven 25 ft. 9 ins.; total distance, 158 ft. 9 ins.; the lode is 1 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 16 grs. The 620 north of Rowse's shaft has been driven 9 ft. 9 ins.; total distance, 271 ft. 6 ins. This drivage produced some very rich quartz, but at present the lode is small and mixed with country rock. The 466 north-west of Rowse's shaft has been driven 17 ft. 4 ins.; total distance, 284 ft. 10 ins. This is in the country rock, which is very hard and spare for driving. The lode in the 236 north of Rowse's shaft on No. 3 fold is 4 ft. wide, and assaying 2 dwts. Schaw's sbaft: The 450 north of shaft has been driven 22 ft. 3 ins.; total distance, 110 ft. 3 ins.; the lode is yielding a little quartz, but nothing to value. The 450 south of shaft has been driven 4 ft. 9 ins.; total distance, 41 ft.; the lode is 2 ft. wide, and assaying 3 dwts. The 320 north of shaft has been driven 3 ft. 9 ins.; total distance, 121 ft.; the lode is small and unproductive. The 320 south of shaft has been driven 5 ft. 3 ins.; total distance, 159 ft.; the lode is 8 ins. wide, and assaying 9 dwts. 2 grs. Tennant's shaft: The 360 north of shaft has been driven 30 ft.; total distance, 155 ft.; tbe lode is still small, but morc regular and better defined. The 290 south of shaft has been driven 26 ft. 4 ins.; total distance, 116 ft. 4 ins.; the lode is 1 ft. wide, and yielding a little quartz. The 290 north of shaft has been driven 32 ft.; total distance, 432 ft. 6 ins.; this level has much improved, and has, no doubt, intersected the rich run of quartz gone down from the 180; the lode is now 3 ft. wide, and assaying 1 oz. 10 dwts. The 180 north of shaft has been driven 31 ft. 2 ins.; total distance, 598 ft.; the lode in this level has been disordered for the time by a soft crossing or slide, but I think the lode will improve again very soon, as it is presenting a more promising appearance than it did a few days ago; it is now 2 ft. wide, and assaying 4 dwts. Stopes: The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 9 dwts. 15 grs. The lode in stope in back of the 700 south of the incline shaft (on the wide lode) is 4 ft. wide, and assaying 14 dwts. 18 grs. The lode in stope in back of the 700 north of Rowse's shaft is 3 ft. wide, and assaying 6 ozs. 4 dwts. The lode in No. 1 stope in back of the 620 north of cross-cut from the incline shaft is 3 ft. wide, and assaying 1 oz. 13 dwts. 23 grs. The lode in stope in back of the 620 south of the incline shaft is 4 ft. wide, and assaying 2 ozs. 5 dwts. 17 grs. The lode in No. 1 stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 9 dwts. 2 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 600 south of Rowse's shaft is 5 ft. wide, and assaying 1 oz. 8 dwts. 6 grs. The lode iu stope in back of the 550 north of Rowse's shaft is 1 ft. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in No. 2 stope in back of this level is 4 ft. wide, and assaying 1 oz. 17 dwts. 19 grs. All the other stopes iu the upper part of the mine are just the same as when last reported. Rising: The lode in the rise in back of the 236 south of Plummer's is 2 ft. wide, and assaying 1 dwt. The lode in the rise in back of the 180 south of Tennant's is 1 ft. 6 ins. wide, and assayiug 3 dwts. Sinking: Rowse's shaft has been sunk 15 ft. 6 ins.; total distance, 60 ft. 6 ins. below the 700. This shaft is still in the couutry rock, but by the end of this month it will be deep enough for the 770-ft. level, when by driving north it will very soon intersect the lode. Glen's shaft has been sunk 8 ft. 6 ins.; total distance, 238 ft. 3 ins. The rock is at present very clean and compact, but we are expecting to meet with the lode very soon. The winze in bottom of the 320 south of Schaw's shaft has been sunk 3 ft. 6 ins.; total distance, 92 ft.; the lode is 1 ft. wide, and yielding occasional stones of quartz. All the surface operations are

going on in a very satisfactory manner. Mill samples: New mill quartz, 2 ozs. 19 dwts.; old mill quartz, 1 oz. 12 dwts.; new mill tailings, 7 dwts.; old mill tailings, 5 dwts. 7 grs.—J. GILBERT.

MYSORE REEFS (17th Dec.)—Fortnightly report:—Harvey's shaft: The 460-ft. level north has been extended 21 ft. 6 ins.; now 135 ft. from shaft. The end is still in a mass of quartz, containing a little pyrites, which, you will observe, is still of low grade, assaying only 1 dwt. of gold to the ton. Rise above the 460-ft. level has been put up 11 ft.; now 20 ft. above the back of the level. The quartz is intermixed with black rock, and worth about 2 dwts. of gold to the ton. Winze below the 400-ft. level has been sunk 6 ft.; now 48 ft. 6 ins. below the level. We are going down in a mass of low grade ore, worth about 2 dwts. of gold a ton. This ground is well nigh spent between this and the rise above the 460. I find that the winze is east of the rise, consequently, we shall cut out west from the bottom of winze, and cut in east from the head of rise, so as to make the communication between these two levels as early as possible. Stope in back of 400-ft. level: The part of the lode we are takiug away is 12 ft. wide, and worth 6 dwts. of gold to the ton. Stope in back 320-ft. level: The lode is 6 ft. wide, and worth, according to assay, 6 dwts. of gold to the ton. Surface: The mill is working well, and considering the low grade that we are milliug, a fair amount of amalgam is being daily taken from the plates. Mill sample, 6 dwts.; blanket sands, 3 dwts. 22 grs.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED (17th Dec.)—Fortnightly report:—Tank Mine—North shaft: This shaft has been sunk 8 ft., making a total depth of 82 ft. from surface. The water continues about the same, and the engine is constantly running to keep it; all dirt is hoisted by hand. The bottom of the shaft is partly in old workings, and the standing ground is very much crushed and broken, showing that there are large old workings close to the shaft. We have a small lode in the bottom, where it is not in old workings; many stones of the quartz show visible gold, and all the samples show gold in the pan. I have made two assays, giving 4 dwts. and 6 dwts. gold per ton respectively, which is about as much as we can expect the old men to have left. I could, of course, get much better results from selected stones of quartz. The work of erecting the pumping machiuery is making good progress; the boilers are in position, and the masons are building up the flues; the engine bed is also in its place. South trial shaft: The cross-cut west has been advanced 4 ft., making a total distance from shaft of 22 ft.; there is no change here; the rock is exceedingly hard, but I am anxious to push it on a little further. The cross-cut east was advanced 1 ft.; total from shaft, 38 ft.; this was suspended the day after my last report. South shaft: This was commenced on the 10th inst., and has been sunk 8 ft.; it is now iu hard ground, which requires blasting. I expect this to be a hard shaft, and we shall want rock-drills here very soon. —L. EVANS.

NEW EBERHARDT.—The mine manager reports under date, December 21st, as follows:—I have much pleasure in informing you at this time of an improvement in our mine workings. I mentioned recently of having suspended work upon our winze from the Gore level, and of putting the men back in the southerly workings at which point I am pleased to say the prospects have very much improved. Our output for the past week has been 20 tons, and the average $47.14 per ton. If it will only be a small pocket or bunch, I am at present unable to say, but at present the new seam of ore promises well. The direction of the ore at this time is easterly, and would run over or above what is known as the old south chamber, but as I have before stated, what the extent or value of this our latest discovery will prove to be, I know not, but at the present time I feel quite hopeful and very much encouraged. Please find shipping receipt for three bars bullion, total 4,230.11 ozs. Standard value, $3,650.46.

NEW DEVALA-MOYAR (16th Dec.)—The 116-ft. level: We have driven this western drive 8 ft. during the week; total length, 82 ft. The reef in this end is of low value, and shows only a trace of gold. Drive east: We have completed stripping down the side, and have the end squared. We are here in barren country of no value. The stope in the 116-ft. level continues to look well, and the reef is increasing in size as we ascend. The parcel of 100 tons of pyrites from the 48 level has been finished, and we have obtained 28 ozs. 19 dwts. sponge gold. Crushing is being carried on at the mill, and all our machinery continues to work well.—R. B. JOHNSTON.

NORTH MEXICAN MILLING (23rd Dec.)—The Cornish pump at the mine will soon be complete. The bob is finished, and the rod is now in place for over 200 ft. We will start it in a few days. In the old Gloria shaft I had a man to do some tut-work. He got out some very good ore, over 100 ozs. to the ton, but he stole so much that I had to send him off. I am now preparing the place to work on a larger scale, and expect soon to take out considerable good ore from there.—HOFFMANN.

— A cablegram has been received from the mines:—"Have started the mill."

NUNDYDROOG (17th Dec.)—Report of work done for fortnight ending 17th December.—The 450 north: Distance driven 26 ft., by two Englishmen with a rock-drill; total length 410 ft. 6 ins.; the lode has become smaller, and is not now more than 6 ins. wide; it is worth by assay 16 dwts. 6 grs. per ton. The 450 north rise in back: Distance 7 ft., by two natives with a rock-drill; present height of rise 38 ft.; the lode is a fine one, 4 ft. 6 ins. in width, and the quartz seems improving, being now worth 1 oz. 14 dwts. 18 grs. per ton. The 370 north: Distance driven 19 ft., by two Italians with a rock-drill; total length 350 ft. 6 ins. This looks more promising, the strings of quartz in the end being wider and more numerous. The 370 south stope in bottom: Stoped 3 fms., by one Italian with a rock-drill. We are stoping here near the cross-course; the lode is 4 ft. wide, and worth 1 oz. 5 dwts. The 300 north stope in bottom: Stoped 4½ fms., by one Englishman with a rock-drill; the lode is about 1½ ft. wide and assays 1 oz. 11 dwts. 12 grs. The 300 north stope in bottom near cross-cut: Ground stoped 2 fms., by one Italian with a rock-drill; the lode is 2 ft. 6 ins. wide, and worth 2 ozs. 3 dwts. 12 grs. Intermediate north: Distance driven 7 ft., making a total length of 30 ft., and stoped in bottom 2 fms., by two natives with a rock-drill; the lode is not more than a foot in width, and is worth 1 oz. 15 dwts. 18 grs. per ton. The stopes working by hand are as follows: The 450 south from Webb's stope in bottom; lode 3 ft.; assay, 2 ozs. 15 dwts. 6 grs. The 370 north from cross-cut stope in back; lode 1½ ft.; assay, 1 oz. 0 dwts. 18 grs. The 230 south from Webb's stope in back; lode 2 ft.; assay, 2 ozs. 8 dwts. 12 grs. Taylor's shaft: Very good work was done here, 17 ft. 6 ins. being sunk for the fortnight by three Italians, with a rock-drill, total depth of the shaft is now 477 ft. North shaft, north drive winze in bottom: A fair amount of sinking; 15 ft. was done here in the fortnight, by one Italian with a rock-drill; present depth of winze 47 ft.; the lode looks well, and is about a foot in width, and assays nearly an ounce per ton. Mill: The mill is running well, and the stamps are doing good duty. Health: All well and at work. Mill samples: Rough quartz, through stone-breaker, 1 oz. 14 dwts. 18 grs.; smalls, 1 oz. 9 dwts. 6 grs.—F. W. GREY.

PESTARENA UNITED (31st December).—Pestarena Mine: No. 1 lode: The 160 north is yielding 5 tons of ore per fm. at 8 dwts. of gold per ton; the lode is 1.20 metres wide, carrying 50 centimetres of milling ore. The 120 north from winze has reached the extent of the ore, and the men are set to strip down the eastern side of the level to communicate with the winze from the 110-fm. level. The 90 south is still in a lode of fair width, yielding 8 tons per fm. at 1 oz. per ton. The winze below the 130 north has fallen off in value, but may improve again. Cauuter lode: The 120 east is yielding 3 tons per fm. at 8 dwts. The 70 west has been communicated with a stope above the 90, and the men will now drive west from the stope, where the lode is big and shows two veins of ore. In the 70 east the lode is big, but produces little ore, the estimated yield being 3 tons per fm. at 10 dwts. An intermediate drive over the 90 to open up stoping ground is yielding 3 tons per fm. at 10 dwts. The winze under the 110 east is going down in a big lode 1.8 metres wide, yielding 6 tons per fm. at 10 dwts. The cross-cut at the 90 has cut the lode, which is 1.10 metres wide, showing a little pyrites against each wall, and having an underlie of 45 degs. north. Driving on this westward will now be commenced to ascertain its value. The cross-cuts at the 150 and 55-fm. levels are without change. There are four stopes at work on the caunter lode, averaging 8 tons per fm., at 1 oz. 2 dwts. per ton, and three on the No. 1 lode, averaging 10 tons per fm., at 1 oz. 6 dwts. The Morghen adit has transversed a division, showing a little decomposed rock and particles of pyrites. The ground is now of a harder nature, and lets out a little water; owing to the scarcity of water, six of the mills are suspended, and the other 22 are running at a reduced speed. Good progress is being made in the transport of timber aud mill beds to the mine. Val Toppa: Stope over Zero level yields 8 tons per fm. at 12 dwts.; it has reached the extent of the ore and rising on it has been resumed in a lode 2 metres wide, showing two veins, about 40 centimetres wide, one of which carries average ore. The stope over the intermediate level under Zero, is yielding 8 tons per fm. at 10 dwts., but has a failing appearance, and is nearing the extent of the ore. The stope over No. 2 level on flat lode produces 6 tons per fm. at 8 dwts. per ton, aud is likely to improve again a little higher up. Under the No. 1 level on flat lode and branches we are stoping a flat bed of quartz about 4 metres long and 1½ metres high, carrying a fair quantity of pyrites, and yielding 14 tons per fm. at 10 dwts. per ton. At the new discovery all the quartz and pyrites having died out, work is abandoned. A rise over the intermediate cross-cut has been commenced; it showed a small vein of quartz, but no ore at present.—W. ROBERTS, T. H. MESSA.

PINOS ALTOS (10th Dec.)—The manager writes as follows:—Last week the east drift in the hanging-wall on 9th level was run 7 ft. The east raise No. 2 above 11th level was advanced 2½ ft.; assays, $31.14 and $41.20. A cross-cut to the south on 15th level west was run 2½ ft.; assay, $12.06. The west winze below 16½ level was sunk 7 ft.; assays, $33.04, $16.97, $19.24 and $16.42. The west drift on 17th level was run 12 ft.; assays, footwall side, $18.34; hanging-wall side, $9.29. A cross-cut was started towards the footwall on 9th level east, above the raise No. 2, coming up in ore from the 11th level, and was run 10 ft.; the last assay was $10.67. A cross-cut towards the footwall on the 13th level west was run 1¾ ft., at which distance the footwall of the ore was struck. A cross-cut to the hanging-wall on the 15th level west was run 1 ft.; assay, $9.74. The main shaft was sunk 2½ ft.; assays $10.05, $3.88, $8.52 and $13.42. Stoping was carried on by an average number of 24 pairs of men iu the stopes below the 16th west, and above the 11th levels east and west. Most of the new compressor for the mine has now arrived, and I am expecting the rest of it within a few days. By mutual agreement, the tunnel contractor and I closed the contract yesterday, on his getting into what appears the footwall matter of the ledge, although still between 200 and 300 ft. of the hanging. This was done on account of the difficulty in arranging accounts for the lost time chargeable to us, and of our being able to run the tunnel cheaper ourselves. I have retained all his men, and no time will be lost on the work, which will be pushed with all speed.

RUBY.—Report for week ending December 20th:—Dunderberg: We have nine men on day's pay, and eight tributers at work here. The raise above the 300 level has been extended 9 ft.; total, 79 ft.; and connection has been made with the bottom of the old workings of the Home Ticket. It will probably take a week to clean out the waste, and then we shall see what the ore amounts to. The 600 cross-cut has been advanced 4 ft.; total, 95 ft. Having drifted the distance, have now started to sink to make connection with the 700 ft. upraise, and I think we may make connection within the next week or so. The 700-ft. incline has been sunk 6 ft.; total, 42 ft. The ground is pretty hard, aud I will put a power drill to work as soon as I can make the necessary arrangements. I think we have things in shape now to prove the mine, and, according to my idea, 1891 should show better results. Lord Byron: We have four men on day's pay, and 13 tributers at work here. During the week we have sunk 20 ft. in a cave, and there is now showing in the bottom a streak of good ore, about 3 ft. by 5 ft. This ore is pitching to the east, and where we started to sink there is another cave going off north, and I have little doubt but that they connect, and if they do we ought to get considerable ore. Bullwhacker: We have seven men at work here. Tacoma: We have two men at work here, who have drifted 5 ft.; total, 114 ft.

— Telegram received from Eureka (6th January):—"No ore shipped or smelted. Furnaces here ceased; purchasing ore on 30th ult."

RUSSELL (8th Jan.)—During the past month the shaftmen have been engaged in sending down main rods from surface, putting in bearers and cistern, and fixing the plunger bottom at the 45-fm. level. They are now rearing up the lift from that level, and I expect it will be finished with all necessary stays, catches, &c., by the end of the present week. The remainder of the rods will then be sent to the 80, and, as soon as the water will admit of its being done, the plunger

bottom will be fixed at that level. The adit level has been driven 13½ fms., and good progress continues to be made with that work, although the severe weather and the Christmas holidays have interfered with the general progress.—WM. GEORGE.

SOUTH-EAST MYSORE (17th Dec.)—During the past two weeks the 500-ft. level north has been extended about 27 ft.; now 100 ft. from shaft; the lode in the present end is 2 ft. 6 ins. wide, composed of decomposed schist and quartz; 1 ft. of same is solid quartz, and worth from 7 to 8 dwts. of gold a ton, judging from a sample I washed yesterday. In this drivage of 27 ft. the quartz has varied in size from 9 ins. to 18 ins., but the samples have been fairly uniform. Mr. Hodgson says he has had samples sent him every day, and the washings are about the same, although a recent assay gave nearly 10 dwts. of gold to the ton. The lode is letting out a good stream of water, showing good walls, and of such a kindly appearance, which clearly and plainly indicates that it is a true fissure; in fact, there is a decided improvement compared with the 295-ft. level. The quartz at the 500 is very nearly free from lime and iron, and I can assure you that one can wash more gold out of one sample at the bottom level than he can out of 20 at the 295, and you are well aware that if quartz will pan gold it will also mill gold. The 500-ft. level south has been advanced about 10 ft., or 33 ft. from shaft. The rock is very hard and difficult for blasting, but this must be pushed on. You cannot do better, neither is there anything else worth doing for the present more than push on these two ends with all possible speed. As I have already stated, you have a kindly lode in the north end, and there is not the least doubt in my mind that when you are through the hard bar in the south end you will meet with the shoot of quartz seen in the 295 south, and that it will be found to contain more gold at this level.—Capt. SCANTLEBURY.

CORRESPONDENCE.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

VICTORY MEETING.

SIR,—Now that the poll has been decided in favour of the directors it is to be hoped that this company will be allowed to proceed in a business-like manner. Disputes of this sort are always damaging to a company, and the result disastrous to the shareholders. It is, however, very pleasant to see the conciliatory manner in which the directors in this case have met their opponents, and no doubt now that some understanding has been arrived at, matters will proceed more amicably, and we shall stand a chance of seeing something back for the money invested in this concern.—I am, &c.,

A BELIEVER IN VICTORY.

THE VICTORY MEETING.

SIR,—As one who attended the adjourned meeting of the Victory Company on Wednesday last, I could not but be impressed with the fairness with which the proceedings were conducted. The chairman, in keeping the meeting in anything like order, had a very arduous task to perform, but I think he must have satisfied everyone present. Mr. Hallett, at any rate, must have been satisfied with the indulgence he received, both from the chairman and the shareholders. This gentleman seems to think that he is the ouly man who has a right to speak, and he therefore takes up the time of shareholders in a most inconsiderate manner. The directors may or may not have been deserving of all the charges that have been brought against them, but now that the shareholders have declared unmistakably in their favour it only remains for the dissentients to throw in their lot with the other shareholders, and see what can be done in an amicable manner to place the company in a better position. The directors showed their willingness to meet the views of the minority by intimating that they would shortly call together a few of the largest shareholders in the company to discuss the future policy.—I am, &c.,

IMPARTIAL.

VICTORY AFFAIRS.

SIR,—I have read with much interest in your issue of the 3rd inst. your comments on the last meeting of the Victory Gold Mine.

I have also received a circular from Mr. Hallett asking for my proxy, but have not sent it yet, though I feel very much disposed to support anybody who is prepared to fight the battle of the shareholders, aud to bring incapable or culpable directors to book. I am quite unacquainted with any of the parties in the Victory concern, but should be glad to know whether any of the directors are in any way connected with any of the mines or companies which have been entirely wrecked in the last 12 to 18 months, such as the Unity Gold Mining Company, the U. S. Gold Placers, the Goulding, Gold King, Gold Queen, &c., as I would not support such a party on any consideration.

I am glad to see that the shareholders in some of the companies show some signs of making a stand, and of trying to make the directors account for their past doings. There is always plenty of plausible explanation aud apology when any of the companies go to wreck and ruin, but I believe that in nearly every instance the actual shareholders are the only sufferers, and it will, no doubt, soon put a stop to all the ill-doings if a few people could, and would, take similar steps to Mr. Hallett and others. The public would at least get some insight in the mode of company wrecking and in the characters of the wreckers.—I am, &c.,

A SHAREHOLDER OF THE VICTORY.

Liverpool, 6th January, 1891.

DOUBTFUL PHILANTHROPISTS.

SIR,—May I be allowed to give a hint to my fellow shareholders in miscellaneous mines?

I hold a good many shares in several (at present) low-priced mines, and for the last month or six weeks I have been favoured by several gratuitous circulars from (as I gather) dealers or brokers, everyone with a marked and significant desire that I should sell. Also, I have received several newspapers of the "financial" type containing articles to the same effect, which my would-be unknown benefactors have carefully and conspicuously marked for my perusal.

Now, if I sold someone would buy; and I am suspicious enough to doubt whether the purchasers might not prove to be the very philanthropists who so kindly seek to save me from loss by remaining the possessor of my shares.

I shall hold, and it may be well if others follow the same policy. That better times for mining are fast approaching, and that my benefactors would very gladly buy what I should be very foolish to sell is the deliberate opinion of—Yours, &c.,

TENAX.

London,
January 3rd, 1891.

VAN MINE.

SIR,—As one of the long-suffering shareholders in this mine I begin to feel very anxious as to the manner in which the present inquiry will deal with the affairs of this company, more particularly with regard to the present local management. I, for one (and I *know* there are a great many others who agree with me), would most certainly decline to join in any scheme for the re-construction of the company unless it is made a *sine qua non* that there should be an entire change of management at the mines.

Looking back over my file of Capt. Williams's reports for a period of over six years, I have come to the conclusion that little reliance can be placed in him for the future, hence my reason for saying we must have a change.

I have *no personal* feeling against Capt. Williams, but as it is my opinion, as well as that of a large number of shareholders, that his reports have not been borne out by results, I feel it becomes necessary that we should entrust the reins to other hands for the future, and I trust that the action of the committee will result in the change asked for.—I am, &c.,

A SHAREHOLDER BEFORE THE PREVIOUS RE-CONSTRUCTION IN 1884.

January 7th, 1891.

GOOD SPECULATIONS.

SIR,—There are some splendid speculations in the Mining market, and for what reason they are neglected is beyond my comprehension.

The following silver shares are almost sure to have a great rise this year, viz.:—

La Plata shares: A mine that is making increased profits every month, and likely (in time) to enter the dividend list, yet shares are to be bought almost for nothing, viz., 1s. 6d.

Colorado shares: The latest reports say there are 68 men at work on 25 different points in the company's mines. The general appearance and outlook of the mines is improving, and in several of the workings high grade ore is being extracted. The various levels are being actively driven, and the width of the mineral veins is maintained. The manager calls particular attention to a continued improvement in the following points of working:—Brown adit level, Coughlin stope; Terrible Mine, 15th level east; Terrible Mine, No. 1 level, Prout's stope; Brown lode, Mammoth tunnel level. Last sales of ore realised 300 ozs. of silver per ton. You can, therefore, see from the above report that the mine is rapidly improving, and not only improving, but making profits, and yet shares are only 3s., 3s. 6d.

Another extraordinary cheap share is Almada and Tirito. The latest news from the mine is a cablegram sayiug they have cut a lode containing 5 ft. of solid ore, which I consider a splendid discovery, and ought to make the shares boom. The manager draws attention to the importance of the new discovery in the 24-fm. level on the 100 lode; at the depth it is being driven on it is in solid ground ahead, overhead, and below. I think the shares will be up to 1*l.* shortly. At present the shares are only 2s. 6d.

Dickens Custer is also a grand purchase at present price. News will come from the mine shortly, which will make the shares treble in value. Present price, 1s. 3d., 1s. 9d.

The following gold shares are also extraordinarily cheap.

Bonnie Dundee: Any day we may expect a cablegram saying a rich discovery had been made. I strongly recommend those shares for a great rise. Present price, 2s. 9d., 3s. 3d.

Lisbon-Berlyn is another fine speculation; last year the shares rose from 2s. to 25s., and will do so again. I therefore strongly advise a purchase of the above. Present price, 3s. 3d., 3s. 9d.

The following Indian shares are well worth a purchase:—Mysore-Wynaad, Nine Reefs; in fact, all low priced Indian shares are good to buy, as I think a boom is not far off.

Amongst Hydraulic shares I strongly recommend Loma and Tetuan shares. Remember, Tetuan shares rose from 2s. 6d. to 18s. two years ago, and history will repeat itself.

Loma shares are very cheap at present price, and I expect the next news from Tetuan and Loma Mines will cause a great rise in the above shares.

Hoping the above will draw attention to those who are on the look out for some good, cheap and progressive shares,—I am, &c.,

CONSTANT SUBSCRIBER.

Penzance,
January 5th, 1891.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine:—"Total weight of ore crushed during December, 7,050 tons; yield from the three mills, $94,100; working expenses for the month, $58,800." N.B.—The estimated number of ounces contained in returns by assay being, gold, 3,541 ozs.; silver, 16,201 ozs.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

LESTER AND HOOK are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

LESTER AND HOOK advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Also at 5, SPRING STREET, SYDNEY, N.S.W.

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Builder.—Hold. A little patience is needed, when no doubt you will be rewarded.
S. M. M. (Bexley).—They are unsaleable.
Surefoot.—Cannot advise them, although you think them a good purchase. Others are more likely to pay better. Write to us further.
J. G. D. (Spilsby).—It means that the company will be on a sound basis. This certainly is wanted.
Speculam.—Sell 4 and 6, but take profit on others named.
Americano.—Considered a good property. The shares are well held.
Curio.—You had better sell.
Regular Reader.—A good speculation. Hold.
Levy.—Hold for a small rise.
Durner (Portsmouth).—Sell, is the best advice we can give you.
Problematic.—There is nothing very promising, in our opinion. Sorry you are interested in the shares. You cannot sell them just now.
Operator.—They are very risky, and certainly should not be bought on the idea of a dividend.
R. B. B.—The last telegram from the mine is encouraging. Do not sell just now.
Disgusted.—The present management is bad, and until an alteration is made the shares cannot be expected to improve.
Old Subscriber.—Yes. They should go better, and you would do well to secure some at the present low price.
Anxiety.—You must pay the call in any case. Should you not do so the directors can forfeit your shares and sue you for the amount unpaid.
Mr. A. (Dundee).—Are expected to go still higher. In your case we are rather inclined to advise you to take the handsome profit available.

The Mining World.

LONDON: SATURDAY, JANUARY 10TH, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

EL CALLAO.

IF El Callao shareholders are backward in protecting their own interests, and if those interests suffer in consequence they will have only themselves to blame. The circumstances in which the company finds itself placed have been fully put before them in these pages again and again. The time for action has veritably come, and it will soon have passed away. Therefore, knowing the shortness of the time, and the vigilance of the opposition, we again tell the shareholders in this country that the proxies they may deposit at the subjoined address will be used purely and solely with a view to securing better and more representative management of the company's affairs than now prevails. These proxies should authorise Mr. De Lemos to act for those who sign them, and they should be sent without delay to Messrs. Dean Swift and Co., 9, Old Broad Street, from whom also forms of proxy may be obtained on application.

SOUTH AFRICAN DIVIDENDS.

THERE have been declared recently three South African mining dividends, two eminently satisfactory upon the basis of the nominal capital of the companies, and one, though disappointing from that point of view, exceedingly good when measured by the actual amount of capital expended upon the property. Of these the most important is the interim dividend of 10 per cent., or at the rate of 20 per cent. per annum, declared by the De Beers Diamond Company, an undertaking to which we referred at some length three weeks ago. Besides paying this dividend the company sets aside 80,000*l.* towards redeeming the first instalment of the debentures falling due in August next, and adds 261,000*l.* to the balance carried forward, which now amounts to 726,000*l.* This shows that the profit for the first half of the current financial year was about 656,000*l.* This is, of course, a very handsome profit, and one which would justify a substantial premium upon the price of the shares. But at the present quotation, which is nearly seven points lower than the figure reached a few months ago, the yield to an investor is comparatively small—less than 6 per cent. The diamond trade has never recovered from the condition, bordering upon chaos, into which it was thrown by the unwise inflation of prices which the De Beers Company brought about as a sequel to the amalgamation arrangements. And when the opposition which the company is meeting with locally is borne in mind, it will be admitted, we think, that the prospects of dividends much in excess of 20 per cent. are by no means encouraging. For this reason it seems to us that De Beers

shares are still too dear for the majority of people who invest in mines.

The other two dividends, those of the Jubilee and Robinson Gold Mining Companies, have been announced within the past few days. The former company pays a balance dividend of 10 per cent., making 60 per cent. for the year, and representing, even at the present price of the shares, a return of about 12½ per cent. The experience of the Jubilee Company proves the desirability of having a small amount of nominal capital to pay upon. The company was formed in 1887 with a capital of 15,000*l.*, and subsequent increases have only brought the total up to 26,000*l.*, in shares of 1*l.* each. For 1887, 25 per cent. was paid, and for 1888, 45 per cent. was distributed on the then amount of capital. For 1889, 30 per cent. was paid, and, as we have said, the dividend now declared makes 60 per cent. for 1890. The returns from the mine are very steadily maintained, though they are not so large as those of many of the Randt companies. In the past eight months, for example, the smallest yield was that of October—1,015 ozs., and the largest, that of December, was 1,056 ozs. The company is, therefore, quite a modest affair; but original shareholders, who are getting 60 per cent. on their investment, have no ground for complaint on that score. The Robinson dividend illustrates the other side of the case. The payment is to be 4 per cent. on the present capital of 2,750,000*l.*; but that is equal to about 200 per cent. upon the capital as it stood before the boom of 1889 induced the directors to increase the nominal capital, with a stroke of the pen, 50 times. For 1889 5 per cent. was distributed on the watered capital, or 1 per cent. more than that now declared. The crushings have recently shown a considerable improvement. In September the yield was 5,207 ozs.; in October it was 5,510 ozs.; in November, 6,034 ozs.; and last month it was 6,530 ozs., the last mentioned crushing being nearly 2,000 ozs. larger than that of the Langlaagte Company, which comes next on the list, and nearly double that of the company third in importance—Jumpers. In other directions the December output was generally satisfactory, and as the system of working seems to have become more honest and more consistent, the prospects of Randt mining are more encouraging than they have been at any time previously.

ST. JOHN DEL REY—ITS REQUIREMENTS AND ITS OUTLOOK.

THE estimates of Mr. Chalmers were put clearly before the shareholders by Mr. Hockin in his speech on Thursday last. They came as a staggerer to the board, and they presented themselves in the nature of a financial shock to the shareholders. It was thought that 70,000*l.* or 80,000*l.*, might be sufficient, but no, the actual sum wanted is 150,000*l.*, 25,000*l.* of which is due for calls, therefore leaving 125,000*l.* to be raised by the shareholders. With this St. John del Rey can, according to all human reasoning, be made again the brilliant success it was and contiuued to be for so many years past; without it the directors may as well cry to the shareholders "to your tents, oh, Israel." If the money be found, not only will the Morro Velho lode be struck, but the mine itself will be equipped with the latest gold-saving and gold-milling appliances, and it will be conducted at an expense infinitely below that which prevailed in the past. The St. John del Rey of the past was built up bit by bit. Fresh appurtenances were added here, and new machinery was put up there, and we do not doubt that the *ensemble* to-day presents as motley a collection of mining machiuery as the 60 years' history of any mine in the world can produce. All this must be modernised if justice is to be done to the produce of the Morro Velho lode when struck, and the estimates of Mr. Chalmers provide for a renewal of the entire establishment, and for its working on a concentrated scale, instead of its departments being scattered over the property as heretofore. This is the position the directors have faced, and the shareholders, too, must do so or practically sacrifice every sixpence they have put into the concern.

What is the outlook? About half the work has been done to strike the lode, and the rate of sinking is rapid indeed—30 and sometimes 32 fms. in a month is a scale of progress that must strike the imagination of all practically acquainted with miniug. The whole establishment on the spot seems to be animated with the single desire again to restore the prestige of St. John del Rey, and if any mining company on earth ever "went for" a certainly it is this. When the lode is reached the future of the company ought to be brighter than the past, which Mr. John Hockin so forcefully recalled, for it will then be in possession of those means of winning and treating the produce of the mine that go to make mineral properties successful, and shareholders happy in the receipt of big dividends. The only question remains whether the directors have proceeded in the right way to get the large sum they require. An issue of debentures is the plan proposed, and Mr. Timewell Rogers is their most eloquent champion. Many persons doubt whether sufficient money will be raised by this means, and amongst them is Mr. Richard Donagan, who has had a good deal of experience in raising money for companies in the throes of a financial dilemma. But there was great force in what Mr. Rogers said, and he must have convinced the minds (we trust he has convinced the pockets) of the shareholders that the best and cheapest way to provide what St. John del Rey requires is unquestionably by debentures, but, failing this, a further opening of the family cupboard of St. John del Rey will reveal the gaunt skeleton of reconstruction. We trust that this alternative will be avoided, but warn the shareholders that it can only be so by a quick and ready response to the appeal the directors will shortly send out. The streets of Jerusalem were kept clean by every man sweeping in front of his own door, and the debenture money of St. John del Rey, will be found by each individual shareholder doing his duty.

VAN MANAGEMENT.

THE meeting held by the Van Company yesterday was harmonious throughout, and the attention of the shareholders was strictly confined to the business in hand. Would that we could say the same of the meetings of all mining companies! The committee have heard the whole of the position, and in their inquiries have been met with absolute frankness by the directors. The liabilities are ascertained to be about 3,000*l.*, and the fresh working capital required by the mine to be between 6,000*l.* and 7,000*l.* The scheme of re-construction adopted by the meeting will provide more than this, and we think the shareholders present showed true wisdom in reducing the liability proposed on the shares from 7s. 6d. to 6s. The company has been put through the first stage on the rough road that leads to re-construction—a word of ominous sound, but a remedy which has had the effect of saving many mines with a far less hopeful outlook at the time of its application than Van has now. Tho liquidation will be conducted by Mr. Lavington at the purely nominal fee of 10 guineas, and in a short time the company will be placed upon a solid financial basis. The question of the local management has been left for the new board to deal with. We trust that that new board may have Mr. Charles Clark as its chairman, that his present colleagues will also be associated with him, and that two more shareholders can be induced to join the direction. The experience of the present directors cannot be dispensed with without great damage to the company. The committee, who have performed their duties so well, commenced them under the entirely erroneous impression that the directors were "making a good thing out of it," but were astonished to find that these three gentlemen had been giving their services for 100*l.*, divided between them, or less than a boy from school expects on entering his first situation. We agree with Mr. Hamilton that it will be true economy to pay the directors on a more liberal scale than this. It will shortly remain for the shareholders to do what is required in regard to providing the new capital, but should any of them bc so unwise in their own interests as to fail to do so, we can assure them that the shares of a mine with such chances as Van has will readily be absorbed by outside persons, who will be only too delighted to take advantage of the opportunity which the apathy or want of spirit of some of the shareholders may place within their reach.

VICTORY AFFAIRS ONCE MORE.

LAST week we left Victory affairs, to which we had devoted seven columns, in a somewhat interesting, though critical, condition. After a wordy warfare, not a little of it approaching the Billingsgate type, the combatants had decided to postpone the struggle for a week, when the chairman said he would announce the result of the poll demanded upon the Hallett amendment. Even so early as the close of the meeting on December 31st we were able to forecast the result of the strife, and the figures have worked out pretty much as we foreshadowed they would. The board have a substantial majority, and the shareholders have apparently seen that though the present managemeut may not have been, as we were at pains last week to show, all that could be desired, it was better than the confusion and chaos into which affairs would have been thrown by its resignation, which would certainly have followed a hostile vote. No body of directors having any sense of self-respect could have accepted a committee, which, in the words of Mr. Hallett, was to be hostile to them, just as no defendant in the Courts would consent to have his case tried by a judge and jury specially selected from his foes. Men of spirit, not to say of sense, could not tolerate a committee of this sort, but what we understand the directors are prepared to do is to receive in conference some of the largest shareholders, and with them to discuss the whole situation, and to give every explanation that may be asked. This is the reasonable proposition of reasonable men, and we scarcely know what can bc said against it. We, therefore, ask all shareholders deeply irritated by acts of alleged mismanagement, and particularly those who are seeking, simply without prejudice or passion, to do what is best and right in the matter, to accept the decision already come to by the majority, and to allow this conference to take place, beause we believe that out of it only good can come.

Last week we ventured to suggest, that, without getting rid of the experience which the present board has acquired, and which cannot fail to be useful, there should be an addition to its number of one or more shareholders in whom the general body have confidence. One of the few speakers at the first meetiug, as we poiuted out last week, whose head retained its clearness, and whoso tongue refrained from evil-speaking, was Mr. T. H. Watson, aud if he could bc induced to join

the Victory directorate we venture to think a great step in the complete reform of the company's affairs would be taken. That a strengthening of the board will be one of the outcomes of the committee of conference may be taken for granted, and other recommendations will also be suggested, which will not only make for peace, but help the company to get over the difficulties, both real and imaginary, by which it is beset. Again do we beg the shareholders to remember that every expert who has seen the property has reported favourably upon it. Even Mr. Hallett himself has done so, who, though not an expert, is in his cooler moments a shrewd business man. The company has suffered much at the hands of some of its officers on the spot, and in that respect it by no means stands alone, as the experience of most mining companies sooner or later demonstrates. The shareholders on Wednesday last wisely decided that they would not allow their affairs to be thrown into disorder, and that they would not be so misguided as to offer up their holdings as a sacrifice on an altar, built up of the doubtful elements of passion, disgust, and disappointment. The vote of Wednesday we take to mean that they will reform rather than destroy the existing management. They will utilise what is of value in it, and endeavour, principally by the infusion of fresh blood into the board, to make all the shareholders, as the Yankees say—toe a harmonious line. The result of any other policy would, if we have not misjudged the situation, be the sacrifice of the interests of the shareholders, but as it is, a course has been taken that bids fair, while preserving those interests as they exist, to augment their value by vigorous work at the mines, and, there is every reason to add, by a substantial rise in the market price of the shares.

GRASKOP—A SATISFACTORY POSITION.

We have great pleasure in directing the attention of our readers to the report and statement of accounts issued by the Graskop Mill and Mining Company in anticipation of their meeting on Thursday next. The company appears to have been well served by its manager, Mr. Criswick, whose efforts to save gold in the battery appear to have been unusually successful. The result of the mining operations has been a nett profit of 5,523*l*. 7s. 11d., out of which the directors, after placing 500*l*. to reserve fund, recommend a dividend for the six months ending 30th September last at the rate of 5 per cent. per annum. We believe we are justified in stating that this is the first company originally formed in London to work a Transvaal Gold mine which has been able to pay a dividend out of gold mining. Other companies have done it out of land sales, but Graskop has done it out of gold quartz. It is earnestly to be hoped that it will soon be joined by others, for nature surely cannot have exhausted herself in the production of the directors of this concern. Their names are:—Messrs. L. Cloete (chairman), L. W. Fisher, John Ogle, and J. A. Travers, and the consulting engineer is Mr. Percy J. Ogle.

WAIHI GOLD MINING CO., LIMITED.

INTERVIEW WITH THE CHAIRMAN OF THE COMPANY.

Our readers must have been struck with the speech of Mr. Thomas Russell, C.M.G., chairman of the Waihi Gold Mining Company, as delivered to them a few weeks ago in annual meeting assembled. From its perusal they may have formed the idea that this company was destined to make its mark on the English market. Hitherto, it must be owned, that the experience of the English public with New Zealand mines has not been very brilliant. The lodes have been patchy and uncertain. The shareholders have looked like becoming millionaires one day, only to find themselves, in a sense, paupers the next. The "downs" have been more numerous than the "ups," and a big success in New Zealand is needed to rehabilitate its mines in the eyes of that long-suffering mortal—the British investor. Let our readers peruse what Mr. Russell has to say about Waihi, and then it is possible they may come to the conclusion that the reputation of New Zealand may be saved by means of that mine.

Our representative found Mr. Thomas Russell, the chairman, poring over the plans of the Waihi property, which he could probably draw from memory, and with certain returns and reports before him, received since the last meeting, confirmatory of what he then said.

You will observe, said Mr. Russell, that the great feature of this mine is the enormous size of its Martha lode. As far as proved, it is in no place less than 40 ft. wide, and in one place, where cut through, it is actually 60 ft. wide. The lode has been intersected in several places, and was driven on for over 500 ft. by the original workers, who formed the singular mining theory of which they are possibly the only living exponents, that one side only of the lode was payable, so that this side was worked, and the other (fortunately) was left for us. Early in our experience the question of the existence of gold was solved, but its treatment was a matter of extreme difficulty. To obtain the suitable process was one of the chief subjects to which we turned our attention, and it was at last found in what is known as the "Wheeler pan" system, accompanied by a crushing of the quartz into an almost impalpable powder, and amalgamation in still water. The stone is saturated with exceedingly fine gold, and, I believe, at one time the whole of the quartz and gold was in a liquid state. We find that the more finely we crush the stone the greater is the yield of gold. We are crushing with a mesh of finest steel gauze of 3,600 holes to a square inch, and if we could crush the stone finer still, it would be so much the better. By the old system they used wet crushing, trusting to catch as much gold as possible in boxes and by silvered plates on the tables, but they saved very little. Our process is as described, and has been very successful, though we still, as time goes on, hope to achieve better results. Our ordinary quartz is worth about 5*l*. per ton, assay value.

What have you done so far at Waihi?

We commenced working in March last with 20 heads of stamps, and the following are the returns we have made:—

The bullion returns since the starting of the new mill are as follows:—

Ex Tainui arrived 14th May, 1890	£2,354	4	8
Arawa arrived 9th July	2,819	0	10
Ionic arrived 3rd September	3,892	18	10
Tongariro arrived 14th November ...	3,377	16	3
Aorangi arrived December...	2,181	19	2
October return (three weeks) per cable advices	2,250	0	0
November „ „ „ „	2,400	0	0
December (part of) „ „	1,900	0	0
	£21,175	19	9

We shall shortly have 30 heads, when, of course, the returns can be proportionately increased, for I may tell you there is practically no limit to the quartz. We intend to increase the plant forthwith. For this purpose, and to clear off outstanding liabilities incurred purely on capital account, so as to free the profits now being made and make them available for dividend, we are about to issue 44,000 shares at par (1*l*.) These will be only allotted to shareholders, and the whole issue has been guaranteed by shareholders. This new issue of shares will bring our total capital up to 150,000*l*. only, a very small capital for such an enormous mass of property, in good going condition, fully equipped.

It is understood that you work by adit levels and have no pumping charges.

That is quite correct. All this great mass of ore is absolutely free from water, and there is no need of pumps. Moreover, it is free milling ore. We have run two level from the side of the hill, both over 600 ft., communicated the one with the other by small shafts. 50 ft. or 60 ft. below the deepest adit we have found the Martha lode as fine as in the best part of the mine hitherto explored. The latest report from the manager is to the effect that "the lode shows no sign of deterioration in size or quality." That news was received by mail on Monday, which also brought the intelligence that the output for the month had been 800 tons, and the net yield 2,375*l*., which is, as nearly as possible, 3*l*. a ton, and it has cost less than 50 per cent. to get this. I may mention that the ore is dropped into trucks, which run out of the mine on to an iron tramway, and are thence taken direct to the mill. The expenditure per ton for mining, owing to the exceptional conditions under which we work, is only about 8s. per ton.

Is the ore all alike?

In one sense it is not, and this brings me to another feature of this remarkable property. The great mass of stone is interwoven with small black seams, which carry gold in large quantities. As the stuff is broken the black seam part of it is put on one side and reserved for special treatment, and it will even pay it to send here. It has run in value from 25*l*. to 100*l*. a ton. The black seam contains distinctly visible gold, as you will see by this specimen (producing it), and the whole mass appears to be finely saturated with the precious metal. Speaking of the quartz generally—formerly not 20 per cent. of the gold was saved; whereas now we are saving from 50 to 60 per cent., and hope to get up to 70 or 80. The tailings are put aside for further treatment. What we want is pulverising machinery on an enlarged scale to deal with this great mass of ore, and it is for this, as well as for the other purposes named, that the issue of shares is to be made—*but only to the shareholders*. I believe there are hundreds of properties in New Zealand, equally good, awaiting development, but the chief point is careful manipulation and a judicious selection of machinery.

What have you spent here?

Between 50,000*l*. and 60,000*l*., but the outlay has been excessive, for a reason to be presently named. Of the value of the reefs we were certain, but the problem was suitable machinery to save the gold. Its solution has come by the dry process, extremely fine crushing, the Wheeler pans, and amalgamation in still water. The property you should understand is within 300 or 400 acres in extent. We have also done some work on the Union lode, which has been found 6 ft. to 8 ft. wide. We can work this under the same conditions as the Martha lode, but for the most part our efforts have been confined to the latter.

Is it the case, Mr. Russell, that you are about to re-visit New Zealand?

Yes, I go out during this month, and though other business takes me thither, Waihi affairs will have my chief care, and I shall return in about five months. The annual meeting will be held soon after my return, at which I hope to give an account of my visit. My ob-

ject, as regards Waihi, is chiefly to consider matters on the spot in connection with the extension of the plant. The property would not have cost nearly so much to develop if we had not had a somewhat rough and expensive experience in trying other plans which proved unsuitable to the ores with which we have to deal.

The last question is the most important—What about a dividend for Waihi shareholders?

I do not see how we are to withhold a dividend, though I assure you there is no anxiety on the part of the board in this direction. I do not care to pledge myself to precise figures, but you can work it out in this way: If we are making 50 per cent. profit, and if we have no debts, where is the money to go to? We are working 20 stamps now; we have other 10 heads erected, and we shall work 30 stamps presently, and that will increase the output one-third; and if all the obligations are cleared off, it follows as clear as effect follows cause that there must be a considerable surplus, and that surplus must be increased in the proportion in which we further extend our plant. We contemplate, and are, providing money for a very considerable extension, which will be made as quickly as it can be done, consistently with economy in making the extensions.

THE YEAR'S TRADE.

INFORMATION, such as is supplied by the Board of Trade returns for the past year, in spite of numerable adverse circumstances, is not altogether unfavourable. The course of trade, hindered by strikes and dearer money, has suffered a shock in another respect from which it cannot at once recover; yet compared with 1889 the results are still on the favourable side. December wound up the year with returns which showed an increase in our exports of at least 1¾ per cent., making 5¾ per cent. for the year, and an increase of nearly 3 per cent. on our imports, making 1½ per cent. for the year, while the reshipments, nearly 11¾ per cent. less for the month, were only 1 per cent. worse for the 12 months. The navigation returns show larger entrances but smaller clearances for the month, although on the year the result is an increase in both respects. The bullion movements show a loss on the month of only about 70,000*l*., but the year gives a larger import by nearly 10 millions, which goes some way towards making up for the adverse balance of trade shown by the figures of the returns. Of our exports, raw materials, yarns, and textile goods, machinery, and chemicals exhibits an increase, but metals and other manufactures show a falling of, particularly iron and steel, although on the year the augmentation is pretty general. As regards imports, the only decline of importance is in respect of raw materials and manufactured and miscellaneous articles; but on the whole period it is, on the contrary, more general, the exception being an increase in metals and food products. Against a year's imports of metals of 23,700,000*l*. —an increase of 1,626,000*l*.—there has been an export of 45,250,000*l*. of both metals and their manufacture, or an increase of 4,337,000*l*. The arrivals of copper and tin have been smaller, but those of lead larger; while as regards the exports, copper and lead have improved, but tin has fallen off. Of iron and steel, the exports have also been less, but those of coal greater.

The following table gives the results for December, and the percentage for this year:—

IMPORTS.

Article.	Quantity Tons.		Value £	Increase or decrease per Cent. Qunty.	Value.

WOODHOUSE AND RAWSON UNITED LIMITED.

CONTINUED PROSPERITY.

THE meeting of Woodhouse and Rawson United, Limited, held yesterday, was one of those that takes place occasionally where certain of the shareholders come prepared to curse the company, the directors, and all connected with it, and retire having blessed with an all round benediction.

It seems that the original feeling was due to some of the shareholders after being dissatisfied with the fall that had taken place in the shares during the recent two months, some shares being issued at 5s. premium in the summer, and when the directors proposed, as they did by their notice, to raise an additional 200,000*l*. capital, and further repay 75,000*l*. which had been deposited as a guarantee fund, they thought that something had happened to the company, and things were in a bad way.

The speech of the chairman of the company, Sir Rawson W. Rawson, a well-known authority on commercial questions, being chairman of the Commercial Section of the Imperial Federation League, late president of the Statistical Society, and present president of the International Statistical Society, and one of the chief writers on statistical matters in connection with trade, soon put the boot on the other leg, and it was not only put on, but securely laced up and polished by the remarks of the managing director, Mr. F. L. Rawson. These speeches quite bear out the favourable view we entertained of the company originally.

It seems that not only have the large profits made during the last year been maintained, but the prospects for the coming half-year are quite as good, and sufficient profits have already been made during the past half year to pay a dividend of 15 per cent. for the whole year. Not only this, but the manufacturing and ordinary trading business has increased largely, the latter by something like 30 per cent. in the last six months, which was 50 per cent. over the previous six months, whilst the manufacturing profits are expected to be quite 10,000*l*. more than they were last year.

The best statement at the meeting was, perhaps, the one that no liability of even as much as 10,000*l*. had been incurred since the formation of the company. This is more important than it seems, for it is well known that most people making their profits from being connected with new undertakings have often to run very large and serious liabilities in underwriting or guaranteeing the subscription of the capital. It seems that Woodhouse and Rawson do not do this, and probably they rely upon the excellence of their companies and the value of their name to obtain for them the necessary funds.

The chairman drew attention to the success of their last two companies, one the well-known Elmore Company—the meeting of the French Elmore Company being reported by us in another column—and the International Okonite Company, which seems to have been very successful, and has just paid an interim dividend at the rate of 10 per cent.

The real reason for the depreciation in the value of the shares was let out when Mr. Rawson stated that by order of the liquidators of the vendor company, to whom they had originally been allotted, they had during the last two months issued the shares to shareholders who had been expectantly waiting for a long time, and thus some 80,000*l*. of shares had been placed on the market.

As the company was doing so well, and had issued a large number of shares at 5s. premium — Mr. Rawson himself had taken 28,000*l*. worth of the shares at 5s. premium—it seemed extraordinary that even in the present crisis the shares could be obtained at par, or even a little under par, when they ought really to be worth quite a substantial premium, and it was no wonder that the shareholders were frightened when they had not a knowledge of these important facts.

There was not a single dissentient to the two proposals, namely, to repay the 75,000*l*. with a good discount, which, of course, would rank as a profit to the company, either in cash or 5 per cent. debentures; and secondly, to issue the additional capital directly the directors see fit.

PROSPECTS OF COLON MINES.

THE directors of the Colon Company are to be congratulated upon holding one of the most successful mining meetings of the week. The spirit of the shareholders, as displayed towards them, was excellent and just. Weighed in the balances of reasonable expectation, the directors have not been found wanting. The chairman (Mr. Sankey) has himself been to the spot, and, though a little sceptical as to what he had previously heard and read about the district in general and the Colon property in particular, he came back converted. In his view it is simply a question of time, and a short time, for the company to be placed upon a dividend footing. The record of work has been extremely creditable to the board. Shareholders who understand the preliminaries necessary to successful hydraulic mining will be of opinion that the directors have done marvels in a short time. Colon is a very rich property indeed, but unlike the "Happy Valley" of Rasselas, where "every blast shook spices from the rock and every month dropped fruits upon the ground," before the gold can be won much has to be done. For example, there has been in this case a ditch, 17 miles long, which, we gather, is now all but completed within the estimate of cost ordinarily allowed for such work. The mining camp has had to be established, and everything to be done from the beginning. The 10 mines, comprising 1,360 acres, have had to be looked over, and we are glad to be able to say that in every respect—timber, water, and, above all, gold—the original prospects held forth do not seem to have been exaggerated. The climate is admirable. There are nine navigable rivers, and the mine is in the vicinity of those that have made their name on the English market by the dividends they have declared and the gold they have produced. The visit of the chairman appears to have been exceedingly useful and opportune, and in Mr. Arthur J. Russell the company appears to have secured a manager of exceptional qualities, and one who is of opinion that the property can be made to pay well. The interest

taken in the proceedings was considerably heightened by the well-delivered speech which fell from Mr. Thomas Thompson. This gentleman took up his parable about the gold mines of Colombia 20 years ago, and ever since he has been prophesying in their name. He has been more or less connected with all the successful mines in that region and Colon, not to speak of one or two others that could be named, seem likely to add to his reputation. Without attempting to submit his speech to critical analysis, we may promise the reader who peruses it much food for thought, and a considerable amount of information that he may not at present possess. There is evidently no feeling amongst the shareholders different from that of satisfaction with the past conduct of the company, and with its present position. The barometer points fair for early returns and substantial dividends.

A NEW DEPARTURE IN TREATING REBELLIOUS GOLD ORES.

A DEMONSTRATION took place on Wednesday morning last, at the works of the Gold Ores Reduction Company, at Hackney Wick, when a number of gentlemen interested in gold mining from the Transvaal and from Australia, and also connected with mining companies in London, attended to observe the treatment of certain rebellious and poor ores under a patent, owned by the company we have named. The experiment, which was carried out to the satisfaction of all present, was upon 2 tons of ore from the Mount Torrens Mine of South Australia—a mine which has lately been acquired by London capitalists. Heretofore, the ore of this mine has been worked at but a small profit, owing to the inability of its owners to recover more than a limited portion of the gold contents—not more, we believe up to the present, than one-third having been saved. By the new process of the Gold Ores Reduction Company it has been demonstrated that at least 90 per cent. of the precious metal can be recovered at a very small increase in the course of treatment. The treatment by this new method comes between the crushing and the amalgamating processes. The powdered ore (which was pulverised by the Cyclone Pulverising Company, at their works, 34, Snow Hill) is passed automatically through a furnace, calcined and oxidised through the medium of intensely heated air, thereby supplying oxygen in excess, decomposing the base metals, volatilising the sulphur and arsenic, and thus freeing the gold. The ore under treatment on Wednesday consisted of iron pyrites, which, by ordinary methods, is very difficult to treat. We saw the sulphur burned away, and the iron pyrites turned into oxide of iron, and after a few seconds the ore was taken out of the furnace, and in the sight of all beholders the free gold was panned out and exposed. To a severer test, as admitted by many mining experts present, this ore could hardly have been subjected. The impression left upon those present at this interesting demonstration was that for this process, which requires only an intelligent labouring man to work it, there is a bright future, particularly as it does not require the alteration of any machinery at present erected on the different mines, but will be supplementary thereto in assisting in the extraction of the precious metal. It is not too much to add that, treated upon a large scale as the 2 tons were treated on this occasion, the ores of many mines can be made to pay which are now cast aside as impossible to treat profitably.

AN ENCOURAGING REPORT—THE MIDDLESBOROUGH TOWN CO., KENTUCKY.

THE report the directors have just issued reviewed the operations from the time of its organisation in 1888 to the end of last October. It was about June, 1889, that the assistance of English capitalists was sought, and the document must be pleasant reading alike to the American and British shareholders. The energy thrown into the management may be judged by the fact that in October, 1889, the directors commenced business by making public and private sales of land. The nett profit to the end of that period, exclusive of satisfactory sales since made, has been "$1,140,662 (228,132*l.*), out of which two dividends of 10 per cent. each have already been declared and paid, leaving an undivided profit of $780,552 (156,110*l.*), or upwards of 39 per cent. on the company's present capital. This result has been obtained by the sale of less than 6½ per cent. of the company's land." Introductory remarks of this kind are appetising as regards what may be expected to follow. The land not sold is certainly as valuable in the opiniou of the board as that disposed of, but it is only taken at its cost to the company, and no prospective profit is taken credit for, as is too often done by the land companies and building societies of this country. The cost to the company of the lands unsold has been 86*l.* 5s. 6d. per acre, whereas the average prices obtained to date have been 1,250*l.* per acre. It is gratifying that no forfeitures have taken place, owing to the non-payment of instalments. This shows not merely the solvency of the persons with whom business is done, but the satisfaction with which they view their purchases.

The report calls attention to the extraordinary progress of Middlesborough in the last 18 months. Whereas in June, 1889, the population was under 100, it is now nearly 7,000. The "city" in which the company is the largest freeholder has been incorporated and permanently established, and future improvements will have to be executed by the local authorities, whose diligence, it is to be hoped, will exceed that of the vestries in this country. English shareholders will be glad to know that the books have been overhauled by Messrs. Deloitte, Dever, Griffiths and Co., and the result is shown in the accounts attached to the report. The very rapidity of the progress of Middlesborough has been a source of *quasi* embarrassment to the company. It has had to spend a very large sum on the work of drainage, sewage, and the like, which has depleted the exchequer; but we anticipate there will be an eager desire to obtain the 25,000 out of 40,000 new shares of 5*l.* each, to be issued at 7*l.* 10s., the money being required to round off the corners of the company's estate, and to replace the exhaustion of capital incident to the cost of improvements already mentioned. The confidence felt in the company is exemplified by the fact that if the shareholders do not take the whole of this issue the directors have arranged for it to be absorbed by other persons. The directors recommend a further distribution of 10 per cent. on the old shares, payable on the 25th inst., making, with the 20 per cent. already paid, a total of 30 per cent. for the period under review. In the course of 15 months wonders have been done. Even in the middle of 1889 there were no industries, no corporation, no railways, no tramways—and, as Sam Weller would say, "no nothing." But now all these are obviated as the result of one year's work. It is obvious that the directors have "improved the shining hour." English shareholders will learn with pleasure that in future the majority of the board will reside in England. Altogether we consider this report most encouraging, and is indicative of a future prosperity of no ordinary kind.

AFFAIRS IN SOUTH AFRICA.

(From our Kimberley Correspondent.)

Kimberley, 15th December, 1890.

OTTO'S KOPJE DIAMOND MINING CO.

THIS unfortunate company has obtained another lease of its life after going through no end of vicissitudes. A general meeting of the shareholders was held here on Friday, when the chairman, Mr. J. J. O'Leary, announced that the meeting had been called to ask the shareholders to endorse a provisional agreement entered into with Mr. Francis Stobbs, of 79½, Gracechurch Street, London, on behalf of a new company to be formed there, and shares in this new company would be issued 18s. paid up, with calls of 6d. on application, 6d. on allotment, and the other 1s. on calls of 3d. each. At the same time the agreement entered into provided that the unapplied-for shares were to be taken up, and the debts of the old company to the extent of 10,000*l.* were to be paid by the new company. He did not think the shareholders had any option but to endorse the terms of the agreement. Things had got into such a bad state that they should be only too glad to arrive at some settlement whereby their property would get, as it were, a new lease of life, and they would be able to show the true value of Otto's Mine. The agreement was then read to the effect that the old company should be voluntarily wound up; that Mr. O'Leary should be the liquidator; that the said liquidator should be authorised to consent to the registration of the new company under the English Joint Stock Companies Act; that the draft agreement be confirmed; that the said liquidator be authorised to receive in compensation for such sale of the assets of the company the consideration set forth in the draft agreement, and that Francis Stobbs, of Gracechurch Street, London, shall, on or before the 15th January, 1891, advance to the said liquidator the sum of 10,000*l.* sterling to be used in payment of the liabilities of the said old company. In reply to a shareholder, the chairman assured the meeting that it was included in the agreement that the unapplied-for shares in the old company would be taken up by the new company. A question was also raised as to how the scrip was to be delivered to colonial shareholders, the questioner arguing that as soon as the agreement was complete, the London shareholders would have a manifest advantage in being able to sell on a rise before the scrip could reach the colony. The chairman replied that he supposed the shares would be issued in London on the same day that they were despatched to the Cape, and if there was any boom the English shareholders would certainly have the advantage of the time intervening between the departure of the mail from England and its arrival here. After some further discussion the agreement was passed as read, and two shareholders were appointed to assist Mr. O'Leary in the liquidation. It now remains to be seen what the new company will do with this hitherto unfortunate property.

THE NOVEMBER OUTPUT

has topped the record, and the cable will have already informed you that it reached the very respectable figure of 46,795 ozs. The total output for the 11 months of this year amounts to 439,036 ozs., as against 343,173 ozs. for the same period of 1889, and 23,040 ozs. for the 11 months of 1888. Notwithstanding these cheering figures, our market is still in a very rickety condition; little business doing, and speculation is really a thing of the past. De Beers fell on Thursday to 17*l.* buyers, and for the first time for a very long period were not even officially quoted. Koffyfonteins receded from 70*l.* to 67*l.* 10s., whilst Nooitgedachts changed hands during the week at 3s. 6d. and

4s. Even Pigg's Peak have been very quiet, and notwithstanding the remarkable crushings have not yet reached par.

MEYER AND CHARLTON CO.

During November this company mined 1,410 tons of quartz, and crushed the same with 30 stamps during 29 days. The yield amounted to 2,085 ozs., valued at 7,820*l*. The total expenditure came to 2,518*l*. 2s. 1d., leaving a profit for the month of 5,301*l*. 17s. 11*l*. Mr. G. Albu, the managing director, is to be congratulated on the manner in which he has brought this concern to the fore, and the shareholders cannot but be satisfied with a management which can show a profit of 5,000*l*. a month.

MAIN REEF COMPANY.

The third annual meeting of the shareholders of this company was held here on Wednesday, Mr. A. Warburg in the chair. The report showed that the sum of 34,865*l*. 18s. 7d. had been expended during the year in development, and the acquisition of the new 30-stamp Sandycroft battery, a 200 h.-p. engine, steam pumps, and buildings. The capital of the company is now 300,000*l*., all the shares being issued with the exception of 5,000, which are held in reserve. The available cash balance amounted to 24,128*l*. 2s. 4d., a sum considered sufficient to ensure success. At the same time, the directors will sooner or later have to consider the advisability of reducing the capital to a more reasonable amount, as the property, although a fairly good one, will hardly be able to show results sufficiently good to maintain the present over-capitalised basis. The management was fortunate in having removed the company's deposit at the Cape of Good Hope Bank previous to the closing of that institution, thus saving a severe loss.

RAILWAY EXTENSION.

If we cannot get up a boom in one way in this country we will in another. Just now there is a boom in railway extensions. Since I last wrote the railway has been opened between here and Vryburg, the capital of Bechuanaland, and some 140 miles from Kimberley. Nor is it going to stop at Vryburg. It has been already surveyed to Mafeking, another 90 miles, and the surveyors are here taking out their quantities with the view of proceeding with the earthworks at once. The day after to-morrow the line running from Port Elizabeth through Colesberg, to Bloemfontein, the capital of the Orange Free State, will be opened. The importance of this extension may be gathered from the fact that the Governor of this colony, the Governor of Natal, and the President of the Transvaal will meet for the purpose of assisting the President of the Free State at the interesting ceremony. But what is of still greater importance is that during the past week the Free State Volksraad, at their special meeting, have agreed to the extension being at once proceeded with from Bloemfontein in a direct line through Cronstadt and Heilbron to the Vaal River, where it will be within a comparatively short distance of Johannesburg. These strong forces of circumstances have combined to stir up the President of the Transvaal to push on his pet railway from the Portuguese frontier. We only hear scraps of news from time to time with regard to its progress, but all accounts agree that the pace at which it is progressing now, compared with that of a year and a half ago, is the pace of a race horse compared with that of a snail. You will, therefore, understand that Johannesburg is now being rapidly approached from all quarters of the compass. From the west through the Vryburg extension; from the south through the Free State; from the east through Natal, and from the north through Portuguese territory. For some time to come, however, the most expeditious route to reach the Golden City is by way of the Cape Town, Kimberley and Vryburg line, and thence by coach to Johannesburg. Since the opening to Vryburg on the 1st inst. the train from Cape Town has been accelerated. You can now reach Vryburg from Cape Town in 56 hours, and Gibson's coaches will take you from Vryburg to Johannesburg in 32 hours, which is not at all bad travelling in South Africa. The distance is not far short of 1,000 miles.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FURTHER REDUCTION OF THE BANK RATE.

THE abundance of money on offer has been such—especially since the distribution of the dividends at merely nominal rates—that the banks have been forced to compete for bills to employ their funds. This reduced discount to 2 per cent. under Bank rate, and as it was hopeless under existing circumsances for the Bank to think of bringing the market within reasonable or effective reach of its own rate, it was fully expected that a reduction would follow, and this has proved the case. On Thursday the directors decided to lower the minimum, which had been fixed at 5 per cent. on the 4th December last, to 4 per cent., and the market rate at once fell to 2½, ¾ per cent., and the discount houses lowered their terms ½, to 2 and 2¼ per cent. for money at call and notice respectively, while the Banks allow 2½ instead of 3½ per cent. The exchanges which had moved in our favour were reversed by the movement, and the only fear is that it may encourage exports of gold. The Bank return is better than expected. The reserve has improved 730,000*l*., to 15,530,000*l*., or 40 per cent. of the liabilities, or a recovery of 3 per cent. At this time last year the reserve was only 9,830,000*l*., but the rate was then 6 per cent. The payment of the dividends has caused a decrease in the public deposits, but the private deposits have increased, and the other securities are less.

Business at the Stock Exchange has again been very quiet during the past week, and prices, in the absence of support, have fallen away except in a few special cases, and in these there has been special reasons for the increased demand. The Scotch strike is engrossing more attention, and as the accounts are directly contradictory, it is difficult to obtain the real facts as to how the strike is progressing or collapsing. One thing, however, is certain, that the companies can hold out for an indefinite period, as they have nothing to fear from competition, and the loss from the receipts is only temporary, as the traffic must come later on. The men must certainly feel a pinch, as "strike wages" in this weather is very different from full "working wages," and it is only a question of time before the companies will be able to make efficient hands of the new men taken on. One result has been extensive selling of North British stock on Scotch account, and the price fell to below 49. The traffic return (31,000*l*. decrease) practically justified the sales, but the "bears" re-purchased when the result was known, which for a time steadied prices. Argentine affairs are still unsettled, but very little disturbance has been reported in the prices of the various loans. The rumoured revolt in Chili affected the Government Bonds, and also the Peruvian, Nitrate, and Copper markets. The Funds have risen on balance, and Colonial Inscribed stocks were also strong. Spanish, Egyptian, and Turkish Loans were good, but other Foreign Government Bonds were weaker. In Home Railways the Scotch stocks were heavy, and ½ to 1½ lower, Great Northern and Chatham showing similar reductions, but the heavy lines were good. American have been well supported and prices have risen $1 to $2, the Louisville dividend being favourably regarded. Grand Trunk stocks were a shade lower, but Mexican improved. Brewery issues were dull, but American were active and rather firmer towards the close of the week. Eastmans, Hammonds' Meat, and other Industrial securities improved on balance.

The Money market appeared steadier to-day. Three months' bills were quoted 2⅝, ¾ per cent., and loans at call ruled in demand at 1½, 2, the supply being rather less, owing to withdrawals on account of the New French Loan, which is quoted about 1½ premium.

The Bank of England received to-day 380,000*l*. in sovereigns from the antipodes. Bar silver was quoted 48⅛d., and Rupee Paper 4½ per cent., improved to 83¼, ½.

The Stock markets have presented a more favourable appearance to-day, prices in most cases closing at their best. The Funds have risen ⅛ to ¼, and Rupee paper about ½ per cent. The New Cape Loan was quoted 1¼, ¾ premium. In the Foreign Government market the International section closes at a general advance, ranging from ¼ in Greek 1884, Portuguese, Turkish 1871, and ditto series A, to ¾ in Egyptian Guaranteed. South American Loans, however, were dull and generally ½ lower, while the premium in gold at Buenos Ayres has advanced to 228 per cent. Ecuador and Guatemala Bonds were heavy, and 1 to 2 lower. The demand for Home Railway stocks continues, and a further advance has been recorded almost throughout the entire list. Brighton "A" was conspicuous with a rise of nearly 1. The Underground and Heavy Lines improved about ½. North Eastern and North British were also better at a rise of ¼ to ½, while Caledonian remained unchanged, and Chatham issues lost ground. American Railroad securities opened dull, then hardened and closed good, the rise being led by a further advance in Denver issues of 1 to 2. Northern and Union Pacific shares rose 1, and most of the rest ¼ to ¾. Reading Bonds, however, were heavy. Grand Trunk stocks reflected the movement in the preceding market to the extent of ¼ to ¾, while Mexican were very strong at advances ranging from 1¾ in the Ordinary to 3 in the Second Preference issue. A further fall of 5 was shown in Central Argentine stock to 81½. Nitrates were irregular, but Brewery issues firm. Other changes were of a trifling character, and about evenly distributed. The Manchester, Sheffield, and Lincolnshire dividend, at the rate of 4¾, was regarded as fairly satisfactory.

Annexed are the final quotations to-day:—Consols Account, 96¼, 96½; Egyptian Three-and-Half per Cent. Scrip, 92⅜, 93¼; Egyptian Unified, 96¾, 97; French Four-and-Half per Cents., 103¼, 103⅜; Hungarian, 90⅜, 90⅝; Italian, 91⅜, 91⅝; Mexican Six per Cent., 92¼, 92⅜; Peruvian Corporation, 10, 11; Peruvian Corporation Preferred, 28, 29; Russian, 1873, 97⅜, 98¼; Portuguese, 56⅝, 56⅞; Spanish, 75¼, 75⅜; Turkish, 1871, 99, 99½; Turkish Defence, 101½, 102; Caledonian Railway, 119⅞, 120⅛; Great Eastern, 89⅜, 89⅝; Great Western 162⅞, 163⅛; Brighton "A," 162½, 162¾; North Western, 178⅞, 179⅛; Metropolitan, 77½, 78½; Metropolitan District, 29½, 30; Midland, 148½, 148¾; North British 51⅛, 51⅜; North Eastern, 167, 167¼; South Eastern "A," 95⅜, 95⅝; Mexican Railway Ordinary, 47⅞, 48⅛; Nitrate Railways, 15¾ 16; Grand Trunk 9⅛, 9⅜; Grand Trunk First Preference, 57⅜, 58; Grand Trunk Second, 38⅞, 39⅛; Grand Trunk Third, 21⅛, 21⅜; Canadian Pacific, 75½, 75½; Denver Preferred, 62¼, 62½; Erie, 20, 20¼; Milwaukee, 55⅛, 55⅜; Lake Shore, 114½, 115; Louisville, 77¾, 78; Atlantic First, 32½, 33; Ontario, 16, 16¼; Ohio, 18¾, 19¼; Norfolk and Western, 56, 56¼; Reading, 17½, 17¾; Reading Five per Cent. Bonds, 56, 57; Union Pacific, 46¾, 47; Wabash Preference, 17¾, 18¼; Ottoman Bank, 14⅝, 14¾; Anglo-Telegraph, 48¾, 49¼; National Telephone, 4⅛, 4⅜; Hudson's Bay, 18, 18½; Suez Canal, 95¼, 95¾; Guinness Ordinary, 315, 317; Allsopp's, 43, 45; Bell's Asbestos, 14½, 15; G. H. Hammond, 4¼, 4½.

REPORTS OF MEETINGS.

ELMORE'S FRENCH PATENT COPPER DEPOSITING CO., LIMITED.

SHAREHOLDERS RECEIVE WITH ACCLAMATION THE STATEMENT OF THE PROGRESS MADE—THEY ALSO HAIL WITH SATISFACTION M. SECRETAN AS THEIR MANAGER, AND LISTEN WITH APPRECIATIVE ATTENTION TO HIS REMARKS—A SHORT BUT IMPORTANT DISCUSSION.

THE first general meeting was held at Cannon Street Hotel yesterday. At this meeting it was notified the following resolutions for altering the articles of association of the company would be proposed :—

RESOLUTIONS.

1. "That the following words be added to article 15 at the end thereof :—'Provided that 21 days' notice at least shall be given of each call, and that no call shall exceed one-fourth of the nominal amount of a share, or be made payable within two months after the last preceding call was payable.'" 2. "That the following words be added to article 44 at the end thereof :—'Provided that the directors shall not, without the sanction of a general meeting of the company, raise or borrow any sum of money which will make the amount raised or borrowed by the company and then outstanding exceed *one-half* of the subscribed capital of the company, and so that every debenture, debenture stock certificate, mortgage, or other charge shall be under the common seal of the company.'" (3.) "That the following words be added to article 116 at the end thereof : 'A printed copy of such balance-sheet shall seven days previously to the meeting be sent to the members in the manner in which notices are hereinafter directed to be served.'"

Should the above resolutions or any of them be passed by the required majority, they will be submitted for confirmation as special resolutions to a subsequent extraordinary general meeting of the company, of which due notice will be given. The proposed alterations in the articles of association are necessary in order to comply with the requirements of the Stock Exchange Committee, and must be made before an official quotation for this company's shares will be granted.

Sir Richard Meade, K.C.S.I. (chairman of the company), presided.

J. SHURMER, Esq. (secretary), read the notice of meeting.

SHARES APPLIED FOR FOUR TIMES OVER.

The CHAIRMAN said : Gentlemen, all present are doubtless aware that this is only a statutory meeting of the company, held to fulfil the requirements of the Companies' Acts. We propose, however, to ask the meeting to sanction certain alterations in the articles of association, of which due intimation is given in the notice convening the meeting, which are required by the Committee of the Stock Exchange. We are glad to have the opportunity of meeting our fellow-shareholders, and of informing them of what has been done. The 66,750 shares offered to the public were applied for about four times over, and a full allotment was made among some 2,000 applicants. The sums due on allotment have, with a small exception, been all paid up, and the Stock Exchange Committee has granted a settlement for our shares, and provided this meeting passes the alterations in the articles of association, of which notice has been given, there will be an official quotation of our shares on the London Stock Exchange at a very early date. Steps are also being taken to introduce our shares upon the Paris Bourse, which will, no doubt, be successful, and, thus lead to an important extension in the dealings in our shares. The first question your directors had to deal with was that of the general management of the company's manufactories and business in France, and they congratulate the shareholders on their having been able to secure the very valuable services of Monsieur Eugene Secretan as the company's general manager there. M. Secretan was formerly manager of the largest copper manufacturing industry in the world, and your directors are confident, from all they have learned and know of him, that in placing him at the head of the company's affairs in France they have taken the most important step that was possible towards securing the complete and early success of the business of the company in that country. M. Secretan was, it is understood, convinced of the merits of the Elmore process when it was exhibited in Paris in 1889, and before entering the service of the company he visited the works of the English company at Leeds, accompanied by several colleagues, and his assurances to the board, after making that visit, of his entire confidence in the future success of our company, were most emphatic and satisfactory.

WORK IN THE NORTH OF FRANCE.

As stated in the prospectus, your directors had secured for the company land at Bellegarde, near the Swiss frontier, suitable for a site for the works, with water available as a motive power, but M. Secretan was so satisfied of the vast importance of establishing a manufactory, and commencing business at first in the north of France, that, after much anxious consideration, we accepted his recommendation on this point, and decided to concentrate our attention and efforts on the establishment of works there, in the first instance, on a sufficiently large scale to admit of a more considerable outturn of manufactured goods than was originally contemplated. M. Secretan gave us the strongest assurances that he would be able to dispose of all the goods that would be thus turned out, and he was accordingly authorised to take the necessary steps for securing a convenient and suitable site, for the preparation of plans and estimates of the buildings that would be required, and for ordering the engines, machinery, and plant needed to stock the works. These arrangements he has carried out with characteristic energy, and we are able to inform this meeting that an excellent and convenient site, of ample extent, has been obtained by him on very advantageous terms at Dives, near Havre ; that the plans and estimates for the buildings to be erected thereon have been approved and sanctioned by the board, and that the engines' machinery and plant have been ordered from the best manufacturers of such articles in France. The winter season will, of course, delay the progress of the buildings, but M. Secretan states that the works will be in operation by 1st July next. M. Secretan, who is present here to-day, will address the meeting, and as he does not speak English, his remarks will be afterwards translated and read.

A COMMITTEE IN PARIS.

I may mention that he has secured the assistance of a committee of experts in Paris, whose aid will be most valuable in the work that lays before him. I will now refer to the financial aspect of the more extended operations your directors have authorised. The prospectus provided for a working capital of 50,000*l*., which, it was thought, would be quite sufficient for starting the works successfully on a moderate scale. But it was at once apparent that the adoption of M. Secretan's proposals would necessitate a large increase to this amount, and, after much consideration, we decided to avail ourselves of an offer from the parent company (the Elmore Foreign and Colonial Company, Limited) to find for this purpose 50,000*l*., at 6 per cent. per annum, for three years. The shareholders were informed of the circumstances of this arrangement by a circular issued to them on 29th October last. I have only to add that we are satisfied that the course we have thus taken was the best that it was in our power to adopt in the interests of the compauy. The measures now laid before the meeting will enable the company to retain in its own hands—instead of disposing of the same to a sub-company, as was intended—the exclusive license to make copper wire in France by the Elmore process. The value of our shares should be largely increased by such retention, as the profits from the manufacture of wire will by and by be very considerable. The patents which we have purchased have been duly transferred to us, and we have every assurance that the same are perfectly good and valid. The company obtains, free of charge, all improvements worked out from time to time by the Elmore English Company in this country, and I may mention, in this connection, that one additional patent on this account has already been taken out by us in France. It only remains for me to say that the board has the fullest confidence in the future success and prosperity of the company. I or my colleagues will be happy to answer any questions that may be put to us before I propose the resolution for the alterations in our articles of association. I have the pleasure, before sitting down, to introduce M. Secretan to the meeting. (Cheers.)

VIEWS OF M. SECRETAN.

M. SECRETAN, who was received with much applause, said : I am very sorry I cannot express myself in English, and I trust some member of the board will kindly translate the few words I ask permission to address to you. Gentlemen, the board of your company has expressed a wish that I should be present at this meeting. It is with great satisfaction that I have complied with that request ; because, on the one hand, it permits me to thank your directors publicly for the honour they have conferred upon me by appointing me general manager of your company in France ; and, on the other hand, I thought you would be glad to hear a few words from me on the present and future position of your company. The extended and careful investigations and trials that have been made, up to the present time, have convinced me and my most trustworthy and competent advisers that the Elmore process has definitely reached a practical manufacturing stage. You have the exclusive right to manufacture under this process in France, and the articles produced are of extraordinarily good quality, and the cost of production is extremely low, more so, indeed, than is stated in the prospectus. These facts being now incontestable, the time for hesitation has passed, and that for work has arrived. I have submitted to your board plans for the erection of the first factory, and I had the good fortune to see them fully approved. Immediately after this approval I entered into arrangements with excellent contractors for the erection of the buildings, and with the most competent manufacturers for the machinery and plant. There will be no hitch in the completion of your factory, as too often happens. To avoid this I have only dealt with firms of the highest standing and the greatest experience, who are renowned for the scrupulous carrying out of their engagements. With these I have entered into definite contracts at prices which are absolutely binding, and cannot be exceeded. Under these contracts the buildings will be handed over complete at the end of next April. Engines, boilers, dynamos aud plant generally will be erected, in working order, by the end of June, and on the 1st July next your first works in France, constructed to produce 370 tons of copper articles per month, will commence work, and will at the end of another three months have reached their full production. I need not tell you that the sale of these articles is absolutely assured. Supported by the confidence of your board, seconded by my French Committee of Direction, and aided by a staff, of whose industry and goodwill I cannot speak too highly, I undertake, as far as I am personally concerned, to work with untiring energy, and with entire devotion to your interests. In conclusion, I can assure you, gentlemen, that you can regard the future with absolute confidence and faith in the prosperity of your company.

DISCUSSION.

Dr. HETLEY : The question I wish to put has no reference to the report of M. Secretan, but to the increase of the capital by 50,000*l*., and I want to know whether that 50,000*l*. was debenture or preference capital. I think you mentioned it was to bear 6 per cent. interest, but I did not gather whether it was a 6 per cent. debenture, or a 6 per cent. preference on our capital. The object of my question is—if the capital were available, being placed at a distinct amount of dividend (6 per cent.), whether it ought not to have been offered to the shareholders of the French Elmore Company, instead of being otherwise distributed ? (Cheers.)

Mr. LAWS : Not having the pleasure of M. Secretan's acquaintance, except knowing that he has had the management of the Société des Metaux in France, I should like to know what the general profits of that company have been for a certain amount of time previously. (Laughter.) It has appeared to me that there has been no practical

demonstration as to the cost of the process, or the way in which it has been carried out. The address of M. Secretan appeared to me to be composed of the best butter, and no practical facts. (Oh, oh.)

The CHAIRMAN: I was under the impression that M. Secretan had mentioned several very striking facts. (Cheers.) As to the Société des Metaux, you cannot expect me to reply about that when we are dealing simply with the Elmore Copper affairs. (Cheers.) We have no means of making a reply. All we knew of M. Secretan is that his experience has been very great in the particular business in which he has now taken service for us. (Cheers.)

Mr. LAWS: In the first prospectus there was a point made about water power, by which this process was going to be worked on a low scale of cost, but all such ideas seem to have been thrown to the winds by this change of *locale* of the company. It appears that every penny of our capital will be hypothecated to another company, and I think the shareholders of this company ought to have had some preference. It appears to be an outrageous thing. (Expressions of disapprobation from all parts of the room.) I am only giving my own opinion on the subject. We appear simply to be advancing our 50,000*l*., which is hypothecated by another 50,000*l*., and withal we are paying a high rate of interest. If M. Secretan could tell us anything about the profits we are likely to make, or that have been made, by the English Company already, we shall have something to go upon.

IMPORTANT TESTIMONY AS TO M. SECRETAN.

Mr. F. L. RAWSON (who was heartily received) said: As the last speaker seems to have thrown doubt upon M. Secretan's position and management, to a certain extent, I think I am entitled to speak as to it, because it was my firm, that of Woodhouse and Rawson, that originally negotiated the sale of the Elmore patents when they were sold to the Société des Metaux for three-quarters of a million sterling. The opinion formed by my brother, who was over there for many months, in regard to M. Secretan, with whom he had very frequent intercourse, was, I may say, of the highest description. (Cheers.) When my brother returned to England, one of the first things he said to me was "What a splendid man M. Secretan is." The impression produced by him upon the mind of my brother was alike as a metallurgist, as a manufacturer of copper, and as a good all-round business man—not as a financier, because I do not think M. Secretan has ever pretended to have a special knowledge of finance—he is a manufacturer of metal articles, and his abilities in his own particular sphere as a copper manufacturer place him *facile princeps*. The opinion I formed of him was that if I ever had anything to do in the way of business in France I would see if I could not get M. Secretan to help me, and when I found that there was a chance of getting him to be associated with the French Elmore Company I said to myself "The future of that company is assured." (Loud cheers.)

The CHAIRMAN: I will reply to the point about the debentures. I understand your meaning (to Dr. Hetley) to be that the debentures ought to have been offered to the shareholders of the French Elmore Company.

Dr. HETLEY: I did not put it so strongly as I ought, but I said *might*.

DEBENTURE ISSUE EXPLAINED.

The CHAIRMAN: I am informed that the Foreign Elmore Company, which has lent us 50,000*l*. on debentures, would probably be ready to issue those debentures to any French Elmore shareholders who are willing to take them up. (Cheers). It was impossible for us to enter into any part or parcel arrangement in this matter. The great object we had in view was to secure the possession of that sufficient sum of money which M. Secretan assured us was necessary for the best success of the company, and we could only do that by accepting this arrangement, which was offered by the foreign company, to give us the sum of 50,000*l*. on the terms named. I will only say that we came to that conclusion after very great consideration, and that we are perfectly confident it was the best thing we could do for our company. With reference to the remarks made by the other gentleman (Mr. Laws), I have some difficulty in replying to them. He has asked about the water power. That is at Bellegarde. I have explained to the meeting that we had secured that site with water power, but it was perfectly impossible for us to commence manufacturing at once, and the weight of evidence in favour of starting in the first instance in the north of France was so conclusive that we were compelled for the present to put Bellegarde aside, but we still retain our interest there, and when the proper time comes, and we have sufficient money to start a second factory, we propose to start one there. (Cheers.)

A QUESTION PROMPTLY ANSWERED.

Mr. F. L. RAWSON: The question has been asked as to what were the profits of the Société des Metaux last year. They were 240,000*l*. (Cheers.)

The CHAIRMAN: I now propose the first resolution. (See above.)

Major JONES seconded the motion, which was carried unanimously.

The CHAIRMAN: I propose the second resolution. (See above.)

Mr. C. PHILLIPS seconded the motion, and it was carried unanimously.

The CHAIRMAN: I now propose the third resolution (see above). Of course you understand that all these resolutions are formal, and must be passed to comply with the wishes of the Stock Exchange.

Major JONES seconded the motion, which was carried unanimously.

The CHAIRMAN: These resolutions will have to be confirmed at an extraordinary general meeting, which will be held in a fortnight's time, of which due notice will be given. The business is concluded.

THANKS TO THE CHAIRMAN AND M. SECRETAN.

Sir RAWSON W. RAWSON: I propose a cordial vote of thanks to the chairman.

The motion was seconded and carried unanimously.

Mr. CALLENDAR: I propose a vote of thanks to M. Secretan.

The motion was carried by acclamation.

The CHAIRMAN: On the part of my colleagues and myself, I thank you for your kindness, and can only assure you that you will have the very best efforts of myself, associated with those of my colleagues, in making this company a great success.

THE VAN MINING CO., LIMITED.

SHAREHOLDERS CAREFULLY CONSIDER THE POSITION, AND, WITH MODIFICATIONS, ADOPT THE VIEWS OF THE COMMITTEE—LIABILITY ON THE SHARES REDUCED—A HARD-WORKING AND ILL-PAID BOARD—DETERMINATION TO WORK THE MINE VIGOROUSLY.

AN extraordinary general meeting was held at the Offices of the company, Dashwood House, New Broad Street, yesterday, "for the purpose of considering, and, if thought fit, passing extraordinary and special resolutions to the following effect, namely:—

PROPOSED RESOLUTIONS.

(1.) "That it has been proved to the satisfaction of the shareholders in the Van Mining Company, Limited, that the company cannot by reason of its liabilities continue its business, and that it is advisable to wind up the same voluntarily." (2.) "To appoint a liquidator." (3.) "That the liquidator be and he is hereby authorised to sell and transfer, subject to due provision being made for dissentient shareholders (if any), all the business, property, undertaking and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman."

The scheme of re-construction has already been circulated amongst the shareholders.

Charles Clark, Esq. (chairman of the company), presided.

W. J. LAVINGTON, Esq. (secretary), read the notice of meeting, and the scheme of re-construction was taken as read.

FREE DISCUSSION INVITED.

The CHAIRMAN: Our object to-day, gentlemen, is not so much to express to you the opinions of the board, or of the committee, as to hear those which the shareholders entertain in regard to the scheme put before them, and I think our most convenient mode of procedure will be to invite remarks upon the various resolutions, and to take your vote upon them *seriatim*. The committee were unanimous in their recommendations, and the scheme, as proposed by them, has met with the full concurrence of the board; but, in regard to its details, it is subject to any modifications that may be resolved upon by the shareholders to-day. There are two or three letters received from the shareholders, and I think the secretary had better read them.

OPINIONS BY LETTER.

Mr. LAVINGTON here read several letters from absent shareholders of which the following are the salient points:—

Mr. Peter Watson wrote:—

"Dear Sir,—I have been unwell for some days, having caught a chill, and to-day am confined to my bed; and although feeling somewhat better, I fear I shall not be able to get to the Van meeting to-morrow, as I fully intended being there to speak to the shareholders fully in support of the committee's report and recommendations being carried out expeditiously, and if this is done as I have suggested, and the mines are vigorously developed, there are yet better days, I think, in store for the shareholders; and anything I can do towards attaining this end I shall be pleased to co-operate in any way I can do."

Mr. Robert S. Carter wrote:—

"Dear Mr. Lavington,—I thank you for your letter *re Van Mine*. There is weight in your view that in many cases further subscriptions would not be got out of the shareholders, judging from the last effort made in that direction, and that point was not absent from my mind when I wrote you.

"Had all taken then their quota, there would be capital in hand now for developments yet necessary.

"I fear the present view taken by the committee is not far from the necessary one, unless the mine is to pass quite out of our hands. I took my quota allotted last time, and will do so again; but I do not like it any the more for that.

"We have all been for years buoyed up with such reports and remarks from Capt. Williams, about the prospects, for the next year—especially so at last meeting—that he cannot be surprised at the wide fecling of dissatisfaction existing. Now it is certain that he has not been warranted in speaking as he has done. It is no good, however, looking back.

"If the proposed *plan* is adopted by the meeting on Friday next, can it not be that the new shares should be issued with a little more than 12s. 6d. paid? It may induce more shares to be applied for by the existing company, besides which, we who will apply, and have always taken our fair proportion of new capital, and more, should have all the advantage that can be given in bindiug ourselves to pay up yet further calls.

"Seeing that only a few thousand pounds are necessary now (five or six, say), could not the directors reconstruct with 15s. paid, leaving 5s. due on each share held by present proprietors?

I think that might induce many to take up their full holding in the new company, same as in present one. Many, very many, matters will be necessary to be taken in hand by the new company besides royalties, such as the farm—the quantities and prices of stores being especially necessary to be carefully considered. The mine will not bear any leaks in those directions, or five or six thousand pounds will go like smoke. I wish the directors, the committee, and all concerned, every success in whatever new effort may be made, and I should like that Mr. Peter Watson should have a seat at a new board."

Mr. A. Kempson, of Northampton, wrote:—

"I should have preferred an attempt to raise the necessary funds, by way of debentures or preference shares, so as to avoid the expense and delay of re-construction.

"As to clause 7 of the 'scheme,' I think it is quite *useless*. Why

burden the company with *useless capital?* If the mine is successful the shareholders will see the fruits of their success in the enhanced market value of their shares, and if the company is unsuccessful no one will want any of the extra shares.

"As to further management: Mr. Williams seems much to blame in magnifying our prospects—in telling us of lodes worth 100*l.* and 70*l* a fm.—that all we had to do was to get the ore out, and there was enough to last for 10 years or more, and I am afraid many shareholders have lost all confidence in him. If he is retained he should be *well looked after*, and there should be more energy and go in the affair altogether, and he should clearly understand he is only on his good behaviour in every way.

"I think, too, the question of royalty and dead-rent charges most important, and should be cleared up before fresh capital is raised."

VIEWS BY WORD OF MOUTH

The CHAIRMAN: The whole subject is now before you, and we shall be glad to hear your observations frankly and freely. We are not tied to the details of the scheme, but shall be pleased to know what you have to suggest by way of modification or alteration.

Mr. ROBERTSON: What do you propose to do in regard to the local management?

The CHAIRMAN: That obviously must be left for the consideration of the re-constructed company.

Mr. TREDGOLD: I think we are proceeding rather too precipitately. The committee were appointed to investigate and assist the directors in ascertaining the affairs of the company, and to report to a meeting at an early date. They have, however, drafted a scheme of re-construction. Before we can form any opinion as to the advisability of falling in with the ideas of the committee as embodied in this plan, we should know something about the financial position, and have a detailed account of the assets and liabilities. Then as to the royalties—we ought before we re-construct to go to the lessor or lessors, state what we propose to do, and ask for some concession under that head. I am convinced, from what Mr. Watson and others have said to me, that if we approach the lessors in the right way before re-construction, instead of afterwards, we shall obtain important concessions, which hereafter will be found to be in our mutual interests. As to the scheme itself, I endorse the sentiments of the writer of the letter who said that the shares should be issued 15s. paid,

LEAVING A LIABILITY OF 5S.,

and that the working capital this would provide would be sufficient. Capt. Francis at the last meeting gave an able and straightforward report on the mine, and said positively that 4s. would be ample to develop it, and therefore if we give another shilling surely we are providing even more than is sufficient. I hold 225 shares and paid 2*l.* and 3*l.* each for some of them. I am sorry Mr. Watson is not here, particularly on account of illness. (Hear, hear.) If we cannot borrow money on debentures, as has been suggested, why should we have such a large capital? Our shares would be more marketable if the capital were 15,000*l.* and the number of shares 60,000, at 5s. each. On the other hand, if we have a capital of 60,000*l.* people are apt to say it is enormous, and are not disposed to invest in such a company. We could distribute 45,000 shares to the old shareholders at 5s. each, which would bring in over 11,000*l.*, and still have a balance of 4,000*l.* on the remaining shares up to 60,000, and if 15,000*l.* be not sufficient to develop this mine and make profits, the sooner we stop it the better. I am inclined to go on with this present scheme, but on the basis I have sketched out.

The CHAIRMAN: The resolution we passed the other day was to appoint a committee to formulate a plan for raising fresh capital, and, in fact, that was the first question the committee had to face.

VIEWS OF THE COMMITTEE.

Mr. HAMILTON (a member of the committee): I was the proposer of the resolution at the last meeting, and will state the course adopted by the committee. I attended the meeting at which the present position of the mine was put fully before us. It showed that up to that moment the liabilities were about 3,000*l.*, and of course it was essential to consider what should be done from the financial point of view. If we had delayed, we had before us the possibility of seeing the property sacrificed. We went into the whole position. It was the unanimous feeling of the committee, who were perfectly independent of the directorate, that it was not right to let the mine go out of our hands. (Hear, hear.) We then said: What is the best plan to get capital so as to prevent this? I was totally against debentures, and declared I would sacrifice my holding if that method were adopted. Then, the suggestion came up of preference capital, and at last the committee were unanimously of the feeling that the only possible way of raising money was by some such scheme as you have before you, without pledging you in any way to the details. In respect to the liability upon the shares, Mr. Watson, whose opinion had great weight with us, was strongly of opinion that it was not right to tie Capt. Francis literally down to the supposed amount of capital required. If the directors found further capital useless they would, as honourable men, call the shareholders together and wind up, thereby saving further calls. The whole question was—Should we make this a 10s., a 5s., or a 1*l.* share? and if the latter, should the amount credited be 12s. 6d. or 15s.? The middle course was taken largely on the advice of Mr. Watson and Mr. Dawson, who were present with the other members of the committee. We already see, according to the reports, that 6,000*l.* or 7,000*l.* is wanted, that the liabilities are 3,000*l.*, so that

10,000*l.* IS NEEDED IN ALL.

If you have a 5s. call, the margin is only 1,000*l.* The present capital is 45,000*l.*, and 5s. per share upon that would realise 11,290*l.*, or practically the whole amount now imagined to be required. I do not think it wise to run matters so close. On the other hand, supposing all the new shares were not applied for, then you restrict yourself to the actual amount put down. The committee was not unanimous about the option scheme, but it was consented to as it appeared to do no harm if it did no good. It emanated chiefly from Mr. Dawson. The question as to what we call the capital makes no difference to the dividends we hope to pay. The great thing is to find something that is readily marketable, and instead of a big capital being against this it operates the other way, as a small capital would put the shares into fewer hands, and make them more difficult to deal in.

LOCAL MANAGEMENT.

The committee feel that the matter of management has to be thrashed out on the mine itself. They considered the first thing to do was to put ourselves in a position to continue the mine at all by getting the cash and then to ensure its wise expenditure. I am quite content under re-construction to take my proportion of the shares, and even more if there are dissentients. With such reports as we have it would be absurd to throw away the property. I have been in foreign mines which have been furnished with fresh capital without a tithe of the prospects that we have before us, or of the *bona fides* to boot. Our investigations show, apart from the management on the spot, the whole thing to be perfectly *bona fide*. I paid 24*l.* a share in the old company for my shares, and received two dividends of 18s. each, and subsequently bought at 8*l.*, so that I have been a very consistent shareholder. I have the greatest desire to give the mine a further chance. If we had not been buoyed up by such positive statements as we had from the manager when we raised the capital last time, we could then as easily have obtained the whole of it as we obtained the half. I have now represented the views of the committee, and defended them from the charges of precipitation. We took the resolution of last meeting in its spirit, and claim that, whether you go on, or whether you do not, we have saved you time. Our report is our faithful recommendation to the shareholders. (Cheers.)

VIEWS OF SHAREHOLDERS WILL BE MET.

The CHAIRMAN: We can delete any clause not satisfactory to the meeting. I wish the shareholders to express their views before I proceed to put any of the resolutions or any modifications thereof.

Mr. HOLFORD: I think the scheme stands well, though the liability appears rather large. If you can depend in the slightest degree upon the reports then this mine ought not to be abandoned. (Hear, hear.) I do not see much good in the option proposal.

The CHAIRMAN: The option did not emanate from the board, and I am not in favour of it.

With the unanimous wish of the meeting clause 7 was then deleted.

The CHAIRMAN: The suggestion to raise money by debentures is an absolutely vain one. It cannot be done. (Hear, hear.) Who would advance money on debentures? I do not believe we could get 1,000*l.* in that way, and the judgment of the board and committee is alike against them. Then in regard to royalties—it ought to be remembered that a reduction has been made, with the offer of the new lease, from one-fourteenth to one-twentieth. (Hear, hear,) There is a sliding scale, on which we pay when the mine is yielding profits, and we pay a small rent for a portion of the land.

Mr. LAVINGTON: We are under two lessors—the Marchioness of Londonderry and Sir Watkin Wynne. The latter has a piece of land in the centre of our sett, for which we pay him 100*l.* a year. But when we get under it (and we shall do so soon) that rent will be merged into royalty.

The CHAIRMAN: The idea of 15s. credited and 5s. liability was the one originally put forth by the directors, instead of 12s. 6d. credited and 7s. 6d. liability. The first necessity is to save the mine for the shareholders, and the object of this resolution is to do that.

PRESENT POSITION.

Mr. LAVINGTON: We have been asked the financial position of the mine. The liabilities at the present moment stand at about 3,000*l.* Capt. Hodge and Capt. Francis say that about 5,000*l.* will be required to carry out what they recommend, which, with the liabilities, will be 8,000*l.* We have 45,165 shares, and a call of 5s. on that number would amount to 11,290*l.*, or 3,000*l.* beyond the estimated amount. The directors will not call up any more capital than is absolutely required.

IMPORTANT DECISION.

After a short discussion the clause was adopted, with a liability of 14s. credited as paid up, and with only a liability of 6s.

The CHAIRMAN then proposed the first resolution (as above), which Mr. Kitching seconded, and it was carried unanimously.

The CHAIRMAN proposed the second resolution (as above) and said: It is desirable that this business should be carried out as cheaply as possible, and Mr. Lavington has consented, if appointed, to do the work for the purely nominal fee of 10 guineas. (Hear, hear.)

Mr. HOLFORD seconded the motion, which was carried unanimously.

The CHAIRMAN proposed the third resolution (as above), and it was seconded and carried unanimously.

CONFIDENCE EXPRESSED IN MR. LAVINGTON.

Mr. TREDGOLD called attention to Clause 2 "The articles of association of the new company shall be subject to the approval of the liquidator." The articles would fix the directors and their remuneration. But as it stood here, the whole matter was left in the hands of the liquidator, and in those hands it was safe. I have (he said) perfect confidenee in Mr. Lavington and we all have. (Cheers.) But still I think the articles should be presented to a meeting of shareholders.

Mr. LAVINGTON: The articles under which the present company is working have been in existence since the commencement, and I should not propose to make any alteration with regard to the directors and their remuneration, for that is a subject on which the shareholders must express their opinion.

SHAREHOLDERS ARE ENLIGHTENED ON THE SUBJECT OF DIRECTORS' FEES.

Mr. HAMILTON: That will be quite satisfactory. Having had the question of the management in London brought before me, which I was told was expensive, I came prepared to think that the directors were making a good thing out of it. But to my great surprise I found that *the total sum divided in fees between three directors was 100l. per annum.*

A SHAREHOLDER: Surely they get more!

Mr. LAVINGTON: They get no more except when dividends are paid.

Mr. HAMILTON: I felt almost inclined to say, when I found this out, no wonder the thing has gone wrong when the shareholders ask three business men to give their attention to this company for such

a ridiculous remuneration. (Hear, hear.) When a concern is in troubled water it is infinitely more difficult to manage it than when it is prosperous, and I shall not have much confidence in the future of the company unless you remunerate those who do your work properly.

The CHAIRMAN: The directors are of opinion that their number should be increased, and instead of three, there should be five. I was on the board of the original company, and there we

WORKED FOR NOTHING FOR SOME YEARS

and we have worked for next to nothing here. (Hear, hear.) I do not think we can expect business men always to take that view of what is due to themselves. You may have trouble in securing desirable directors unless you pay them properly.

A COMMITTEEMAN EXPRESSES A PLAIN OPINION.

Mr. HAMILTON: I have no hesitation in saying that to expect business men to serve you properly for a remuneration of 100*l*. a year is futile.

Mr. LAVINGTON: Might I suggest this addition, "That the articles be subject to the approval of the shareholders, and be submitted to the confirmatory meeting?" That could be added to Clause 2. (Hear, hear.)

This was unanimously accepted by the meeting.

The CHAIRMAN: The alterations made are in Clause 5, where 12s. 6d. gives place to 14s., aud 6s. is substituted for 7s. 6d.; and Clause 6 (line three) is altered in the same way, whilst Clause 7 is struck out altogether. I will ask you to pass the third resolution with the reference to the agreement struck out.

Mr. HAMILTON: If dissentients refuse to take their proportion, is it possible to offer their shares to the others?

Mr. BATTERS (Messrs. Stacpole and Batters) (solicitor): It is a legal question, and I have done it in a similar case under the opinion of Mr. Grosvenor Woods and Mr. Buckley.

Mr. LAVINGTON: The dissentients will get nothing in this case, as the liabilities exceed the assets.

The motion was seconded by Mr. HAMILTON, and carried unanimously.

THANKS TO THE CHAIRMAN.

Mr. HOLFORD: We ought to return our thanks to the chairman for his courtesy to-day.

Mr. ROBERTSON: We all second that. (Cheers.)

The CHAIRMAN: I trust the miue is about to enter upon a new era. (Hear, hear, and cheers.)

WOODHOUSE AND RAWSON UNITED, LIMITED.

AN ENCOURAGING OUTLOOK — PROSPECTS OF SUBSTANTIAL DIVIDENDS — CAPITAL TO BE INCREASED TO MEET THE GROWTH OF BUSINESS — DIVIDEND GUARANTEE FUND TO BE RETURNED.

AN extraordinary general meeting of Woodhouse and Rawson United, Limited, was held at Winchester House yesterday for the purpose of considering, and, if thought fit, passing the following extraordinary resolutions:—

EXTRAORDINARY RESOLUTIONS.

1.—"That the directors be authorised to enter into such arrangement as they shall think advisable with the liquidators of Woodhouse and Rawson, Limited, for the immediate or early repayment to such liquidators of the sum of 75,000*l*., or any part thereof, deposited with the company on the terms that it should be retained till the 1st of July, 1892, as a dividend guarantee fund." 2.—"That the capital of the company be increased to 550,000*l*. by the creation of 40,000 new shares of 5*l*. each, of which 20,000 shares shall be preference shares, which shall be entitled to the same preferential dividend and rights, other than the benefit of the dividend guarantee fund, and shall be subject to the same conditions as and rank for all purposes *pari passu* with the existing issue of 30,000 preference shares of 5*l*. each of the company, the remaining 20,000 shares shall be ordinary shares, and shall be entitled to the same dividends and rights, other than the benefit of the dividend guarantee fund, and shall be subject to the same conditions as, and rank for all purposes *pari passu* with the existing 40,000 ordinary shares of the company."

Sir Rawson W. Rawson, C.B., K.C.M.G., presided.

Mr. GEORGE WORRALL (secretary *pro tem.* read the notice convening the meeting.

HOPES REALISED.

The CHAIRMAN: Gentlemen, about a year ago I had the honour of occupying this chair at our statutory meeting, and of expressing to you my confidence that the company would realise fully the expectations of its promoters, the promises of its prospectus, and the hopes of its shareholders, and I am happy on this occasion to have the opportunity of repeating the confidence of the board that the success which has hitherto attended the company will continue to be maintained. It will be in your recollection that Lord Aberdare stated his opinion very confidently that the capital of the company was insufficient for the opportunities it had of realising large profits from excellent and sound undertakings. His colleagues were of the same opinion, and were prepared at an earlier period than the present to address the shareholders upon that subject, if it had not been for the financial crisis which has stopped anything of the kind for some weeks past, and we have taken the earliest opportunity that we consider advisable to present our views to you, and ask your sanction to what we propose to carry out. There are two objects in the resolutions that have been circulated, and which you have had the opportunity of examining. The first is to enter into such arrangements as we may think advisable in the interests of this company, with the liquidators of Woodhouse and Rawson, Limited, for the refund of the sum of 75,000*l*., which was deposited by them with us as a guarantee that for three years the shareholders of this company should be secured 8 per cent. on their preference shares, and 15 per cent. on their ordinary shares. You will have seen in our balance-sheet for the first year that the profits of that year, after paying those rates of dividend to our shareholders, left a surplus of 41,000*l*.—equal to about a year and a half of our annual payment at those rates to our shareholders. Now a year and a half has already elapsed of the three years for which the guarantee fund was left in our hands, and it is time that we should consider how that sum is to be repaid. Therefore, we consider that it is convenient when we are asking you to increase our capital for general working purposes to propose to you at the same time an arrangement for repaying the limited company this loan. I had hoped that we might have been able to inform you to-day that the terms were arranged, but they have not been arranged up to the present moment. We feel confident that the security of our shareholders is perfect for the three guaranteed years.

A GOOD RECORD AND FAVOURABLE PROSPECTS.

Already one year has elapsed, and we have paid our shareholders at the rate that we undertook—namely, 15 per cent.; another half-year has elapsed, and our profits have been, I may venture to say, not less than last year. Our expectations of the coming six months are no less favourable. We shall, therefore, at the end of the second year have another surplus to add to the 41,000*l*. wherewith to pay our shareholders at the end of the third year. We are not pledged beyond the third year, but our hopes certainly extend beyond that period, and we trust that at the end of three years we shall not be in a worse position than we are now to satisfy our shareholders with large and abundant profits.

THE INCREASE OF CAPITAL.

The second point is that the capital of the company be increased from the present amount to 550,000*l*. by the creation of additional shares. When this company was brought out the working capital for which we asked was decidedly moderate. We were satisfied that we would be able to show such a rate of profit as would justify us in coming before the shareholders, and saying, "You see what we are capable of earning—if we have a larger capital we shall be able not only to continue this rate but to improve upon it, and we believe that our shareholders will then find sufficient reason for confidence in the board to meet their appeal, and to furnish them with further capital." Well, since that time, which is now about 18 months, things have considerably changed.

LARGE INCREASE OF BUSINESS.

Experience has shown us that our capital is insufficient, as our business has largely increased. I yesterday had put into my hands the earnings of our supply department. The second six months were 50 per cent. over the first six months; the third six months were 30 per cent. over the second six months; and this in the supply business alone, where we must hold in our hands a large and very valuable stock of electrical goods to meet the demands of our customers, and moreover must have large outstanding accounts, with several thousand customers swallowing up our available working capital. In the same way we have already stated to you that we have increased our business by the purchase of one very important and very extensive business to enable us to hold, as we believe, our prominent positiou amongst the electrical companies of England. We should be sorry to drop back iustead of progressing in our position, and in order to secure it, and to be independent of other people, we find it necessary that we should manufacture a number of the more important articles required by our customers, so as to be ready to meet their wants without delay, and without the difficulty of procuring the articles from other people.

THE DEBENTURES.

As regards the debentures, our articles of association empower us to increase the issue to the extent of 250,000*l*. Inasmuch as the value of money, independently of the recent financial crisis, has decidedly lowered, and the action of the Chancellor of the Exchequer with regard to the conversion of Consols last year has given us an indication of the probable future value of money, we consider that the 6 per cent. interest payable to our debenture-holders is excessive, and it is therefore our intention to recall those debentures, giving the holders of them the profit that we promised them at the time of their issue, and issuing a larger sum at 5 per cent., probably to the extent of 200,000*l*. instead of 100,000*l*. That will be a profitable arrangement for the company and for the ordinary shareholders, for there will remain a larger sum available for distribution to them. As regards the debenture-holders, they have a largely increased security, having the advantages of all the purchases of real property and factories that we have made; and in other respects their position will be improved. As regards the question of the issue of new shares —you are aware that the shares already issued have receutly fallen in value. Your directors have not been at all frightened by that, inasmuch as 15 per cent. safely earned, and likely to be continuously earned, ought to place the shares considerably above par. We have had several difficulties to contend against. We have had the difficulty of the delay in the settlement of the affairs of Woodhouse and Rawson, Limited, for which we are in no way responsible, and for which the liquidators as far as we know have not been responsible. The public do not understand the difference between Woodhouse and Rawson, Limited, and Woodhouse and Rawson United, Limited. That difficulty happily is at an end. Another difficulty we have had is in connection with getting a quotation for our shares. The Committeed of the Stock Exchange is exceedingly particular. One difficulty that we had was in cousequence of our issuing 100 shares in payment to a patentee from whom we had bought a patent. That happened not to be included in the list. They noticed it, and said these were vendors' shares. That caused weeks of delay; and so in the same way from time to time it has been delayed. I am happy to say, however, that there remains only one affidavit now to be completed in order to obtain our settlement. That affidavit we count upon receiving next week. The managing director reminds me that one of our difficulties has been in takiug over so many companies and businesses. There has been a remarkable and unusual complication iu clearing the whole of the transactions to the satisfaction of the Stock Exchange.

PRICE OF SHARES ABOUT TO RISE.

These circumstances have combined to lower the value of our shares beyond their proper value, but we feel confident that when our shareholders and the public find that the profits we made last year are not accidental, and not casual, but will be maintained this year,

and have every apparent prospect of continuing during the third year—we cannot look further than that—that the public will have restored confidence in our shares, and that the shares will reach their proper value. There are three good reasons for our not calling up our uncalled capital. The first is, that our ordinary shareholders, some of them at all events, were led to expect that it was not our intention to do so unless it was absolutely necessary. Another cause has been that we thought it right to keep this capital in reserve, for the purpose of meeting the repayment of the loan to the limited company. The third reason is that it is exceedingly desirable in a company carrying on a business of this kind to have a reserve fund upon which, when opportunities of useful extension present themselves, they should be able to borrow for temporary purposes, instead of keeping a large balance at the bankers yielding the small rate of interest that money now fetches. I have the satisfaction of drawing your attention to the success which has attended the company, both in the matter of the Elmore shares, and of the International Okonite shares. Every day confirms the truth of the original statements made with regard to the value of the Elmore process and the two companies that have been issued for foreign countries, which are only a prelude to the arrangements for the sale of the patent in other countries.

ELMORE AND OKONITE COMPANIES.

The French Company will hold their meeting this afternoon, and I have reason to know that statements will be laid before the shareholders of that company, which will contain the most satisfactory assurances of the confidence that the French members of the board have that the process will be even more profitable than has been held out hitherto to the shareholders of the company. With regard to the other company, the International Okonite Company, the certificate of the accountants, Messrs. Price, Waterhouse and Company, shows that our expectations of the earnings for the six months of last year, from January to July, have been exceeded; and the directors have aunounced their intention of paying an interim dividend at the rate of 10 per cent. upon the working of the last six months; and this, it must be borne in mind, has been before the Manchester branch has been able to erect their works and commence operations under the Okonite patent in England. Consequently the success of the International Okonite Company, as far as profits are concerned, is substantiated to the fullest. These are companies in which we have been interested, and they will give you an indication of the class of enterprise that we desire to promote—not untried companies, or chance patents, but patents and processes that we have the opportunity of testing with our numerous staff, scientific and financial, and with our variety of factories. We can therefore see that in taking up these things we do not take up anything haphazard. The method of our taking them up secures us from any risks beyond that of the expense of launching the companies, so that our shareholders need not be afraid that the directors are likely to embark in any rash undertakings that are calculated at all to risk the property and the capital of the shareholders. With regard to our own factory in London, we have built a new block for ourselves nearly double the size of the original one, and we hope by the end of February that this will be at work, and we have a number of new machines ready to manufacture as soon as we are able to get into the new premises. Our profit from that branch of the business is likely for the future to be very much larger than it has hitherto been. I think I ueed not detain you longer except to say that as far as we can judge our future prospects are very bright, and as our promises have been realised during the past year, we hope that you will give us your confidence, and believe that we would not make a promise for the coming year if we were not satisfied that it would be substantiated. We expect that the interim dividend for the past six months will be declared in a very short time. The chairman concluded by moving the first resolution.

The Right Hon. Sir EDWARD THORNTON, G.C.B., seconded the motion.

DISCUSSION.

Mr. SQUIRE: Of course, the ordinary shareholder has not the same opportunities of acquiring information as a member of the board has, but upon such information as I do possess, I have formed certain conclusions, perhaps only temporary conclusions, which, however, I should like to lay before the meeting. We are asked to sanction the issue of new shares, in order to increase the capital of the company. Were the whole of the shares of the first issue taken up?

The CHAIRMAN: Since the issue of our balance sheet at the end of the first year the whole of the shares have been taken up, and perhaps it will be satisfactory to you to know that our managing director, who happens to know as much of the business as anybody else, and something more, has taken up the whole of the remaining preference shares, payiug a five shilling premium upon them. The whole of the ordinary shares issued were taken up.

Mr. SQUIRE: At any rate the fact remains that at the present time the shares of the company are at a considerable discount. The company was formed the year before last, and so early as March 17th Mr. Baker, who is, I believe, the manager of the manufacturing department, began to hawk about his preference shares at 4*l*. 12s. 6d. I had a lot of them offered to me directly by him. Would it not be better under the circumstances, notwithstanding the reasons the chairman has given for not doing so, to call up the uncalled capital? I, personally, should very much prefer to pay up my shares. With regard to the guarantee fund, I do not think the directors are justified in getting rid of this guarantee, and I think this 75,000*l*. should be kept. The board may be extremely confident that the dividends will be maintained without trenching upou this 75,000*l*., but supposing that they are not, where will we be?

Mr. ABRAHAM expressed surprise at hearing that the guarantee fund had not been ear-marked, or set apart as a trust fund. He was not disposed to put any more money into this concern, until this matter was satisfactorily explained.

The CHAIRMAN: In the agreement between the two companies, it was not required to be set apart, but was specially to be used for the purpose of the company, at the same time the directors were responsible for reserving such a portion of it, as would ensure the payments to the shareholders, which it was intended to secure, and I think we have done that in the first year, and we have reserved 41,000*l*. profits for paying the second and third years.

Mr. ABRAHAM: I do not know what may be the nature of the arrangements made.

The CHAIRMAN: It was stated in the prospectus.

Mr. ABRAHAM: That being so I am very glad to hear it.

A SHAREHOLDER: It was distinctly stated in the prospectus that the directors were to have the right to use any portion of this money in the company's business.

A DISSENTIENT.

Mr. HORSFIELD complained of the short notice given to the shareholders of this meeting, and went on to say: As to the guarantee fund we subscribed to the company on the strength of being certain of receiving 15 per cent. in three years—45 per cent. on our capital—and we could afford to run the risk of what might happen after that. We have heard a good deal of the success of the company. but we have not had any information to show us how that success has been obtained. All the statements of our chairman to-day point to the fact that up to the present time the company has been successful, and that the profits are being maintained; but we are met with absolute facts, namely that the shares are at a discount. We cannot be certain of what is to come, and another financial crisis may occur. I strongly refuse to give up any portion of this guarantee fund, which has to be paid in cash, until the expiration of the time at which it was deposited. I am surprised iu such an important matter as this that there should be such a small attendance of shareholders.

Mr. HOSTER: There seems to be some misapprehension with regard to this guarantee fund. Nobody has yet remarked upon the 41,000*l*. profit which is in hand. The first year's dividends have been paid. I calculate that 12,000*l*. was distributed for the half-year, and 6,000*l*. for a portion of the half-year—in other words, the year's distribution would be about 25,000*l*. The balance-sheet up to the last meeting showed a surplus of 42,000*l*., and if the board are able now to make such arrangements as will give us an extra profit, I think we ought to be very well satisfied. I state this in fairness to the board, and I would ask the chairman to be good enough to explain the position of the 42,000*l*. I take it that it cannot be used for any other purpose than the payment of dividend. I shall certainly support the board in their proposal, for I believe it to be for the benefit of all of us. As to the other proposal of issuing capital, I have a slightly different opinion; I do not thiuk the present a proper time to do it, but if the directors will call up the uncalled capital to supply the insufficiency, that would perhaps be a better course.

CONFIDENCE IN THE DIRECTORS.

Mr. MONTEZUMA thought that this was a subject which might fairly be left to the discretion of the directors, iu whom the shareholders had every reason to place full confidence.

Mr. CHAPMAN said he did not object to the board promoting profitable companies. As regarded the guarantee fund, he agreed with the last speaker that it was a subject that might well be left in the hands of the directors. As to the new issue of shares, the present time was certainly not an opportune one, but he understood that all the board wished was to take power to issue these shares when convenient.

THE MANAGING DIRECTOR'S EXPLANATION.

Mr. F. L. RAWSON (managing director): The chairman has asked me to answer the various questions that have been asked, and also to amplify anything in his speech that I might consider advisable to mention to the shareholders. I should like to call attention to the fact that the proposed increase of capital is an increase of the security for the debenture-holders justifying the increase of the debentures to 200,000*l*., and the reduction to 5 per cent.; secondly, that the depreciation that has taken place in the market value of our shares is very largely due, not only to the financial position of the country—for if you take almost any of the industrial securities you will find that they have fallen from 10 to 20 per cent.—but also to the fact that during the last two months we have been distributing the shares of the companies whose properties we purchased under the agreements made. We gave the shares to the liquidators of those companies some time ago, but they were not able to distribute them until quite recently, and hence during the past fortnight or month there has been about 80,000*l*. of capital put upon the market, and large numbers of shares have been obliged to be put upon the market at the same time. During the past few days, however, the shares have steadily risen. I bought some myself yesterday aud had to pay a good deal more than I expected. The name of Mr. Baker, our works manager, has been mentioned as having sold shares. I was rather surprised when I heard Mr. Baker was selling, and I took an opportuuity of speaking to him on the subject. The explanation is this: It seems that Mr. Baker was paid altogether in preference shares when we purchased his interest, and he had to realise a large number of them in order to settle his own arrangements. I may mention, however, that Mr. Baker has ever since, from time to time, been steadily buying ordinary shares. The same remarks apply to myself; I have taken up recently over 28,000*l*. of shares, and paid 5s. premium on them, and I do not think you could have any better proof of my belief in the future of this undertaking which is decidedly very good. (Hear, hear.) We may have been thought speculative in purchasing so many as four new businesses in so short a time as 18 months, but we wanted to put ourselves in the position of being able to manufacture, creditably to ourselves and profitably to our clients, every class of electrical goods; and this we are now able to do—with the exception of cables and wires which are a special manufacture by themselves—and I may add that the businesses we have taken over have turned out very well. In one of them, about which we were a little doubtful, we have received an important commission from the Government, aud I hope it will result very profitably to our company. As regards new companies we have been quite different from ordinary company promoters. We have been connected with very few companies; indeed, during the 18 months of our existence, we have only been connected with three, counting the Elmore as one. As a rule, we are associated with any new enterprise we take up for some 18 months or two years before they come out as companies. We gradually work at them, and help to build them up, so that we have a long experience of them, and know what they are capable of. At the meeting last year it was mentioned that we had three new inveutions in hand. I am glad to say that all of them have turned out very satisfactorily. One is completed, and we are now commencing manufacturing on a large scale ourselves. If it outgrows our capacity, we shall turn it into a separate company. We have now another uew electrical invention, which we have now commenced to carefully test.

INCREASED DEMAND FOR ELECTRICITY.

The demand for electricity, both for lighting and motive power, has increased so much that the position is now very different to what it was 18 months ago. The electric light, as the Americans say, has now come to stay. With regard to the remarks made by one speaker, I would like to draw atteution to the fact that we have the power of paying the liquidators this 75,000*l.* in cash or debentures, and naturally we will pay them in what is most advantageous to the company. If we give them 5 per cent. debentures it only adds a sum of 3,750*l.* per annum to our annual expenses, which is very small out of a margin of profit of 41,000*l.* Then, with regard to the issue of the new shares, the directors have only asked for the power to issue them, and they will do so when a favourable opportunity presents itself. If the ordinary shares are only half-paid up we will have 150,000*l.* of share capital, whereas we will have the benefit of 100,000*l.* of debentures, besides reducing the rate of interest to 5 per cent. The uncalled capital is a valuable security for those debenture-holders.

IMPORTANT STATEMENT.

The chairman has told you that we are about to pay the interim dividend; we have made in six months more than enough to pay the whole year's dividend at 15 per cent. The first thing I look to in our business is to have it safe, because our profits are so large now, and the electrical business has increased to so great an extent that we need not go into speculative things. I do uot think there is a single business that we have gone into during the last year and a-half that has practically involved us in a liability of even 10,000*l.* We consider it right to set our profits aside for the repayment of the guarantee fund. At the date of the last balance-sheet we had lent Woodhouse and Rawson, Limited, 39,000*l.*, and we also put shares that we had aside as security; but since the balance-sheet those shares have been sold, and they fetched more than the price we put them down at, and we have re-invested part of the money, and that is set aside for the repayment of the amount. We do not care to invest sums of that kind in Consols: we take the class of security that does us good and helps our business. With regard to the notice of meeting being rather short, Mr. Horsfield is quite correct. I am sure the directors will not object to our giving longer notice in future, when possible. With regard to the time of issue of the new shares, it is ridiculous to imagine our shares being so low when such large profits are being made, and where the surplus profits are so good, and the price must rise, more especially after a meeting such as this, when you have heard what a satisfactory position the company is in. I think the manufacturing profits will be considerably larger this year than last—10,000*l.* or 12,000*l.* larger.

NEW COMPANY WORK.

With regard to our new company work—you will be glad to hear that now a very different class of business is being offered us. We have a tremendous amount of work offered in connection with new companies with which there is practically no risk to us at all, but which we do not accept. In the late Elmore Companies, for instance, we did not involve ourselves in one penny of risk; we had not even to pay any preliminary expenses or anything of the kind. We made arrangements whereby all others did this. (Applause.)

The first resolution was then put to the vote and carried unanimously.

The CHAIRMAN: The second resolution is with regard to the increase of capital, and all I wish to say is this:—We are much interested as directors, because our credit is concerned in the matter as well as the success of the company, and we certainly would not take any action that is likely to iujure the prospects of the company. All that we ask for is permission to raise this additional capital when the proper time presents itself. We hope that there will be a certain revulsion of public feeling soon, when we may go to our shareholders and to the public with great success, but we shall not act upon this resolution indiscreetly. The chairman then formally moved the second resolution as above.

Mr. PHILIP RAWSON seconded the motion, which also was carried unanimously.

On the motion of Mr. CHAPMAN, seconded by Mr. HOSTER, a cordial vote of thanks was passed to the chairman, and the proceedings terminated.

STANDARD GOLD MINING CO., LIMITED.

DISPUTE WITH THE VENDORS—ACTION AT LAW.

THE second annual general meeting of this company was held on Wednesday, December 31st, 1890, at the Cannon Street Hotel.

Mr. C. Shield presided.

The SECRETARY read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in a lengthy address, said that the large amount of expense would naturally have attracted the attention of the shareholders, but they were incidental to the circumstances in which the company had been placed, and furthermore, all charges in South Africa at the present time were exorbitaut. He trusted that the development of railway enterprise in the Transvaal which was now being pushed forward would speedily alter this state of thiugs, and that the cost of materials and food would be very much reduced. Alluding to the past history of the company he stated that a difficulty arose in the early days of its existence between the vendors on the spot and their accredited agent in London. As to Capt. Hodgkyns (the agent), he had done all in his power to aid the company, but the board had reason to complain of the other vendors, who had frustrated the iuterests of the company, and put them to a very large expenditure in legal costs.

THE ACTION BROUGHT BY THE VENDORS AGAINST THE COMPANY

had entailed a very large outlay for telegraphic expenses in order to keep in constant communication with the solicitors and agents in South Africa. The solicitors believed there that the result of the action would be in favour of the company. Having dealt with various items of account, the chairman proceeded to refer to the present position of the mine, which he said was now developed, and their mine manager was doing steady work. The directors had hoped that day to have laid the results of a regular crushing before the shareholders, but in that matter they had been disappointed. The results that they received weekly of "pannings" they, however, regarded as satisfactory. As to the future, they had at the present moment 22,000*l.* of unissued capital, and half of that would be sufficient for doubling their battery power and carrying on further development work in other portions of their property. They possessed, as the shareholders knew, a very large area of ground, and they had always looked forward to the idea of selling portions of it, but the unfortunate collapse in South Africa had put this out of the question. They hoped that things would again improve, and the opportunity arise of doing so yet. They proposed to issue the further capital in the shape of preference shares, to be, in the first instance, offered to the existing shareholders in the company, and full details in respect to the issue would be circulated at an early date. They believed that if they had the additional capital to increase their battery power, they would at an early date be able to compare favourably with any other property in the Witwatersrandt district of the Transvaal. He moved the adoption of the report and accounts.

The motion was seconded, and a discussion followed.

In reply to various shareholders,

The CHAIRMAN stated that the vendors at the present time held 550,000 free shares and 58,000 "locked-up" shares, which latter would remain locked up in the Bank of Africa until after the payment of 20 per cent. on the whole of the capital of the company. It was not necessary to obtain the consent of such "locked-up" shares to the issue of preference capital. He thought that the dividend on the preference capital that it was proposed to raise would be 5 per cent.

The report was adopted.

The re-election of directors and auditors was agreed to, and the usual complimentary vote closed the meeting.

WATERBERG TRANSVAAL LAND, TRADING AND PROSPECTING CO., LIMITED.

A LONG STATEMENT, BUT NO DIVIDEND.

THE ordinary general meeting of the shareholders of this company was held on Monday at the City Terminus Hotel.

Mr. R. B. B. Clayton presided, and, in the course of a lengthy address, said that there was very little which he could say to add to the report which had been sent to all the shareholders, and contained a lengthy report from their manager. Taking iuto consideration the time at which the company was formed just before the collapse in South Africa, he thought that they might congratulate themselves upon the state of their own finances. The only unfavourable feature which he had to allude to was the withdrawal by the Volksraad of its surveyors, who were employed to re-inspect the Waterberg lands. The re-inspection would be proceeded with very probably about next May. The vendors had accepted a cousiderable rebate on the purchase-money. One of their directors, Mr. C. A. Ross, had tendered his resignation, and at the present time the board did not think it desirable to fill up the vacancy. He did not think that there were many South African companies in London which could show such a good balance as they had at present to their credit. There were 120,595 shares taken up out of the total capital of 130,000 shares, and

ALL THE CALLS, WITH THE EXCEPTION OF A VERY SMALL AMOUNT, HAD BEEN PAID UP,

which, he thought, was very satisfactory. He did not think that it would be wise to make their investments public, but they were all good securities, and could be easily realised. He thought that it would be advisable for the board to eudeavour to place the 8,905 unallotted shares, or, at least, a portion of them, as that would enable them to again apply for a Stock Exchange quotation, which, he believed, would then be granted. Their manager, he thought, was a man well fitted for his position, and as he had a good interest in the company, the shareholders might be sure that the expenses would be kept as low as possible. He concluded by moving the adoption of the report.

Mr. H. T. WALKER seconded.

In reply to questions, the CHAIRMAN said that with respect to the issuing of shares the board were bound by the rules of the Stock Exchange to issue shares at their full amount, and he trusted that they would be able to do something with regard to the issuing of those shares early in the year. The directors had carried on the work of the company for about 14 months, and their individual remuneration was less than that of the directors of any other South African company in London.

The resolution was carried, and other formal business having been transacted, a vote of thanks to the chairman and board of directors closed the proceedings.

THE UNITY GOLD MINING CO., LIMITED.

AMALGAMATION SCHEME AGREED TO UNANIMOUSLY.

THE first annual meeting of shareholders was held at Winchester House recently.

Mr. F. Machell Smith presided.

The SECRETARY (Ernest N. Dawe) read the notice calling the meeting.

The CHAIRMAN said that at the extraordinary general meeting he went fully into the position of the company, and as very little had happened since then, with the exception of the difficulties they had had to contend with with reference to the actiou against Mr. Mollien, he had very few remarks to make. The directors had had one or two complaiuts made with reference to the item of directors' fees. He wished to call their attention to the fact that the directors had taken no fees since last June, when the mine was first in difficulties, and at the time they were taking fees there were six directors on the board instead of four as at present, which made a difference in the amount each received. The item of 25*l.* was a contra account with the Komati Gold Field Syndicate.

THE DIRECTORS HAD KEPT DOWN THE EXPENSES AS FAR AS POSSIBLE

in every way. That was all he could say as to the accounts and balance-sheet, and unless any shareholder had any questions to ask he would move the adoption of the report.

Mr. Redgrave second the resolution, which was carried unanimously.

The retiring director was re-elected.

The Secretary read the notice of the extraordinary general meeting.

The Chairman said that at the last extraordinary meeting of shareholders a resolution was unanimously passed approving of the action of the directors, and the shareholders were asked to subscribe for shares, in order to carry out further operations. The result, he was sorry to say, was not satisfactory, and the whole amount subscribed was under 400 shares. They then endeavoured to raise money on debentures, which was equally unsatisfactory, and also to borrow money, and issue shares through a gentleman who had promised his assistance ;

BOTH OF WHICH SCHEMES PROVED AGAIN UNSUCCESSFUL.

Their funds were getting meanwhile lower and lower, and, although they had reduced the expenditure as far as possible, they were obliged to give orders to stop the works. The idea of an amalgamation with the Gipsy Queen Gold Company had been mentioned at the last meeting, and the directors had decided, with the consent of the shareholders, to adopt that course, although, as the board of Gipsy Queen knew their present financial position, the directors had not been able to secure so good an arrangement as they would have wished. The Gipsy Queen was a mine near the Unity, and that company had in hand 14,000*l.* as working capital, which would be increased if the agreement proposed was accepted. The Gipsy Queen board intended to increase the capital by the issue of 25,000 shares, 15,000 of which would be given to the Unity Company for the mine as it stood, and they had also advanced certain sums of money to keep the mine going, and to carry through their action with the investment company. He strongly advised the shareholders to pass the resolutions, as, although the agreement might have been better, it would put them in a worse position if they were not passed then.

The following resolutions were then put, and carried unanimously.

"That it is expedient to effect an amalgamation of this company with the Gipsy Queen Gold Mining Company, Limited, and that the conditional agreement submitted to this meeting be, and the same is hereby, approved." "That this company be wouud up voluntarily, and that Ernest Nanscawen Dawe, the secretary of the company, be, and is hereby, appointed liquidator for the purpose of such winding-up." "That the liquidator be, and is hereby, authorised to adopt the said agreement, and carry the same into effect." "That the liquidator be empowered and directed to sell so many of the shares of the Gipsy Queen Gold Mining Company, Limited, to be issued under the said agreement, as may be necessary to pay the debts of this company and the costs and expenses of winding up the same, and to apply the proceeds accordingly, and to distribute the remaining shares among the members of this company."

A vote of thanks to the chairman closed the proceedings.

EXCELSIOR COPPER CO., LIMITED.

RESOLUTIONS CONFIRMED.

An extraordinary general meeting of this company was held at the Cannon Street Hotel, on Monday, January 5th.

Col. G. B. Malleson, C.S.I. (chairman of the company), presiding.

The object of the meeting was to confirm certain special resolutions for the re-construction of the company, which were passed at the last extraordinary general meeting.

The Chairman said : Gentlemen, at our meeting held on the 19th of December, the reasons for and against the company going into liquidation, for the purpose of resuscitating, with a sufficient amount of money to develop the mine, were completely discussed, and after that discussion the resolutions, which you have in your hands, were carried by a very large majority. I do not think it desirable, therefore, unless any of you wish it, that I should take up your time by going over the same ground again, but will content myself by formally moving the confirmation of the resolutions.

Mr. Armitage seconded the resolutions, which were carried unanimously.

Mr. Charles Harrison Smith, of 6A, Austin Friars, was then appointed liquidator of the company on the motion of Mr. Armitage, seconded by Mr. Battenson, at a remuneration of 100 guineas *plus* any out-of-pocket expenses.

The Chairman, replying to a vote of thanks, said the prospects of the company were very good, and that all they broke down for was the want of funds.

The meeting then terminated.

REVIEWS.

Horncastle's Manual. The Technical Adviser for all Connected with Companies. By Walter R. Horncastle. The Central Advertisement Offices, 61, Cheapside, London, E.C. 5s.

This manual for the current year has now been issued, and is even an improvement on its predecessor. The information contained is put in a clear and concise form, so that it makes a handy book of reference. That Mr. Horncastle is an authority on the formation of companies, and especially as regards advertising, no one will deny, and his manual, which we are glad to see may now be regarded as a handy annual, will no doubt have a large and increasing circulation. The book, in addition to chapters on the formation and advertising of a company, contains information on the technical matters involved therewith. The lists of companies registered during 1890 will be found specially useful, and altogether the book supplies a long felt want.

A very useful desk diary and traffic recorder has been issued from the offices of the *Financial Times*. The information is precisely of the kind Stock Exchange members and the investing public require. All dates important to them are here to be found at their left hand with a blotting pad at their right—as we have said, a very useful combination. We have also to observe that the *Rialto* now appears as the weekly edition of the *Financial Times*. It has been enlarged and improved, and may claim to be a production of general as well as financial interest.

Asia Minor (9th January).—Ara Dere :—The lode in the winze and rise is worth 10 cwt. of rich silver-lead. Stoping will be commenced as soon as the rise is holed to surface. Chief Mine : Special drivages for junction of lodes. Savalan is now looking very favourable, and the lode in Michael is improving. The drive west from No. 4 stope is worth 20 cwt., and the winze in drive east from Savalan Pass 21 cwt. Production to 26th December : 14,168 tons crushed, yielding 1,012¾ tons rich silver-lead.

REPORTS OF MEETINGS.

VICTORY GOLD MINING CO., LIMITED.

DECLARATION OF THE POLL—RESOLUTIONS CARRIED—LIVELY PROCEEDINGS.

THE adjourned general meeting of this company was held at Winchester House, Old Broad Street, on Wednesday, 7th inst., for the declaration of the poll, which was demanded at the meeting on 31st December.

THE CHAIRMAN ASKS SHAREHOLDERS FOR SUPPORT IN THE CONDUCT OF THE MEETING.

Mr. ARTHUR WHITTEN presided, and said: Gentlemen, I intend to-day, with your assistance, to have a little more order than was observed at our last meeting, and, therefore, I must ask you to support me in the chair. It is my intention to keep you to the business before the meeting, and to allow of no unseemly obstruction, which would simply waste time unnecessarily. (Hear, hear.) This is an adjourned meeting for the purpose of declaring the result of the poll demanded by the general meeting held on 31st December last. The scrutineers appointed were the company's solicitor, and the solicitor of Mr. Hallett, therefore we may rely upon the result which will be declared to you as being correct, and one that cannot be questioned. I will now call upon our solicitor to state the result of the poll.

RESULT OF THE POLL.

Mr. CHAVE (the solicitor): For the amendment; 28 shareholders, personally present, holding 10,112 shares; proxies admitted good 72; shareholders holding 11,024 shares; total votes counted, 21,136; handed in too late, 14; shareholders holding 4,380 shares; makes a total of 25,516. For the resolution and against the amendment: 11 shareholders present, holding 15,019 shares; proxies admitted good, 182; shareholders holding 17,607 shares; total votes counted, 32,626; handed in too late 8; shareholders holding 884 shares; total, 33,510; majority against the amendment and in favour of the resolution, 11,490.

Mr. HUNT: I suppose you objected to the Bristol proxies?

Mr. CHAVE: I objected to the Bristol votes, because they were only handed in at the meeting.

Mr. SIMMONS: Have you objected to shares upon which the last call was not paid?

The SOLICITOR: No, sir. Those votes were counted.

Mr. GEORGE HALLETT: I think I heard you read out votes in favour of the resolution and against the amendment. We were voting against the amendment, and I most strongly object to having it put in that way.

The CHAIRMAN: The proposition before the meeting was put forward clearly by me, and an amendment was proposed and seconded, and whether the one or the other should have effect was submitted to the meeting—(no, no)—and a poll demanded. A poll has been taken, and the result has been made known to you. There was a majority of 11,490 votes in favour of the resolution. I therefore declare that resolution carried.

A SHAREHOLDER: I beg to remind our chairman that we did not discuss the report and accounts at the last meeting. The chairman told us these were posted on Monday, but I heard from the Post Office that they were posted on the 23rd December, too late for the night mail, and, therefore, I say the meeting was not legally convened.

Mr. HALLETT: I moved a certain amendment. That amendment only was before the meeting, and on that amendment only was the poll demanded.

The CHAIRMAN: I moved the adoption of the report, and it was duly seconded, and an amendment was moved, and we are here to-day to hear the result of the poll on the resolution and the amendment. (No, no.)

Mr. CHAVE: You cannot have an amendment without a motion.

Mr. HALLETT: Do you rule that your resolution, "That the report and balance-sheet be adopted," is passed?

The CHAIRMAN: Yes.

HOW MR. HALLETT TOOK HIS DEFEAT.

Mr. HALLETT: Then our meeting is a farce. At the last meeting I proposed that the report should not be passed, and after that meeting I determined, having one or two letters from shareholders which coincided with my feelings, to come to some arrangement, if possible, with the present board. I had a letter from Mr. Gilbert asking me to go and see him. I always believe in going to see an enemy to find out the length of his sword. Mr. Gilbert met me in a very friendly spirit, and the upshot was this—that last night I wrote a letter to Mr Gilbert, which was in the nature of a private letter as follows:—

142, Marine Parade, Brighton,
January 6th, 1891.

To S. P. Gilbert, Esq.

Dear Gilbert,—I am sorry I returned too late to the City to-day to call upon you previous to my leaving for home, but as I am desirous of (if possible) coming to an arrangement beneficial to the company with you, I write this:—

If you will agree—

1. To give us four seats at the board (there are three vacancies at present, and you said to-day you were willing yourself to retire).
2. To give me an undertaking to-morrow at 1 p.m., in plain English, signed by Messrs. Whitten and Larchin and Adml. Powell, in which they each and all agree to a meeting of shareholders being called at a date not later than the beginning of April next, at which they will all three resign.
3. To accept a committee of enquiry appointed by us to go thoroughly into the accounts and affairs of the company, and that the reports and accounts of the past year stand over until the committee have made their report to the shareholders.

I, in return, will agree—

1. To urge on Col. Tamplin and my brother dissentient shareholders to combine with me in nominating four directors at once to fill up the board, but there must be no more fees paid to the directors until the mine is making returns.
2. To do my utmost to get the affairs of the company put into a sound condition and on a proper business-like footing.
3. To do my utmost to prevent the company going into liquidation.
4. To allow the meeting to-morrow to pass off as quietly as possible.

This offer is entirely without prejudice as to whatever steps the committee of enquiry may recommend as to the past doings of the board.

I will call on you at your office to-morrow at about 1 p.m. for your answer previous to my meeting my brother dissentient shareholders at Messrs. Bevan and King's offices, and trust that our efforts to arrive at an amicable settlement, and to restore harmony, peace, and confidence to the shareholders, which has been sadly wanting of late, may be successful.

Yours very truly,
GEORGE HALLETT.

Mr. Gilbert has met me in a very friendly way, and gave me a letter this morning reading as follows:—

"January 7th.

"Dear Hallett,—Yours of yesterday to hand, and I think the matter can be arranged in accordance therewith. As you know, I am anxious to help the company to a successful issue. As far as paragraph I, I am quite prepared to resign my seat as soon as you have elected your three members of the board. Paragraph 2: I suggest that the meeting be held in May, and will use my best endeavours to obtain the consent of the remainder of the board to your request before the meeting to-day. Of course, I need hardly say that you will on your side do your best as stated.—Yours truly,

"(Signed) S. P. GILBERT."

I have also a letter from Mr. Larchin to Mr. Gilbert, which, with his permission, I will read.

"January 7th, 1891.

"Dear Gilbert,—I have read Mr. Hallett's letter, and I think the plan proposed by him is the right one, and personally I would assist in it, that a meeting should be held as soon after March 31st as possible, and all of us retire, and I may say for myself, that done we should work together to carry out his seheme and pull the thing along and try to make a success of it.—Yours faithfully,

"(Signed) R. LARCHIN."

What the other directors intend to do has not transpired.

Vice-Adml. R. A. POWELL, C.B. (director): You are perfectly welcome to my seat at the board.

The CHAIRMAN: This correspondence comes before me quite new. As regards the arrangement to hold your meeting in May, I think it is quite sensible, and most certainly I would not inflict my presence upon you if it is not desired. I therefore place myself in your hands according to the terms of your letter.

Mr. HALLETT: Well, gentlemen, I think you will admit that my efforts to arrange this matter amicably have met with a certain amount of success. Before this meeting disperses to-day, we must have

ANSWERS, AND PLAIN ANSWERS,

to certain questions. I do not want to make this an antagonistic meeting. I do not think it was entirely my fault that it was conducted in that way last time. There are certain questions I asked last week, and I shall ask them to-day. There is one question, and that is with regard to the balance-sheet—Why was it not sent out at the same time as the cash account?

Mr. GILBERT: It was sent to the printer about 10 days before the meeting, and notwithstanding that we did our utmost to get them

printed, we did not actually receive them until a short time before the meeting.

Mr. HALLETT: Then why was the cash account and the report printed earlier than the balance-sheet?

Mr. GILBERT: The cash account was sent to the printers on the 18th December, but the balance-sheet had not then been signed.

Mr. HALLETT: I should like to know whether at the present moment the shareholders are in possession of the balance-sheet. (Several voices: "No.") I most strongly protest against the conduct of the board with regard to the notices of meeting and balance-sheet. That is a thing which ought not to be allowed. They ought to have been posted a fortnight or three weeks before the meeting. Are we to have a balance-sheet given to us?

Mr. GILBERT: Yes, sir. They would have been posted ere this, but the registers have been in use by the scrutineers.

The CHAIRMAN: I quite admit with you that a copy ought to have been sent to the shareholders, and it will be.

Mr. HALLETT: It is quite within your power to see that the thing is carried out. It was your duty as chairman of this company to see that everythiug was conducted in a proper business-like manner.

AARON'S REEF.

I see there is a balance of purchase-money on Aaron's Reef's sale. How is that secured?

Mr. CHAVE: The 19,000*l*. payable by the Aaron's Reef Company, that is secured by an agreement to pay.

Mr. HALLETT: Have we a lien?

Mr. CHAVE: Undoubtedly.

Mr. HALLETT: Who is working Aaron's Reef at prcsent? Is it Mr. Nicholls?

Mr. GILBERT: No, sir.

A SHAREHOLDER: May I ask when Mr. Nicholls gave up the management? (Cries of "Order.")

Mr. GILBERT: Mr. Nicholls never was the manager. Whatever has been done by Mr. Nicholls on the Aaron's Reef property has been on account of this company.

Mr. HALLETT: I should like to ask what large sum of money has been expended on the surface operations of the mines. You state in your report large sums have been expended on these.

The CHAIRMAN: Doubtless in prospecting and investigating as to the value of the surface property, and would come out of the monies which we sent for our ordinary cxpenses for the working of our mines. If those examinations of the surface property were not satisfactory the money so expended would come to a very large sum, but it is quite beyond my competence to say to what extent the expenses incurred were to be placed to the charge of surface inspection.

Mr. HALLETT: There is another question. I should like to know when the directors bought their shares, and what price they paid for them?

Mr. GILBERT: They were all bought in the early part of last year, and the average price was 6s. 4½d. each.

Mr. KLENCK here endeavoured to make some remarks, but the chairman ruled him out of order, Mr. Hallett having possession of the floor. The gentleman refused to take the ruling of the chairman, and continued his speech amid general uproar, scarcely a word of which was audible.

THE DEBENTURE ISSUE.

Mr. HALLETT: With regard to the debenture issue. In order to obtain 10,000*l*. by debentures the directors have issued 40,000*l*.—that is to say, they have paid 30,000*l*. to obtain 10,000*l*. I will simply say with regard to that, that it is quite irregular, and decidedly wants looking into by a court of law. I would like to know who holds these debentures.

Mr. GILBERT: I hold 4,000*l*. of them, and I am endeavouring to buy up the other 1,000*l*.

Vice-Adml. POWELL: I think the history of the debentures is as follows:—A circular was sent round to all the shareholders, requesting that they would make an offer for debentures. In response to that, about 135*l*. came in. That was no good at all, so they were then offered to the public, and the only tender we got was from a gentleman who offered for the whole of them at 5s. in the £, which after some consideration and enquiry was accepted.

Mr. HALLETT: That is eminently unsatisfactory.

Adml. POWELL: Then what would you have done?

Mr. HALLETT: I should have called a meeting of the shareholders. Then there are the directors' fees; I protest against them, and I think the directors ought to return part of those fees.

A SHAREHOLDER: I think Mr. Hallett has occupied too much of our time this afternoon. (Hear, hear.)

The CHAIRMAN: I regret he has kept the meeting so long, but I am quite williug to allow him to ask his questions, otherwise he would say I was throwing opposition in his way.

Mr. HALLETT: With regard to the rent, I think it is monstrous.

Mr. GILBERT: I think next time the rent will be reduced.

Mr. HALLETT: I want to know why it has steadily increascd.

Mr. GILBERT: It includes one clerk.

Mr. HALLETT: Travelling expenses. Why are they so high?

Mr. GILBERT: Therc was 150*l*. for Mr. Larchin, who went out to the property.

Mr. HALLETT: Preliminary expenscs, 1,200*l*. I want an explanation of that item?

The SOLICITOR: That is an *ad valorem* duty paid by the company to the Government.

Mr. HALLETT: As regards the item of sundries—that is monstrous. We have here every item we possibly can, and then at the end there is a large amount for sundries.

Mr. GILBERT: Those will be dissected when they pass through the auditor's hands.

Mr. KLENCK: I want to know how long this gentleman is going to keep the meeting—(hear, hear)—and I am going to ask you whether you will allow every shareholder in the room to have the same privilege and the same time. (Laughter.)

HAPPY MR. HALLETT.

Mr. HALLETT: I have very nearly finished. I am going to Brighton by the 5 o'clock train, so that, after half-past 4, the shareholders can have the whole evening to themselves. (Laughter.) As to the legality of the meeting—it ought to be tested, because, whatever we are doing to-day can be upset, and what we did last week can be upset. I also want to know if the directors will accept a committee of inquiry?

PERTINENT QUESTIONS FOR MR. HALLETT TO ANSWER.

Mr. KLENCK: I am very glad to find there has been an olive branch thrown out by my friend, Mr. Hallett. I am going to tackle him on one subject, a subject of vital interest to this company, and that is on the question of debentures. I ask my friend, Mr. Hallett, and his friend, Col. Tamplin, why they did not subscribe when the company was in need of money to those debentures, and why they did not come forward with their money to assist us in the development of the mines, and in the development of their own interests. Neither Col. Tamplin nor Mr. Hallett came forward with a single sixpence. We had a subscription of 135*l*. from the shareholders of this company to develop the mine, but not a sixpence from Col. Tamplin or Mr. Hallett. A gentleman did come forward and offered us 10,000*l*., but, unfortunately, the mine had a shaft sunk, upon which thousands and thousands of pounds had been expended, of which Mr. Hallett had full knowledge as a director, and not only as a director sitting here to adminster the affairs, but a director who had been out there, and had seen the utter uselessness of the shaft. The result was we had to send out a practical miner to report, and he said the shaft we had got was neither useful nor profitable. We said to him, "What shall we do?" and he said, "You must sink a new shaft of a proper width, and proper character to develop the mine." (Cries of "Time.") Gentlemen, I ask you, in the interests of this mine, and in your own interests, not to be led away by Mr. Hallett on the one hand, nor by the board on the other. I ask you to devise some scheme to-day by which our property can be saved, and by which we shall

GET GOLD OUT OF THE MINE.

What Mr. Hallett is most complaining of I was the means of introducing, viz., to get the surface rights and freehold of our mine for a very small consideration. By that *ad valorem* duty payable to the Government we have got a freehold of the property, a property capable of developing, not one mine, but 10 mines. I ask you, Mr. Chairman, and the board and shareholders to elect gentlemen who will conserve your property and not be led away by a faction. I do say, conserve your own property and develop it, and you will have mines that are capable of great development if you will only find the money to develop the industry. (Cheers.)

Mr. HALLETT said Mr. Klenck had made an attack upon him as to the past management of the mine. All he could say was, they appointed a man who was considered one of the best men in the world, Mr. Howard Hill. He (Mr. Hallett) was not a miner, and never claimed any mining knowlepge. What he advocated was a proper, straightforward means to carry on the mine.

THE CHAIRMAN'S REPLY.

The CHAIRMAN: The discussion on these points has gone far enough. I have listened to what has been said on both sides. There is more that might have been said on our side than has been said, but I have listened to what Mr. Hallett has said with great attention and satisfaction to myself. I have not, so far as I know, been guilty of any secret dealing, or of any obstruction or desire to do that which I ought not to have done as your chairman and representative. I assure you that the attention to your business has been to me a source of very great concern. You spoke of directors' fees. I dare say to you, as a lump sum the amount may appear considerable, but it is not when you come to consider the attention that has to be given to the business of a company like this. Supposing you were a merchant, you could not come to your business without incurring expenses. One day that I came up I was five hours on the railway. I did not reach home on another occasion till 10 o'clock at night, and on every occasion I attend the meetings expenses are incurred. I am not an independent man so far as to throw away money. I desire to represent you as an honest man, but I consider I have a right to pay my expenscs, and I ask for nothing more. I assure you we have not wilfully done that which we ought not to have done. I now close this discussion. and proceed to the further business before us. The directors have not lost sight of the fact that

THE WISHES OF THE MINORITY SHOULD BE RESPECTED,

and with that in view it is intended without delay to ask some of the largest shareholders to meet the board at a committee. In the meantime, I may state that it is our desire to meet the wishes of every party or section of the shareholders in every way that is in our power. The next business I bring before you is the election of an auditor.

Mr. LIONELL H. LEMON was then unanimously elected auditor of the company for the current year, at a fee of 20*l*.

A SHAREHOLDER, who said he represented the Bristol shareholders, then read a resolution passed at a meeting on Monday evening calling upon the directors to resign.

Mr. HALLETT thought they ought not to disperse without appointing a committee of enquiry. If the board had nothing to fear, why did they not let a committee of enquiry be appointed? They ought to court enquiry. (Hear, hear.)

Col. TAMPLIN thought his frieud, Mr. Hallett, had made a most sensible proposition to-day, and he moved that the present board of directors be called upon to resign.

Mr. F. W. HUNT (Bristol) seconded the motion.

Mr. KLENCK moved, as an amendment, that the present board be requested to retain their position, and that it be strengthened by nominating Mr. Hallett and other gentlemen.

Mr. CHAVE (solicitor) said the resolution was informal. The meeting could not call upon directors to resign. Supposing the resolution was to be passed, there would be no directors at all. The board, before they resigned, would have to appoint other directors.

The motion was then withdrawn, and a vote of thanks passed to the chairman.

The proceedings then closed.

THE COLON GOLD MINES, LIMITED.

A SUCCESSFUL MEETING—THE CHAIRMAN GIVES AN ACCOUNT OF HIS VISIT AND A RECORD OF A SUBSTANTIAL YEAR'S WORK, AND MR. THOMAS THOMPSON ADDS SOME WEIGHTY WORDS OF ENCOURAGEMENT TO SHAREHOLDERS—A GOOD MANAGER SECURED, AND THE MINES RAPIDLY APPROACHING THE DIVIDEND STATE.

THE ordinary general meeting was held at the Guildhall Tavern, Gresham Street, on Wednesday, "for the purpose of receiving the directors' report and balance-sheet, and transacting the ordinary business of the company."

H. Stuart Sankey, Esq. (chairman of the company), presided.

The SECRETARY read the notice of meeting.

SHAREHOLDERS KEPT WELL INFORMED.

The CHAIRMAN: Gentlemen, I have noticed that usually when a chairman rises to address a meeting, if he sees only two or three shareholders present, he says, "Gentlemen, I am very pleased that there are only such a few present, because it shows the general confidence felt in the directors." Now, I confess that I should have been much disappointed if there had not been present the considerable body of shareholders to listen to what I have to say that I now have the pleasure of seeing before me. (Hear, hear.) The report we have laid before you seems, to our minds, very favourable, and one that gives an extremely good account of the first year's work done at our mine. Gentlemen, I have not very much to add to that report, because you have had the advantage each month of receiving the reports sent from the mine as soon as possible after we have received them ourselves. The mail comes in about the end of every month, and as soon as we can get the reports from the printer's hands they go out to the shareholders. You will, however, expect me to give a short account of our stewardship as directors, and, further, you will expect from me, as having been out to the property, a short account of Colombia, and the system of mining there adopted, and more especially that which we propose to adopt at our mine. I will now

CALL ATTENTION TO THE ACCOUNTS.

The report of the superintendent and that of the directors, together with the balance-sheet, have now been in your hands for some days, and, therefore, they may be taken as read. With regard to the accounts, you will see that they take a simple form, and for the very simple reason that the whole work of the year has necessarily been development, and that practically there have been no earnings. It can hardly be expected that even an alluvial mine can make returns in its first year. What we bought was a group of nine mines, not working in any way, without water laid on, without a single shed or house on the property, and the fact that we have obtained some little gold as incidental to opening up this property is satisfactory. The accounts, therefore, take the form of a capital account—there is no revenue account. Next year the accounts will be in the form in which they are issued by companies that are well established—there will be a capital account, a revenue account, and a profit and loss account. Although this is our first annual general meeting, we held a statutory meeting within four months after the incorporation of the company, which, you will remember, was at the end of January, 1889. We have called this meeting as early as it was possible to get the accounts from Colombia, so as to take in the first year of the company's operations. They only arrived by the mail which arrived about Christmas Day, and this meeting has been held at the first opportunity. (Hear, hear.) Gentlemen, the first item is the water contract account.

A BIG WORK.

As you no doubt know, the whole of the motive power of the mine is derived from water, and so it has been necessary to convey water from a long distance, because, although we have a river practically at our doors, it is necessary to bring the water, so as to have it at an elevation on the mine, in order to get its full force for working purposes. The water contract was to lay on a ditch of 14 miles. In a work on hydraulic mining, which I daresay many of you have seen, the estimate for ditches is put at about 1,078*l.* per mile, and 14 miles, as in our case, comes within this estimate at 14,000*l.* cost. At the same time estimates must differ, for you may have had hard soil or easy soil to encounter. Our ditch may be taken as at about the average. We have, however, had 90 ft. of tunnelling in one place through solid rock—a work that takes time, labour and expense—and on the whole we may be satisfied that our contract has worked out as it has done. The item immediately above that is purchase of a piece of the Sabandija estate adjoining us. It rounded off our property, as you can see from the plan on the table. We have now

A COMPACT MASS OF 10 MINES.

I may say they are contained in a ring fence, and we have no fewer than 1,360 acres, chiefly mining land; this large quantity has been secured so as to have at command the necessary timber for working the mine. Timber is always wearing out and requiring renewal, and land is necessary to obtain a good outlet for the tailings and *débris*, and for that purpose we have spent on this additional land 1,500*l.* (Hear, hear.) We were asked more, but by bargaining we have made a favourable purchase for the company. (Hear, hear.) The next item is mine expenditure, which comprises a large number of items, superintendent's salary, labour, construction of ditch, &c.

ITEMS OF OUTLAY.

The latter is not the 14 miles of ditch, but a further 3 miles which the superintendent recommended us to make, because when the contract for the ditch was completed it was found it only brought in about 400 miner's inches in the dry season, and the superintendent told us that we should require 500 ins.; it is a soft friable soil, and 500 ins., he estimated, would be as good as 1,000 ins. in many of the mines there. He constructed at the head of the ditch another 3 miles, so that the ditch is 17 miles long. This is not in the ordinary sense a ditch, but an aqueduct—"acqueducto" is the Spanish term—it brings the water to the mine. Of course, from the 7,565*l.* the first bar of gold is deducted, and also the premium on exchange in Colombia. I daresay most of you know that when we send out a sovereign to Colombia it does not realise $5, but about $9, so that we obtained the benefit of that, and this year we have obtained the substantial amount of over 2,000*l.* on the premium. Then come the office expenses, less the transfer fees, and the cash balances. The latter seem to be satisfactory. We have 338*l.* at the bank in London, 308*l.* at the mines, 83*l.* at Bogotá, and in transit to Bogotá 1,300*l.* The money is sent out to Bogotá, and then it is drawn upon by the superintendent as he wants it for the construction and development work of the mine. The accounts taking that form, I do not know that there is much more to say about them, but I shall be glad to answer questions, and, to save time, will reply to them collectively. Now you will like, perhaps, to hear

A LITTLE OF THE HISTORY OF THE COMPANY.

As I have said, it was incorporated at the end of January, 1889. It then became necessary to make this contract for the water, for until the water was provided the mine could not be worked, and about June we found a satisfactory superintendent. The work of choosing a superintendent is half the battle of a mine. We had considerable trouble to find really a good one, but I think we have found about the best possible. Mr. Russell had considerable experience before in alluvial working in Brazil. He came with the highest testimonials from Messrs. Easton, the well-known engineers, and is a civil as well as a mining engineer. At the same time my colleagues asked me if I would be willing to go out with him. I had some knowledge of the mines in Tolima, and it was thought that I should settle Mr. Russell there, and give you afterwards my experience of the property as a member of your board. I went with Mr. Russell at the end of July. Of course, when we arrived there the mines were bare—not a shed, not a house in which we could put our heads—but, owing to the hospitality of a neighbouring mine, we were "put up" comfortably until Mr. Russell was able to have a house, in which he is now comfortably installed, and all the other houses, such as the retort house, mine offices, house for the European staff and for the native miners, are all up, and everything may now be considered established. The journey out is under 5,000 miles. Some people know where Colombia is, and some do not. (A laugh.) For the sake of the latter, I may state that it is at the extreme north-west corner of South America, just south of, but including, the Isthmus of Panama. The usual route is by the Royal Mail Line. Thence 600 miles up the country by river, and on horseback the remainder of the distance.

WOULD THAT IT COULD BE SAID OF LONDON.

Sabandija is isolated, but when once you are there you cannot but be charmed with the climate. It is tropical, but the height of our mine above the sea level is 5,000 ft., and the mean temperature is 70 degs. One can work in comfort, and there are no extremes of temperature. It is the same all the year round, and one could not fail to be struck with the quantity of excellent timber that is to be found all round. There is iron-wood, mahogany, cedar, and every kind of wood in abundance, a great advantage for hydraulic mining. A great quantity is used in carrying the water over the launders or flumes, and a large quantity in the sluices, so that it is necessary to have good timber. Even a more necessary thing is a plentiful supply of water; in this Colombia differs from Australia. It is a country abounding in water sheds. There are no fewer than

NINE LARGE NAVIGABLE RIVERS,

and there is plenty of water. A further important point is that this mine is situated in the heart of the best mineral country of Colombia. It is in the province of Tolima, and is surrounded by mineral-bearing mines.

GOOD NEIGHBOURS.

At a very little distance is the Tolima Mine, which you have heard of—a large silver-bearing property, and a little way off on the other side are the mines belonging to the Oritá Company and the mines belonging to the Colombian Hydraulic Company. There are many others, but I mention these because they have already made their names. There are many others that have yet to make their names, and which will be heard of later on. Besides, there are a large number of native mines of which we never hear in England, and at the neighbouring port of Colon there are to be seen ingots of silver and gold which are shipped to different parts of the world—some going to the States, and some to England. If you had seen the ingots dealt with like ordinary bales of merchandise you would not have much doubt about the mineral-bearing capacities of the country. Labour is plentiful, and you can obtain a good supply of miners, who will work at the rate of not much more than 2s. a day. Now, we know the rate the miners in Australia receive, so that is a very favourable comparison. I think a miner in Australia gets 4*l.* a week, whereas here we can get a decent miner for 2s. a day. The reason is that the climate is so good; they live lightly clad, and their food is abundant. Having described to you what I found there, I may next mention that the ditch when we arrived was still in course of construction and was not nearly finished, but the quantity that had been completed was perhaps 11 miles, and Mr. Russell and I walked over every inch of it, and tested the grades; the water was then running a little. Later, we went to different parts of the mine, and panned out some of the gravel. Everybody knows what panning out is. You take gravel in a mining batéa or pan, and with the aid of water you shake it about with a little movement of the wrist until the whole of the gravel, by degrees, goes over the side, and at last your eye is rejoiced by the presence of gold. Everywhere there were a considerable number of colours of gold remaining at the bottom of the pan. That was highly satisfactory, and we considered there was good ground for expecting that

THIS PROPERTY WOULD BE A GREAT SUCCESS.

You will remember that I wrote you what I had seen then. I think it was in September, 1889, and I have this morning looked through what I wrote, and believe every word has been verified now, or is in course of verification. (Loud cheers.) Before I went out I had

read in some publications that Colombia was a land "paved with gold," and that "the rivers were running with the precious metal." I had always thought that those who wrote this description of Colombia had probably been reading the "Arabian Nights," or stories of that kind, but really, when one got out there, one saw that, although there was perhaps a certain amount of floweriness about the language, yet it was in a measure true, because I can assure you that after a tropical rain you can actually, as you ride along, see the particles of gold glistening in the sun. The peons, or labourers, instead of hoeing for potatoes and vegetables, can go and wash a little gravel (possibly from a rich mine when the eyes of those in charge are not upon them), and in a day they often obtain 10s. worth of gold. Gold dust is taken as common currency. A labourer will take ¼ oz., or whatever he may have, to a shop. Is is weighed over the counter, and the change is given to him, just as in the case of sovereigns here. I think we may feel confident that our mine is situated in the right place, and that we have an excellent property, with plenty of water, timber, and labour. (Cheers.) As to the working of the mine, of course we were not washing, but I had the opportunity of going over several adjacent mining properties, the Colombian Hydraulic, Oritá, &c., and had the advantage of seeing those mines in full work, and Mr. Russell has also visited them. We have at the office a great many enquiries from the shareholders as to the reports from the mines. These enquiries show that a large number of the shareholders (we have over 1,700 in this company) are quite ignorant of the meaning of many of the terms used in our reports. The reports come from the superintendent, and are published with all the technical details as received, I trust, therefore, I shall be pardoned by such shareholders as are conversant with these details if I try to explain their meaning to those who are not.

A FEW TERMS EXPLAINED.

As you know, we take the water from a distance, because it is necessary to get a very large force of it on to the mine, and for that purpose the ditch has been constructed. The water in this aqueduct is brought to the mine to the top of a high bank, where it is received into a reservoir, or pressure box. From that point it runs in a steel pipe (which may be 2 ft. in diameter), and then into an iron box called the distributor, and at the bottom of that is what is called the monitor—a sort of pipe not unlike a fire hose, working on a universal joint with a nozzle, through which the water is poured with immense power against the gravel banks, or rather is directed against the bottom of the bank, so as to undermine it. The bank falls down with a run, and the gravel is swept into the sluice. This is a wooden trough, solidly constructed with riffles, or blocks of wood, at the bottom into which, before the water is turned on, a quantity of quicksilver is poured. The gravel passes over the riffles, and the gold, by means of its specific gravity, falls to the bottom and amalgamates with the quicksilver. The gravel is pushed on and on, checked by the riffles, and at last is swept over into the dump, that is, the ravine, or river, where all these tailings go, and are finally carried away to a river, or into some spot where they can do no harm. That is the whole system of mining of this kind. You will see it is simple in comparison with deep mining, but it requires considerable judgment as to how and where to get the water, to select the best situation for the sluice, which must rest on the bedrock, and, of course, care is needed that the *débris*, or tailings, should be poured iuto a suitable place. I have taken the liberty to bring a few photographs with me which were taken in Colombia. There is one of a ditch filled with water; there is another with a sluice-box; there is a third showing how the ditch is carried over a ravine by means of the flumes or launders, and there are two pictures of monitors at work. It may please some of you to look at these afterwards, for they show clearly how the work is done. With regard to the force of water, we have reason to know that a miner's inch is gnnerally understood by our shareholders.

WHAT IS A MINER'S INCH?

It is equivalent to 58 tons of water every 24 hours, and when we use 500 miner's inches that means that 29,000 tons of water will pass through the monitor in 24 hours. I think, gentlemen, you will see from that what a tremendous force of water it is. 500 ins. in 24 hours would move about 1,000 tons of gravel. You will readily see how it is necessary to have a large volume of water, and with what impact it must strike against the gravel banks. There only remains to mention how the gold is secured. After the water has been running a month or so over the sluice it is then turned off. The amalgam found in the sluice is placed in the retort, the mercury driven off, and the gold melted into bars. We regret that the first bar is not on view, but by oversight it has been melted. I have here a little bottle showing some coarse grains of gold taken from the mine, which can be examined afterwards. The report of Mr. Russell on the mine I will not read, as it has been sent to you, but it is extremely modest in its one. I consider it good, and to lose nothing from the moderation of its language. (Cheers.)

CONCLUSION OF THE MANAGER.

He seems to take especial care and pleasure in saying nothing but what he can absolutely verify, and this tone of modesty prevails throughout. The last part is: "The properties acquired by you for this company form, as a whole, a most complete and valuable mining property, and contain an area of gold-bearing alluvial soil, sufficient for many years' successful working." Gentlemen, we have a mine which will not be worked out for a great many years. It is not a block of 5 acres. We have seen companies formed to acquire 5 acres at a high price, but, however good those acres may be, they must tolerably soon be worked out; we have no fewer than 1,360 acres, and, I think, Mr. Russell is not going over the mark when he says that for many years—I hope it may be a great many—we cau count on successful workings. We have another report which was not sent to you, because only written two days ago—one by Mr. Griffith. He came to England at the end of last month, and I wrote this letter to him:—"I understand you have paid one or more visits to Colon Gold Mines, and that you have made a thorough inspection of them on the spot. While we have every confidence in Mr. Russell's experience and good judgment, I think our shareholders would be interested in having a report from an independent source, and I shall be glad if you can find time to write a short report of what you noticed when there, in time for our general meeting, which is fixed for this day week." In response to that invitation Mr. Griffith has sent us a report.

"WHO'S GRIFFITHS?"

A SHAREHOLDER: Who is he? (Laughter.)

The CHAIRMAN: I thought somebody would say "Who's Griffiths? (Laughter.) I should explain that he has been assisting at the Gravel Gold Mines, a large company, which is spending some 50,000*l*. on a ditch alone to lay on the water. They have a very valuable block of mines near our own, and Mr. Griffith has been there for three years assisting in this work. He is an engineer of considerable ability, and I understand has received the offer of superintendent to the Gravel Gold Company. I think his experieuce as a mining and civil engineer in that country, and a gentleman to whom such an important post has been offered, is very valuable. He has no interest in, or connection with, the company in any way, and, therefore, I think his report is of special value, and I will read it:—

REPORT OF MR. GRIFFITH.

5th January, 1891.—In accordance with your request, I have much pleasure in forwarding you a short report of what I saw when on a visit to the mines of the Colon Company, in October last, before leaving South America for England. I was first conducted by the superintendent to the mine-buildings, where I found a very comfortable house erected for the English *employés*, a good store-house, office, retort-house, carpenters' and smiths' shops, all built in the best style adapted for the country. The houses for the workmen were situated a short distance from the mine, and were in every way suitable for their use. Thence I rode to the main sluice at the point where the tailings of the mine empty themselves into the Sabandija River; the sluice was well constructed, and the outlet forms a splendid dump. We next proceeded to the Quebradona Mine, where there was a monitor with a 3-in. nozzle at work, the main bulk of the water being then in use at the Margaritas Mine. There was not a very large deposit of gravel in this mine, but what was there was very rich. I washed out several pans of gravel which gave excellent results. Although the deposit of gravel was not large in this mine, I have no doubt that this was the proper place to commence work at as the bedrock is very low there, and the chief feature, in securing the success of a hydraulic mine, is to place the main sluice, if possible, where the bedrock is lowest; in this mine I saw but few boulders, and the gravel was easy to work, being very soft. From here we walked up to the Margaritas Mine, and I found that this mine had only just been started; there was a heavy deposit of rich gravel here, formed on ridges, and lying on a slate bedrock. The nature of the gravel was also very soft, easy to wash, and free from large boulders. There was one monitor at work here with a 5-in. nozzle, and it was moving away a large quantity of stuff. Both of these mines are admirably mounted with plant of the best workmanship. We then went up several miles of the ditch, which conveys the water to the mine-pipe. The water was running with an even grade, the ditch looked as secure as it could be constructed, but your directors must bear in mind that, however well the ditches are made, it is quite impossible to say how long they will run without an accident, as in Colombia we have very heavy tropical storms at times, and the ditches cannot stand the increased volume of water that comes down them, without constant care and attention; and even then occasional "derumbos" are inevitable. Thence I visited several of the other properties belonging to the company, and made various experiments with the gravel, and I have never found better results in any other mine in Colombia than those I obtained in your mines. I should like to say a word on behalf of your superintendent. During the last year I have paid two visits to Sabandija, one six months after Mr. Russell arrived there, and the other at the end of his first year's work, and I was surprised to find the amount of work he had got through in six months' time, and the excellent and workmanlike manner in which he had mounted the mines. I am quite sure the company have secured in Mr. Russell a most valuable man, and he is not only a mining engineer, but a civil engineer. He understands his work thoroughly, and is, in my opinion, doing his very best to make the company a success. His staff I found ample and efficient, and working well in harmony with the superintendent. In conclusion, I may mention that the climate is better than that of any other mine in the province of Tolima. Good food is easily obtained, as well as a plentiful supply of peons, who work at a moderate wage. —WM. ST. DAVID GRIFFITH, A.M.I.C.E.

The CHAIRMAN: The boulders referred to form a considerable trouble with many mines. They have to be broken up, and have caused the failure of many mines. I am very glad Mr. Griffith has mentioned the subject of tropical storms. Often there will be interruptions in hydraulic mining work, and they must be expected.

NATIVE TRICKS.

If you see that the mine is temporarily stopped you must not be disappointed, because these delays are incidental to all hydraulic work. Occasionally there are native difficulties, for the Colombians are fond of litigation. If they see a new mine likely to be a success they say "let us blackmail it"—let us say that their tailings spoil our river or prevent our cattle from drinking. They may try to blackmail us, and we have heard, by the last mail, that such attempts are being made. They are made with every hydraulic mine, but no doubt we shall surmount them successfully. I know Mr. Griffith has been over many mines in Colombia, and when he says that our results show better than those obtained by any other new mine, I think it is a good deal for him to have said. (Cheers.) I am very pleased to have had such a good report from him, particularly as it is entirely indepeudent and speaks of his visit as late as October last. I fear I have occupied your attention too long. (Cries of "No, no.") You have been kind enough to give me a very patient hearing, but I will add one word more. I know that our shares stand at a low figure. I am sorry for it, although it does not make the slightest difference to the company as a company.

A WORD OF COUNSEL TO SHAREHOLDERS.

Dividends earned will be paid whether the shares are marked at 6d. or 2*l*., but at the same time do not be disheartened because they stand so low. I can remember the shares of Tolima a 15s., they are now over 8*l*. I [remember the

neighbouring Colombian Hydraulic mines when the shares were drug at the market at 4s., they are now something under 30s. I think our shares will soon be at a much better price. When we meet at our next annual gathering I shall not be surprised should there be a dividend to declare. (Cheers.) We have gone through the first and hardest year of our history, during which we have nearly developed the mine, and I do not see any reason why you should not now commence making returns of gold. Last year Colombian Hydraulic distributed 16,000*l.* in dividends, and carried forward 7,000*l.* If we make 16,000*l.* in this company, that will give us 40 per cent. on the present price of the shares. I think we may very well be satisfied with that result, and I shall not be at all surprised if it is not larger. (Cheers.) 16,000*l.* is not the limit of profit to be obtained from 10 mines. Such a return only means a monthly return of some 1,300*l.* That is not too much to expect, and I feel tolerably confident that when we meet next year we may have some tangible result to put before you. I move formally the adoption of the report and balance-sheet, and after it is seconded shall be glad to answer any questions. (Loud cheers.)

Major P. W. SYDENHAM ROSS (director): I beg to second the motion.

VOICE OF EXPERIENCE.

Mr. THOMPSON: I wish to make some remarks upon the eloquent speech to which we have just listened from our chairman, and upon the report and balance-sheet issued to us. In the first place, I think I shall only be echoing the feeling of the shareholders when I say that we are to be congratulated upon the very successful issue which the company appears to be approaching. I think I may say that our report and balance-sheet are exceedingly satisfactory also, and that our company occupies a position that is almost unique. In the first place, we have the fact staring us in the face that in this case we have not had miscalculation or anything of the sort. The amount of capital which it was estimated would be required at the beginning appears to be ample for all the purposes of the company. In the next place, here at what is practically our first meeting we have not a body of directors coming to us for an increase of capital, but rather do they present themselves to tell us that practically the whole of our preliminary work has been accomplished, and that the greater portion of our work will in future be directed towards gold getting.

CHAIRMAN COMPLIMENTED ON HIS SPEECH.

I think, gentlemen, that the speech the chairman has made has been of a particularly satisfactory character, but there is one feature about it that will not have escaped your observation, and that is how very guarded it was. From him, no doubt, that feature was to be expected. In the first place, I state matters which are within my own knowledge when I say that our chairman occupies the position of being on the board of one of the most celebrated companies of our day—I am speaking of the Tolima, which is now making a profit of about 6,000*l.* a month. He is also one of the directors of the Colombian Hydraulic Mines, whose property is within a very short distance of our own. He has been to our mine and seen the work we are doing there. Under these circumstances you can very well understand that he feels himself bound round with chains, which, however, is not the case with the free lances on this side of the table. Under these circumstances I say again, as one of the largest shareholders in the company, I may be allowed to direct your attention a little more extensively—I will not say that—but possibly in a more roseate way than the chairman has done, to the past history of our company and to its probable future. I might say, to begin with, that I have known these mines by repute ever since I became interested in Colombian mining, and that was about the year 1870; and although I took a very small part in its promotion, yet that the first company I had to do with in that way was the Tolima itself. (Cheers.) The next one was the Colombian Hydraulic, afterwards with the Orita—(hear, hear)—and then I began to hear about our Colon property, and all the extraordiuary riches which had been yielded by it. At one time I believe that the mine was not worked by the hydraulic process at all, but as a hand-worked mine, and it is only under our company that this work of hydraulicing has been initiated. It was always dealt with by the hand process, but even under that extensive system there was one case in which they produced as much as $1,937 at a cost of $586, leaving a profit of $1,351. I do not think there was any other occasion when so large a profit was made in so short a space of time, but I think I may say that whenever the Colon property has been worked by hand it has always been at a very considerable profit. Indeed,

IF THE MINES WERE IN CALIFORNIA,

I might also say that there was a somewhat celebrated Californian miner who once inspected our mines and said "If we had these mines in California and the money to work them, they would be worth from $100,000 to $500,000 each, and we should have no difficulty in realising such a price for them." (Cheers.) The chairman has told us we may have 10 mines of the same character, and although we may not have water to work them all at one and the same time, yet the statement of this Californian miner (a gentleman of responsibility and character, whose testimony goes a long way) was, that putting aside the returns of the past, we have an enormously valuable property. But, gentlemen, there is one other point I may mention with regard to our mines, which is this—there is a gentleman in Colombia at the present time, whose name is a household word, I think, amongst hydraulic miners, and that is Mr. W. S. Welton.

MR. WELTON'S VIEWS.

It was that gentleman who discovered the Tolima mines, the Colombian Hydraulic, and who worked the Oritá, and laid out this stupendous work that is now being carried on in connection with the Gravel Gold Mines, where 50,000*l.* in connection with the laying on of water alone is being spent—it was he, I say, who discovered the Colon Gold Mines. Under these circumstances it would be interesting to you to learn that on looking over one of these old letters I found this remark: "The deposit contains no sand streaks or pipe-clay. The outlet is good, and the gravel soft, and easy to run off. Under these favourable conditions a constant supply of 500 ins. of water would do as much as 1,000 ins. of water at the Colombian Hydraulic." That is the mine at which they are now obtaining a profit of 16,000*l.* per annum. From my personal, experience of the deposit I have no doubt that from $10,000 to $15,000 would be obtained per month with a water supply of 500 ins. at a cost of only $2,000 per month." I do not think that I can say anything stronger with regard to the prospects of our company than that. But you may say, "If this mine has been known for 20 years past; if it has shown itself by gold washing to be so exceedingly rich in the past, how is it that it was not worked by the former proprietors?" That is a question which is easy to answer. I may tell you I speak of all these matters from a knowledge of the country and a knowledge of the mines themselves. I have watched them closely for the last 20 years. We all know by this time that a hydraulic mine is of very little use without water, and it was a long time before it was discovered that water could be brought to this property at all. Its former proprietors were fairly rich, but at the time when it was discovered that water could be brought to the mines, it was also found that these former proprietors had not the wherewithal to bring that water on. Hence, the misfortune of these gentlemen became our good fortune, and thus it came to pass that the property fell into our hands. I do not know that I need say much more with regard to our company. It is very evident from the report of Mr. Russell, our manager, and from the lucid statement of the chairman that

WE ARE WORKING THIS HYDRAULIC MINE IN A PROPER MANNER.

There are very rich points indeed upon our estate, but it is not these which our superintendent is first attacking. He cousiders, and very properly so, that the proper way to work a hydraulic mine is to begin at the lowest point of the gravel, so as to work upon its bedrock, and so wash away all the gravel, whether it contains little gold or not, so long as it pays. That is the proper way to conduct hydraulic mining, and that is the plan, which, I understand, our superintendent has adopted. I think it appears from what the chairman has said, and from the report of the superintendent, that we have eveu at this present time exceedingly good prospects ahead, and that we may expect large returns in the near future. But what have we to look for only a little distance ahead? I was saying that the superintendent has not attacked the richest part of our property.

WHAT LIES AHEAD.

He is mining in a minerlike fashion, and is taking all the gravel as it comes, but not a long distance ahead of where we are working now there is a portion of that gravel, which, under the former proprietors, produced as much as from 4s. to 6s. worth of gold per yd. (and under the hydraulic system it only takes 2d. to 3d. to work such gravel), and there was one occasion when 100 ozs. of gold were obtained, the average being 30s. per yd. Now, taking that 30s. per yd., I think you will see (the ounce of gold is worth about 4*l.*) that was something like 400 to 500 tons of gravel. You will agree with me that that is something more than an assay. Our property, if calculated upon any such basis as that, would come short of it, though we fiud pockets in hydraulic as well as we do in other mines—but still it shows that ahead of us we have a very rich property, and, as Mr. Welton and our manager tells us, without any of the ordinary hindrances to hydraulic mining to interfere with us in obtaining the realisation of our hopes. (Cheers.) I think I am one of the largest shareholders in the company, and may say that I represent a considerably larger number of shares than that which stands in my name. I mean that there are many of my personal friends who are interested, and one or two have written to me asking me questions on the subject of the accounts, and upon their communications I should like to base a single question to the chairman. It is this—the report and balance-sheet are very satisfactory, but I should like to ask as to the office expenses. They staud in the balance-sheet at something like 1,600*l.* Personally, I know something about office expenses, aud can imagine what answer will be given, but it is a question that may be fairly asked for the information of shareholders, as well as the personal friends of whom I have spoken. Speaking for myself,

I AM VERY PLEASED WITH THE BALANCE-SHEET,

and even on this question of office expenditure, I compare the item with the balance-sheets issued by other companies. I noticed a company the other day whose balance-sheet covered only four months' office expenses, which amounted to 6,500*l.* Here, however, we are down for 1,600*l.*, and the comparison is a favourable one. I will conclude my remarks as I commenced them by expressing the great satisfaction with which I have perused the various documents issued to us in connection with this meeting, and the extreme pleasure with which I have listened to the chairman's account of the progress of the company as it has been given to the shareholders to-day. (Loud cheers.)

Mr. MEEKING: Is Colon in the same district as Tetuan?

Mr. HOLMAN: Is there likely to be a further call?

Mr. MEEKING: Colombian Hydraulic Company has difficulties with the Government about the water, and are we likely to have the same?

The CHAIRMAN: We are all very much obliged to Mr. Thompson for the interesting account he has given to us of the history of our mines, and of the results obtained from them before they came into our possession. The statistics are very good, because it is well known that as little as 4d. yield per ton of gravel will give good results. If, therefore, we get anything like the results Mr. Thompson has foreshadowed we shall certainly obtain large profits. Mr. Thompson has, as you all know, devoted great attention to hydraulic mines, and he would not have given these statistics, I am quite sure, without having carefully compiled them, and ascertained their accuracy. (Hear, hear.)

IMPORTANT TO REMEMBER.

I am glad the question has been asked as to office expenses. *They are for almost two years.* You will see the balance-sheet is made up in London to the end of last November, and that the company was incorporated at the end of January, 1889—that is one year and ten months. (Hear, hear.) These office expeuses may be divided by one half in future, which will be a moderate sum. (Hear, hear.) I have had a list of them drawn up. (He read the details.) Our postages have been enormous. We have some 1,700 members, and every month we have sent out a report. We propose, in future, to

avoid this heavy expense by sending them to the usual mining and financial papers. The interest account to sundry creditors means that we have only paid 5 per cent. on money advanced, and I think that is very moderate, and shows the confidence felt in the company. The auditor's fee is 20 guineas, and the law costs 69*l*. 10s. 6d. The fee for registration and the stamps came to 235*l*., which makes up a total of 1,437*l*., from which you have to deduct transfer fees. The items for preliminary expenses will not occur again. I think next year will show a very small amount for office expenses. I have lately seen the report of a company where the administration charges were 5,000*l*., and another 1,000*l*. as well. If we ask you ever to pass such accounts as those I hope you will refuse. The Tetuan Company has mines in the province of Tolima. The reports show that our mine is free from boulders and pipe-clay, that the gravel is friable, and that 500 ins. of water will do as much as 1,000 elsewhere. We need not trouble ourselves about boulders in other mines when we know there are no boulders in our mines. (Cheers.)

Mr. REDFERN: How long will it be before we get through the tailings to the better part of the mine?

The CHAIRMAN: I do not think it should be long. You will have noticed that after the 120*l*. gold cabled, the next return was 270*l*.; that seems to show that the gravel is rapidly improving.

Mr. REDFERN: Has the new ground been formerly worked or is it enterely virgin soil?

SHARE LIABILITY.

The CHAIRMAN: I believe the latter. There is a sum of 1s. a share to be called up. It was always intended that the shares should be fully-paid, because we knew that we had the ditch to make and the mines to develop. We have delayed making the call because of the financial pressure that has existed, but several shareholders have said they would rather have the shares fully paid, and I think that will be to the advantage of the company, so as to save interest charges. We are not needing the money, but it will probably be for the interest of the company to make a call.

Mr. REDFERN: Will the call be 6d. or 1s.?

The CHAIRMAN: I think it will be better to call up the whole amount; but the matter has not been considered by the board at present.

The report and balance-sheet were unanimously adopted.

The CHAIRMAN proposed the re-election of Mr. Edward J. Tabor as a director.

Mr. ALLISON seconded the motion, which was carried.

Mr. TABOR, in returning thanks, expressed the hope that the prosperity of the company would be such as to give him a great deal to do in the way of signing dividend warrants.

On the motion of Mr. ALLISON, seconded by Mr. HOLMAN, the auditor, Mr. J. Sadler Wood, F.C.A., was re-elected, at the same remuneration as before.

GRATITUDE TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr. THOMAS THOMPSON: I take it that now the business of the meeting is practically concluded, I think, with the permission of the shareholders, I should like to propose a vote of thanks to the chairman, the directors, and the staff. Perhaps this proposition will come gracefully from me, seeing that I am the largest shareholder in the company. With regard to the shares I hold, I have between 8,000 and 10,000, every one of them bought in the market at something like twice the present price; but I do not care whether the shares go to 1s. or 1*l*.—I have taken every one of them as an investment, and intend to stick to them and sink or swim with the company. (Cheers.) I need hardly say it is my belief that I shall swim—(hear, hear)—and swim well—probably on waves of dividend warrants. (Laughter.) But, gentlemen, if I consider the prospects so good before me I think that position is largely due to our chairman and directors for the capable manner in which they have conducted our company hitherto, and it is under these circumstances that I venture on this occasion to propose a vote of thanks to them. I wish particularly to add to their names that of Mr. Arthur J. Russell and the staff. Mr. Russell, I believe, is new to Colombia, and knowing something of that territory, I think I am able to tell you that anyone going out there as a stranger has to meet with almost insuperable difficulties, but this gentleman, both from being able to speak Spanish, and from being a capable miner, has been able to conduct our operations with the greatest possible success, and without any hitch whatever. (Cheers.) I met Mr. Russell on one occasion before he went abroad, and can candidly say, not only from my interview with him, but from the reports he has sent from time to time, that there is no man in whom I feel I can place a larger amount of confidence than in him. He is not here to-day, and I am sorry for it, but the report of this meeting will doubtless go out to him, and if our vote of thanks will be any gratificatiou, I can say for my own part that he thoroughly deserves it. (Loud cheers.)

The motion was seconded and carried unanimously.

The CHAIRMAN: You will be glad to hear me for the last time. I beg to thank Mr. Thompson very much for his kind speech on behalf of my colleagues, myself, and the staff. I may say that my colleagues have been most attentive to their duties, and have not missed in any case a board meeting, except once through illness. I have the greatest confidence in this company, and it is both a pleasure and an honour to me to be its chairman. As regards the superintendent, I cordially endorse the vote of thanks the meeting has given to him, and to the staff. He will, I know, be pleased with this vote of thanks you have given to him and the staff. Mr. Thompson has said he was sorry Mr. Russell was not here. I cannot say I share that feeling, though, of course, we should have been glad to have seen him, but the right place for a superintendent is on his mine, and I am glad to know that that is where Mr. Russell is. (Cheers.)

The proceedings of a very satisfactory meeting were then brought to a close.

PRINCE OF WALES MINE.

THE COMPANY ENCOUNTERS DIFFICULTIES—FAVOURABLE POINTS—A CALL OF 4s.

AN ordinary general meeting of the adventurers in this mine was held at the Offices, Gracechurch Buildings, Gracechurch Street, E.C., on Thursday, 8th January.

The profit and loss account submitted to the meeting, for the four months ending 29th November, showed the labour costs for that period to amount to 2,315*l*. 5s. 7d., and the merchants' bills to 741*l*. 3s. 9d. The sales of tin amounted to 857*l*. 10s. 5d. There was a balance of liabilities over assets amounting to 2,794*l*. 5s. 10d.

Mr. Alfred Thomas presided.

Mr. C. B. PARRY read the notice convening the meeting and the minutes of the previous meeting.

The report and accounts were taken as read.

THE ACCOUNTS.

The CHAIRMAN: Gentlemen, I will call your attention, in the first place, to the accounts. You will observe the sales of tin for the past four months have amounted to 17 tons 6 cwt. against 19 tons 6 cwt. for the previous four months. This falling off is owing in a great measure to the disappointment we have experienced in not having met with the lode in the actual sinking of the engine shaft, and also to the very bad weather we have had, not allowing of the tin we had on the surface to be made marketable. The total costs for the last four months you will see amounted to 3,172*l*. against 3,222*l*. for the previous four months. The loss this time you will see is 2,170*l*. as against 1,947*l*. on the last occasion, and this loss is accounted for by the extra price paid for coal, and by the smaller quantity of tin we have been able to return. I may also add that

THE PRICE OF TIN IS NOT SO GOOD

by 3*l*. or 4*l*. per ton as on the previous occasion. You will also see we have sold copper and mundic realising 144*l*., as against 200*l*. on the last occasion, but I pointed out to you the copper sold and credited in the last account was for a considerably longer period.

OPERATIONS AT THE MINE.

Now, as regards the mine itself. I will commence by calling your attention to the position of the mine. At the bottom of the mine the agent says—"Since the last general meeting the engine shaft has been sunk 7 fms., which makes it 13 fms. below the 166-fm. level." The mine is, therefore, nearly 180 fms. deep now. The last time, if you remember, when the two lodes came together, we had a very nice bunch of tin, which we thought was going to be continuous, but like a great many other things that we think are going to be continuous, it proved to be otherwise. At the same time we met with favourable ground when sinking, and that has been in our favour, at any rate. We find upon development that we are not sinking upon what we at the time believed to be the Prince of Wales lode, but the agent in a private letter to me gives it as his opinion that we are really sinking upon what is known as Flucan lode. He is strongly of opinion that the Prince of Wales lode being stronger than the Flucan lode has cut through it, and it being more vertical than the Flucan lode has gone down to the north, and we are now driving a cross-cut north to intersect the Prince of Wales lode proper. We have already driven 9 ft. of this, and we expect to have to drive another 9 ft. before we actually cut into the Prince of Wales lode. Of course it has been very disappointing to us as well as to you that we have had this disturbance, but still it is

ONE OF THE FREAKS OF NATURE

which cannot be accounted for. At the same time we are very pleased to say that although we have not found the lode in the bottom of the shaft, the 166-fm. level has gradually improved, as you will see by the agent's report. "The 166-fm. level east has been driven 7¼ fms., which makes it from shaft about 25 fms. This drivage has been on a lode from 4 ft. to 6 ft. wide, and worth from 8*l*. to 15*l*. per fm.; being now 5 ft. wide worth 18*l*. per fm." Therefore you will see we are laying open a valuable piece of ground in these eastern drivings. "The 166 west is driven 8¼ fms., making it about 24 fms. from the shaft, on a lode from 3½ ft. to 4 ft wide, and worth from 12*l*. to 20*l*. per fm. In the present end the lode is intersected by a cross-course, west of which it has not yet been seen. We are now driving by its side, and believe it to be equal in value as when last taken down, 20*l*. per fm." Here, again, we are laying open a very good piece of ground. Another point which I look upon as of very great importance is the cross-cut being driven south of the 166-fm. level in order to intersect what is known as the Good Luck lode. This cross-cut, as you will remember, was very strongly recommended both by our manager and also by some inspecting agents from the west of Cornwall. Therefore we have been driving this on as fast as we can. At 17 fms. the cross-cut should have intersected the lode, but these lodes become more vertical in depth, and that will explain why we have not intersected this lode. At the same time we shall continue this point, and the agent writes to me

THE GROUND HAS UNDERGONE A VERY GREAT CHANGE.

It is becoming highly mineralized, and any day this may come off. All we are doing in the upper levels is stoping, and is of about the same value as on the previous occasion. We are very sorry we have not a good lode at the bottom of the shaft, but at the same time I consider the two points I have mentioned, viz., the cross-cut at the 180 and the 166 south, very encouraging. Either of these points may come off any day, and put a very different complexion on our prospects. I beg to move "that the report and accounts as placed before you be received and adopted."

Mr. SIMMONS: Can you still take the copper away at the present price?

The CHAIRMAN: We return a very small amount of copper, all the copper being raised by tributers.

Mr. DONNETT: Could not the costs of the mine be reduced?

The CHAIRMAN: We have made up our minds, in consequence of the lower price of tin, to discontinue all dead-work operations above the 166. We shall then offer all the ground above that level to the same men who are working now upon tribute, and no tribute to exceed 13s. 4d. in the £. That will leave a small margin.

Mr. BAWDEN: I have much pleasure in seconding the motion that the report and accounts be adopted. I think the right course is being pursued at the mine. The ground appears to be a little disappointing in the bottom of the shaft, but all I can say is

PUSH ON SINKING

as fast as you possible can. Get down to the junction of the Good-luck lode with the Prince of Wales lode, and you will then see what that makes, and I should say something good should come of it. I

quite agree that the stoping above the 166 should be offered on tribute.

Mr. DONNETT: Would it not be better to leave off working levels that do not pay?

The CHAIRMAN: Should unfortunately this cross-cut not intersect anything of value, it is our intention to sink the shaft as fast as possible. We can sink another 10 fms. as easily as possible. I am confident we have got a good mine.

The motion was then carried unanimously.

FINANCE.

The CHAIRMAN: The next business is the matter of finance. You see our liabilities over assets are 2,794*l*. We ought to have made a larger call last time than we did, but the committee thought we should have better results from our tin sales, and we made a call of 3s., instead of 3s. 6d. or 4s. We can postpone the evil day no longer, and we must ask you for a call of 4s. a share. I hope some one will make that proposition from the other side.

Mr. BAWDEN proposed a call of 4s. a share.

Mr. WENDOVER seconded the motion, which was carried unanimously.

Mr. BAWDEN called attention to the large amount standing in the account as arrears of calls.

The CHAIRMAN: The only amount that we can take any notice of is 186*l*. 19s., because 783*l*. 12s. is from the last call only. I need not remind gentlemen of the bad times we have been going through in the City of London, and also in the country, which has been indirectly affected. We have a splendid body of shareholders, and I feel confident the bulk of this call will be coming in during next month. In the meantime it is necessary we should have our credit good, and our bankers have a very good opinion of us. Before this we have had power to overdraw to the extent of 2,000*l*., but it ought to be more. If shareholders pay up their calls promptly we should not require it, but we can hardly expect that, and, therefore, we ask you to sanction an overdraft of 3,000*l*. instead of 2,000*l*. It will strengthen our position with the merchants, as well as with the bankers. I propose, "That the committee be authorised to overdraw the banking account to the extent of 3,000*l*., instead of 2,000*l*., as before."

Mr. SIMMONS: What do they charge?

The CHAIRMAN: 5 per cent. on the amount overdrawn, and even when the bank rate was 6 per cent. they did not charge us any more.

Mr. SIMMONS seconded the resolution, which was carried unanimously.

A vote of thanks to the chairman closed the proceedings.

ST. JOHN DEL REY MINING CO., LIMITED.

A CAPITAL OF £150,000 WILL BE REQUIRED—THE MONEY WILL BE SPENT IN GOING FOR A CERTAINTY, AND WILL EQUIP THE MINE UNDERGROUND AND AT SURFACE WITH THE BEST AND LATEST QUARTZ-WINNING AND GOLD-SAVING APPLIANCES—A BOLD POLICY BY THE BOARD, AND A UNANIMOUS DECISION BY THE SHAREHOLDERS.

AN extraordinary general meeting of the shareholders was held at the City Terminus Hotel, on Thursday, "for the purpose of considering, and, if thought fit, authorising the raising of additional capital by either or both of the following methods, that is to say—(*a*) By the issue of debentures to such amount and upon and subject to such terms and conditions as to interest, conversion into shares, or otherwise, as may be thought fit. (*b*) By the creation of additional share capital in shares of such amount, and with such priorities, preferences, rights or privileges attached thereto as may be decided upon by the meeting."

John Hockin, Esq. (the chairman of the company), presided.

Mr. C. F. POOLE (assistant secretary) read the notice of meeting.

A CLEAR STATEMENT OF THE POSITION.

The CHAIRMAN, who was loudly applauded, said: Gentlemen, at the ordinary general meeting, held on the 18th December, we informed you that we would take the earliest opportunity of calling you together to lay before you the details of Mr. Chalmers' estimates of the sum required to put the mine into full complete working condition, and to recommend to you the mode we would suggest for raising the necessary moneys to enable us to carry out the work to that conclusion. I will, therefore, first go into the particulars of the estimate. Mr. Chalmers considers that in two years from the date of his letter—17th November—the lode will be properly opened, all necessary underground arrangements in order for the removal of the stone, pit-work fixed, dam level driven, dam fixed, and accumulation of water removed, at the same time everything on surface ready for the transport of the stone to the stamping mills, and the reduction department fully prepared for economically treating the ore. The cost for labour in sinking the shafts, driving the levels, materials used in those works, and fixing the pit-work, and all minor materials whilst carrying on these works, with the general expenses of the establishment, he estimates at 4,000*l*. a month. 3,300*l*. has been the average monthly cost for the last half-year, but an increased force will be necessary for excavation, for foundations, buildings and erecting the reduction works; therefore, two years at 4,000*l*. a month, equal to 96,000*l*. He estimates separately the cost of the heavy materials, such as timber, cement, iron, roofing and machinery, foundations of stamps in concrete, retaining walls, floors, 100 head of stamps, stonebreakers, amalgamation plant, and all necessary fittings, pipes, hurdy-gurdy wheels, and other motors for driving the stamps—indeed, a complete reduction plant for reducing the ore to the finest pulp, and for saving the utmost percentage of the gold, 25,144*l*.; the pit-work, or pumping machinery, with hydraulic engine to work the same, spalling floor engine, all necessary wire guides, wire ropes, cages, and fittings, 14,000*l*.; being a total of 135,544*l*.; debenture interest and London expenses, 4,000*l*.; and liabilities in Brazil, 10,000*l*—149,544*l*.; against which may be placed calls due, 25,000*l*.—124,544*l*.; and an unkown amount for gold which, during the past year, has been about 4,000*l*.; but this cannot be relied on to last through the next two years, so that the capital required cannot with safety be considered much under the last-named amount—124,544*l*. With regard to the mode we are to-day prepared to recommend you to adopt for raising this large sum, we have considered very carefully the opinions expressed at the last meeting, the letters we have received from the shareholders, both before and since, the views we are told that are held as regards preference shares not being sufficiently tempting, where some time has to elapse between their issue and a preferential dividend; and above all, our earnest desire to consult the convenience, and, as far as is prudent, to spare the pockets of the numerous old friends and supporters who have stood by us for the last two years. The result we have arrived at, after duly weighing all these considerations, is to offer to the shareholders, or to the public if desired, 10 per cent. mortgage debentures, to run for seven years, with the option of converting them into ordinary fully paid-up shares at par, and the directors having the power to pay them off with 10 per cent. premium, if the holders decline to convert them into shares when desired. The amount we propose to take power to issue is 150,000*l*., with a first and present issue of 60,000*l*., this being the minimum amount on which an allotment can be made. At the same time we take power to issue 180,000 ordinary shares of 1*l*. each to redeem these, and the other debentures of the company when the time arrives. These debentures will be secured by a first mortgage on the Morro Velho property, which, besides its unparallelled lode, proved for the last 45 years, and, as I shall show you when I come to speak more particularly of it, still containing great wealth, and now made vastly more valuable by the addition of improved economic machinery and the centralisation of the works. This being such indisputable security we trust they will be taken up largely by the proprietors, according to their holdings and means of doing so.

WHAT THE MORRO VELHO LODE HAS DONE.

We feel that all old shareholders have the fullest confidence in the mine, but we have a great many new shareholders, and from letters I receive from some of them I find many are uninformed as to its past history. On this I will say a few words in order to show them that we are not sinking these shafts and expending so largely for the purpose of erecting and laying out new and improved reduction works in search of a lode which may never be found; but that we are going down to what we know exists, and at an exactly defined point, where we left it only a short time ago in a condition to amply repay for the outlay. The lode has undergone little change as regards its course, dip and dimensions since it was first opened by the company in 1836. It has shortened, but at the same time widened. Its auriferous contents have varied considerably, but that has arisen more from the way in which it has been worked, than from the actual average contents of the whole formation. Before the fire in 1867, the average yield of the whole might be fairly taken at 4½ oits., or 10½ dwts. of gold per ton, and on this yield dividends were paid half-yearly during the 25 years—1842 (when the first dividend was paid) to 1867—amounting to 896,500*l*., or an average of 24 per cent. per annum. After the fire, on the mine being re-opened, by the sinking of shafts—as is now being done—dividends were paid, amounting to 556,600*l*., which if spread over the period of 12 years, when the last casualty occurred, would average over 19 per cent. per annum on the then increased capital. Unfortunately, the then shafts were continued on the lode, instead of outside of it, as we intend doing, and the consequence was that we had both water and timbering to contend with on a very large scale, and before long the old machinery became unequal to its work.

GROUNDS FOR FUTURE CONFIDENCE.

This inability to contend with these difficulties, and the heavy expense of working with uncentralised and uneconomical machinery had much to do with dividends falling off. The machinery was unequal to drawing sufficient ore; the weakness of the pumping machinery constantly interfered with the sinking of the sump; and the expenses rose to an amount out of all proportion to what it would have been with better machinery, and more economic surface arrangements. It is true also that, unfortunately, during two years of this period—1882-3 and 1883-4—a poor zone of the lode was met with, which had occasionally happened in the previous history of the lode, but during the following years—1884-5 and 1885-6—the recovery had been steady and continuous, amounting during the last year to 2½ dwts. per ton, which on the average output would give 25,000*l*. per annum on that increase alone. If, therefore, we find the lode equal in quality to what it was when last worked, viz., giving a yield of 4.5 oits, a little over ½ oz. per ton, no fear need be entertained, in my opinion, as to highly satisfactory results being obtained. The expenses from causes I have mentioned would certainly be greatly reduced, and the returns of gold would be large. I have been asked, why not confine our future expenditure to sinking the shafts only, until the lode has been proved? I hope I have already said enough to convince the meeting that the lode needs no proving, and, therefore, I cannot imagine a more fatal policy than to sink down on this well-known lode, and then have to wait—say 12 months—for the means of extracting the gold from it, incurring, of course, the heavy expenses of keeping up the establishment without any returns to meet these expenses. I have so lately given you an account of the good progress of the work of sinking, and, indeed, of all the work in progress at the mine, that I need say nothing further to-day than that the last accounts are most satisfactory. The sinking and driving for December, by telegram received on Tuesday, was again 30 fms. I read the resolution *pro formâ*, which Mr. Rogers will second:—"That the directors be authorised to borrow, or otherwise raise, for the purposes of the company, such sum or sums of money as they shall from time to time think proper (not exceeding in the aggregate the sum of 150,000*l*.), by the issue of debentures secured upon the undertaking of the company, and with or without a special mortgage upon the Morro Velho Estate of the company; and that such money be raised at such rate of interest, and upon such terms and provisions, and with or without such powers of conversion into shares of the company, as the directors may think fit." (Cheers.)

REASONS WHY DEBENTURES ARE PREFERABLE TO RE-CONSTRUCTION.

Mr. F. TIMEWELL ROGERS, J.P. (director): You have heard from Mr. Hockin the particulars of Mr. Chalmers' estimate, and no doubt, like every member of the board, you are surprised and alarmed at its magnitude. As a matter of course, no one would for a single moment entertain the idea of abandoning the task which we have undertaken, and which is, with the sole exception of finance, progressing so well and satisfactorily, although the amount which he estimates will be required is 125,000*l.* beyond our present capital; and we must remember that he also estimates that a very large saving will be effected in working expenses of not so little as 10,000*l.* per annum, or the interest on 100,000*l.* debentures at 10 per cent. On us falls the duty of recommending to you some mode of raising this huge sum, which really means, in some shape or the other, a 50 per cent. increase of our present capital, and we are unanimously of opinion that unless you adopt the plan which we now submit to you, there is nothing left for us but re-construction, and this we are, if possible, most anxious to avoid. We well know the inconvenience it will be to some, and we fear, I might almost say, the impossibility to others to take a similar amount of shares, with 10s. liability, in a new company as they hold in the present one; therefore, we are asking you to give us the power to issue 150,000*l.* mortgage debenture bonds, also 180,000 shares of 20s. each; but I must at once make the matter clear to you that these two amounts in reality form but one, as the issue of shares is intended as a means of paying off the debenture debts of the company at present incurred—30,000*l.*, and proposed mortgage debenture loan of 150,000*l.* This will explain to you the difference in the amount of the mortgage debenture loan proposed and the number of shares.

THE MORTGAGE.

We, therefore, propose that the Morro Velho estate, with the shafts, machinery, &c., should be mortgaged to the same three trustees as the Cuiaba estate is mortgaged, to secure the repayment of the 150,000*l.* net, and that mortgage debenture bonds shall be offered bearing 10 per cent. interest, the holders of these bonds to have the right of exchanging them at any time into ordinary paid-up shares in the company at par, the directors reserving to the company the right of calling on the holders to convert, and in case of their refusing to do so, paying them off with a bonus of 10 per cent., that is at the rate of 110*l.* for every 100*l.* mortgage debenture bond. We further call for power to increase the capital of the company by the issue of 180,000 shares of 1*l.* each, thus providing the necessary shares for conversion, if required, by the debenture-holders, or for issue as the case might be, thus providing the means of getting rid of the whole of the debenture debt incurred or to be incurred. Should this meet your approval we do not propose making any further call on the shares for the present, but to make a first issue of 60,000 of the mortgage debenture bonds, payable in four equal quarterly payments from March 1st, on which day the first instalment will become due. Looking at Mr. Chalmers' estimate this amount will, we hope, suffice to meet our payments up to February, 1892, and we shall as quickly as possible cause a circular form to be sent to each shareholder with a request that he or she will kindly return it to us, stating the amount he or she is willing to take of this first issue of 60,000*l.* The time for replies is fixed at seven days; it is very short, but it cannot be helped, as seeing the huge work we have in hand, and how unfair it would be to the subscribers to issue only a small portion of this loan, and ultimately to have to fall back on re-construction. It is absolutely necessary that the directors should know the amount on which they can rely, and on your replies will depend whether or not re-construction can be avoided. You will, doubtless, wish me to say when this 60,000*l.* is spent, what comes next.

ADDITIONAL FUNDS CAN EASILY BE RAISED.

As I said, we hope that 60,000*l.* will carry us to February, 1892, and it is fair to calculate that, barring accidents, we shall by the end of that month have sunk a further distance of 450 fms., 30 per month for 15 months, say 225 in each shaft; the D shaft would then be, say, 390 fm. deep, and the C shaft 366 fm., or one within six, and the other 30 fms. of the required depth, about one month's work. Now, on the occasion of sinking the last shafts, when the deepest was not 6 fms., but five months' work from the lode, and the other not 30 fms. (one month) but eight months' work from the lode, the then directors offered the shareholders fresh capital at par, and what little was not taken up was sold at over 50 per cent. premium, or over 30s. each for 1*l.* shares. Of course, I cannot say it will be the same this time, but why it should not I cannot see. History repeats itself; but say they are only at 4s. or 5s. premium, might we not, instead of issuing more debentures, be able to issue shares at par, *pro rata*, and thus realise money to go on with — or can anyone believe that if our shares were anywhere near par there would be any difficulty with a further issue of the mortgage debentures? Do you not think with me that with our shafts down that depth, if our own shareholders will not take them outsiders will only be too glad to do so, and join the company on such terms? I believe that, barring accidents, our crucial time is *now*. I think *now* is the great pinch; let us get over this bar and we shall be, so to speak, in smooth water, and I think it is not too sanguine to hope that this issue of 60,000*l.* will put us there, as when we are down at the lode or near it, our shares will be at such a price in the market that we shall not find any great difficulty in making a further issue of the mortgage debenture loan, if, indeed, we cannot issue shares instead. I would invite the shareholders' attention to the fact that if re-construction takes place it will fall very hard on some, as in that case there must be power to forfeit all shares that are not applied for within a given date, that they might be allotted to others who will take them up, and more; each shareholder will have to undertake a liability of, at the least, 10s. per share, or 50 per cent. of his present capital, payable whenever the calls may be made, or lose all he has put into the company, except the trumpery price he might be able to get for his shares on the face of re-construction, whereas by making an effort now, and accepting a present liability of about 25 per cent. in debentures, payable over the year, he pulls the company through this difficulty, he saves his shares, and from the fact of being so much nearer the lode at the end of the year, he almost ensures the certainty of raising all the capital that will be required to finish the machinery, lay open the lode, &c., without difficulty, and very probably may be himself in a position to accept a further liability of 25 per cent. in debentures, or should the market price of the day warrant it in the issue of shares.

NOT MAD, BUT REASONABLE.

At our last meeting my friend, Mr. Tendron, told you I was a man of strong will—a great compliment, for which I heartily thank him; but he also told you I was mad on debentures; he must pardon my saying that is not quite correct. I do not like debentures, they have a happy knack of falling due at the most inconvenient times, and I look upon them as a great evil; but "of two evils choose the less," and when we considered that we should have to raise from 60,000*l.* to 80,000*l.* only, and it was proposed to give half of our future profits to preference shares for that amount, so that if the original shares received 10 per cent. the preference would receive 30 per cent., I certainly preferred the lesser evil, and stood firm for 10 per cent. mortgage debentures. Of course, when the amount required proved to be so very much larger, the idea of preference shares was at an end, and nothing but re-construction appeared to stare us in the face; still I felt very strongly indeed that it was our duty, before committing ourselves to re-construction, to give you the opportunity of raising the necessary capital without such a drastic remedy, and I must thank my colleagues very heartily for consenting to lay this plan of debentures before you, which we think the most feasible one, under the circumstances, we can propose.

RE-CONSTRUCTION SHOULD BE AVOIDED.

We are all desirous of avoiding re-construction. We believe that if you subscribe the 60,000*l.* we are now asking you for, there will be but little difficulty in making another issue when required—say in a year hence—of either more debentures or shares. We believe by adopting this course all will avoid the forfeiture of any of their shares; we believe that the saving in the future working expenses will be at the least 10,000*l.* per annum, and I, therefore, entreat you most earnestly to adopt these resolutions, and having done so to at once undertake the liability to provide the 60,000*l.* we are asking you for. It is only right, however, to tell you plainly that by reconstruction you will save a large item of something like 10,000*l.* or 12,000*l.* in interest on the debentures, and in both cases you will be liable for the remaining calls, 1s. 6d., on your present shares. I am not aware that there is much more that I can say, except to urge on every shareholder to remember that on his or her responses to this appeal rests the decision as to whether or not this company shall again pass through the throes of re-construction. If you subscribe the money, well and good; if not, we cannot help ourselves. Should your replies be what I hope they will, let me entreat you to fill in your forms in a liberal spirit, for bear in mind there are certain to be amongst a proprietary of nearly 900 some who cannot possibly find the means—executors and others; therefore, I would make a special appeal to the smaller shareholders not to confine their applications to their *pro rata* amount, which would be a little over 100*l.* debenture for every 400 shares, but rather let them apply for double. Some of the larger shareholders will have quite enough to do to take their quota, but to others, I would say, look at what a good speculative security (a mortgage of one of the finest gold mines in the world for so small a sum, and 10 per cent. interest on your money, with option of conversion) we are offering you, and out of your abundance help your weaker brethren by subscribing liberally, and at the same time increase your own wealth. Gentlemen, the directors have done their duty by offering you a means of escape. I have endeavoured to do mine by urging you to avail yourselves of it, and must ask you to excuse my not having done it in a more perfect manner, and it now rests with you next week to do yours by subscribing the first issue of 60,000*l.*, and remember if you will not help yourselves over this great pinch you cannot expect others to help you. (Cheers.)

The CHAIRMAN then invited discussion.

SHAREHOLDERS ASK QUESTIONS.

Mr. DONAGAN: Is it intended that the debentures should be paid in full at once, or that the amounts should be called up by instalments? It will save interest to have the money only called as wanted.

The CHAIRMAN: There will be four different instalments. (Hear, hear.)

A SHAREHOLDER: What is the amount of each debenture?

Mr. ROGERS: They are divisible in sums of 10*l.* and upwards.

Mr. TENDRON: I will just say a few words in support of this resolution.

Dr. PARSONS: Allow me first to ask—is the security on the Morro Velho only? Is there a first charge upon Cuiaba?

The CHAIRMAN: Morro Velho is the most valuable part of the property. That, in fact, is the whole of the property we can mortgage, for debentures are issued only upon Cuiaba.

Dr. PARSONS: Then they will really be a first charge upon the property. (Hear, hear.)

BOARD WILL NOT ALLOT UNDER 60,000*l.*

Mr. TENDRON: There are certain trustees for the existing debenture-holders, and they have a mortgage on Cuiaba. We have mortgaged Cuiaba to those who will only come second to the one we now propose on Morro Velho. Holders of a mortgage on one part of a property have a reversionary claim on other property, and that is the case with those who hold the mortgage on Cuiaba, but I want this point to be very clearly understood by shareholders, that we shall uot issue or grant a mortgage for these properties, nor shall we utilise the money that may be paid in, unless the whole 60,000*l.* is taken up. It is not the least use our going on and breaking down in a few months through insufficient means. Therefore, the whole of the 60,000*l.* must be subscribed. If it is not we shall return the money in full, if we do not carry out this scheme. The great argument of Mr. Rogers is this, that you will find it very much easier to get the balance of the money when you are close to the lode than you may find it now. At the same time, it is a strong point with us, even at the present time, that we have done nearly all the surface work for carrying us down, and

WE ACTUALLY ARE DOWN HALF WAY.

Most of you know the Monument by sight, and, perhaps, two or three of you in your earlier days have made the ascent. Well, the work that we have undertaken is to sink through hard rock 12 times the

length of the Monument, and as nearly as possible the dimensions of the Monument. It is a colossal work, and it will reflect great credit on the company and all connected with it if carried to a successful issue. We must not break down through the fault of the directors. We must do our best, and Mr. Rogers has placed the matter very fairly before you when he says that you will lighten the charge upon yourselves at the present time by subscribing for these debentures, and will put the company in a much better position for raising the balance of the money required at a future time. The claim on each one amounts to about one-fourth of his present holding, and those who have small holdings may apply for a larger number of debentures if they wish to do so. We shall protect those who come forward, because we shall not expend their money unless we see we have the whole of the 60,000*l.*, and, as far as we can calculate, that will carry us down very close to the lode in at least one shaft, even if it does not carry us down sufficient to drive a level to reach it. If we could have shown you some samples from the lode on the table to-day, there would not have been much difficulty in getting the balance of the money required. (Cheers and laughter.) We have made a clean breast of the whole matter. We have not concealed the enormous amount of money that is required, which was a perfect staggerer to us. We thought 70,000*l.* or 80,000*l.* would carry us through, but had little idea that a sum of money so much larger would be required when we talked the matter over six or eight months ago.

MR. CHALMERS RIGHT.

I quite agree with Mr. Chalmers, we must have entirely new reduction works. We must have the most modern machinery placed in a central position where the ore can be carried to it at little expense. The advantage of the debenture scheme is this, that the 60,000*l.* you will have raised will be used mainly in sinking as fast as possible, and in preparing foundations for the reduction plant. We shall not order it at present, because we will hope, at all events, by getting all the foundations ready and preparatory work of that kind, not to incur much delay when we once succeed in reaching the lode. I hope the shareholders have grasped the point that 60,000*l.* will not be the limit of our requirements. It is the limit of them for the next 12 or 15 months, and by the end of that time, if we only go on as we have been going for some time, we shall be very close to the lode. I do not think you will have any hesitation in passing the resolution, and I hope you will have the courage to enable us by this means to go on with our great work.

The CHAIRMAN: We propose to call up 10 per cent. on application and 15 per cent. on allotment, and the other 25 per cent. at periods of three months apart.

A SHAREHOLDER: Is this a first or second charge on the property?

The CHAIRMAN: A first charge on Morro Velho, and a second charge on Cuiaba. The previous debentures were upon Cuiaba.

A SHAREHOLDER: An alternative scheme was mentioned of preference shares in the event of this one breaking down, but it has not been named to-day—has it been abandoned?

Mr. TENDRON: The preference scheme was much the best, provided we had only required from 70,000*l.* to 100,000*l.*, but under a requirement of 150,000*l.* we found it would not do. There are only two schemes feasible—the one is that proposed by us to-day and the other is re-construction. The people who subscribed under the first scheme will have an absolute charge on Morro Velho itself, and will hold the keys of the position in regard to any future amount that may be required to carry the work to a successful issue. Each man must form his own opinion. I do not think there can be any opinion that if we get close to the lode (though we have a mortgage on the whole of Morro Velho) there will be any difficulty should further money be required to put complete the foundation that has been laid for the new stamps, because the expense of opening out the lode will be comparatively small.

RESOLUTION UNANIMOUSLY CARRIED.

The CHAIRMAN then put the resolution, which was carried, amidst cheers, with absolute unanimity.

The CHAIRMAN: The next resolution merely comes in for the purpose of enabling the debenture-holders to convert their debentures into shares and providing shares for that purpose. It may or may not be necessary to hold a second meeting with regard to this resolution that I am going to put; but if we do not succeed in raising the money by debentures then it will fall to the ground. The resolution is as follows:—

"That the capital of the company be increased by the creation of 180,000 shares, of 1*l.* each, ranking as ordinary shares *pari passu* with the existing capital of the company, and that the directors be authorised either to issue such shares in ordinary course, or to grant to any debenture-holders of the company the privilege of converting their debentures or any of them into shares at par, or subject to such terms and conditions as they may from time to time think fit."

Mr. TENDRON seconded the motion, which was also carried unanimously.

Mr. TENDRON: Mr. Rogers says that on the last occasion I called him a strong-willed man, and I will say on the present occasion he is a sanguine man. I do not think you recognise the full force of the powers we take. Mr. Rogers is strongly under the impression that in 12 or 15 months' time we shall be so near the lode that the shares that are now at a price of about 4s. or 5s. will be at 24s. or 25s. Should that be the case, then it will be time enough to issue these shares either to people who have advanced money for debentures, or with the money derived from others pay them off with 10 per cent. premium, or we can issue more debentures either at par or at a higher price.

CONFIDENCE IN THE MINE.

I think it must be a great comfort to the shareholders who have had to bear so much disappointment to see that a man so well informed as Mr. Rogers has such strong views about the future prosperity of the company. I think you seem to hold that view yourselves, for you have passed the resolutions unanimously. (Cheers.) We trust the good feeling just manifested will be exemplified still further in good works, and that before long we shall receive plenty of applications for these debentures.

Mr. DONAGAN: I beg to propose a vote of thanks to the chairman and directors. (Cheers.) So many circumstances were mentioned in favour of the debenture scheme that I thought it best not to interfere in the matter any further, and to let that scheme have a chance I must say the way in which it has been elaborated and put before us seems to lead to the hope that it will be successful. But when you vote in favour of debentures, bear in mind you do not do so in order that somebody else will take them up, but that you yourselves, individually, to be logical, must take up your proportion of the debentures under the scheme for which you have voted. I think your directors deserve every thanks for the explicit and frank way in which they have stated affairs, and I hope that the good fortune which has been presaged by Mr. Rogers may be realised within the next 12 months, and that we shall see the shares at the price he has indicated. (Cheers.)

Field-Marshal Sir FREDERICK HAYNES: I have great pleasure in seconding this motion. I think it must be admitted that the sense of the meeting could not be more strongly shown as voting confidence in the directors than it has been by carrying with absolute unanimity the large scheme which has been submitted to this meeting. (Cheers.)

The motion was carried by acclamation.

The CHAIRMAN: I am much obliged to you for the confidence you have expressed in us, and take it as a further sign of that confidence that you have carried our proposals unanimously. (Cheers.) I only trust now you will come forward and send in to the bank your applications as soon as possible. (Cheers.)

LATEST TELEGRAM.

The directors have received the following telegram from the mines, dated Rio de Janeiro, 5th January, 1891:—"29 fms. sunk, 1 ditto driven, during December."

THE NOOITGEDACHT ESTATE AND GOLD MINING CO., LIMITED.

THE PRESENT POSITION OF THE COMPANY DETAILED BY THE CHAIRMAN AND MR. DAVIDSON—THE QUESTION OF THE TREATMENT OF THE REFRACTORY ORES.

THE first annual general meeting of the Nooitgedacht Estate and Gold Mining Company, Limited, was held at the City Terminus Hotel, Cannon Street, E.C., on Tuesday, 30th December, 1890, to receive the report of the directors and the statement of accounts to 30th September, 1890, to elect auditors in place of those retiring, and to transact the general business of the company.

Mr. C. Chaloner Smith presided.

Mr. C. S. C. WATKINS (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

EXHAUSTIVE STATEMENT.

The CHAIRMAN said the directors had taken considerable trouble in making the statement in the report as clear as possible, so as to give the shareholders just the same information as was known to the directors themselves. It was impossible for him to add much, or indeed anything to the information contained in the report. He might just as well say one or two words, particularly as the prospectus shadowed forth very glowing prospects, and the disappointing result which had ensued, and if they were the sole company in South Africa in the position they found themselves, it would be far more disappointing, but many companies in South Africa were similarly placed. The company had up to the present been an experimental one, and they were still to a certain extent in that state, for with all their efforts they did not know absolutely how the mine would turn out. As the shareholders knew the real difficulty had been in reference to the refractory ore. They could not tell the shareholders anything more than was contained in the report—that was the difficulty with which they had to contend. It seemed to him that an improved method of treating this ore ought to be found, and he thought would be found, and if this were the case the company would be able to show very good results. The shareholders knew that in the early days of the company the directors heard contradictory reports as to the mine, and the board sent Mr. Boucher, mining engineer, to make a thorough report upon the mine. He (the chairman) personally interviewed that gentleman, and had great confidence in him. The directors instructed him to report exactly what he thought of the mine. You all obtained his report—it was a very clear one, and in consequence of that report a great number added to their holding. Mr. Boucher himself was so satisfied that he took a considerable number of shares, and the directors had still no reason to doubt their confidence in Mr. Boucher. He wished to make a few remarks as to the price of the mine.

PRICE OF THE MINE.

People talked about too much having been given for the mine. He would simply mention the fact that when they took over the mine it gave great annoyance to all the shareholders who were interested in the parent company, who thought it worth at least 50,000*l.* more. Persons may still say that we gave too much, but we have no reason to doubt what we considered at the time, and may be still, a very fair concession. All the directors could now do was to ask the shareholders to wait for a time. The directors were doing their best to develop the mine, and hoped when they had found the best method of treating the refractory ore they would meet under more favourable circumstances. He begged to move the adoption of the report and accounts.

THE TREATMENT OF THE ORE.

Mr. ALEX. DAVIDSON, in seconding the adoption of the report, said that Mr. Boucher's first report was made in 1889, and it was a very full and exhaustive one, and really gave a history of the mine up to the time the directors took over the property. The shareholders were thus put in the same position as the directors themselves. As shown upon that report, the mine was believed to be of a free-milling character, with the exception of one small portion. There could be no question of the *bonâ fide* of Mr. Boucher. He went thoroughly over the mine, and inspected it completely, and he (Mr. Davidson) believed he was correct in saying Mr. Boucher became the purchaser of a large number of shares above par. So far as regarded the wisdom of the directors in taking over the property at the price they did, no blame could be attached to them. The shareholders ought also to reflect that the assays which were carried

out by the experts sent to the mine, and by their own milling assistants, showed that there was a large amount of gold in the mine, although when operations were first started it was not discovered that the gold was of such a character that it could not be got out without improved machinery. It was clear from the nature of the ore that the company would have to adopt roasting machinery or chlorination if they were to obtain the full benefit from the ore. Mr. Boucher showed in his report that there was a very large amount of reserve at the time he visited the property in 1889, and the rate of progress had been general throughout; the portion of the mine that had been opened up had been very great. At the last statutory meeting their consulting engineer, who spoke, mentioned the exceedingly high rate of progress, which at that time was from 300 to 400 ft. a month. Since that period the progress had been still greater, sometimes at the rate of 400 or 600 ft. a month. They had there an enormous deposit of reef, which opened up a very large extent, that was to say, the development of it had been kept well ahead of the possible milling power for a very long time.

NO NEED FOR DEPRESSION.

If they combined this with the fact that the assays had stood well, and did so at the present time, there was no need to be so disappointed as the price of the shares would seem to indicate. On the last occasion the consulting engineer mentioned the fact of the low cost of mining and milling on the property. The original estimate of Mr. Sweet had been confirmed by Mr. Boucher, and in his report stated the mining and milling came to 12s. a ton. It is right to give honour to whom honour is due. The mining and milling had been tested by a process known as the "long haulage system." They believed the adoption of this process was quite unique in South Africa. The process was largely in vogue in coal mines, but had not been used previously in gold mines. During the whole of the time the development went on the milling was continued uninterruptedly. The first crushing of November was exceedingly disappointing to the manager and to them in England. The manager then told them that if he did not get better results in the succeeding month or so he would require to put himself in the directors' hands in order to get instructions. It was true the following month was better, but the directors then engaged Mr. Eissler, a well-known expert, to go out to the property. He did so and a great deal of time was thus lost.

ACCIDENTS AND ILLNESS.

The foundations gave way and he had to refound the mill. This threw them back again. In order to fill up his time Mr. Eissler crushed the ore in an experimental fashion, taking some from some part of the mine and some from other parts, thus seeing what could be done with the various portions of the property. They put the mill entirely under his charge. The company were further handicapped in getting any returns on account of the labour difficulty which prevailed during the whole time he was there, and accentuated by the influenza. During his last stay at the mine the labour was short. It was after Mr. Eissler had left that Mr. Sweet resumed charge, and he was fortunate the first month in getting a larger accession of labour which enabled him to mine a larger quantity of good ore and crushed it with good result, but as further in depth he went he found the ore more and more refactory. He would read one or two extracts from his letters, but before doing so he would read the opinion expressed by Mr. Eissler after five or six months residence at the property. Mr. Eissler says: "I am going away satisfied that the ore in the present shoot must come from some source deeper in the hill, and when you strike this body you will have an excellent property. It would be absurd to think that a reef extending for miles through the country will give out at 400 ft. to 500 ft. in depth, especially as you have proven that on your property Button's reef carries more or less gold for 1,500 ft. in length, and Davidson reef shows gold 5,000 ft. from the present place of working; so I consider that it is a question of exploration and careful sampling, so as to ascertain where the payable ore bodies lie." Then Mr. Sweet, writing on November 24th, said: "The blanket concentrates we are at present treating in the pan arasta, with what result I shall not be able to say until the end of the present month, when the pan will be cleaned out. I am afraid, without previously roasting in a revolving reverberatory furnace, we shall not obtain a fair amount of the gold, but with calcination I feel certain of being able to extract 75 per cent. of the gold contained in the ore from any part of the mine; of fuel we have an abundance, so that roasting can be carried on cheaply. I will cable you in as few words as possible at the end of the month whether this new *modus operandi* is successful or not."

LARGE HOLDING OF THE BOARD.

Then he added: "The mine is looking very well indeed. At Button's the lode in the new level is 1½ ft., and is composed of laminated quartz of much better grade than anything we have yet met here. The 400-ft. level west of No. 3 main level shows also a good vein of ore, and being our deepest level, the permanency of the ore body in this section is pretty well established." In a letter received that morning, Mr. Sweet said:—"That the blankets concentrate the stuff well is shown by the following experiment: During 24 hours we crushed 20 tons quarts, assaying 17½ dwts. per ton, or containing 17½ ozs. bullion." Of course, none of these processes might be the best, and the best one had yet perhaps to be found. There were newer processes which were said to be very successful, all of which might be applicable to their mine. Before sitting down he would like to say a word or two about the interest the board took in the company. Their interest was pretty clearly shown by the number of shares they held. It appeared that amongst themselves and their immediate friends they held 24,965 shares. The shareholders had thus the best guarantee the directors would work in their interest. Everyone of these shares had been paid for by the directors. The vendors, the Gold Estates Company, also held 85,000 shares, and had not sold a single share.

QUESTIONS.

Mr. Rowley referred at some length to the circumstances under which the property of the company was purchased. He had prepared two resolutions, either of which he was willing to adopt as most agreeable to the directors. His first was that a committee of investigation be appointed; and his second proposition, that the consideration of the report be adjourned, with a request that the directors should formulate information as to the conditions under which the property was purchased. He also wished information as to the sum of 1,115*l.* charged for interest on purchase money.

Mr. Connoly wished to know if there was any objection to the directors publishing not only the ounces obtained, but the number of tons.

The Chairman, in reply, said that the sum charged for interest arose on account of the purchase money not being all paid down. The parent company accommodated their company with the money for a certain time, for the loan of which they, of course, paid interest. There were difficulties in the way of publishing the number of tons from which the assays were taken, owing to their inability to know how the stuff had been picked, and an unfair estimate might be given; and in reply to Mr. Rowley, he would say all the shareholders had been placed on the same footing in respect to information given by the directors.

Mr. H. E. M. Davies (a director) said that all information in reference to the purchase of the property could be obtained from the prospectus.

The propositions of Mr. Rowley not meeting with the approval of the shareholders, the motion for the adoption of the report was put to the meeting and carried.

DIRECTORS SET AN EXAMPLE.

The Chairman announced that the directors did not intend to take any further fees until the company was in a more satisfactory position. (Applause.)

Messrs. Turquand, Youngs, Weisse and Co., were re-appointed auditors.

A cordial vote of thanks to the chairman and directors terminated the proceedings.

THE JAY HAWK MINING CO., LIMITED.

A MINE IN WHICH DIRECTORS HOLD MORE THAN HALF THE SHARES—MR. PRIDEAUX, THE NEW MANAGER, WORKS HARD AND SENDS GOOD NEWS.

The statutory meeting was held at the Offices, on Monday.

The Hon. Ashley Ponsonby (chairman of the company) presided.

A. J. Lavington, Esq. (secretary *pro tem.*), read the notice of meeting.

THE NEW MANAGER AND HIS WORK.

The Chairman: Gentlemen, as you are aware, we are only called together for a statutory meeting, in conformity with the Act, but at the same time I think it may be interesting to you to know what we have done. You may be aware that we sent out Mr. Prideaux as our agent to take charge of the mine, mill and works—that is of the new property that has been purchased and paid for, and for which the United States patents are in our hands—the property being vested in the name of a company. We are very well satisfied with Mr. Prideaux, who is extremely energetic. He has sunk over 80 ft. in one month, which anyone accustomed to mining will acknowledge is very good work, and he has also timbered the shaft. He wants to go down at least another 60 ft. for the proper development of the mines. I do not want to take up your time, and, therefore, I prefer that you should hear from the secretary the latest reports from Capt. Prideaux rather than you should listen to them quoted by me second-hand.

MANAGER PLEASED WITH DEVELOPMENTS.

Mr. Lavington here read the following letter:—

15th December.—My last report was dated the 2nd inst., since which we have sunk 32 ft. The shaft is now 194 ft. from surface, and is still in the break. The ground is very unsettled; crevices and small water courses are frequently seen. The quartz is mixed with the country rock, but is beginning to be more mineralised, the assays showing 4 and 5 ozs. per ton. I have no doubt but that we shall find a good lode of ore when we get into more settled ground. Every indication points to there being a large course of mineral below us. I feel quite satisfied on this. It is only a question of time. We may cut it in a few days, or it may take us some weeks to do so. I have the air compressor and rock-drills ready, and on getting into the richer ore, I shall use them to drive the levels and stope the ore, thus ensuring a steady supply to keep the mill fully employed. The mill: This we can start to work in a short time; the only defect is the friction gear, which will, I expect, have to be replaced with pulleys, having longer hubs; these are now on the road from Chicago. I shall also lag up the driving pulley of the pan shafting, so as to increase the speed of the pans, without increasing the speed of the engine. I am under the impression that this increase of speed in the pans will enable us to save a higher percentage in the treatment of the ore. The company's property here, including the building, offices, houses, and machinery at the mine and mill, could not be replaced for $50,000. There is also machinery not in use, some of which is as good as new, worth over $5,000, and we have about $2,000 worth of supplies at the mill. I have, in fact, everything ready to handle a large quantity of ore. In my report of the 2nd inst., I mentioned about the Bonanza shaft. (See map). The only thing wanted to develop this portion of our property is a small engine. I think something ought to be done here, but perhaps you would rather defer it for the present. I say, in conclusion, that I feel confident there are great riches under this hill, and I am just as confident if there I can unearth them.—H. Prideaux.

A Shareholder: Does this apply to the new property?

The Chairman: Certainly; because we are concentrating our resources upon the new property, and as soon as we have that in working order we shall return to Jay Hawk, as we may be advised, for I believe it will be profitable by and by. A telegram from Capt. Prideaux is to the following effect:—

"The shaft has reached a depth of 226 ft. It must be continued another 60 ft. in order to develop deeper in the lode. Ground is getting more settled. Indications are favourable for rich ore. Everything now is in first-rate order. The last shipment of bullion realised $1,000."

POSITION REGARDED AS SATISFACTORY.

The Chairman: I think the position is very satisfactory, and certainly we are all very much pleased with Capt. Prideaux, who came

to us highly recommended, and who is known to our secretary, Mr. Lavington.

Mr. LAVINGTON: Capt. Prideaux is a gentleman whom I have employed three or four times to go out to various parts of the world, and I have always found him both straightforward and energetic, and his work satisfactory in every business upon which he has been engaged for me. I have known him for 15 or 16 years, and have a very high opinion not only of his ability, but of his straightforwardness and energy. (Hear, hear.) I feel quite sure from my personal knowledge of him, and the recommendations we had with him that he will be reliable, that he will give the shareholders every satisfaction, and by his work yet prove the property to be a good one.

The CHAIRMAN: I think we have now told you everything we ourselves know.

A SHAREHOLDER: Has there been any remittance from sales of ore? I thought the secretary read from the telegram that there was a remittance on the road.

The CHAIRMAN: Nothing has been sold from Jay Hawk, and we are concentrating our efforts upon the other mine. No remittances are coming at present.

A SHAREHOLDER: What is the distance from Jay Hawk to the other mine, and what are the means of conveyance?

Mr. LAVINGTON: There is a railway, but the mines are 140 and 150 miles distant. It would be impossible under one management to work the two.

A SHAREHOLDER: It will be interesting to the shareholders to know that they will not be in the dark as to whether both will be worked or only one.

Mr. LAVINGTON: Capt. Prideaux recommends nothing to be done at present on Jay Hawk proper. It seems that Jay Gould Mine near it has been worked out and shut down, and he does not recommend that we should undertake any work there for some time yet, though hereafter he may have a further recommendation to give us in the matter.

A SHAREHOLDER: In case you get further news by wire or letter will you send it to the mining papers?

The CHAIRMAN: Certainly we shall; but at present we have not had anthing worth sending.

Mr. LAVINGTON: The reports will be received regularly in future, and I will send them to the papers.

BIG HOLDING OF THE BOARD.

A SHAREHOLDER proposed a vote of thanks to the chairman for presiding, and a DIRECTOR, in reply, took occasion to observe that the board and their friends held more than half the shares of the company.

SOUTH CONDURROW MINE.

MR. MARSHALL RECAPITULATES, AND SHOWS THAT IN THE PAST 15 YEARS THE SHAREHOLDERS HAVE RECEIVED IN DIVIDENDS £17 4s. 8d. PER SHARE—HE GIVES REASONS TO JUSTIFY THE BELIEF THAT THE NEXT 15 YEARS ARE LIKELY TO BE EQUALLY PROSPEROUS.

A MEETING of this company was held at the Offices, 20, Great St. Helens, E.C., on Tuesday.

H. J. Marshall, Esq. (chairman of the company), presided.

CREDIT BALANCE OF 2,762*l*.

The notice calling the meeting was read by Mr. EDWIN F. COLMER, and also the statement of accounts. The latter showed that charging costs to 29th November the total expenditure had been 6,890*l*. 2s. 4d.; the tin sales from 20th August to 20th December had realised 7,320*l*. 5s. 4d., showing a profit on the five months' working of 467*l*. 18s. 5d., and a credit balance in favour of the mine of 2,762*l*. 3s. 1d.

Mr. CHAS. CLARK: I regret to say that Capt. Rich is not able to be present to-day, but his report, dated the 2nd inst., I will now read to you.

REPORT OF THE AGENTS.

2nd January.—In sinking Marshall's shaft below the 123-fm. level we have recently passed through a lode having a north underlie, which has doubtless shifted Marshall's lode south, but it will be met with in deeper sinking, or by a short cross-cut; the shaft is now about 8 fms. below the 123-fm. level. We purpose sinking about 7 fms. deeper before driving north to intersect the new lode and the flat lode. We have recently enlarged Marshall's shaft from surface to the bottom, and have continued the sinking at the same time, and fixed a new and substantial skip-road, which will greatly facilitate the discharge of the stuff, and will enable us to raise the men by steam power from the bottom of the mine. The great tin lode has been intersected in the 123 north of Marshall's, and driven on east of the cross-course about 12 fms. We are now rising and stoping the back of this level, where the lode is worth 12*l*. per fm. The stope west of the winze below the 80, and higher up than the back of the 123, is worth 12*l*. per fm. We are working with the view of communicating these points, which, when effected, will give good ventilation, and open out a great stretch of ground on the line of the lode. The operations on the new lode west of the 123 are suspended; the lode in the back is poor, but there is good tinstone in the bottom of this level, which will be opened on when the lode is intersected in the next level below. The lode will be very near, if not actually in conjunction with the main tin lode in the proposed 138-fm. level, where we may reasonably expect good results. We are putting out a cross-cut north at the 70-fm. level east of King's shaft with the view of intersecting the tin lode north of the fault or heave between the 60 and the 70-fm. levels; we think there are some 3 fms. or 4 fms. more to drive. Two stopes in the bottom of the 60 east are worth 10*l*. per fm. each. Two stopes in the back of this level are worth 10*l*. and 12*l*. per fm. respectively. Two stopes in the back of the 50 east are worth together 18*l*. per fm. The 40 end east is worth 8*l*. per fm. Two stopes in the back of the 40 are worth 25*l*. per fm.—W. RICH, H. KING.

The CHAIRMAN: I beg to propose "That the accounts and agents' report now read be received and passed."

Mr. CHAS. CLARK: I second the motion.

Carried unanimously.

STORY OF THE YEAR,

The CHAIRMAN: Gentlemen, you will no doubt regret as much as I do that Capt. Rich is not able to be present to-day. I am happy to tell you that that is not on account of any personal illness, or mishap, but we have had the misfortune to lose the services of our under agent for about five months. Capt. King has been unable to attend to his work, so that Capt. Rich has had a great deal thrown upon his hands in consequence. Still, knowing as he does that the number of adventurers who attend our meetings in London is apt to be small, he asks that he might be excused from coming here on this occasion. This is our annual meeting, at which we are apt to look back upon the previous year's work, and generally to survey the situation. We find that the amount of tin sold during the past 12 months has been less by some 60 tons, and the amount realised also has been less by about 3,300*l*. The balance of profit has also been considerably less—2,997*l*., as compared with 5,370*l*. Granting that you agree to declare the dividend, we mean to propose to you our dividend for this year will be 7s. 6d., as compared with 16s. last year. As I think you all know from attending previous meetings, we have been rather disappointed so far in the western ground. Marshall's shaft was sunk upon a lode, which in its shallow levels turned out a great deal of tin, and which we naturally anticipated would continue to do so. We drove west upon it a considerable distance, meaning to communicate with Pendarves shaft, and make that our engine shaft, work through there and draw our stuff—in fact, in a word, make it our centre of operations. Those levels, however, have been disappointing, and the consequence has been that Pendarves shaft has not been sunk below the 50, and practically for the time it has been abandoned. We have, however, spent a good deal of money in widening Marshall's shaft in consequence, and making it a drawing shaft as well as an engine shaft, for which purpose it was not at first intended. That has cost a good deal of money, and much of the outlay has come into the present five months' account. It is now completed to the 123, and we have sunk, as you have heard by Capt. Rich's report, some 7 fms. below that. The work has been done in a very effective manner. Capt. Rich tells me, in his letter, it has all been timbered from the surface to the 123, with 6-in. timber, faced with iron, and a good large skip-road has been made capable of raising a large quantity of ore. This cost, of course, will not recur.

PROGRESS OF THE WORKINGS.

At our last meeting we rather anticipated, and, perhaps, led you to suppose, that before our present meeting we should have communicated at the 123 with our upper workings. Well, we have not done so in consequence of either a heave in the lode or an alteration in the direction of the underlie, which might almost be called a slide. Capt. Rich has sent a plan which explains the state of affairs (plan exhibited). The cross-cut was driven past a point where we expected to meet with the lode, and only in the cross-course were there such indications as might have meant that a lode had been passed through, but it hardly looked like an indication of what would have been expected in such a large lode as we had before. However, having passed the point at which intersection should have occurred, Capt. Rich went back and found the cross-cut had heaved the lode, and he shows in his plan the two points of intersection. After getting clear of the influence of the cross-course where he struck the lode and began to rise, he finds, on re-dialling, he has 20 fms. of ground to rise on the lode. Of course, that gives him more lodestuff available for producing mineral, but at the same time it will take so much longer to rise through it and obtain ventilation where it is wanted badly. The number of hands we can employ in this part of the mine is, for this reason, limited. His report I consider encouraging. Capt. Rich, as you very well know, is not accustomed—in fact, we cannot persuade him—to put a high value on any lode. Most of us think

HE RATHER UNDERVALUES HIS LODES

and his ends, but still you will have noticed that some of the stopes we are working in the old ground, and from which, in fact, we are drawing our dividends at the present moment, have improved. There are two stopes quoted at 25*l*. per fm. for the two. Two stopes at the bottom of the 60 are worth 10*l*. and 12*l*., and both will pay well. The stopes in the back of the 50 are also good. He is driving a cross-cut north at the 70 with a view to meet with the lode that has been thrown to the north by a heave, where he also may expect to find tin stuff. As soon as we have obtained ventilation we shall raise a good deal of stuff from the ground laid open in the western ground, which he now quotes as worth 12*l*. per fm. at each stope. We may fairly assume the ground between to be equally rich. Therefore, although we are

NOT ABLE TO SUGGEST THAT YOU SHOULD DECLARE AS GOOD A DIVIDEND

on this as on former occasions, I do not see in any of the facts I have laid before you ground for depression. We are not, I hope, within measurable distance of making calls yet. We can pay our way, show a profit, and declare a respectable dividend. Capt Rich's absence we shall all regret, but, on the other hand, it leaves me less tongue-tied in asking the meeting to pass a vote of thanks to him for the years of service he has given us, and the success he has achieved in dealing with this mine.

A BRILLIANT RETROSPECT.

It is now nearly 16 years (it was in November, 1874) that my colleague, Mr. Clark, and I took office, and that Capt. Rich was appointed manager of the mine, and we are now in January, 1891. In July, 1875, we paid our first dividend. Since that time we have had the good fortune, mainly in consequence of Capt. Rich's excellent management, to declare continuous dividends, and the sum we have divided has amounted to 17*l*. 2s. 8d. per share. (Cheers.) We mean to recommend to you a dividend of 2s. on this occasion, which will make

THE TOTAL DISTRIBUTION 17*l*. 4s. 8d.

paid since Capt. Rich joined the mine, and the least we can do in his absence is to convey to him from the shareholders a vote of thanks for the work he and those under him have done for us on the mine, and I hope you will agree to pass such a vote of thanks, and concur in the expression of the earnest wish the committee feel,

that he will long be spared to conduct this mine as faithfully and as successfully in the future as he has done in the past. You will have gathered from the accounts that the profit made during the five months is 467*l*. 18s. 4d., and a dividend of 2s. will absorb 612*l*. 6s. To pay that it will require us to draw 145*l*. from the reserve fund, still, however, leaving that fund handsomely over 2,000*l*. I now move "That a dividend of 2s. per 1-6123rd share be declared payable forthwith."

Mr. STRAUSS seconded the motion, which was carried unanimously.

Mr. STRAUSS: As far as we can see, is there any extra work to be done during the next quarter?

The CHAIRMAN: No, we have almost made all our extraordinary outlay. We have nothing now to do but sink and drive. We have about 8 fms. to sink before we cross-cut again, and then owing to the rapid underlay of the lode, probably all three lodes will come together either in our next level or very nearly below it. We expected to cut our flat lode in Marshall's shaft about the 145, granting that it maintained its underlie as seen in the 70 and 80. The underlie turning out to be greater, we may possibly cut it in the 135. Of course, there is the intermediate rich lode which we shall expect to meet with most certainly in the next level.

Mr. STRAUSS: I am sorry to hear that Capt. King is disabled from attending to his duties. Is he ill?

The CHAIRMAN: He has been ill for five months, and has just come back. He is a capital man, and an excellent servant, and everybody must hope that he will have health to long stay with us. Capt. Rich has put him at work on the surface until his health is restored. I shall be happy to adopt any amendment to improve this resolution, but what we wish is to make our agents understand that we are grateful to them for their energetic and skilful service. The resolution reads thus, "That a cordial vote of thanks be sent to Capt. Rich and the other agents of the mine for the services they have rendered."

TRIBUTE TO THE CHAIRMAN AND CAPT. RICH.

Mr. STRAUSS: I second that resolution, and think the shareholders ought to mention at the same time that it is about 16 years since Mr. Marshall was made a member of the committee, and I also believe that one of the first acts of his management was to appoint Capt. Rich to be the agent, so that we owe our good fortune during the last 16 years both to Mr. Marshall and Capt. Rich. As for the latter, he is a personal friend of mine, and I feel justified in testifying to his high abilities as a miner, and his upright conduct as a man. One quality which I admire in him greatly is that mentioned by the chairman, that he never unduly puffs up a mine. If anything, he errs on the other side, and in these days such a quality should not be thought lightly of. It is always unpleasant for shareholders to be told that the mine does not turn out as they were promised it should, and I think if other managers were to follow his example and, if anything, rather under-value than over-value the lodes, the advantage would be to them, to the shareholders, and to mining generally. (Hear, hear.) At present we are not quite in such a happy mood as we were some time ago, but I have full confidence that under the management of Capt. Rich and our able chairman the time will soon come when we shall be able to declare larger dividends. I have certainly this faith in the mine, that if anything can be got out of it the chairman and Capt. Rich are the men to get it out. I was also pleased to hear that our under agent, Capt. King, is fairly convalescent, and trust we shall long retain his services, for, as I understand, he is a very able and industrious man, who services we can ill spare.

The resolution was carried unanimously.

COMMITTEE RE-ELECTED AND THANKED.

Mr. HORSELY proposed the re-election of the committee of management.

Mr. STRAUSS seconded the motion, which was carried unanimously.

The CHAIRMAN: For my colleagues and myself, I again tender you our hearty thanks for this fresh testimony of your confidenoe. I am sorry to say that Genl. Shipley is laid up in Warwickshire by the severity of the weather, which has affected so many others adversely. I hope we shall see him at our next meeting, which will take place the first fortnight in April.

Mr. SUCKLING: We have to thank Mr. Marshall for his courteous and able conduct in the chair to-day. We all appreciate his services very much. We have also to thank the committee.

Mr. STRAUSS seconded the motion, which was carried unanimously.

The CHAIRMAN: It is very good of you to carry this motion. My services are most willingly given, and always have been. I trust we shall have many another pleasant meeting of South Condurrow Mine, and that we shall pay larger dividends again. (Cheers.)

WHEAL CREBOR.

A PROFIT OF £288—THE MINE LOOKING WELL—LIBERAL CONCESSION BY THE DUKE OF BEDFORD.

A MEETING of the adventurers in this mine was held on Thursday, 8th January, at the Offices, Gracechurch Buildings, Gracechurch Street, E.C.

Mr. John Schofield (chairman) presided.

Mr. C. B. PARRY (secretary) read the notice convening the meeting and the minutes of the previous meeting, which were confirmed.

The report and accounts were taken as read.

THE MINE CONTINUES GOOD.

The CHAIRMAN: I do not know that there is very much to be said about the mine except that it continues to look as well, if not better, than it did at the last meeting. Our raisings have not been quite equal to our expectations from various causes, which do not at all arise from non-productiveness of the mine. The price of copper has fallen somewhat, our last sale of ore being about 11s. 9d. per ton less than the preceding sale. A portion of that depreciation is no doubt attributable to the fact that the ore is not quite as good, so that we may reckon 10s. per ton as the fall in the price of copper, which has been from 58*l*. 10s. to 53*l*. since the last meeting in September. I do not know that there is any ground for expecting that the fall in the price of copper will continue, although yesterday there was a slight fall, but to-day there has been a reductiou in the bank rate of discount from 5 per cent. to 4 per cent., which I hope will have a beneficial effect on the metal market. I do not understand the great fall that has taken place. The stock has been reduced since the commencement of 1888 from 104,105 tons to 65,366 tons in December last, being a reduction of 38,739 tons in two years. The average deliveries for the two years were 132,696 tons per annum, and the present visible stock is only 65,366 tons, which is a trifle less than what may be considered is equal to six months' deliveries. The visible stock in April, 1887, when copper was 37*l*. 10s. a ton, was 124,447 tons, nearly double the amount of the existing visible stock, and it, therefore, appears that the advance to 60*l*. a ton has not stimulated the production nor lessened the consumption. These figures I have taken from Messrs. Merton and Co.'s "Statistics of Copper," published a few days ago, and may be considered perfectly reliable, so that you will see the future of the copper market, apart from financial and trade disputes, points to the present price being maintained, if not materially advanced. There are two circumstances which have no doubt contributed to the consumption of copper during the past two years, viz., the progress of the electric lighting system, and also the manufacture of sulphate of copper, which is a most effectual remedy for a disease in vines called phyloxera. There is no doubt the demand for these two purposes is not fully developed by any means yet, and therefore I think

THE PROSPECTS OF COPPER OUGHT TO BE GOOD.

But, unfortunately, we cannot control these things, and the panic, which took place last August, no doubt had the effect of knocking it down in price. However, if we have no disturbances in financial or commercial circles we hope it may be recovered during the next few months. The accounts show a profit of 288*l*. 19s. 4d., which is very satisfactory, considering that the discovery which has produced it has not been of very long continuance, and that we had to take up the mine after Mr. Bawden had cleared it up, and we had perhaps some little extra expense in one way or another. We consider

THE PROFIT HAS BEEN FAIRLY AND HONESTLY EARNED,

and I hope that the next four months will see a considerable increase on that account. We cannot pledge ourselves to anything, but that is our view, and if it is realised I think the shareholders can congratulate themselves on the energy and perseverance which had been displayed. Mr. Bawden made this discovery from which we have derived this great benefit, and if he had not done it we possibly might not have done it; and I think the shareholders should congratulate themselves that they accepted Mr. Bawden's offer. There is another point, and that is the question of dues. Mr. Parry and myself went by appointment to see the agent of the Duke of Bedford, and as a result he relinquished the dues until September, 1892, and also the arrears of dues from September, 1889. to September, 1890, that is 12 months' arrears of dues, amounting to 80*l*., and the dues relinquished since amount to 244*l*. Therefore,

THE DUKE HAS MADE US A PRESENT

in 16 months of 332*l*. I consider his Grace's treatment of us has been very liberal, and deserves the cordial thanks of the shareholders. (Hear, hear.) I am very sorry to say that the same indifference in regard to home and Cornish mine shares continues. The further mines are away from a civilized state the more the British public seem to like them. I now beg to move "That the report and accounts be received and adopted."

Mr. WAGSTAFF seconded the motion.

Mr. BAWDEN thanked the chairman for the kind expressions he had used towards him. He desired to say that if the shareholders had not had the grace to give him two months' extra after he had made the discovery he would not have made a profit at all. As it was, the profit he made was not one-half the profit made during the last four months. If he had made the discovery a fortnight after he took the contract he would have profited to the tune of thousands; and if he had done so some people would have said, "Mr. Bawden knew all about this, and a fortnight after he takes the mine from us he makes a big discovery." The chairman had not told them that this discovery which had been made by him had been opened on 18 fms. up to the time of the report—it was probably 21 fms. now; but taking 18 fms. only, and the ordinary valuation of a lode, which was 5 fms. above and 5 fms. below the level, and taking that 10 fms. and the length as 18 fms., that would give

A THOUSAND TONS OF ORE LAID OPEN

and not a ton taken away. That could not be touched until the winze was put down to the 156, and the 10 fms. now left to drive had been connected with the winze. As soon as that 10 fms. had been driven they might reckon on increasing the returns considerably.

Mr. WAGSTAFF: How long will that be?

Mr. BAWDEN: It will be done within three months.

On the motion of the the CHAIRMAN, seconded by Lieut.-Col. W. W. CRAGG, a vote of thanks was passed to his Grace the Duke of Bedford for his liberal and generous concession.

The meeting closed with the usual vote of thanks to the chairman.

It is announced that the dividend warrants of the London, Edinburgh and Glasgow Assurance Company, Limited, at the rate of 5 per cent. per annum were posted on 1st inst.

THE directors of the Elephant and Castle Horse and Carriage Repository Company, Limited, have appointed Mr. Thomas Earle to the vacant seat at the board of that company.

HOLLOWAY'S PILLS.—Nervousness and want of Energy.—When first the nerves feel unstrung, and listlessness supplants energy, the time has come to take some such alterative as Holloway's Pills to restrain a disorder from developing itself into a disease. These excellent Pills correct all irregularities and weaknesses. They act so kindly, yet so energetically on the functions of digestion and assimilation, that the whole body is revived, the blood rendered purer, while the muscles become firmer and stronger, and the nervous and absorbent systems are invigorated. These Pills are suitable for all classes and all ages. They have a most marvellous effect on persons who are out of condition; they soon rectify whatever is in fault, restore strength to the body and confidence to the mind.

MINING MARKET.

CITY, FRIDAY EVENING.

PITY THE SORROWS OF THE POOR BROKER—A LIVELY WEEK ENDS IN A GENERAL ADVANCE IN PRICES—HOME MINES ON THE DOWN GRADE—THE OUTLOOK DECIDEDLY MORE HOPEFUL.

PITY the sorrows of the outside broker ! He tries to do the best he can. He argues from a close analogy of facts, and from a long experience of the markets, but very often the simplest causes set at nought his predictions, and bring down upon him the reproaches, not to say the imprecations, of his clients. Here, for example, is a good report, we will say, from the Mysore, followed by a brilliant crushing, and, of course, reasoning after the manner of men, he predicts that the shares will rise. They, however, do not rise ; on the contrary, they fall—not because he is wrong in his prophecy, but because some executor, or some person in need of cash throws a lot of shares on the market. "Oh !" writes his client, "Is this the result of your experience ? I bought Mysores on your advice for a rise, and the operation has been for the fall." Or it may be that Mysores show a slight falling off in the monthly yield, and there is a general inertness in the market. The prophetic broker thereupon thinks that now is the time to take up his parable or never, and so he writes to his client, "I think you will see these shares lower." Thereupon a sale is made, but probably, immediately afterwards the market has a substantial advance, owing to the entrance into it, in the character of a large buyer, of a person who thinks Mysores are decidedly too low. "Oh," writes another client, "I sold on your advice so as to buy back at lower rates, and behold, prices are higher, and I have missed a substantial rise. I shall go to another broker." What, under these circumstances, is the unfortunate broker to do but moodily anathematise the uncertainty of things in general, and the vagaries of mining shares in particular.

The market has acted very much in this wayward fashion during the past week. Some of the shares that it was thought would go up have most disobligingly gone the other way, whilst some of those that were held in little esteem have been active to a degree and close at higher rates.

Speaking generally, the market has been active, and prices show a distinct advance. Let us first of all take a bird's eye glance at Kaffirs. True, De Beers are quoted lower in the Diamond section, but it must be remembered these shares are now dealt in ex. div. Its contemporaries are all higher, and in the Land and Gold departments the falls are the exception, and the rises the rule. The crushings of the Randt companies have been received with more than usual favour by the public. We have, in a leader, brought all the facts into a pretty narrow focus, and almost a glance will show the actual position. Copper companies are up, Rio Tinto leading the procession made up of Namaqua, Mason and Barry, Cape Copper, Copiapo, and others.

Then in the Indian section, though there is little to record, yet that little is satisfactory. Goldfields of Mysore rose this afternoon, and Mysore and South-East Mysore are a shade firmer on the week, The calls made by Mysore Wynaad and Mysore West, which were announced by us last week, somewhat depressed the market, but the shareholders must know perfectly well that the directors cannot develop the Tank Block property unless they have the wherewithal to do it. The fall in Ooregum Ordinary is surprising, considering that most people are coming to think this to be the best mine in the Colar field. We publish this week a chart that cannot fail to be interesting and instructive to our readers. It gives a comparison of the crushings in 1890, of Mysore, Ooregum Nundydroog, and Balaghat, and all particulars connected with these much canvassed companies. In a subsequent issue we propose to give a similar chart confined exclusively to the Nundydroog Mine, but which will, when laid before our readers, give additional particulars similar to those in connection with the Mysore chart, published in the MINING WORLD of August 9th, 1890. A few of these charts are still available for *bona fide* shareholders in that company, and will be sent on receipt of a stamped envelope.

Wonders will never cease. In the Australian market Mount Morgan Extended at last shows an advance. Considering the good news from the mine, it is surprising that these shares remain at existing quotations. There has also been a fractional rise in Mosman and Etheridge ; but the tale would not be complete unless we record a fall in British Broken Hill, Cumberland and Kangarilla.

In the general market, with but few exceptions, prices have risen all round. West Indian affairs have now passed under the management of Messrs. John Taylor and Sons, and it is possibly to this that is to be attributed the circumstance that there have been dealings in these shares by the thousand. Callao Bis have also been in great demand, and there have been big dealings in Yuruari, for which we anticipate a sharp rise. Graskops were firmer after the meeting, and led also to a demaud for the shares of the neighbouring companies — Balkis and Lisbon Berlyn. Don Pedro shares have also been better, and many thousands of New Gold Hill shares have changed hands. There has also been an active market for Pahang Corporation, which showed a marked advance on the week ; for Yankee Girl, Tetuan, Colon, Palmarejo, and one or two others. Dickens Custer, Flagstaff, Golden Leaf and Richmond are down on the week. The general outlook in this department is extremely favourable.

Last of all we have to mention the Home market ; and here, indeed, may we say with Shakespeare, "What a fall is there, my countrymen !" Not a single rise is to be noted on the week. On the inclined plane there has not been a single share to arrest the downward speed of its contemporaries, Carn Brea leading off with a fall of 1½, and South Frances a bad second with a fall of half that amount. The Wheal Uny meeting to-day made the shareholders jump. The call should have been 7s. 6d., for Mr. Strauss was right in contending that the deficit should be paid, but a compromise was effected, and 7s. was the amount finally decided upon The expenses of this mine are simply awful. The coal bill alone costs over 600*l*. a month. Wheal Uny is not without encouraging indications, but the manager seems unable to hold out any prospect of a diminution in expenditure. The truth is, Wheal Uny is a wet mine, and has not only to pump its own water but that from the neighbouring sett of East Uny, which was stopped a long time ago. Copper has been dull at about 53½ ; tin, at 91½ ; and lead at round about 13.

In his circular for December Mr. Samuel James points with pardonable pride to 25 companies favourably mentioned by him in his last report, of which 10 have advanced in price, seven have remained stationary, and eight to a trifling extent have set at nought his predictions. The proportion of successes to losses is unusally large, and is creditable to his perspicacity, seeing how many con-

tingencies may arise which it is impossible to foresee. The present circular gives a good deal of information about mines in a concentrated form which must be valuable to the reader.

The outlook for business during the ensuing week, is decidedly better than it was when last we wrote.

KAFFIRS.

The market for these shares has been fairly good, and with the result of the December crushings (53,052 ozs.) there is every prospect that a speedy improvement in prices will take place. The public are regaining confidence in this market.

Piggs Peak have shown weakness, and to-day have been almost unsaleable. It is reported that the crushing is not so good. Johannesburg Pioneer improved on the announcement of the dividend. Langlaagte, Crown Reef, Heriot, Evelyn, and Jumpers have been enquired for.

Business :—A rise has to be noted in the following :—Aurora, ⅛ ; Bantjes, ¼ ; City and Suburban, ⅛ ; Crœsus, ⅛ ; Glencairn, 6d. ; Great Gold Zone, 6d. ; Henry Nourse, ⅝ ; Jubilee, ⅛ ; Jumpers, ¼ ; Langlaagte Block B, ⅛ ; Main Reef, 1/16 ; Moss Rose, 1/16 ; Royal, ¼ ; Salisbury, New, 2s. ; Stanhope, ⅜ ; Wemmer, ½ ; Witwatersrandt (Knight's), 3s. 6d. ; and Wolhuters, 1/16.

The following have declined :—Piggs Peak, Ordinary, ⅜ ; Piggs Peak, Preference, ¾ ; Battery Reef, 1/16 ; Ferreira, ½ ; Geldenhuis, ⅛ ; Heriot, ⅛ ; May Consolidated, 1s. ; and Robinson, ¼.

SOUTH AFRICAN LANDS.

There has been a slight improvement in many of these shares. Oceana, London and South African, Explorations, Transvaal Gold, and Chartered have all been freely dealt in, and prices seem likely to still further improve.

Explorings have been offered and prices are lower in consequence.

Business :—The following have advanced : Bechuanaland, ⅛ ; London and South African, ½ ; Oceana, ¼ ; Ophir, 6d. ; Read's Drift, ⅛ ; Silati River, 1s. ; Sutherland Reef, ⅛ ; and Transvaal Gold, 1s.

The only other changes are a fall in British South Africa Chartered of ⅛, and Exploring ½.

DIAMONDS.

Very little business has been transacted in this market. De Beers, which have been the most active, are now quoted xd.

Business :—A rise has taken place in New Jagersfontein of ⅛ and North Eastern Bultfontein, 3s. 6d. ; whilst a fall is recorded in Bultfontein Consolidated of 6d. ; De Beers, ¼ ; and Gordon, 1s.

INDIANS.

There is again a general feeling that these shares should be purchased, and at the prices now ruling there appears justification for such an opinion. Mysores are a shade better, but Ooregums are somewhat lower. A demand has set in for Goldfields, which close slightly firmer. Holders of these shares will do well to study the chart of these mines which is issued as a special supplement to this number.

Business.—The advances are Balaghat of 3d. ; Goldfields of Mysore, 1s. ; Mysore Gold, ⅛ ; and South-East Mysore, Preference, 6d. ; whilst the declines are Glenrock of 3d. ; Mysore-Wynaad, 3d. ; and Ooregum Ordinary, ¼.

AUSTRALIANS.

British Broken Hill and Kangarilla have been freely offered, and are lower in price, while Etheridge and Mount Morgan Extended are slightly firmer. There are no other changes to call for attention.

Business.—A fall is noted in British Broken Hill of ¼ ; Cumberland, 9d. ; Day Dawn Block, 3d. ; Kangarilla, 1/16 ; and Moruya, 3d. The only rise is in Etheridge, and Mosman of 3d. each ; and Mount Morgan Extended, 6d.

COPPER.

A much better feeling has been maintained for this class, and dealing has been free, with an upward tendency. Rio Tintos have as usual jumped up and down, but they close to-night firmer and higher than last week. Capes and Masons have also been enquired for, and are a shade higher.

Business: Capes have risen ⅛; Mason and Barry, ¼; Namaqua, ¼; and Rio Tinto, ⅝. Others of this class remain stationary.

GENERAL FOREIGN SHARES.

The sensation of the week has been the large amount of business doing in West Indian shares, which changed hands freely at one time at 2s. 3d., but on one dealer selling 23,000 in two days the price dropped somewhat. They close strong at 1s. 6d. to 1s. 9d.; Almada, Callao Bis, Flagstaff, and Palmarejo have received some attention. The last mentioned changed hands at ⅝, while Flagstaff have gone back a trifle. New Gold Hills have also been freely dealt in, at one time being in demand at 3s., bnt closing at 2s. 3d, 2s. 9d. Pahang Corporation have had a good rise, and, it is thought, will further improve. Lisbons rose to 5s. on some good bnying this morning, but do not close at their best. Golden Gates are again coming into favour at advanced prices. Richmonds have receded on account of heavy selling.

Business.—Those showing a rise are Don Pedro, 6d.; Golden Gate of ⅛; Idaho, 3d.; Lisbon-Berlyn, 1s.; New Gold Hill, 6d.; New Guston, ¼; New Russell, 3d.; Pahang Corporation, $\frac{5}{16}$; Palmarejo, 1s.; Spitzkop, 6d.; Tetuan, 6d.; Venezuelan-Austin. 3d.; West Argentine, 3d.; Yankee Girl, ⅛; and Yuruari, 3d.

The declines have been Aaron's Reef, 3d.; Dickens Custer, 6d.; Elmore, 6d.; Esmeralda, 3d.; Flagstaff, 9d.; Golden Leaf, 1s.; Kohinoor, 3d.; Richmond, ¼; St. John del Rey, 3d.; and Tesoro, 3d.

The following list shows the principal changes which have taken place :—

	Last Week.			This Week.

LATEST FROM THE MINES.

COLONIAL MINES.

BROKEN HILL PROPRIETARY.—For the week ending 8th inst. there were 5,374 tons of ore treated, yielding 1,075 tons of lead, containing 193,464 ozs. silver; the leaching plant realised 700 ozs.; making a total production of 194,164 ozs. silver.

HARRIETVILLE.—A telegram from the mines, dated 10th January, gives the result of 10 days' crushing :—"Cleaned up 9th January; 10 days' crushing, Mons Meg Mine, 332 tons, 152 ozs.; new lease, 170 tons, 42 ozs.; old copper plates 20 ozs."

MIDAS.—Cable from the mine :—"Yield for week, 57 ozs."

NEW QUEEN GOLD.—Warrants for the quarterly dividend to 31st December last have been posted.

FOREIGN MINES.

CORTEZ.—A cablegram from the superintendent at the mines shows the results for the month of December :—"Production, 39,437 ozs.; expenses, $15,168; tons crushed, 815; development expenditure, $2.622.

DICKENS CUSTER.—A call of 6d. per share has been made, payable on February 5th.

ELKHORN.—Cable information from Capt. Plnmmer :—"Bullion shipped for week ending 10th Jannary, 1891, $9,000."

EMMA.—The following cablegram has been received from the manager at the mine :—"Connection made on 4 ft. vein of iron and little first grade mixed; commenced drifting easterly; drift from Emma tunnel shows vein 3 ft.—1 ft. first grade, 15 ins. second grade, balance milling ore."

EMERALD MINES OF COLUMBIA.—Cable from the manager :—"Veins improve; crystals slightly coloured; pyrites larger; depth at bridge, 8 metres, rock."

OURO PRETO.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of November, which realised 5,312*l.* 6s. 6d.

RAUB AUSTRALIAN SYNDICATE, PAHANG.—A telegram from Singapore says :—"Manager at the Raub reports struck a reef 4 ft. thick, showing good gold, 1,000 ft. below present workings."

UNITED MEXICAN.—Telegram :—"San Cayetano : Gross retnrns for week ending 3rd January, $3,390; expenditnre for week ending 3rd January, $3,890; loss for week ending 3rd Jannary, $500. El Cubo : Gross returns for week ending 3rd January, $6,800; expenditnre for week ending 3rd January, $6,000; profit for week ending 3rd Jannary, $800.". Telegram :—"San Cayetano : Gross returns for week ending 10th January, $3,400; expenditure for week ending 10th Jannary, $3,790; loss for week ending 10th January, $390. El Cubo : Gross returns for week ending 10th January, $6,150; expenditure for week ending 10th January, $5,500; profit for week ending 10th January, $650. Profit on mill last month, $1,000.

VALLEY.—Cablegram from the manager at the mine :—"No rain yet; everything ready to begin work."

HOME MINES.

MANGANESE BRONZE AND BRASS.—The company has declared an interim dividend of 8s. per share for the half-year ending the 31st December last, payable on the 2nd March next.

WHEAL UNY.—At the meeting to-day a call of 7s. a share was made. Mr. Strauss urged that it should be 7s. 6d., so as to cover the deficit (4,323*l.*), but was outvoted.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

GIPSY QUEEN.—Cable : "150 tons crushed yielded 49 ozs."

WITWATERSRANDT.—The crushing for December yielded 400 ozs. from 1,600 tons.

BATTERY REEF.—Cable :—"Crushed 275 tons; obtained 132 ozs. of gold; 14 days."

CLUTHA.—Advices are just to hand announcing the third shipment of bullion, amounting to 114 ozs.

CRŒSUS.—A cable from Johannesburg is to the effect that the crushing for December was 314 ozs.

WEST BATTERY REEF.—Cable from the manager at the mine :—"Crushed 332 tons yielding 107 ozs. of gold; mill running eight days."

MOODIES EXPLORATION.—Cable : "356 claims rented or leased; 1,918 tons crushed by claimholders for December yielded 620 ozs. of gold."

GEORGE GOCH.—1,595 tons crushed; yield, 1,001 ozs. 6 dwts.; milling time, 20 days; value of gold, 3,504*l.* 11s.; less cost, 2,100*l.* 1s. 6d.; profit, 1,404*l.* 9s. 6d.

NI-WOT.—Cablegram from the manager :—"Have cleaned up after a week's run with 47 stamps; result, 145 ozs. amalgam; 12 tons concentrates and 12 tons smelting ore."

DURBAN ROODEPOORT.—A cablegram states that "25 stamps of the new battery have been started, and that the remainder will be started in a day or two."

LONDON AND SOUTH AFRICAN EXPLORATION.—The Supreme Court at Cape Town has, on appeal, given judgment in the company's favour in the action against the Companie Generale, thereby reversing the decision of the High Court at Kimberley in September last.

CROWN REEF.—The crushing for December during 27½ days of 24 hours was 5,296 tons, yielding 3,293 ozs. of smelted gold. The revenue for the month was 11,772*l.* 9s. 6d., and the working expenditure was 5,658*l.*, leaving a balance of profit for the month of

6,114*l.* 9s. 6d. The expenditure on capital account for the month was 941*l.*, making a total expenditure for the month of 6,599*l.*

Transvaal Gold Exploration.—Mines :—Brown's Hill. Nu vein : Ore extracted, 45 tons ; assay value, 2 ozs. 2 dwts. per ton from the main workings, and 20 tons, assay value, 10 ozs. gold per ton, from No. 1,210, about 300 yds. each of the main workings. In No. 1,209, adjoining No. 1,210, a small patch of very rich ore assayed 157 ozs. 11 dwts. gold per ton. This ore was being carefully separated for special treatment. It is not expected that more than a very small quantity of such rich ore will be obtained. The vein in the eastern workings looked very promising. Mill : All work at the battery was proceeding satisfactorily.

COMMERCIAL NOTES.

Metals.

The Metal market has been fairly active during the current week. Bar silver has improved to 48½d.

Copper has been steady. A large business has been done in Warrants from 51*l.* 17s. 6d cash, 52*l.* 7s. 6d. three months, up to 53*l.* cash, 53*l.* 10s. three months. To-day's prices are 53*l.* cash, and 53*l.* 10s. three months. The stocks in Liverpool and Swansea show a reduction of about 1,000 tons for the fortnight. We quote English tough, 57*l.* to 58*l.*; best selected, 58*l.* to 60*l.*; strong sheets, 65*l.* to 66*l.* India sheets, 60*l.* 10s. to 61*l.* 10s. Yellow metal, 6d. Ore, regulus, &c., 9s. 6d. to 10s. 9d. per unit. The total deliveries of copper from all parts were about 3,850 tons for the fortnight.

Tin has been fairly active. Straits improved from 90*l.* 17s. 6d. cash to 91*l.* 10s. cash, and three months from 91*l.* 7s. 6d. to 92*l.* To-day's prices are 91*l.* 10s. cash, and 92*l.* three months. The Dutch market has been steady at about 55fl. to 55¼fl. for Banca and Billiton. English ingots, 94*l.* 10s. to 95*l.*

Tin Plates are firm and quoted 17s. 9d. for ordinary coke Liverpool.

Spelter firm. Owing to the difficulties of navigation, and ordinary brands are quoted, 22*l.* 10s. to 22*l.* 15s. to arrive ; spot parcels sold at 22*l.* 15s. to 23*l.*

Lead steady, and soft Spanish quoted 12*l.* 15s. ; 12*l.* 17s. 6d ; soft English, 13*l.*; L.B. China pigs, 13*l.* 5s. to 13*l.* 10d. ; sheets, 14*l.* to 14*l.* 5s.

Quicksilver.—Rothschild reduced his price to 8*l.* 12s. 6d., at which a fair business was done ; seconds about 8*l.* 12s.

Antimony quiet. 71*l.* to 72*l.*, according to brand and time o f delivery.

Dividends Declared and Announced for Week Ending January 17th.

Amalgamated Dairies	8 per cent.
Anglo-American Telegraph, Ordinary	15 per cent.
Bank of Bolton	2½ per cent.
British and Foreign Marine Insurance	6s. per share.
Banco Nacional do Brazil	10 per cent.
Bristol Brewery	20½ per cent.
Birmingham District and Counties Bank	12½ per cent.
Central Pacific Railroad	$1 per share.
Cork, Bandon, and South Coast Railway	4½ per cent.

REVIEWS.

Heat as a Form of Energy. London : Wm. Heinemann.

This little work, by Dr. Robert H. Thurston, presents to the reader in simple popular language that outline of the growth of our modern philosophy of the form of energy which we call heat, which every intelligent person desires to become familiar with, even though his work may be entirely outside the precincts ascribed to the physicist and the man of science. In the opening chapter the author gives the ideas of ancient philosophers with regard to heat, pointing out that although those ideas were extremely crude they contained the germ of the modern science. Dr. Thurston, in an interesting manner, traces the first slow, then rapid, progress of physical sciences through and after the middle ages, noting the discovery of one logical fact, and one physical truth after another, and their union by natural law into a consistent and harmonious whole. He points out that the second half of the nineteenth century has seen the production of a new branch of science, that of Thermodynamics, which has given us a clue to the whole philosophy of the prime movers of the steam, air, and gas engines, and of the utilisation of the stored energy of our coal-beds, oil wells and forests. The development of the steam engine—"that most productive wonder of all the wonderful products of the brain of the mechanic and inventor"—is dealt with at considerable length. We recommend to our readers the perusal of this little volume which is replete with useful information.

Horncastle's List of New Companies.

The well-known aud enterprising firm of Horncastle and Co. have published a list of all new companies, loans, debenture issues, &c., advertised during the year 1890, which will be found useful to company promoters and others interested in finance.

Holloway's Almanac for 1891,

Besides containing a mass of general information, this *brochure* gives some useful hints as to gardening for each month and some instruction as to the preservation of health.

Stock Exchange Year Book. Thomas Skinner, 1, Royal Exchange Buildings, E.C.

This annual volume is now so widely known and valued by investors, that any lengthened review of it is superfluous. We will therefore merely say that the Year Book for 1891 maintains the high position of its predecessors both as regards the extent and accuracy of its information, and with the growth of investments each year the book is increasing in bulk. Mr. Skinner, in a short preface, reviews the past year, which he describes as one "memorable in the financial history of the country." Comparatively well as the year closes, however, we have, Mr. Skinner points out, as a nation of investors, gone through a good deal, and we have suffered severe loss, but our power to bear that loss is undoubted. Our savings used to be considered equal to 100,000,000*l.* a year ; but that sum, large as it is, has probably come to be much below the present experience. Using the latest figures known, we find that in 1888 we increased the capital invested in the railways of the United Kingdom by 18,724,000*l.*, making it 864,625,000*l.* We further know that in the year to April, 1890, the paid-up capital of joint-stock companies registered in this country was increased by 103,200,000*l.*, making it 775,139,553*l.* In addition to these sources of investment, as much as 20,000,000*l.* was last year absorbed by Indian, Colonial, and Municipal issues, and by American railway issues. These three groups leave out many forms of investment, and yet they come to just upon 143,000,000*l.* It is clear, therefore, that our savings must immensely exceed the old estimate of 100,000,000*l.* Perhaps 150,000,000*l.* a year is not too much to put it at.

Mr. John Vivian, of the firm of Harvey and Co., Hayle, is, we understand, to represent that important firm in South Africa during the next ten weeks.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (15th Jan.)—Wheal Maria, Capel Tor, Eastern shaft: In the 112-fm. level west the lode is 3 ft. wide, composed of capel and quartz, with peach, and saving work of copper and mundic ores. In the 100-fm. level west the lode is 2 ft. wide, and yields small quantities of copper and mundic ores. In the 74-fm. level east the lode is 1 ft. wide, composed of capel and quartz, with a little mundic. Watson's engine shaft: In the 172-fm. level west the lode is 3 ft. wide and yielding saving work of copper and mundic ores. In the 160-fm. level east the lode is 3 ft. wide, composed of capel and quartz, with fluor, and yields 3 tons of copper and mundic ores per fm.—I. RICHARDS.

DEVON UNITED (15th Jan.)—Willesford's shaft: In the 144-fm. level west the lode is 2 ft. wide, composed of capel and quartz, peach, and a small quantity of mundic. The work of cutting plat at this level has been completed, and the men have now returned to the driving of the 144 west. In the 132-fm. level west the lode is 2½ ft. wide, composed of capel and quartz, with a little copper and mundic ores. We hope, however, that the falling off in value of the lode is only temporary, and that it will soon again improve. The lode in the stope in the back of the 132-fm. level west is yielding 2 tons of copper ore per fm. Watson's shaft: In the 60 fm. west the lode is 1½ ft. wide, composed of capel and quartz. We have now at surface, ready for sale, about 80 tons of good quality arsenical mundic.—I. RICHARDS.

DRAKEWALLS (15th Jan.)—In the 160-fm. level driving east the lode is improved and will produce 7 tons of mundic per fm., rich stones of copper ore and a little tin. In the 160 driving west the lode continues to yield 9 tons of mundic per fm., good stones of copper ore and a small proportion of tin, altogether exceedingly promising. In the rise in the back of the 160-fm. level the lode is producing 7 tons of mundic per fm. The stope in the back of the 160 west will yield 10 tons of mundic per fm., and saving work for tin. The lode in the 147-fm. level driving east of the small cross-course referred to in my report of last week is looking very promising, and is producing 6 tons of mundic per fm., mixed with a little tin and good stones of copper ore. The lode in the 147-fm. level driving west continues to yield 5 tons of mundic and 1 ton of copper ore per fm., and occasional stones of tin. We have taken the men from the stope in the back of the 147 east and put them to sink a winze in the bottom of the 147-fm. level in order to communicate with the rise in the back of the 160 as quickly as possible, and to lay open the ground for stoping. The lode in the stope in the bottom of the 132 east will produce 7 tons of copper and mundic ores per fm., and the stope in the bottom of the 132 west of the cross-course continues to yield 5 tons of mundic per fm., and saving work for copper ore. We expect to finish clearing out the arsenic chambers by to-morrow evening. The continued severe frost greatly impedes our progress as regards all surface work.—H. RODDA.

ENGLISH ANTIMONY.—Letter from manager dated January 12th. The lode in the old shaft continues to look well, and is of a very promising appearance. We are driving each way in the lode; the lode is increasing in size in going down, and also as we extend the level south; we are now raising some splendid antimony from both levels north and south. I am pushing on the driving in the bottom of the trial shaft. We have to-day discovered some splendid stones of antimony in the end driving south. The lode continues to hold on and looking very promising. I am daily expecting a further improvement as we extend the level south.

LEADHILLS (12th Jan.)—Brown's vein: The 145-fm. level north of Jeffrey's shaft keeps in a veiu above 4 ft. wide, showing better quartz, although yet too dried and without ore. The stope above the 145 south of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 north of Wilson's shaft are worth 20 and 5 cwt. of ore per fm. respectively. The 130-fm. level north of Jeffrey's shaft shows a vein 4¾ ft. wide, worth 15 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are worth 30, 15 and 20 cwt. of ore per fm. respectively. The rise above the 130 south of Jeffrey's shaft is producing kindly quartz, but no ore. The stope above the 130 north of Wilson's shaft is worth 10 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft continues in a vein 3½ ft. wide, charged with nice looking spar and ore worth 15 cwt. per fm. The stope below the 115 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 30 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing hard and uncongenial constituents, and still without ore. The 70-fm. level south of Wilson's shaft is in a vein 3 ft. wide, charged with improved quartz, but stone yet too dark for bearing ore. The 35-fm. level south of Flat Rod shaft is in a vein 3½ ft. wide, mixed with kindly quartz and spar, and ore worth 80 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 70 cwt. of ore per fm. Sarrowcole vein: The stope above Gripp's adit north of George's Roust vein is producing only small bits of ore, scarcely to value.—T. NEWBIGGING.

MID-DEVON.—Roport for week ending 10th January.—Surface: Have had to clear ice from pumping-wheel once during week, save that, machinery has worked continuously, and done good duty. A shaft: Water in fork to bottom of the 80. C shaft: The No. 3 stope worked on by six men; yield of ore still equals 3 tons per cubic fm.; the strata is harder, having more capel intermixed, still it is mineralised, and contains chlorite and friable garnet.—J. NEILL.

ROMAN GRAVELS (15th Jan.)—The men are making very fair progress indeed in driving the 155 fms. cross-cut, which is now driven 6 fms. from the shaft. We calculate that the lode will be reached in say 5 fms. further driving. The 140 north is driven 71 fms. 2 ft. 6 ins.; the lode here to-day shows little or no change since last week. The new winze coming down from the 125 in front of the above-named forebreast is 7 fms. 1 ft. 6 ins. deep; lode in present bottom 5 ft. wide, produciug 1¼ tons of lead ore per fm. The two stopes in back of 140 north are each worth 1 ton per fm. The 140 south is driven 72 fms. 4 ft. 6 ins.; the lode here is about 4½ ft. wide, carrying good-looking strings of lead ore and blende, but not in sufficient quantities to place a value upon them. The 125 south shows a wide vein of promising character, and is being pushed forward to prove the same run of ground as that wherein the vein at the 80-fm. level is at present looking so well. The four stopes in back of this level at Lewis' winze average about 1½ tons each per fm. The four stopes in back of the 110 south are together producing 4 tons per fm. The lode in the 80 south of Jones' winze is producing 3 tons of lead ore and 1¾ tons of blende to the fathom, and the two stopes in back of this drivage are worth together 3½ tons of lead ore, aud 2 tons of blende to the fathom. The severe weather is still impending our dressing operations. The 50 tons of lead ore sold to-day realised 446*l.* 5s.—A. WATERS.

SOUTH DARREN (15th Jan.)—The stope under the 142 west is worth 1½ tons of silver-lead ore per fm. Three stopes above this level are worth together 2 tons of silver-lead ore per fm. The stope in the 130-west is worth 12 cwt. of silver-lead ore per fm. with good copper. The weather is still frosty, but has been milder this week.—J. MITCHELL.

WEARDALE.—Report for week ending 10th January: Ore raised for week, 66 tons; ore dressed for week, 27 tons. Smelt mill and surface work standing on account of frost.

WEST WHEAL GRENVILLE (13th Jan.)—The cross-cut driving north at the 120-fm. level is extended 79 fms. 1 ft. 6 ins. The granite in the end continues of a favourable character. The 120 driving west of cross-cut is extended 11 fms. 3 ft. The branch in the forebreast is of a more defined character. and carries a little tin. The 120 driving east of cross-cut is extended 8 fms. 2 ft. There is no material change to notice in this drivage.—J. SKEAT, N. TEMBY.

WHEAL CREBOR (13th Jan.)—Good progress has been made in driving the 156-fm. level east of the new shaft during the past week; the lode is 3 ft. wide. yielding a little mineral. The lode in the winze sinking below the 144 west of cross-cut is worth 2 tons of copper ore, and 8 tons of mundic per fm. Having met with water we shall not be able to sink it any further until it is drained, which we expect to do by driving the 156 a few fms. further east. The lode in the end driving west of cross-cut at the 144 is not so large as it has beeu; present value, 3 tons of copper ore and 3 tons of mundic per fm. The lode in the stope in the back of the 144 west of cross-cut is worth 6 tons of copper ore, and 5 tons of mundic per fm. There is nothing new to report in our tribute department.—P. D. HOLMAN.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Extract from a letter from the superintendent at the mine, dated 23rd December:—Mine: I am sorry to inform you that the ore at the 24 end on the 100 lode has dwindled out during the past week. For a distance of 43 ft., however, we have opened up ground, worth from 6 to 20 tons ore per fm., and assaying from 30 to 60 ozs. per ton. While I have a strong belief that the ore will continue again further north, I must say that the breast of the drift is at present in unproductive ground. The stopes are looking much the same as last reported, except the back of the 36 on the 100 lode, which has improved, and is now producing well.

ASIA MINOR.—The lode in the winze at Ara Dere is improving as it goes down, and is now worth fully 18 cwt. of rich silver-lead. The lode in the end west No. 4 stope is worth 21 cwt.: in the winze east from Savalan Pass, 20 cwt.; and in the rise from Durfeld, 21 cwt. The character of the lode in Petri west is much more encouraging, and we look for an early improvement. The lode in Savalan (special drivages) has now ore disseminated throughout. We now have our full number of men at each mine. Production to 31st December: 14,259 tons crushed, yielding 1,084 tons rich silver-lead ore. As usual the dressing floors stop till the beginning of March, during that time the machinery will be thoroughly overhauled and put in a state to run continuously for the remainder of the year. Mining operations proceed during the winter with the utmost vigour.

BALAGHAT-MYSORE (24th Dec.)—North engine shaft: This shaft has been sunk 8 ft. 3 ins., or 70 ft. below the 500-ft. level; the quartz is at present small and poor, assaying only 6 dwts. 12 grs. of gold per ton. I think the lode will soon improve again. The 500-ft. level north has been driven 20 ft. 8 ins., or 378 ft. 8 ins. from the shaft; the quartz is from 9 to 12 ins. wide, and assays 3 ozs. 10 dwts. 19 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 7 ft., or 21 ft. 6 ins. below the level; the quartz is fully 2 ft. wide, and assays 5 ozs. 8 dwts. 14 grs. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay, on an average, 3 ozs. 4 dwts. 14 grs. of gold per ton. The 410-ft. level north has been extended 8 ft., or 807 ft. from the shaft; the lode is of a kindly appearance, and letting out water freely. The No. 2 winze in the bottom of this level has been sunk 5 ft. 6 ins., or 75 ft. 6 ins. below the level; the lode is of a promising character, but as yet it does not yield sufficient quartz to value. The No. 3 winze has been sunk 6 ft., or 44 ft. 6 ins.; the quartz is somewhat smaller, being now about 4 ins. wide, and assays only 6 dwts. 12 grs. of gold per ton. The midway No. 1 winze in the bottom of this level has been sunk 4 ft. 6 ins., or 79 ft. below the level, and has since been communicated with the 500-ft. level, thus laying open a good section of stoping ground, which is now being worked. The 410-ft. level north (west of plat) has been driven 5 ft., or 113 ft. from the cross-cut; the quartz is from 4 ins. to 5 ins. wide, and assays about 1½ ozs. of gold per ton. This level is now communicated with the other, or old north level. The stopes in the back of the 410-ft. level north yield quartz of about 1 ft. wide, and assay on an average 2 ozs. 12 dwts. 6 grs. of gold per ton. The plat stope in the back of the 410-ft. level north yields quartz of about 8 ins. wide, and assays 3 ozs. 7 dwts. 20 grs. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 1 ft. wide, and assay on an average 2 ozs. 19 dwts. 19 grs. of gold per ton. The plat stopes in the back of this level yield quartz of about 9 ins. wide, and assay on an average 4 ozs. 12 dwts. 10 grs. of gold per ton. The 270-ft. level south has been driven 3 ft., or 634 ft. from the shaft; the lode is at present unproductive. The stopes in the back of this level produce quartz of about 10 ins. wide, and assay 5 ozs. 1 dwt. 6 grs. of gold per ton. The stopes in the back of the 270-ft. level north yield quartz of about 8 ins. wide, and assay about 1 oz. per ton. The machine rise in the back of this level has been advanced 5 ft., or 45 ft. above the level. (See Haines' shaft.) Haines' shaft: This shaft has been sunk 7 ft., or 178 ft. below the surface, and at this depth we holed to the machine rise in the back of the 270-ft. level; this shaft, therefore, is now communicated with the 270-ft. level north of the north shaft. The machine rise having only been carried about 8 ft. long, we have now to enlarge it to the proper size of the shaft; this will soon be accomplished, when Haines' shaft will be carried down to the 270-ft. level. Surface: All the surface work is progressing satisfactorily.—J. PRYOR.

BRATSBERG.—Report for week ending 3rd January :—Hoffnung Mine : There is a very promising-looking lode at No. 2 adit level, at present worth fully 1 ton per ton fm., and we shall at once proceed to lay open by a rise the ground close into the end. The rise in the back of this level is now carrying a lode about 1½ ft. wide, and yielding about ¾ ton per fm. At No. 3 adit level the lode is yielding about ½ ton per fm., but this is contained in two leaders separated by a junctiou of hard strata. There are, however, indications that this strata will disappear within the next two or three meters' drivage, consequently we hope then to have a more productive lode. The rise in the back there is worth 1 ton per ton. No. 4 level is yielding ½ ton per fm., the lode being 3 ft. wide, but for the greatest part composed of quartz. The rise in the back of this level is worth 1 ton per fm. This rise we expect to communicate to Ball's shaft within the next seven or eight days, and then we shall be able to operate more conveniently on this section of ground by the application of the small hoist direct from No. 3 adit level for the transport of the stuff. During the past month we have had 54 miners employed. Johannes' Mine : The level on Howard lode going west continues for the present to yield only saving stuff, but the congenial character of the lode remains unchanged. At the Eastern level we are daily meeting with more ore, but the miuers eugaged are doing but poor duty, hence we have been very slowly opening up new ground at this point, but this will now be remedied by our using other men. The rise in the back still produces about 1 ton per fm. ; 12 miners employed here during December. Moberg Mine : The adit level, according to the men's report, has been driven 5 metres during December, three miners employed, which is slow progress, but the men complain of a recent increase of water, which indicated a greater proximity to the old workings, causing them a good deal of delay in having daily to cut away the accumulated ice which dams back the water iuto the level. I intend to visit this place to-morrow. Surface works and remarks : Carriage of ore has been conducted with satisfaction, and I anticipate we shall be able to get the whole of the ore sacks we have available to strengthen possibly by the 9th inst., that is if the steamer is not stopped by ice before. We are at present engaged in bringing a permanent supply of water to the saw mill (recent frost making it a matter of difficulty) in order that we may proceed at once to re-build the dressing-house destroyed by fire ; otherwisc men are engaged in taking the machinery to pieces. The estimated quantity of ore mined during December I estimate at 115 tons 20 per cent.—J. D. Holman.

CALLAO BIS (21st Dec.)—The directors have received advices from the mines as under :—Independiente : Since the 8th inst. the shaft has been continued a further distance of 5 ft. ; total from surface, 122 ft. Very little progress has been made in sinking, owing to the repairing of our boilers, which have been continually giving trouble. However, I am very pleased to say we have now ready the third boiler, therefore I feel satisfied better progress will be done in the future. No. 2 level west has been continued a further distance of 22 ft. ; from the shaft, 124 ft. ; lodc 5 ft. wide, of fair value. No. 1 level west has been continued a further cistance of 20 ft. ; from rise, 24 ft. ; lode 6 ft. wide, of good value, showing visible gold. No. 1 level east has been coutinued a further distance of 19 ft. ; from rise, 23 ft. ; lode, 1½ ft. wide, of good value, showing visible gold. Mill result : 380 tons of quartz crushed ; yield, 556 ozs. bar gold (already advised by cable). Surface work : We are pushing foundation of Cornish pump with all energy, to have it completed as soon as possible. The trench for battery post of mill is almost completed. Very good progress has been made in taking down the timbers of the Unda mill. A good deal of timbers are already taken to the Independiente Mine.

— (24th Dec.)—All poiuts throughout the mine are very satisfactory, showing visible gold. We are pushing with all energy the foundation of our Cornish pump, that it may be completed by the next mail. This work will be permanent, and capable of commanding the water throughout this mine.

CHAMPION REEF.—Fortnightly report of superintendent, dated 24th December :—Mysore section : Carmichael's shaft has been sunk 2 ft. 9 ins. ; total depth, 215 ft. 3 ins. Besides this work the men have been employed cutting away ground for bearing timbers to support the sets. On the east side of shaft the rock is slightly charged with mineralised matter. The water still continues abundant, and the progress in sinking is retarded considerably on this account. Ribblesdale's shaft : 3 ft. 6 ins. have been sunk. The timbering and dividing of shaft have taken up a great deal of the time. There is a decided change in the rock ; it is now much harder, and has the appearance of being the same hard channel of ground that we have at Carmichael's shaft. Garland's shaft : The cross-cut at the 180 ft. has been advanced 6 ft. ; total length, 9 ft. 6 ins. Since last report we have cut through the width of lode to the footwall and opened up a little on each side of cross-cut. The old workings appear to be very extensive on the north side, and probably go below the cross-cut, as the shoot of ore or line of old workings is dipping in that direction, but we cannot, owing to the works being partly filled with *débris*, ascertain the length or width of the shoot worked by the ancieuts. The lode at the point of intersection in cross-cut is fully 2 ft. wide, composed of good, strong, productive quartz, carrying a good quantity of free gold. The shaft has been sunk 3 ft. 6 ins., the result of one week's work only. The sinking after getting well through the lode will be continued on the underlie. A general sample taken from the lode in the bottom and south side of cross-cut gives 3 ozs. 5 dwts. of gold per ton. Dalyell's shaft : Sinking 5 ft. 6 ins. ; total depth, 193 ft. ; the lode continues very regular, and carries a good footwall on the south side of shaft ; it consists of 9 ins. of quartz, but the quality is a little less than last reported. The 160-ft. level north has been advanced 9 ft. 6 ins. ; total length 28 ft. 6 ins. ; the rock is very favourable and fairly good labour has been donc by the contractor ; the lode during the last few feet of driving has been very small and poor, but at present it shows a little more quartz and appears to be opening out again. Coromandel section : The cross-cut at the 320 ft. from Coromandel shaft has been driven 6 ft. 6 ins. ; the end is in hard clean country. Prospect shaft : The 290 end south has been extended 5 ft. 3 ins. ; total distance 101 ft. 9 ins. ; the lode is about 1 ft. wide of quartz, but of rather low quality. In the winze below this level the lode has been for some time heaving to the west, and in order to follow it we have suspended the sinking for a time, and the men have been employed stripping down the hanging ; assays from the lode at this point gave 1 oz. per ton. The 260-ft. level : The old workings continued for a depth of 45 ft. below this level. We have now by all appearance reached the bottom of them. The ancients during the last 20 ft. only extracted about 15 ins. of the lode in the footwall, and our men are now employed making it longer to facilitate the continuance of the work from the bottom to communicate with the cross-cut from the 320-ft. level north. At the 320-ft. level a cross-cut has been driven 4 ft. 6 ins. This will no doubt in a few feet more cut into the lode a few feet below the old workings from the 260. Surface work : At Mysore section the building of chimney stack and houses in connection with the erection of air compressors is progressing very satisfactorily, and will, I hope, be finished by the end of next January, and we shall then be able to commence to erect the engines, &c., for Garland's and Dalyell's shafts.

COLAR CENTRAL (24th Dec.)—Eastern section, North division : New shaft has been sunk 9 ft. ; total depth, 169 ft. The present sink is in unproductive ground. The dyke is not far from us, and I do not think we shall find the lode until we commence to drift north from a deeper level, probably the 200 ft. South division : Main shaft has been sunk 6 ft., or a total now of 285 ft. Sinking was suspended on 18th inst., and we are pushing out the west cross-cut at the 260 ft. This has been driven 7 ft., the full length from shaft being 30 ft. The ground in the end has changed considerably, and we have a branch of quartz about 4 ins. wide. West cross-cut at 180-ft. level : We have drifted north and south—6 ft. each way by hand labour. This is merely to test the direction and underlie of the lode at this level. No. 3 winze has been sunk 8 ft., or a total of 115 ft. below the 80-ft. level. The quartz is 4 ft. wide here, showing a trace of gold only. Drift north at 170 ft. has been driven 14 ft. ; total, 64 ft. from the winze. The end is letting out a good deal of water, but there is no quartz. Marden's shaft sunk 6 ft. 6 ins. ; full depth, 263 ft. We suspended sinking on the 20th inst. There is a little quartz in the bottom, but of no value. We still carry good walls in the sink. Drift north 240 ft. has been driven 12 ft. ; total, 69 ft. We have 2 ft. of quartz in the present end, but it still only shows a little gold in the pan, and is of no practical value. Machinery at surface is working very satisfactorily.—A. S. B. Oakley.

COLORADO.—The manager in his report for fortnight ending 31st December states that 64 men are employed, and that work is being carried on at 24 different points. The various levels are being actively driven, and the total amount of drifting, sinking, and cross-cutting for the past year is 1,972 ft., nearly the whole of which has been paid for out of the mine. The stopes are yielding as usual. The 8th level west is now in 460 ft. from the Silver-ore shaft, and is being pushed ahead as rapidly as possible, in the expectation of encountering one of the western ore shoots, of which the indications are exceedingly favourable. Rockwell's stope on the Brown adit level is daily improving, and the manager states that we are certainly nearing the same ore-shoot as worked in the level above.

EMMA (17th Dec.)—Since writing you 10th inst., we have sunk winze from Cincinnati level 17 ft. ; total depth, 182 ft. ; we are still in the vein, and sinkiug at an angle of 45 degs. ; the vein shows no material change in character of rock, iron and ore intermixed ; is fully 3½ ft. wide at bottom. We have not yet made connection with raise from No. 4 level, but cannot be a great way off now, as the sound from the workman in raise is plainly heard. The ground we are sinking in (besides the iron and low grade ore we are following, and which continues all the way down) is strongly mineralised, and shows small particles of good ore, besides small seams of ore leading off ; soon as connection is made with raise we will develop this ground thoroughly, and I feel very sanguine of finding ore in quantity. The upraise from No. 4 level extended 6 ft. ; total, 50 ft. We have completed timbering raise, and are now putting in shoot ; besides, have beeu short of miners this week, which will account for the seeming slow progress. On the old Emma tunnel, in the eastern part of the mine, the vein of ore mentioned in my letter of the 10th continues without any material change. We have been timbering the ground most of the week, and have mined second grade ore only, of which we mined some 10 tons, making now about 25 tons ; this ore on hand estimated to be worth about $40.00 per ton. I have succeeded in shipping 15 tons of first grade ore by teams down the canyon to market ; this is very good cre, and I am in hopes of selling it for from $115.00 to $125.00 per ton. I shall continue with another shipment unless weather prevents. The vein in this eastern part of the mine, as well as in the north-west part, is most encouraging, and I am in hopes of being able to write you still more flattering ere many weeks pass.—H. C. Wallace.

ESMERALDA (30th Dec.)—The manager reports the appearance of the mine for the past few days to be most encouraging. There is a foot of good ore in the Durand winze worth 1½ ozs. of gold to the ton, and when the ore shoot is reached in the south drift, lowest level, the mill will be immediately started up, and it is hoped that it will be kept running, as there will be 200 ft. of ore to stope. The drift has been advanced 34 ft. during the week, making a total of 1,340 ft. The vein is 5 ft. wide and all quartz, the walls smooth and well defined. The new Monte drift is out 450 ft. ; progress for the week, 13 ft. The ledge is looking much better, and has resumed its regular course and dip.

ETHERIDGE UNITED (19th Nov.)—Fortnightly report.—My last report was dated 5th inst. Caledonian No. 1 South Mine : I regret that at present we have not been able to get down further owing to the heavy water. I think there must be a large lode which holds this quantity of water. We are winding fully 4,000 gals. of water per hour from this shaft, and are unable to make further progress until the pump is fixed, which is now being done under difficulties. I fear the trial crushing from here will not be out before the annual meeting as I had expected. In the second shaft on higher ground we are working on the reef, which is now 4 ft. to 5 ft. thick, and is fair-looking stone. We have at grass 40 tons. The battery starts to-morrow, and we shall put through about 100 tons. Should the yield from this be satisfactory, we can easily get out a large quantity of ore in the higher ground. North Star Mine : I visited this mine last week. A level has been commenced at a depth of 55 ft., and is now in 14 ft. easterly. The reef here averages 18 ins. thick, and appears to be of very fair quality. I intend to start crushing this stone at the Nelson Battery as soon as the crushing at Goldsmith's is completed, and will cable you the result. The water in this mine continues very heavy. Water supply : There is a good supply of water in the Lord Nelson dam, and at Goldsmith's there is a small supply only, but we expect rain at any time now, the weather being very warm.—M. Ferguson.

GOLDFIELDS OF MYSORE (24th Dec.)—Fortnightly report of superintendent: The mining operations for fortnight ending 22nd December have consisted of sinking a winze and driving a short cross-cut. The winze is below the 206-ft. level south, and has been sunk 6 ft. 3 ins.; total depth, 15 ft. The cross-cut has been driven 4 ft. from the south end of level in order to cut through the whole width of the lode before abandoning the work. The lode in the winze has as reported last fortnight taken a greater underlie, and the main body of the quartz is still in the hanging, the winze, however, is now being sunk flatter, and will by the end of the month be in or near the hanging-wall. The quartz on the footwall part is slightly charged with arsenical pyrites, and at present is the most productive part of the lode. We have been obliged to work the plunger lift at middle shaft to prevent the water coming back through the 150-ft. level into south shaft. This work, however, will only affect the cost a trifle, as we can easily keep the water by working only during the day.

GOLD HILL (1st Jan.)—The 435-ft. level north-east was advanced 28 ft. last month; vein cut off by iron dyke, which we are 6 ft. through. The 435 ft. south-west advanced 11 ft.; ground hard; vein split up and branching off. In 160-ft. level east we have driven in 8 ft.; vein split up and not showing anything, but there are good indications that the vein will open out again in a few feet. The 160-ft. level south-west advanced 18 ft. On 20th December we cut the rich ore; we are now in 12 ft. on the shoot; it is still showing well, with vein 2 ft. wide; this is a fine prospect. We are 50 ft. beyond all old works, and have 160 ft. of backs with 500 ft. of unexplored ground, and from all indications we may expect to find good bodies of ore as we advance. In Miller shaft, driving towards the Barnhardt, we have advanced 18 ft., and have a fine vein of heavy sulphuret ore all along, and in present end the vein is 3 ft. wide. The stamp mill was run 17 days. I will finish washing up by end of this week. Engine, pumps, and everything working well.—F. H. MAUNEY.

— Manager cabled from mine on 9th January as follows:—"Assay ore, 160 level, $192 per ton; also rich in Martin shaft; am sending sample.—MAUNEY."

GYMPIE GREAT EASTERN (27th Nov.)—Fortnightly report.—During the past fortnight the 730-ft. level, to intersect the 1 South Great Eastern, has been extended 17 ft.; total, 331 ft. from the shaft; we are still in dyke country at this level. The south drive has been driven 6 ft.; total, 97 ft.; there is about 15 ins. of crushing stuff. The back stopes north and south are showing a little gold. The 690-ft. level: In the back stopes above this level going south there is very little quartz. The formation between the walls is very nearly all mullock; there is a little gold showing. There is no change in the stopes going north; they show a little gold. The 634-ft. level: In the back stopes going north we are breaking some leaders in the hanging-wall, some of them showing fair gold. For the four weeks ending November 17th there were 600 tons of quartz raised and crushed for a return of 618 ozs. 2 dwts. of smelted gold. The Nicholl's lease is crushing with five head of stampers; therefore, we have had five head hung up during the fortnight. Everything about the mine, winding engine and battery, is in fair working order. There are 70 men employed—60 on the mine and 10 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (22nd Dec.)—Phœnix section: No. 1 drive advanced 7 ft. for fortnight; ground hard; vein of lode matter 2 ft. 6 ins. in width; the end at present is very wet. We shall certainly have a change within a short distance further driving, and I hope I shall be able to report that more quartz will be showing than for a long time past. Tramway drive extended 7 ft.; vein of decomposed stuff, with occasionally colours of gold from washings, but not worth saving. We have had a full force of coolies at work in the stopes, which show no particular change in any case. As usual the quartz in tramway backs is greatly mixed with country rock, but judging from the crushing, remains of about its usual value. Our work of filling up and securing one or two points is being done with all speed, and we shall soon have these places in good order for working. We have a couple of small parties of coolies prospecting at north end of workings between Tramway and No. 1 levels, but there is nothing of consequence from their work as yet. Our surface works are going on with usual order, and we hope to get to mill and crush more quartz during the current month than has been done for some time past.—J. FRY.

— (24th Dec.)—Colar section: No. 1 new shaft has been sunk 5 ft. 3 ins.; total depth, 178 ft. 9 ins. The ground remains unchanged, but I think we shall soon have an alteration for the better in the character of the rock, which will enable us to make better speed. There is not much water at this point at present. No. 2 new shaft: The 210 ft. north has been driven 12 ft. 3 ins.; total from shaft, 26 ft. 3 ins. The ground is very heavy here, and we have to timber close up to the forebreast. There is no lode to value in the end; the water is not quite so quick as formerly. The 210 ft. south has been driven 17 ft. 6 ins.; total from shaft, 41 ft. 9 ins.; the quartz had become very patchy here, but looks like making solid again as we drift south; the value of the ore still remains poor, showing a trace of gold only. Main shaft, 240 ft. north drive: We were obliged to suspend this point from want of compressed air; it has just been re-started and driven 3 ft. 6 ins., making the drift 47 ft. 6 ins. from the cross-cut; there is not quite so much water here as there was formerly. No. 5 shaft: 156 ft. north-west cross-cut has been driven 5 ft.; total, 35 ft., and suspended, as we are not likely to come across anything of value now, so far west of the drift. East cross-cut, No. 1: 12 ft. were driven by hand labour, making a total length of 64 ft. 6 ins. We have met with several branches of quartz, and are in promising-looking ground. East cross-cut, No. 2, has been driven 20 ft. 3 ins., with a rock-drill. This cross-cut is about 100 ft. from No. 1 east cross-cut. We have just struck a branch of quartz about 8 ins. wide, but cannot yet say if it is the main lode. The 425 winze, drift south, has been driven 5 ft. 3 ins.; total, 14 ft. 9 ins.; the lode is the full size of the drift, but shows only a trace of gold. Drift north has been driven 3 ft. 9 ins.; total, 9 ft. 9 ins.; the lode is very much mixed up, and assays only 1 dwt. 7 grs. I do not think we shall have much more quartz here, as the ore body has been making south all along the stopes. The 425 back stope: We have two pairs of men working here each shift. The quartz has slightly improved, being worth 6 dwts. 11 grs. and 2 ft. in width. The 450 drive: The lode at this point has entirely died out in the end.—A. S. B. OAKLEY.

JAY HAWK (23rd Dec.)—My last report was dated December 15th, since which we have sunk the shaft 21 ft., making a total depth of 215 ft. I am glad to state that the ground continues to get more settled, and the shaft appears to be getting under the break. I shall continue the sinking another 60 ft., at which depth I expect to be clear of the disturbance, and then cut through and ascertain the value of the lode. The last shipment of bullion realised $1,507.—H. PRIDEAUX.

KETCHAU (PAHANG) CORPORATION.—I beg to inform you that Mr. Becher having heard such extraordinary reports as to the discoveries at Ketchau, decided to proceed to the property, from Singapore, for the purpose of making his own personal examination, and you will be pleased to hear that he has yesterday forwarded the following telegram to his firm (Messrs. Bainbridge, Seymour and Co.) in London, viz.:—"Inhabit Ketchau Becher Vesuvian." "Clasplock Formazes Licano," which reads as follows:—"Please inform Ketchau Becher, after having visited the mines, we can confirm statements; a streak of the vein very rich in free gold; above this level a stope has been started."—E. B. WOODFORD, secretary.

MONTE DEL ORO.—Mine agent's report for the fortnight ending 6th January.—Taylor's engine shaft: During the fortnight 5 ft. were sunk, making a total of 8½ ft. below the 244-ft. level on the underlie, and afterwards the men started to cut the cistern plat. This has been accomplished, and the cistern fixed in its place, and in the course of two or three days the lift will be dropped into the cistern, when sinking on the underlie will be resumed. The lode in the present bottom of the shaft is composed principally of slate, but with a little quartz intermixed, a sample from which assayed 1 dwt. 7 grs. of gold per ton. In cutting the cistern plat a lode of quartz, varying from 1 ft. to 4 ins., was cut, and a sample from this yielded 1 dwt. 23 grs. of gold per ton. Shaft No. 6: The total length of the 244-ft. level north of this shaft is 349 ft., showing an advance of 20½ ft. in the fortnight. The ground has considerably changed, and is harder for driving, the lode being composed of slate with a small flookan, and it carries a stringer of quartz averaging about 4 ins. The samples taken assayed respectively 1 dwt. 23 grs., and a trace of gold per ton. Good speed has also been made in extending the west cross-cut, 19 ft. being driven, making its present total length 120 ft., but as yet no further lode has been encountered. The ground being favourable, capital progress is made in driving the intermediate level north of winze No. 8, since 24 ft. have already been driven. The end contains about 2 ft. of lode matter, and at one time carried a small stringer of quartz. Two samples were taken, the first assaying a trace of gold, and the second yielding 2 dwts. 14 grs. of gold per ton. In the 186-ft. level north of the shaft the lode of quartz, which is very hard, has averaged from 2 ft. to 2½ ft. throughout the two weeks, the results of the assay of the samples taken being 3 dwts. 6 grs., and 1 oz. 14 dwts. of gold per ton. The level is now 490½ ft. long, the amount driven since the last report being 10½ ft.

NEW HORNACHOS SILVER.—Report for December:—The output of marketable ore from Afortunada Mine was 45 tons from 525 tons of crude ore. The yield of ore on the stopes has been maintained. In the back of the 9th level south ore of very rich quality was taken out.

NINE REEFS (24th Dec.)—Progress report for fortnight ending 22nd inst.—Vyvyan's shaft: During the past fortnight this shaft has been sunk 7 ft. 2 ins. by hand labour; the total depth is now 77 ft. 6 ins. below the 145 level. The lode continues small, but is carrying good walls, and we hope it may open out again shortly. This week's assay was 18 dwts. 6 grs. Prospect pit: The cross-cut east from the bottom of the pit has been advanced 12 ft., making a total of 12 ft. We shall have to drive some little distance further before meeting the lode, but hope to cut it before next report.—H. P. HODGSON.

OOREGUM.—Fortnightly report of mine agent, dated 24th December.—I beg to hand you the mine report for fortnight ending yesterday:—Main shaft: The 250-ft. level north advanced 10 ft. 9 ins.; total, 43 ft. 6 ins.; lode still disordered, 3 ft. wide, assaying 6 dwts. 12 grs. per ton. Winze in bottom 250-ft. level north sunk 4 ft.; total, 25 ft. 3 ins.; lode 4 ins. wide, value 10 dwts. 21 grs. No. 1 winze bottom 250-ft. level south, north Wallroth's shaft, sunk 4 ft. 8 ins.; total, 14 ft. 11 ins.; lode 1 ft. wide, value 5 ozs. 8 dwts. 21 grs. per ton. No. 2 winze sunk 5 ft. 6 ins.; total, 55 ft.; lode 3 ft. wide, value 3 ozs. 22 grs. per ton. No. 1 winze south Wallroth's shaft sunk 1 ft.; total, 39 ft.; lode 2 ft. wide, value 5 ozs. 17 dwts. 8 grs. per ton. No. 2 winze south Wallroth's shaft sunk 6 ft. 6 ins.; total, 49 ft.; lode 3 ft. 6 ins. wide, value 4 ozs. 16 dwts. 21 grs. per ton. Intermediate level south advanced 9 ft.; total, 246 ft. 2 ins.; lode 1 ft. wide, value 10 dwts. 21 grs. per ton. Intermediate level north advanced 1 ft.; total, 47 ft. 6 ins.; lode 1 ft. 6 ins. wide, value 6 ozs. 1 dwt. 7 grs. per ton. This level has been communicated with the rise from back of 250-ft. level, and will be continued north. Wallroth's shaft sunk 6 ft. 3 ins.; total below 250-ft. level, 31 ft. 8 ins.; lode 2 ft. wide, value 6 ozs. 18 grs. per ton. The new windiug engines and skips at this shaft are working well. Low's shaft: Cross-cut west from 350-ft. level south advanced 17 ft. 3 ins.; total, 34 ft. 8 ins. We expect to intersect the lode before the next report. The 270-ft. level south advanced 4 ft.; total, 256 ft. 2 ins.: no lode. Winze in bottom 270-ft. level south sunk 3 ft. 6 ins.; total, 18 ft. 6 ins.; lode 4 ft. wide, value 4 ozs. 18 dwts. per ton. Winze in bottom 270-ft. level north-west of shaft sunk 6 ft.; total, 73 ft. 2 ins.; lode 2 ft. wide, value 3 ozs. 16 dwts. 5 grs. per ton. Winze bottom 270-ft. level north from shaft sunk 3 ft.; total, 36 ft. 6 ins.; lode 10 ins. wide; value 15 dwts. 6 grs. per ton. The 200-ft. level south from cross-cut east driven 9 ft.; no lode. Probyn's shaft: The 450-ft. level south advanced 21 ft. 6 ins.; total, 39 ft. 6 ins.; lode 1 ft. 3 ins. wide, value 4 ozs. 10 dwts. 16 grs. per ton. The 366-ft. level south advanced 19 ft. 6 ins.; total, 358 ft. 10 ins.; lode 1 ft. 8 ins. wide, value 3 ozs. 16 dwts. 5 grs. per ton. Rise in back of same level commenced and measured 8 ft.; lode 1 ft. 3 ins. wide, value 1 oz. 1 dwt. 19 grs. per ton. Winze in bottom of same level sunk 3 ft. 3 ins.; total, 14 ft. 3 ins. Bottom still in the band of country rock passed through in level. The 300-ft. level south extended 21 ft. 4 ins.; total 339 ft. 10 ins. We have a branch of quartz in the present end 4 ins. wide, assaying 1 oz. 21 grs. per ton, which we think will make the lode. The 230-ft. level south advanced 7 ft.; total, 322 ft. End still in the baud of country rock. Surface: The engineers' gang are engaged removing the tailings machinery to the new site, and erection of same will be proceeded with immediately. We shall stop the mill to-morrow and Friday for the Christmas holidays. The amalgam collected up to date leads us to expect an increased return of gold for the current month.

OSCAR.—The following report has been received from the mauager under date 10th January:—Hodgkinson's lode: Good progress is

being made in the sinking of shaft. The lode in bottom is over 4 ft. hard blue quartz, containing usual quantity of pyrites, and assaying 5 dwts. 2 grs. A decided improvement has taken place in the 200-ft. level going north; the lode is 4 ft. wide, half of which is quartz, which to-day assays 13 dwts. gold per ton. The same level south shows no alteration, the lode having still a width of 4 ft., and assaying 5 dwts. The lode in the 150-ft. level south is at present rather pinched; quartz, 10 ins., assaying 2 dwts. 13 grs. The stope in bottom of 100-ft. level is still yielding good mill stuff; the quartz is 3 ft. in width, in two bands of 2¼ ft. and 9 ins. respectively. The former hand shows by assay value 2 dwts. 13 grs., the latter 18 dwts. 3 grs., and looks like improving. All other workings at present, no alteration to call for special remarks.

PORT PHILLIP.—The following advices have been received, dated December 8th:—Mine—North shaft, No. 17 level: The cross-cut east is now 135 ft. from the shaft, and that to the west 131 ft., both in favourable country for driving. The bottom cross-cuts are still in favourable country for new makes of stone, especially the east side of the shaft where several quartz veins have been passed through, which, at a deeper level perhaps, may increase both in size and value. No. 5 level: Driving across the western lode is being continued, but has not yet reached the eastern wall, the quartz looking favourable. Criterion ground, No. 6 level: Whitford's tribute party have had another crushing, which shows an improvement in the yield; 31 tons of quartz averaged 7 dwts. 14 grs. per ton. The crushing from two other tribute parties were very poor; two other tribute parties are at work in this part of the mine.

RUBY (27th Dec.)—Dunderberg: We have nine men on day's pay, and eight tributers at work here. We are still running waste from the 500 drift, and it will probably take three or four days before we get through and be able to prospect the quartz. We have been sinking on the 600, and raising from the 700 to make connection. The 700 level has been sunk 8 ft.; total, 50 ft. We lost three days this week on account of Christmas, and a bad case of shale in the 700 drift. Lord Byron: We have four men on day's pay and 13 tributers at work. There is not much change in the look of the ore since my last; a cave from the bottom is apparently making off flat, but we are not far enough advanced to get into it. Bullwhacker: We have seven men at work here. Tacoma: We have two men at work on a small seam of iron. We have drifted 4 ft.; total, 119 ft.

SOUTH-EAST MYSORE (20th Dec.)—Fortnightly report.—The 500-ft. level north of cross-cut east No. 1: This level has been driven 34 ft. 6 ins. in the fortnight, making a total drivage from the cross-cut of 62 ft., and the last assay gave as a result 8 dwts. 9 grs. The 500-ft. level south: Here we have only driven 8 ft. in very hard ground. At present there is no lode in sight. The total length of this drift from main shaft is 34 ft. 6 ins. Cross-cut west of 295 south at a point about 350 ft. from main shaft: This cross-cut has been driven 18 ft., partly by hand labour and partly by rock-drill. No lode at present in the end, but much water coming in. Winze in bottom of 295 south at a point about 300 ft. from main shaft: Here we have sunk on the underlie of the lode 14 ft., partly by hand labour and partly by rock-drill. The lode is about 3 ft., of which 2 ft. are quartz.—W. HENDERSON.

VALLEY GOLD.—December report: Weather very cold, but for an hour or two in the middle of each day it thawed a little, and in three or four days the California dam filled, which permitted of an occasional hour's hydraulicking, which has revealed the fact that the bedrock has again begun to pitch down, and some blue clay (about 1 ft.) is coming in over the gravel.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

YURUARI COMPANY, LIMITED.

SIR,—I am at a loss to understand the fall in price of these shares, seeing, according to last returns, the company is in a better position than it has ever been, and with continued developments there is no reason to doubt that at an early date the returns will be what they were shortly after I joined the company (working the same property) a few years ago. The drawback hitherto has been expenses, but according to the chairman's statement at the general meeting, these are now less than one-half what they were at the time referred to. The price of the shares of this, as compared with neighbouring companies, is out of all proportion, when it is borne in mind that this company have realised more gold than all the other companies put together, excepting, of course, the celebrated El Callao. The great point is the confidence felt by Mr. Pryor that he will be able to obtain good returns, and to keep the mill steadily going with paying quartz. You have throughout supported this company as possessing an exceptionally good property, and consequently having an assured future. I have carefully considered everything that has recently been written for and against the present position of affairs, and can find no ground for differing from the opinion I have expressed.—I am, &c.,

HOLDER OF FIVE THOUSAND SHARES.

January 16th, 1891.

VICTORY MANAGEMENT.

SIR,—Some of your correspondents appear to lose command of themselves when discussing this company's affairs. I hope we shall keep cool, and endeavour to shut out passion, which always leads to rashness. I was present at the first, but not at the second, of the two meetings lately held by this company. I came a determined opponent of the board, but decided to support them rather than throw myself into the impetuous arms of Mr. Hallett. In fact, the views of Mr. T. H. Watson are my views to a "T." Hamlet may have been mad at times, but I think he was wise when (you quote him yourself) he said he preferred the ills he had to others that he knew not of. I prefer the shoals into which the Whitten Board has led me, to the rock upon which I should definitely split with Mr. Hallett as the captain and the scratch crew he would bring on board. I have seen Victory shares under the present board, or something like it, at 30s., and I am waiting to see them at a decent price again, when I say frankly I shall clear out. Now, that result is more likely to be achieved by following the advice contained in your two temperate articles than by wholesale denunciation and precipitous action.—I am, &c.,

A SHAREHOLDER WHO TRIES TO KEEP HIS HEAD.

January 14th.

VICTORY AFFAIRS.

SIR,—Your correspondent, "Believer in Victory," deprecates disputes of the late sort as "always damaging to a company and disastrous to the shareholders." I wonder if he held shares when the last re-construction took place; if so, he should know that rather than have the manipulations going on that took place at and since that event it would be better to have anything. Before that re-construction the management, it is said, allowed the mine to be sold without an effort to save it. Was that for the advantage of the shareholders? Then, at the meeting after the re-construction, Mr. Gilbert, supposed to be the guardian of the shareholders, intimated he held the vendor's power of attorney.

Witness now the sale of Aaron's Reefs, *supposed* to be (for who *knows*, seeing no information can be got) the larger and better part of the whole property, and yet all the money received for it has been disposed of like the petty cash. Then view the recent debenture business and the issue of 30,000 shares in extinguishing part of it. Is it business? or is it fair to any shareholder in the concern? At the meeting of 31st December, observe the secretary coolly asserting that the terms of the Aaron Reefs sale have nothing to do with the shareholders. No? Then they have only to do with other people, and the shareholders may go to where they have gone twice already, viz., liquidation, for want of their affairs being managed for their interests. Does "Believer" wish all this sort of thing to continue? if so, his interest is not that of independent shareholders.

The committee now to be appointed will be nominated by the directors, not the shareholders, and no doubt they will be the friends of the directors—this was quite visible in the report. Lastly, witness the fiasco of the balance-sheet and report — the balance-sheet being now passed, while only a small fraction of shareholders have even had a glance at it. Like you, Mr. Editor, we believe in light and truth, and do not believe in directors who do or sanction such doings.

As regards your Liverpool correspondent, it is a pity he does not read his MINING WORLD, for that would have given him some "light" upon the gold royalties, &c., he mentions, and he could have judged for himself whether Victory was in such company or not.—I am, &c.,

ANOTHER VICTORY SHAREHOLDER.

Newcastle, 10th January, 1891.

VAN MINE.

SIR,—Will you kindly allow me, through the medium of your widely-read paper, to give expression to my views *re* above, which, I trust, will meet the eyes of most shareholders? I quite agree with "Shareholder's" letter in your last issue, and have fully decided not to take up a single new share unless the management at the mine is entirely changed, and a number of my friends who are large holders intend adopting the same course.

The two experts who inspected and reported condemned the management. This was quite clear, and I am persuaded that most of the shareholders, after all the promises, now broken, and all the gas now exploded, have completely lost confidence, and are utterly sick and tired. It is rumoured that the manager is to be retained, and a mining engineer sent down periodically to inspect the mine and instruct him how to proceed. I sincerely hope, for the credit of the directors of the Van Mine, that such is not their intention. This question of management ought to be finally settled before the new shares are subscribed, and I would most earnestly and strongly urge upon the shareholders to insist upon this being done at the confirmatory meeting. I am also of opinion that we ought to have new blood on the board. Why not elect the gentleman from Wales who so valiantly and fearlessly tackled the management at the meeting on December 12th? He seemed to have grasped the situation and to have more practical knowledge of mining than the whole of the directors. If we had a couple like him living in the neighbourhood, who could visit the mine occasionally, our confidence would be greatly strengthened, and we should see better results. I and my friends intend supporting him. Had I been able to attend last Friday's meeting I should certainly have spoken strongly. I object to a board who only visit the mine once or twice a year, whose practical knowledge of mining is almost *nil*, and who leave everything pertaining to the working of the mine to the manager. We want practical men who know what they are about, and unless a change is to be made, neither myself nor my friends will take up a single share, and no doubt a number of others will act similarly. In conclusion, I would urge upon the shareholders to wake up, and take prompt action, see that the management is changed, and a good, able, pushing and reliable man be appointed, one who will go a-head; also put one or two similar men on the board; then confidence will be restored not only to the shareholders, but to the outside public, and Van shares will assume something like a respectable price. See that this is done before you subscribe a single penny.—I am, &c.,

A LANCASHIRE SHAREHOLDER, WHO HAS THE GREATEST CONFIDENCE IF THE MINE IS PROPERLY MANAGED.

Manchester,
January 12th, 1891.

MIDDLESBOROUGH TOWN.—The final batch of letters of allotment and regret in respect of this company's new issue of shares have been posted.

REPORTS OF MEETINGS.

WHEAL UNY.

MINE IMPROVING IN THE SHAFT—CALL OF 7s.—A HEAVY COAL BILL.

A GENERAL MEETING was held at the Office, Gracechurch Buildings, Gracechurch Street, yesterday, "to examine and audit the accounts, to make a call, and to transact the ordinary business of the company."

A. Strauss, Esq., presided.

Mr. C. B. PARRY (secretary) read the notice of meeting.

The statement of accounts showed a total debit balance of 4,323*l.* 4s. 9d. The sales of tin were 3,381*l.* 2s. 9d., leaving a debit balance on the quarter of 3,991*l.* 17s. 3d.

AGENTS' REPORT.

January 16th.—Since the last meeting, held September 24th, we have sunk Hind's engine shaft over 7 fms. After sinking 2 fms., in a lode worth 25*l.* per fm., we met with a course of elvan which changed the underlie of the lode from 40 to 28 degs., and squeezed it from 7 ft. wide to a few inches. After 5 fms. further sinking, we are pleased to say the lode is again widening, and taking near its former course, now about 3 ft. wide, and turning out some fair stones of tin. Stuff for length of shaft assayed 23 lbs. of tin to the ton, equal to 25*l.* per fm. Seeing that the best courses of tin in the district have made underneath and around the elvan, it is the opinion of the mining authorities of Cornwall that after sinking through this elvan we shall have a rich lode. The 230 end west has been very disappointing, although we have had good stones of tin here occasionally; we can only value the end to-day in 9*l.* per fm. The 230 east, the lode in this end, as well as the western end, seems to be disordered by the influence of the elvan. Now worth for tin 6*l.* per fm. The 203 end west has not turned out to expectation, although there is a very good lode coming down in the winze above; this end is now worth 9*l.* per fm. A stope in back of this level worth 12*l.* per fm. The 193 end west is worth, 9*l.* per fm. A winze sinking in bottom of 193 west is worth for length of winze 15*l.* per fm.; we expect to communicate this with the 203 in about four weeks from now, when we shall lay open a good section of stoping ground. The 182 end is about 20 fms. west of the above winze, and going back in unwrought ground 35 fm. short of what is known as the great cross-course; this end is very promising, and now worth 8*l.* per fm. We have 20 tribute pitches working by 57 men, at tributes varying from 10s. to 13s. 4d. in the £. In the past 16 weeks we have increased our returns of tin over 13 tons. We hope to keep up our present returns.—J. WHITE, D. H. WILLIAMS.

FURTHER INFORMATION.

Capt. WHITE by means of a map, further explained the working of the mine. He said that in the winze at the 190-ft. level, there was a very good lode. As regards the shaft, he considered the future of the mine to be centred there. They had sunk 5 fms. in the Elvan, and another 3 fms. would prove the lode, and the nature of the ground they would meet with beyond the Elvan. They had cross-cutted north and south in the 230 west, but the lode was very poor. The 230 east, according to a letter he had received that day, seemed to have improved a little. The 214 they had stopped for a while, because there was a long piece of poor ground to go through. They intended to push the 230 on in a way to avoid the driving of an extra level. The ground from the winze was turning out 60 lbs. of tin to a ton of stuff. At the 180 there had been very good stopes, and the end was about 35 fms. from the great Tolgus cross-course. Most of the mining men of Redruth believed that near the cross-course they would have tin, and in that opinion he concurred. It was turning out about 28 lbs. of tin to the ton of stuff.

SUPPLEMENTARY.

Capt. WHITE made the following supplementary statement: The valuation of our various points is not very high, but looking at the character and position of our shaft, compared with other mines in the district, I think our prospects are brighter to-day than they have been for some time. The 230 ends east and west, although not very rich at present, should be driven with all possible speed. We cannot tell what mineral may be met with as these levels extend. The elvan in shaft seems to have an eastern dip, and seeing it makes a rich deposit of tin on the junction, we may meet early with good results driving west. The 203 west has been driven in a poor belt of ground, and looking at the tin in the winze above, and the stope behind this end, we hope it is nearly through it. Stuff from the winze in bottom of 193 west assayed over 60 lbs. of tin to the ton. When this is communicated, if the lode continues good, with 10 men stoping, we can keep up our returns, and perhaps increase them. The 193 and 182 west are very hopeful points, going back in new ground. Most mining men think good results will accrue as these western levels get near the cross-course. The eastern levels, 182 and 193, have been driven a good way; the results were not very encouraging at that mine, but at present we have several pairs of tributers working at these levels. We need not regret the driving of these levels as yet, tributing, in my opinion, being the right thing for our great lode. I may here say a few words about the present and most satisfactory working of our engine and pitwork. Most people who know Uny also know the trouble she brings in winter time. Although the sinking for the four months is not what I would like to see, still it is more than has been done for many years at this time of the year. It repays us for the labour and expense we have put to about the pitwork in the past 12 months. We have still more new work to put in as soon the wet season is past a little, when we hope to do better in the future. The general working of the mine was never better than to-day.

COSTS.

Mr. TIMOTHY: Is there any possibility of reducing the costs?

Capt. WHITE: I cannot say, but remember that December, January, and February are very wet months. But the quarter following we shall be able to do with a little less coal. As to work underground we are only driving four ends and sinking the shaft. The latter must be done, but if we drive no levels, practically we open no new ground. We find it is best to set the ground on tribute, but I cannot see that we can do with any less cost at present. The coal is the great item—a little over 600*l.* a month.

The CHAIRMAN: Is that arrangement in force which the committee recommended some time ago, as regards giving the engine men a bonus on all the coal they save?

Capt. WHITE: That has been done, but we cannot see that they have saved anything at all. The men have done their best. Mr. Mitchell has gone through the engine accounts, and compared them, but we cannot say that there has been any saving. We have only one boring machine at work. We are having the coal from the side of the vessel, and from thence sent direct to the mine. We have a man to watch the coal, as we keep a stock in the yard. That stock at present is 80 tons, all paid for, and we have a renewal of the contract for six months. The price was 13s. a ton; it is 18s. 10s., and that makes a great difference. We expect the returns of tin to be about the same, but our costs on pit-work will not be so heavy. The engine shaft has cost a good deal during the last 12 months, but several expenses connected therewith will henceforth be saved. It costs us 200*l.* in the year for repairing boilers, which are now in fairly good condition.

The CHAIRMAN moved the adoption of the report.

ARREARS OF CALL.

Mr. TIMOTHY: Is there any possibility of getting in the arrears of calls. Honest men pay their liabilities, whilst other people seek to avoid them, and I do not think that is right. (Hear, hear.)

The CHAIRMAN: The committee have repeatedly impressed Capt. White with the necessity of keeping his energies devoted to sinking the shaft. (Hear, hear.) Hardly have we had a meeting at which we have not sent him special instructions to use all his efforts in sinking the shaft with every possible economy, I am glad to see the merchants' bills are being lessened, and hope Capt. White will be able to do more in that direction. I observe that they are less in each of the last three months. Our coal bills are very heavy, and account mainly for the state of the balance-sheet. Calls in area is a serious item, which requires discussion. I have a list of the arrears before me, and they amount to 2,990*l.* 7s. 11d. The worst of it is that a good many of these arrears are not from the last call, but some previous ones—as early as 12th February and 4th June, 1890. We have urged Mr. Parry to collect the calls, and in certain cases the law has been put in motion. We have decided at this meeting to leave the matter to the shareholders, and invite their instructions on the subject, so that the responsibility of taking extreme measures may be shared by the whole body of proprietors rather than be monopolised by the few individuals who form the committee.

MR. STRAUSS STRIKES A SYMPATHETIC CHORD.

I am of Mr. Timothy's opinion that rigorous measures should be taken to collect the calls, as it is most unfair to shareholders who pay that those who do not pay should not be proceeded against.

Mr. TIMOTHY: Two or three meetings ago Mr. Hodgkinson was in the chair, and mentioned that very often he sat alone at the committee meetings. It was then that you, sir (to Mr. Strauss), were invited to join the committee, and it is a good thing for us that you were able to do so. There is a third gentleman on the committee who, I understand, does not attend the meetings, but in my opinion should either do so or resign.

The CHAIRMAN: Mr. Hodgkinson and I are present at every meeting, and are here to-day. (Hear, hear.)

Mr. DONNET: I think all the committee ought to appear at the general meeting, more especially as they have it in their power to name a day convenient to the whole of them.

AN ABSENTEE COMMITTEEMAN CENSURED.

Mr. TIMOTHY: I believe Mr. Hodgkinson really does attend to his duties, and so also does our chairman. (Hear, hear). It is not justice, however, to the office or to the shareholders, that any member of the committee, should be habitually absent.

Mr. PARRY, said he had no reason to doubt but that the majority of the calls would be collected.

The motion was seconded and carried unanimously.

The CHAIRMAN said that unfortunately the next resolution dealt with the subject of a call. The mine was originally in 12,000 shares, but 260 had been relinquished, leaving a balance of 11,740*l.*, and the question was to make a call sufficient to cover the debit balance of 4,323*l.* He, therefore, proposed a call of 7s. 6d. a share. To that proposal he must adhere, because it was the principle of the cost-book system to pay your debts.

CALL OF 7S.

Mr. TIMOTHY proposed, and Mr. DONNET seconded, that the call be 6s. 6d.

This was defeated, and ultimately a compromise was affected, and a call of 7s. per share was agreed to unanimously.

Mr. TIMOTHY moved "That the requisite legal measures be taken to recover the calls in arrear," and this was carried unanimously.

It was arranged to hold the next meeting in London, and Mr. Strauss was thanked for presiding.

WE understand that Mr. Samuel Gifford leaves London for India on the 23rd inst., to inspect and report upon mineral properties in the Bengal Presidency, on behalf of Messrs. John Taylor and Sons.

HARROGATE LAND.—The transfer books of this company will be closed from the 17th January to the 21st January, both days inclusive, for annual meeting to be held at Cumberland Gap, Tennessee, on the 21st inst.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

Sir CHARLES METCALFE, Bart., Chairman.

B. B. TRENCH, Esq., Deputy-Chairman.

L. Balfour Burns, Esq. | Major J. W. M. Cotton.

Sir Stuart S. Hogg. | Richard Smith, Esq.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.

NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business :—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Notice.—Several "reports of progress" from the mines have lately reached us without the names of the companies sending them at the top. The difficulty of tracing such reports to their right source is so great that we cannot undertake it. Reports must have the name of the mine or company sending them at the top, or otherwise they cannot be inserted.

H. J.—Equalise. Most of the original difficulties have been surmounted.

Andrew.—No. 1. The authorised capital is 55,000*l.*, of which, by the last return, 45,000*l.* had been issued, and was fully paid up. It is a company established to act for other companies, and has, we understand, no land of its own. No. 2 forms a fair speculation. It is a gold-producing company.

E. M. (Stuttgart).—No. 1. The shares are nominally 4s. 6d., 5s., but with little business in them. The company is well thought of, and, it appears, has a fair chance. Have sent you last report by post. No. 2 is a well-managed mine. The shares are a fair investment, and cheap for a mine that has already paid its shareholders 11s. 9d. in dividends. The mine is what is called patchy, that is, very rich, but apt suddenly to give out.

I. A. (Edinburgh).—No. 1. Contango rate was three half-pence per share. 2. Yes, we think so. 3. Decidedly good, in our opinion. Closed firmer last night.

Settler.—Their prospects are most encouraging. We expect much better prices for the shares very soon.

B. D. Brodie.—Sell.

Seine et Oise.—More money is required before the company can do any good.

Rock.—The shares have fallen owing to the bad report issued. Sell, and take what little profit is shown.

Questioner.—Cannot advise purchase of A D and E, but others should be held for a market rise.

Frank H.—We are informed that a call will not be made for at least six months.

L. L. (Manchester).—Buy a few now they are so low. You cannot lose much whilst the chances are good for a rise. The mine looks well.

Glover (Newcastle).—We stated the facts and it remains with you to act. We have since heard that the dividend will not be declared.

Anxious.—The companies officials here are rather reticent, and it is difficult to get the information required, but we think by next week some light will be thrown on the subject.

S. S. Gillot (Warrington).—Shares are worthless, and likely to remain so.

Exploration.—Yes. A good security, and not too high priced.

K. Jenkins.—Sell, as we think you will be able to get them cheaper later on.

Journeyman.—It will, we understand, add very little to the present rate of expenditure.

Sergeant A. J.—Considered a good speculation, with the usual amount of risk in such mining shares.

Reckless.—Have nothing further to do with the parties mentioned, and think yourself fortunate that you have not lost more. You should have enquired *before* and not after dealing with them.

The Mining World.

LONDON: SATURDAY, January 17th, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

INDIAN GOLD MINES.

COMPARISON OF THE 1890 CRUSHINGS OF THE MYSORE, OOREGUM, NUNDYDROOG, AND BALAGHAT COMPANIES.

Notes by the Compiler.

The Chart presented with this week's Mining World calls for but little explanation. The companies dealt with are actually the only

ones that have crushed regularly throughout the year, but no doubt several other mines will be added to the list when the 1891 comparison comes to be made. Already the Mysore Reefs has begun its record as a productive mine by a crushing in December of 600 tons, yielding 103 ozs. Among others that are rapidly getting to the period of returns, it is probable the Champion Reef Company will be sending out a battery ere long, which may be set up and at work before the year's end.

It is a remarkable feature in connection with Indian Mines that the public prefers to pay full prices for shares in companies that have "prospects" rather than invest in those mines that have arrived at the productive stage. A recent instance of this is to be found in the sudden rise of Champion Reef from a quite nominal price to 22s. 6d., on very satisfactory assays, while the almost simultaneous announcement that the Mysore Reefs had commenced crushing with its new 20-head battery passed unnoticed, and the fully-paid up 1*l.* shares are quoted at 5s. to 5s. 6d. As the latter company is not short of money, and, with its 15,000*l.* 10 per cent. debentures, has a smaller capital than the former, a more marked confirmation of this peculiarity of the public taste could hardly be found.

THE YEAR'S RECORD.

For the Mysore Gold Mining Company the past year, though uneventful, was one of uninterrupted prosperity. As this concern is practically not one but many mines, it is not surprising the directors on the occasion of the last annual meeting should have proposed an increase of the capital account from 175,000*l.* to 200,000*l.*, and as the issue was cheerfully accepted by the shareholders at the rate of 4*l.* per 1*l.* share, the result has been to put 100,000*l.* in its coffers, while the capital of the company has only been increased by the sum of 25,000*l.* As showing what a good mine and good management combined can do, it is of interest to note here that the 200,000 1*l.* shares of this company have yielded an actual working capital of 345,000*l.*

With the additional rock-drills and the increased stamping power to be put in force so soon as the Glen shaft is available, say in June next, the minimum monthly output will be 6,000 tons, and the tailings machinery will soon be able to treat 1,000 tons in the same period.

Long before the Mysore was crushing, its shares were dealt in at prices up to and exceeding 3*l.* When the company was treating some 400 or 500 tons a month the shares were dealt in up to 9*l.* 10s., while now, with a monthly average of 3,235 tons and of 4,850 ozs., the price can hardly keep up at 6.

OOREGUM.—This mine is happy like its predecessor in having no history. A comparison of the percentage of gold per ton of ore shows this to be the richest mine of the four under consideration—13,029 tons yielded 27,350 ozs. When, however, the capital of the company comes to be considered, it will be seen that a very rich mine will be needed to give the ordinary shareholders a reasonable dividend. So far no dividends have been paid pending the legal proceedings in connection with preference shares, now under appeal.

A great deal will turn on this decision when it is given. The 10 per cent. preference shares to the nominal amount of 120,000*l.* were originally issued to revive this company (by taking it out of liquidation), and they were credited as 15s. paid. As it has since been decided by the Courts that such a proceeding was illegal, and beyond the powers of directors, a suit has been entered into by a shareholder in the Ooregum, and this now awaits a hearing in the Court of Final Appeal. If it is ruled that the preference shares are really under a liability to pay up the 15s. credited as paid, those holders of the preferences who are not original subscribers will either have to claim against the original holder for 15s. per share, or the directors and the shareholders will have to arrange the difficulty. In whatever way they do settle it. it is hard to see wherein the ordinary shares will benefit, as the preferences not only take a first 10 per cent., but also share equally with the ordinary for any surplus that may remain. Here, again, is an anomaly; the present price of preference shares is 2¾, and of ordinary 2¼.

NUNDYDROOG.—This mine having passed the greater part of 1889 in searching for its lost lode north of the cross-course, found it in its last month, and the year under review began with a jump in the returns of gold from 751 ozs. in December to 1,139 ozs. in January, and with additional stamps called into play in July it is now treating 900 tons monthly, and yielding 1,450 ozs. of gold. The capital of this company is 150,000*l.*, and the present price is 1¾ to 1⅞. If the valuation of Ooregum Ordinary is a proper one, the Nundydroog quotation is very much too low.

Of Balaghât-Mysore there is but little to be said. In February it was found necessary to re-organise the company, and the shareholders came readily into the new concern, accepting a liability of 5s. per share, of which 3s. has been paid, making them 18s. called up.

All the companies working on the Colar Goldfield are now (with one or two unimportant exceptions) under the London management of Messrs. John Taylor and Sons, and as this firm has a thorough knowledge of the district, the outlook for all concerned was never brighter than now.

Valuation of the Output of Gold.—As the realised value of the gold is only known for 11 months of 1890 (the December crushing being in transit), no amounts are inserted in the Chart, as they could only be estimates; the known figures and an estimated total for each are given below:—

Mine.	Gold sold in 11 months.	Estimated. Value of December gold.	Estimated. 12 months' value.
Mysore	£208,978	£20,200	£229,178
Ooregum	93,136	10,800	103,936
Nundydroog ...	53,574	5,274	58,848
Balaghât	11,930	1,847	13,777
Estimated total			£405,739

DIVIDENDS PAID IN 1890.

Mysore—			
March ...	6s. 6d. on 175,000 shares ...	£56,875	
June ...	5s. „ „ „ ...	43,750	
October ...	4s. „ „ „ ...	35,000	
„ ...	3s. „ 25,000 new shares	7,500	
			£143,125
Nundydroog—			
June ...	1s. 4d. on about 138,000 shares	£9,767	
„ ...	1s. 2d. „ „ 12,000 of 17/6 paid		
October ...	1s. 6d. „ 150,000 shares	11,250	
			21,017
Total dividends in 1890			£164,142

In the case of the Mysore, this brings the total amount paid in dividends to 2*l.* 1s. per share, or 311,250*l.*; while the Nundydroog's totals are equal to 4s. 4d. per share, or 31,400*l.*

A SMILING CHAIRMAN.

WHEN Mr. Cloete rose to address the Graskop shareholders last Thursday he was in a state of exhilaration that he was at no pains to conceal. The winter of his discontent had been made glorious summer by success. There were icy blasts outside, and the merciless snow fell alike upon new hats and upon old, but neither Graskop directors nor Graskop shareholders felt the bitterness of the elements in the presence of the jubilation they mutually felt that the shots in the locker, after providing for all expenses and contingencies, permitted a dividend of 5 per cent. "We might have declared 15 per cent.," cried Mr. Cloete, with a burst of laughter at the very thought, and the shareholders made the walls of the hotel ring with their plaudits, and would doubtless have promptly acted upon the slightest hint to "chair" him round the room in triumph. The significance of the dividend was this, that it is the first—yes, the very first—that has ever been declared by a Transvaal company, originally formed in London, out of the gold quartz extracted from its mine. Others have done it by "sales of land to subsidiary companies" and the like; but here was a company that without any financing had done it out of gold. This news we conveyed for the first time to the public last week, and it seems to have come to the Mining market, at least, like a revelation from the skies. To say then, that, under these unwonted circumstances, the Graskop directors came up smiling is but coldbloodedly to express a fact—they were positively radiant. Equally jubilant were the shareholders, so that the poet's description was realised to the full—"Eyes did smile to eyes that smiled again."

The occasion was one that, as the Methodists would say, should be "improved," and Mr. Cloete did not miss his opportunity. The unique position he occupied as the chairman of a dividend mine working in the Transvaal presented to him a rostrum which he was not slow to mount. From this vantage ground he preached with much acceptance, not from a text, but from two heads of discourse—first, the need of perseverance on the part of directors; second, the need of patience on the part of shareholders. To the former, he addressed words of encouragement, inferentially referring to his colleagues (not forgetting himself) as bright and shining examples. To the latter, he commended the virtue of patience, so well exemplified in the body of sages who sat before him, and whose opinion of themselves no longer remained at a discount or at par, but rose rapidly to a premium. But deep and favourable as was the impression produced by the chairman, he thought it might be still further "improved" by another speech, and this brought Mr. John Ogle to his legs. This is a gentleman who, when there was no eye to pity Graskop and no hand to save, brought those funds to the till, without which all the eloquence of Mr. Cloete and all the wisdom of the shareholders could not have prevented it from succumbing to that disease of impecuniosity which is the chief cause of mortality amongst companies. Mr. Ogle is a gentleman who speaks like the Apocalypse, and who studies reports and balance-sheets with an appetite that knows no satiety. His lamp consumes the midnight oil, and, knowing this, the shareholders were deeply anxious to have the conclusions at which a sage like Mr. Ogle had arrived. They are simple, though we are scarcely able to follow them in their logical sequence. He says: "First get a good manager, and then get a mine." Now, in our simplicity, until Mr. Ogle threw this flood of light upon the situation, we were under the impression that you should first get your good mine, and that next you should get your manager.

But still, Mr. Ogle spoke like Nestor, who, as we all know, was the wisest of the Greeks. Col. Malleson, in one of those striking remarks of his that the listener can never afterwards forget, once exclaimed, "Balkis will be a parent company." Well, Balkis has conceived and brought forth Graskop, and to do it justice, the offspring seems more promising than its progenitor. Still, what has been done by Graskop may be achieved by Balkis, by Lisbon-Berlyn, and by other mines in its vicinity; and though Mr. Ogle modestly claims merely "a little credit for himself and his colleagues," we think they merit all praise for what they have done for the company, and the example they have set to the members of other boards. The latter, we trust, will make public their determination to go and do likewise; only a resolution, like a crying baby at a concert, requires to be carried out.

RANDT MINING.

Whether the recent increase in the gold production of the Witwatersrandt district of the Transvaal be due to better management, and to the extension of the stamping machinery in several directions, or, as some people assert, to efforts among the managers of many of the properties to make a good showing for a few months, and so to pave the way for another "boom" in the shares, it would be very difficult to say. Probably both sets of factors have been in operation at different mines. Be that as it may, there can be no question that during the past year the progress of the industry has made such rapid strides that the auriferous character of the district has been proved beyond dispute. The Randt gold mines are still practically in their infancy. Prospecting in the district was only commenced in 1884, and for the first four years, although some excellent work was done by the pioneers, the actual production of the precious metal only amounted to 34,897 ounces, or about 122,139*l*. Last month's output was 50,352 ozs., or, at 70s. per oz., 176,232*l*., bringing the aggregate production for the year up to 494,756 ozs., or 1,731,646*l*. Up to date the Randt district has yielded gold to the value of very nearly four millions sterling, which, apart altogether from any question as to the value of the separate properties which have contributed to the total, cannot but be regarded as a brilliant result for a district in which, as we have said, prospecting was only commenced about seven years. The growth of the output will be at once apparent from the following table, showing the monthly production for the past three years :—

	1888.	1889.	1890.
	Ozs.	Ozs.	Ozs.
January	11,269	24,986	35,038
February ...	12,161	25,800	36,886
March	14,706	23,705	37,600
April	15,853	27,131	38,799
May	19,002	38,298	38,844
June	16,328	31,272	37,412
July	19,966	32,407	39,452
August	19'877	32,142	42,861
September ...	20,219	34,369	45,467
October	27,775	31,914	45,250
November ...	27,336	36,116	46,795
December ...	26,148	39,600	50,352
Totals ...	230,640	377,740	494,756

It will be observed that in the past year the output has been increased by 117,016 ozs., or about 30 per cent., while as compared with 1888, the year in which the great inflation in the prices of shares commenced, the aggregate production has been very nearly doubled. The Ferreira Company, which has gone in for an excellent system of developing its property before commencing milling operations, has at length began to crush, and from this source, together with increases in the stamping power at several of the mines, it is estimated by competent judges that the current month's total will not fall far short of 60,000 ozs., if it does not actually reach that amount. But we must not anticipate. Our purpose just now is rather to show what has been accomplished. And in this connection it may be of interest if we compare the yields of gold obtained by the better-known mines for the last three months of the year that has lately closed with the corresponding period of 1889. This we do in the following table :—

	1889.			1890.		
	Oct.	Nov.	Dec.	Oct.	Nov.	Dec.
	Ozs.	Ozs.	Ozs.	Ozs.	Ozs.	Ozs.
City and Suburban ...	2,073	2,370	2,480	811	738	900
Crown Reef	2,300	2,220	2,408	4,030	3,760	3,293
Durban-Roodepoort...	1,161	1,007	1,180	1,540	1,540	1,406
Heriot	850	925	719	320	472	300
Jubilee...	815	876	917	1,015	1,040	1,056
Jumpers	2,037	3,120	2,480	2,360	2,167	3,414
Langlaagte	6,500	6,250	6,250	4,550	4,600	4,750
May Consolidated ...	496	741	686	1,110	933	2,025
Robinson	8,000	7,812	8,008	5,510	6,034	6,530
Salisbury	615	535	425	750	870	530
Simmer and Jack ...	1,124	1,142	1,185	3,013	3,016	2,563

This table shows that the rule of progression, measured by the monthly yield of gold, has been by no means uniform. The City and Suburban, after making a brilliant show for a time, fell off in productiveness fully 75 per cent., and there has been no dividend since December, 1889. The Crown Reef Company has paid 15 per cent. on its capital of 116,000*l*., and must have a considerable divisible balance in hand. Durban-Roodepoort, one of the few Randt companies formed and directed on this side, has paid 20 per cent., and has shown steady progress. Heriot is said to be a good mine; if so, the management cannot be congratulated. The December output was less than half that of June. Then we come to the Jubilee company, which in spite of the bad example set it by some of the big concerns that went in for capital-watering on a preposterous scale, has distributed 60 per cent. upon its modest capital of 26,000*l*. The Jubilee mine is as well managed as any Randt property; and even at the present price of the shares the yield to an investor is equal to 12 per cent. For 1889, we may remind our readers the dividends paid amounted to 30 per cent. To double the payment in one year is clear evidence that those who have charge of the property understand their business and conduct it properly. The Langlaagte returns, though they improved recently, still compare unfavourably with those for the second half of last year. The company paid 7½ per cent. in July, and with the returns it has been obtaining lately there ought to be a good dividend in the near future, unless the cost of working is very much larger than it should be. Robinson appears to be making up for lost time, although it is not getting nearly so much gold as during the closing months of 1889. It has recently declared a dividend of 4s. per share, or 4 per cent. on the capital as it now stands—2,750,000*l*. It will be recollected that the original capital was 50,000*l*. in 1*l*. shares, but very unwisely, as the directors must now see, this modest amount was inflated up to 2,750,000*l*., each holder of a 1*l*. share receiving 10 shares of 5*l*. each. Hence the very small dividend. If the capital had been left untouched the distribution would have been equal to 200 per cent. The Salisbury Company since its re-construction appears to have become more respectable, and, like Simmer and Jack, should not remain much longer unfruitful to the shareholders.

With regard to the future, it is reasonable to assume that the costs of working will tend to decrease. Kaffir labour has come down in price, and the cost of transport and stores will be reduced when Johannesburg is connected with the outer world by the railway which is now in active progress; but we are not inclined to accept as probable the estimates of savings that we have heard mentioned recently. The Randt industry has in it all the elements of success; widely distributed auriferous deposits, not particularly rich for the most part, but holding down in depth; fairly good climatic conditions, and a good supply of labour and water. In the past, the real defect has been incompetent and dishonest management. If, as we are led to believe, this has been altered, there is no reason why the Randt should not have a long and prosperous history.

MR. THOMAS THOMPSON'S CIRCULAR FOR JANUARY.

Mr. Thomas Thompson is apparently unable to resist the temptation of giving a brief review of the events of the last financial year, and has consequently gathered up in a few sentences the salient facts of 1890, so as the better to show the position in which they have left the markets at the opening of the present year of grace. "He will be his own Chancellor," said Bismarck of the present German Emperor, and Mr. Thompson will, is, and, in fact, ever has been, his own editor. He remembers what he said at the opening of 1890—most prophets try to forget it—and fearlessly turns over the files of his "Mining and Investment Circular" to re-produce, with internal satisfaction and external pride, what he wrote 12 months ago. We do not propose to follow him into the past, but to call attention to his opinions as to the immediate mining future. He regards the position of South African mines as favourable, for he has been impressed with their improving returns. Mr. Thompson has long been regarded as the great high priest and the outspoken apostle of gold mining in Colombia. A perusal of our report of the Colon meeting last week will show that Mr. Thompson has been connected with the best of these ventures, and that there are others with which his name is associated that promise soon to toe the dividend line. He describes the country as teeming with wealth, and the evidences of it have not been wanting on this side. He quotes from our report of Mr. Sankey's speech delivered at the Colon meeting a week ago. This gentleman, previous to his visit to the spot, had received with "mental reserve" the statements made by Mr. Thompson and others as to the mineral wealth of Colombia, but when he saw the unmistakable evidence of riches about him, and when he came to know that it is often the custom for working men to pay for supplies in gold dust, he became transformed into a sort of masculine edition of the Queen of Sheba, who, after her visit to Solomon, exclaimed that the half was not told her. Mr. Sankey must, therefore, now take rank as one of Mr. Thompson's converts, for this is the mining creed he has been proclaiming to all who would stop to listen or take time to read. It is true that some of the companies with which Mr. Thompson is connected have not yet entered the dividend list, but of their appearance there, when the initial stages of preparation are over, he has no more doubt than that he is the author of this circular. We are bound to admit that we admire a man who has the courage of his opinions and is not afraid to express them in sanguine language. Without such ardent believers as Mr. Thompson, and such dogged

perseverance as that which is exemplified by the history of so many bodies of shareholders, mining would not be the success it so often becomes, and this country would lose one of the chief traits that make its people so much admired by foreign nations. It is not to the cynical and the unbelieving, but to the confident and the sanguine that the world owes its progress and its wealth. We are glad to see that all Mr. Thompson has said about Loma being "the richest mine in Colombia," and the strong things he has spoken of other ventures with which he is identified, he adheres to. The circular is replete with information about mines other than those situate in Colombia.

ANGLO-MEXICAN AFFAIRS.

THE absence of Mr. Hopkins from the Anglo-Mexican meeting was much regretted, though a good substitute was found in the person of Mr. William Lloyd. This gentleman has seen the property, and moreover, has had considerable experience of mining in Mexico. His view, therefore, that the company is likely soon to be able to resume the dividends (9 per cent.) it paid in the previous financial year, is certain to bring encouragement to the shareholders. This they somewhat needed, for the reason that when once a mine begins to pay dividends, it is generally supposed to do so over a lengthened period. It is the first dividend that is the hardest to earn. Exceptional causes have operated against the company last year, notably a reduction in the value of the ore produced, and a charge of 13,000*l*. for necessary expenditure on capital account at the mine. In regard to the former, the latest reports show that the mine is improving; and as to the latter, it was re-assuring to hear Mr. Lloyd say that capital expenditure had practically ceased. Some quartz recently extracted from the mine has given striking assay results.

PENHALLS TIN MINE.

WE understand that a syndicate is in process of being formed, which will have for its object the acquiring and working of Penhalls Tin Mine, situate in the district of St. Agnes, Cornwall. Penhalls Mine was formerly worked on the cost-book system up to the time of stopping in March, 1884, when black tin was selling under 40*l*. a ton. The crude and expensive methods of working, together with the low price of tin at that time prevailing, and other difficulties the adventurers had to contend with caused the mine to be closed down. Since that period adjoining mines have exploited and worked with considerable profit on valuable lodes, which are now known to exist in Penhalls. The Great Pink lode traverses Penhalls sett, where it has made great riches. It is said that as much as 100,000*l*. profits were realised from three shallow levels at 45 fm., 48 fms., and 50 fms., and when last worked in Penhalls it yielded tin ore of such richness that some of it had merely to be reduced in size for the smelting works, where it realised, without undergoing the usual preliminary dressing operations, within 7*l*. per ton of the market price for dressed black tin. Capt. Bennetts certifies to a rich shoot of ore, available for immediate operations, between the 60-fm. and 70-fm. level on this lode, and of its continuance into the level below. There is little doubt that this is a good speculation, and to those who are bold enough to join the syndicate in the present depressed condition of mining generally and home mining in particular, it offers a fair prospect of success. The shares iu the syndicate are 100*l*. each, with no further liability.

NEW DEVALA-MOYAR.

THE impression left by the New Devala-Moyar meeting on Monday was wholly favourable. The recent news from a neighbouring mine has greatly encouraged the shareholders who, however, are not without signs of coming prosperity nearer home. For example, the developments of the Harewood reef have been of a hopeful character, and as described by Mr. Long, a recent addition to the board, it is apparently a true fissure vein. The directors have acted wisely in appointing Messrs. Bewick and Moreing their consulting engineers, for under their advice every prudent and reasonable effort will be made to unearth the latent wealth of this concern. We are glad to be able to record the complete success of re-construction, as the result of which the new company starts with a capital of 20,000*l*., two mills, a complete rock-drilling plant, and a master lode. In regard to the latter, testimony here, as elsewhere in India, goes to show that the ores increase in value with depth. If the directors did wisely in calling to their aid the consulting engineers we have named, the shareholders acted with equal wisdom in re-installing Major-Genl. Light and his colleagues in the position most of them have so worthily filled for a long time past. It is not an easy task for directors during a whole decade to face their shareholders with a record of the failure of their utmost efforts, but we are perfectly certain that all reasonable shareholders feel that Major-Genl. Light and his colleagues deserve their sympathy as most certainly they have their suffrages and their support. There are signs that the immediate future of the company is likely to be considerably brighter than its past, and one of these is the practical absorption of the remaining balance of 15,000 shares by the shareholders since the meeting was held.

AFRICAN BANKING CORPORATION, LIMITED.

THE public who join this enterprise at par are to be commended for their courage rather than their discretion. Provided the directors are ever able to go to allotment, we shall be very much mistaken if a short time hence investors who "stand by" will not have the opportunity of purchasing the shares at a considerable discount. The time for introducing a banking corporation for any part of the world, and especially for South Africa, is most inopportune. The directors appear to think the public have a short memory of the recent crisis in banking, but they are likely to be undeceived by the nature of the applications they will have for the shares. The prospectus states that Cape Colony, Natal, the Transvaal, &c., are inadequately supplied with banking facilities; but this is purely a matter of opinion. In our judgment, so far as these territories are developed, the Standard Bank of South Africa and the Bank of Africa fulfil all reasonable requirements, not to mention other institutions of a more local character. Figures are set forth in the prospectus to show the growth of enterprise in South Africa generally, but they go to prove, not that a South African Banking Corporation with a capital "authorised to be increased by the directors at their discretion to five millions" is required, but that the present facilities are sufficient for all reasonable purposes. There is a large amount of second-hand information in the prospectus as to what is going on in South Africa generally, but in regard to the proposed operations of the corporation itself the information is meagre indeed. Even, as we have said, were such a corporation as this required (and we contend that it is not) a more inopportune moment to introduce it to the public could scarcely have been selected. Some of the directors, at least, have a good reputation for business, but they scarcely sustain it by becoming connected with this concern, and particularly by choosing the present time to bring it before the public.

MINING IN VICTORIA.

DURING the quarter ended 30th June, the quantity of gold obtained throughout the colony amounted to 151,191 ozs. 5 dwts. 21 grs., being 15,890 ozs. 2 dwts. 2 grs. more than the yield for the preceding quarter. Increased yields were noticeable in the whole of the several mining districts, with the exception of Maryborough, which had a decrease of nearly 900 ozs. The amount of gold produced in each district was as follows:—Ballarat, 51,304 ozs. 15 dwts. 21 grs.; Sandhurst, 37,482 ozs. 14 dwts. 13 grs.; Beechworth, 17,192 ozs. 17 dwts. 22 grs.; Maryborough, 14,232 ozs. 5 dwts. 11 grs.; Gippsland, 12,931 ozs. 14 dwts. 16 grs.; Castlemaine, 12,890 ozs. 17 dwts. 22 grs.; and Ararat, 5,155 ozs. 19 dwts. 12 grs. From alluvial, 54,492 ozs. 1 dwt. 17 grs. were obtained; Ballarat having the largest output, whilst Sandhurst contributed the greatest part of gold procured from quartz. In the latter class of mining 96,699 ozs. 4 dwts. 4 grs. were produced. In some of the mining districts the price paid per ounce for gold varied considerably. For instance, in the Dark River division, as low as 2*l*. 15s. was paid; the highest amount for which gold was sold in the same locality being only 3*l*. 5s. The gold found there is evidently of a very poor quality, seldom reaching a higher price than 3*l*. 7s. per oz. In other portions of the same district, that is, in the Indigo division, as high as 4*l*. 3s. was obtained. The best gold is produced in the Ballarat district, where the price per ounce for which it is sold ranges from 3*l*. 17s. 6d. to 4*l*. 3s.

The export of gold (the produce of the colony), from Victoria during the quarter ended 30th June, amounted to 30,580 ozs. 15 dwts., which was valued at 123,314*l*. This gold was sent to the following ports:—Bombay, 16,024 ozs. 1 dwt.; Ceylon, 9,264 ozs. 16 dwts.; United Kingdom, 3,986 ozs. 18 dwts.; South Australia, 1,305 ozs. Gold specie from all sources, valued at 183,143*l*., was also exported during the same period. No gold not the produce of the colony was exported. Returns were received by the Mining Registrars during the quarter, showing that 190,681 tons 10 cwt. of quartz had been crushed for a yield of 86,738 ozs. 6 dwts. 6 grs., or an average of 9 dwts. 2 grs. per ton. The Gippsland district had the highest average, namely, 15 dwts. 10 grs. which was obtained from a crushing of 8,741 tons of stone. The lowest average, 7 dwts. 5 grs., was recorded in the Ararat district. In addition to the above there were 5,660 tons 10 cwt. of quartz tailings and mullock treated, yielding 531 ozs. of gold, also 1,452 tons 7 cwt. of pyrites operated on, which gave a return of 3,726 ozs. 9 dwts. 22 grs. of gold. The quantity of washdirt puddled and sluiced during the quarter, according to the Mining Registrars' returns, was 167,754 tons, from which 15,212 ozs. 18 dwts. 23 grs. of gold were obtained, giving an average of only 1 dwt. 19 grs. per ton. The high average of 10 dwts. 19 grs. was obtained in the Sandhurst district, where 250 tons were treated for a yield of 135 ozs. 3 dwts. 19 grs. Cement, amounting to 3,894 tons, was crushed during the same period, for a return of 544 ozs. 17 dwts. 12 grs. of gold. During the quarter no washdirt was treated in the Ararat and Gippsland districts, and cement was crushed only in the Ballarat and Ararat districts.

On the 30th June there were 23,803 gold miners at work, an increase of 179 compared with the returns for the previous quarter. Quartz mining employed 12,245, and alluvial 11,558. In both classes combined 20,475 Europeans were engaged, and 3,328 Chinese, the latter being employed chiefly in alluvial mining. Divi-

dends amounting to 124,223*l.* 19s. were paid during the quarter ; the amounts disbursed in each district were as follows :—Ballarat, 54,815*l.* ; Sandhurst, 39,601*l.* 19s. ; Beechworth, 11,046*l.* ; Gippsland, 6,000*l.* ; Maryborough, 5,441*l.* ; Castlemaine, 4,800*l.* ; Ararat, 2,520*l.* The following mining companies paid the largest amounts during the quarter :—Madame Berry, Creswick, 15,300*l.* ; Berry Consols, Creswick, 14,000*l.* ; Johnson's Reef Gold Mines, Eaglehawk, 11,200*l.* ; Star of the East, Ballarat, 10,800*l.* ; Long Tunnel Extended, Walhalla, 6,000*l.* ; New Chum Railway, Sandhurst, 5,533*l.* 10s. ; Specimen Hill, Eaglehawk, 5,000*l.* ; Black Horse United, Gordon, 5,000*l.* ; Lazarus, Sandhurst, 4,500*l.* ; and Great Northern Extended, Chiltern, 4,000*l.* It is satisfactory to be able to record a decided improvement during the past quarter in general mining. There has been an increase in the amount of gold won, and the prospects of mines in many of the divisions are encouraging. It is most satisfactory to be able to point to the important developments in tin-mining, which are in progress in the Omeo district ; to the development of the alluvial mines in the Beechworth district ; and last, but not least, to the satisfactory proof that deep mines of Ballarat and Sandhurst carry gold in remunerative amount.

MESSRS. GEORGE GREGORY AND CO.'S NEW OFFICES.

MESSRS. GEORGE GREGORY AND CO. may fairly claim to have reduced stock and share dealing to a fine art, and in their new offices at 4, Tokeuhouse Buildings, have given a further development to their system, which experience has proved to be creditable to themselves and satisfactory to their clients. In the old offices the business was " cribbed, cabined and confined ; " in the new ones, which cover an area of 1,184 ft., there is ample space in which to continue their affairs, which seem to be growing in magnitude and importance every year. Leaving the thoroughfare of Tokenhouse Buildings, the visitor descends three steps and finds himself in a spacious eutrance hall. To the right he observes a large staff of clerks busily engaged in dealing with ramifications of a correspondence, which in ordinary times involves the answering of from 85 to a 100 letters a day, and in special seasons of activity, a considerably larger number thau this. To the right he sees the rooms set apart for clients, and the offices of the Messrs. Gregory themselves. It is a feature of the whole establishment that nothing is kept secret ; everything is open as the day. Investigation is not merely courted, but is absolutely forced upon those who do business with the firm, for each evening the tape prices, as officially quoted from the Stock Exchange in the leading evening paper, are sent to each client, so that he may see not only the various fluctuations that have characterised the whole of the day, but the prices current at the exact hour at which his business was done. A statement is sent to each client every night, with a balance cheque. The vast amount of detail which all this involves is simplified by system. In fact *system* is the key note of the whole business. The new offices are provided with five private wires, four private telephones, one telephone connected with the National Telephone system, three tapes, a series of electric bells, which call to the room of his chief, the clerk, or messenger who may be required, and a machine, which is altered with each change of the clock, by which telegrams can be dated at the very momeut they are received. No effort is spared to place the client *au courant* absolutely with every detail of the business which is being done for him, and, as a general rule, it is said that each communication with which he is favoured conveys, on an average, five enclosures. All this involves an immense amount of detail, but, as we have said, by system ; in other words, by method aud arrangement, the whole organisation works like a well-oiled machine. In their new offices the Messrs. Gregory bid fair to surpass the success they have already achieved, and that success has been of no mean order.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

As Money has been so abundant as to be unable to find employment even at 1 per cent., and as discouut has consequently fallen away to nearly 2 per cent., or half the Bank rate, it was thought in some quarters that the official rate would be lowered to 3 per cent. this week. This, however, considering the position occupied by the Bank, was rather premature, for the fall affecting the exchanges might lead to a sudden renewal of the drain of gold. The return of the establishment proved, however, very favourable, which lead to the expectation that the movement was only deferred until next week, but the Bank, for the sale of its reserve, and the necessity of repaying the Bank of France the gold borrowed, requires to keep control of the market, and this it will gain shortly when the revenue payments get more heavy, and they may decide to keep 4 per cent. in force instead of again raising the figure, if lowered ; moreover, it is a reasonable rate, level with the Bank of Germany and 1 per cent. above the Bank of France. Satisfactory statements with regard to the position of affairs in connection with the recent difficulties, and the Baring Guarantee Fund were made by the chairman of the Union Bank of London at the meeting upon the authority of the Governor of the Bank of England, which have confirmed the more confident impression. The Bank return is much stronger, showing an increase in the reserve of 1,267,000*l.* to 16,800,000, or 44⅜ per cent. of the liabilities.

Despite the amount of attention necessarily devoted to the arrangement of the account business at the Stock Exchange has been active, and prices fairly well sustained. The settlemeut was concluded without difficulty, money proving abundant and contangos light. The scarcity of stock in some instances also helped to send prices to higher levels. The Funds have been strong on investment purchases, while the revenue returns point to a large sum being used by the Chancellor of the Exchequer to liquidate a further portion of the National Debt. The first reports of the revolt in Chili have been practically confirmed, but as only private telegrams came by a most roundabout course, it is difficult to gather "the wheat from the chaff," and the stock has fallen considerably, Nitrates being similarly affected. A strong advance is recorded in Consols, which now stand 4 per cent. above their worst in November, or at the same level as for the corresponding period. Foreign Government Bonds, on the whole, were featureless, but lower, including South American. The New French Loan has proved a grand success, and once more speaks volumes for the thrift of the French as a nation. Home Railways were steady, the Scotch on the better prospects with regard to the strike. The Brighton Company annouuce a dividend at the rate of 8 per cent. ; the South-Eastern, 3½ ; and the Tilbury at the rate of 4½. A good business has been reported in American Railroad securities at enhanced values. The United States Senate have passed the Silver Free Coinage Bill. Grand Trunk stocks were very good, while Mexicans have been buoyant. Numerous transactions were reported in Banks, Breweries, and the most active in the Industrial section, at greatly expanded prices.

The value of money has undergone some further reduction to-day, but the market was nevertheless considered rather steadier at 1⅞, 2 per cent. for three months' bills, and 1½ for loans at call.

At the Bank of England 114,000*l.* was withdrawn partly in German gold, while 20,000*l.*, chiefly sovereigns, arrived from South America. Bar silver declined ½d. per oz., to 48d., yet from America cable advices this afternoon state that the Free Coinage Silver Bill will pass the House of Representatives, but that the President will sign under protest.

Not much business was reported on the Stock Exchange to-day, and prices as a rule were dull. The Funds were lower, Consols for cash being 97⅛, ¼. In the Foreign Government department the feature has been the collapse in Entre Rio stock, which fell 10 per cent., owing to reports of a revolutionary outbreak in favour of Dr. Celman, other Argentine and Buenos Ayres stocks, however, only receded ¼ to ½, with an exceptional fall of 1 in Argeutine Sterling loans, but Brazilian issues also receded ¾ to 1. International issues were firm, notably Egyptiau, Hungarian, Italian, Spanish ; Greek and Portuguese, however, closed dull. The dividend of the Great Eastern Railway at the rate of 4 per cent. was satisfactorily received, and the stock rose 3½, to 92½. The result of the Chatham meeting, rejecting the stock conversion and splitting scheme was also received with satisfaction. The Scotch stocks were likewise favourably affected by the improvement in the railway service. Brighton "A" closed 1½ higher, and South Eastern "A," ½ ; while Sheffield "A" alone exhibits a decline of ¼. American Railroad Securities responded to the lower prices received from the other side, and although some recovery was noticeable at mid-day. The latest prices show a reduction of ½ to 1 in all the active descriptions, Atchison, Union Pacific, and Milwaukee shares being respectively 1¼, 1½, and 1¾ lower. Grand Trunk stocks continued to improve, but Mexican receded ¾ to 1, owing to advices respecting the state of the Silver market. Nitrates were featureless, while Banks again expanded, but other Miscellaneous securities were dull.

Annexed are the final quotations to-day :—Consols Account, 97 5/16, 97 5/16 ; Egyptian Preference 93⅝, 93¾ ; Egyptian Unified, 97 7/16, 97 7/16 ; French Four-and-Half per Cents., 103¾, 104¼ ; Hungarian, 91¼, 91½ ; Italian, 91⅜, 91½ ; Mexican, 92¾, 93¼ ; Peru Corporation Ordinary, 10¾, 11¼ ; Peru Corporation Preferred, 28¾, 29¼ ; Russian, 1873, 98, 98½ ; Portuguese, 56⅜, 56⅝ ; Spanish, 75⅞, 76 ; Turkish, 1871, 99, 99½ ; Turkish Defence, 101¾, 102¼ ; Caledonian Railway, 121⅛, 121⅜ ; Great Eastern, 91⅞, 92⅛ ; Great Western, 162⅞, 163⅛ ; Brighton "A," 160¾, 161 ; North Western, 178⅜ 178⅝ ; Metropolitan, 79¾, 80¼ ; Metropolitan District, 30⅜, 30⅝ ; Midland, 148¾, 149 ; North British 52⅛, 52⅜ ; North Eastern, 167¾, 168 ; South Eastern "A," 95⅛, 95⅜ ; Nitrate Railways. 14 14⅛ ; Mexican Railway Ordinary, 48⅛, 48⅜ ; Grand Trunk 9⅞, 9 11/16 ; Grand Trunk First Preference, 62¼, 62½ ; Grand Trunk Second, 42⅜, 42⅝ ; Grand Trunk Third, 22⅜, 22⅞ ; Canadian Pacific, 76¾, 77 ; Denver 20, 20¼ ; Erie, 20¾, 21 ; Milwaukee, 55⅞, 56⅛ ; Lake Shore, 110½, 111xd. ; Louisville, 79¼, 79½ ; Atlantic First, 33½, 33¾ ; Ontario, 16¾, 17 ; Ohio, 19¼, 19¾ ; Norfolk and Western, 57½, 57¾ ; Reading, 16⅞, 17⅛ ; Reading Bonds, 55½, 56 ; Union Pacific, 46⅞, 47⅛ ; Wabash Preference, 20, 20½ ; Ottoman Bank, 14 11/16, 14 13/16 ; Anglo-Telegraph, 49½, 50 ; National Telephone, 4⅜, 4⅝ ; Hudson's Bay, 18¼, 18¾ ; Suez Canal, 95½, 96 ; Guinness Ordinary, 320, 323 ; Allsopp's Ordinary, 42, 44 ; Bryant and May, 13¾, 14¼ ; Eastmans Ordinary, 13, 13½ ; G. H. Hammond, 5¼, 5½.

DAY DAWN BLOCK AND WYNDHAM CO., LIMITED.

NEW PROPERTY ACQUIRED AND PLAN OF WORKING ALTERED.

6th January.—Since the last issue of the fortnightly reports, the directors have been able to acquire the No. 1 and 2 Day Dawn West or Empress of the North Lease, of about 10 acres, adjoining the company's ground on the west, as shown on the plan, and that, owing to the care exercised by the general manager, Mr. Rollston, in the negotiations, a valuable addition has made to the company's property at a trifling cost. I am also instructed to iuform you that, in order to obviate as much as possible all unremunerative expenditure, the directors, on the recommendation of Mr. Rollston, have abandoned the Wyndham shaft and the ground upon which it was situate. In advising the board on this matter, Mr. Rollston pointed out that not only would the heavy cost of maintaining the shaft and keepiug the workings free from water be saved, but also the expense of representing a large portion of useless ground ; and, further, that the Wyndham reef, seriously disturbed in the lower workings of the shaft by a cross-coursc, could be worked equally well, and much more economically from the levels in the Day Dawn ground. In conclusion, I am authorised to say that the development of the company's western ground is making good progress, and that the reef indications are very satisfactory and encouraging.—T. WINDER, Secretary.

REPORT OF MEETINGS.

THE NEW DEVALA-MOYAR GOLD MINING CO., LIMITED.

RE-CONSTRUCTION A SUCCESS—PRACTICALLY ALL THE SHARES TAKEN—THE ORE IMPROVES IN DEPTH—CONFIDENCE OF THE BOARD MAINTAINED—MESSRS. BEWICK AND MOREING APPOINTED ENGINEERS—IMPORTANT SPEECHES BY THE CHAIRMAN, MR. LONG, AND MR. BEWICK.

THE first general meeting of this company was held at the Cannon Street Hotel on Monday.

Major-Genl. Alfred Light (chairman of the company) presided.

The SECRETARY read the notice of meeting.

SUCCESS OF THE RE-CONSTRUCTION.

The CHAIRMAN: Gentlemen, as you are aware, this is a statutory meeting, which we are obliged to hold within four months of the date of re-construction by Act of Parliament. No accounts will be submitted to you, and no business beyond that which is mentioned in the circular. The re-construction has been well received. Up to the date of the issue of the circular 163,000 shares had been allotted. Since that date 22,000 have been applied for, and I have no reason to doubt the receipt of applications for the balance of 15,000 shares, which will make up the total amount. (Cheers.) Of this amount the board will be prepared to take a fair proportion. Having to meet the shareholders, the board determined to take their views as to whether they were to continue to manage the affairs of the company, or whether the shareholders would wish to elect a new directorate. Hence the statement in the circular. Whatever may be the result of your decision, I must repeat my

CONFIDENCE IN THE FUTURE OF THE MINE,

and that you were wise in taking the advice of the board in finding fresh capital to develop it to a greater depth. Before the discussion about the re-election of the board, I am going to ask Mr. Long, the shareholders' nominee at the last general meeting of the old company, to give his views of the mine, of its management, and of our direction. After Mr. Long, Mr. Bewick, our consulting engineer appointed since the re-construction, will give you his views. Then we shall, as directors, submit ourselves to your decision, and I shall be happy to answer any questions that you may put to me.

VIEWS OF MR. LONG.

Mr. LONG: Though this is the first time I have had the honour of addressing you from this side of the table, I have been a shareholder since 1880, now 10 years ago. I am, therefore, acquainted with the history and vicissitudes of the property. I use the word vicissitudes advisedly, because I have seen the shares of this company up at 3*l*. and down to 3d. I may tell you that I am a civil engineer, by education, and have been in many parts of the world, and in India amongst others, though not in the district in which your mine is situated. In response to the appeal of the solicitor of the company at the general meeting of the old company, last August, I volunteered to assist the directors, and my offer was accepted, but as the other directors have chosen to offer themselves for re-election, I obviously could not do less than also appeal to the shareholders, and place myself in their hands. You will, perhaps, like to hear from me what I think of your property. We tried in succession the Strathearn, the Salomons, and now the Harewood reefs, and only in the latter case have we been encouraged to mine in depth. We are now about 420 ft. from the outcrop, and so far as indications go, all is favourable to our finding richer ore as we continue to sink.

A TRUE FISSURE VEIN.

The Harewood reef is apparently a true fissure vein, with well-defined walls going down in depth. The presence of sulphurets, or pyrites in the upper workings, is not in itself a bad sign. But we have an augury of greater value in the fact that the only other mine in the district, namely, the Indian Gold Mines of Glasgow, which has descended in depth, has at 500 ft. from the outcrop intersected a rich lode running 13 and 14 ozs. per ton. I contend, therefore, that the Wynaad district can claim to be on a true gold-bearing strata, and that we are justified in the prosecution of our venture in the Harewood Mine. As regards the management of your property, I have very carefully, and thoroughly examined into every detail, and can tell you that I am of opinion that further economies and greater efficiency can be effected in the management of the mine, but that having a regard to the distance, viz., 5,000 to 6,000 miles, of the property from London, it takes time to inaugurate and arrange matters, and that it will be a month or two before we can consider everything is as perfect as we should wish it to be. It was to this end that a representative of Messrs. Bewick and Moreing, your consulting engineers, was deputed to visit the mine, but his report is not at present to hand Every information will be gladly given, and all enquiries answered. I trust this meeting will fully debate all points relating to the mine. You have ample funds in hand, starting with 20,000*l*. clear on the 1st January, two mills, and a complete rock-drilling plant, and a master lode. I trust with the new year the New Devala-Moyar Gold Mining Company may enter a career of prosperity and success. Mr. Bewick will give you a fuller and more interesting account of the mine than I can; I will therefore give place to him. (Cheers.)

THE VOICE OF EXPERIENCE.

Mr. THOMAS J. BEWICK: Gentlemen, immediately after our appointment as consulting engineers to your company on the 21st October last we made an exhaustive examination of the manager's reports for some time previous, and compared them with the plans and sections of the workings which the directors had submitted to us, in addition to which we investigated, as far as we could, the cost sheets and accounts having reference to the work carried out at the mines. The result of our investigations is that we consider the Harewood a promising vein, and, relying on the reports and assays, which we have not any reason to doubt, are of opinion that it ought to be worked to a considerable profit. We think this vein, which is now opened upon to a depth of 420 ft., has been sufficiently developed both in depth and lengthwise to prove that it is of a permanent character. We understand that a great many strictures have been passed upon the past management of the undertaking, but these matters may be treated as bygones, and it would be useless for us to enter into details on this occasion, nor do we see that it could benefit the company as to its future, which is the main point we have to keep in view.

JUSTICE TO THE PAST MANAGEMENT.

We may, however, point out that the testing of the property for its mineral wealth has been difficult, tedious and expensive, and we look upon it that any company not backed up by dogged perseverance and the pluck of English capitalists would long ago have given up the undertaking as hopeless. In almost any matter of business it is easy to be wise after the event, but in mining this may be emphasised, and we have little doubt that those who now criticise and profess so much wisdom had they been in charge of the property would not have shown any better results than those actually responsible for the management. According to the advices from the manager of the mines, there is now opened up, and, in fact, blocked out, a great many tons of ore, containing, by assay, from 1½ ozs. upwards of gold per ton of stuff, and very many more tons. containing from 10 dwts. to 15 dwts. per ton. These reserves the directors have been blamed for not extracting and having crushed and manipulated by some process, with the view of obtaining the precious metal, in order not only to reduce the strain on the company's financial resources, but also holding out a prospect of monetary returns to the shareholders. You will, however, perhaps, permit me to explain that, as a matter of fact, the directors have had this ore tested by almost every known gold extracting process, uone of which have so far given satisfactory results. The first thing the directors put before us after our appointment was the question of a process for the extraction of the gold, which they could at once adopt with a view to remunerative returns. We were, unfortunately, obliged to advise them that there is not any process in practical operation which will treat the company's ore at a profit, while that ore remains at its present grade, and consequently that the directors would not be justified in spending the company's capital until such a process had been met with. There are, however, many well-known experts and others applying their knowledge, experience, and skill to the solving of the question of gold extraction from the ores, at a cost which will be remunerative to the mine owner, and experiments are being made in London and elsewhere, the promoters of which claim for their respective processes all that is required; that is, an efficient and economical means of extractiug the gold. With most, if not all, these parties we are in communication.

ORE TO BE SENT HOME FOR SPECIAL TREATMENT.

Within a short period we are expecting to receive from your mines in India about 2 tons of refractory concentrates, and it is our intention, with the authority of your board, to personally see these tested by one or more of the processes to which we have referred. Should the results be satisfactory to us we shall, without delay, advise the directors to acquire the necessary plant, and no time will be lost in applying the process and extracting the gold. Believing that gold exists in payable quantities, assuming always that a successful method of treatment is applied, it would be obviously wrong for the directors and their advisers to enter upon any rash or hasty action, whilst it cannot but be to the interests of the shareholders to await the issue of the experiments now being carried out and then to avail themselves of the opportunity of benefitting thereby. According to all the information before us there would appear to be sufficient ore containing gold to yield satisfactory monetary returns. This being so, we would strongly advise the shareholders to await the results of the trial crushing referred to, which we can only hope will lead to satisfactory returns in the near future. If, on the other hand, a matter of this sort is entered upon hastily, without the most careful investigation, the result may probably end in loss and disappointment to the shareholders. Early in December last one of our representatives was proceeding to Borneo on professional business. This occurrence led us to suggest to your directors that we could arrange for him to visit your mines on his way out. We thought this a good opportunity for getting a knowledge of your property, of checking the local management and advising us, and through us the board, on the present condition and prospects of the uudertaking from an iudependent source.

A REPORT EXPECTED IN A MONTH.

The directors having approved of the suggestion, our representative left this country upwards of a month ago and is now at the mines. We hope in the course of a few weeks to have a full report from him. Our advice is briefly to wait for our representative's report, and the result of the tests of the refractory ores now being sent from India. On receipt of these it will be our duty to draw up a definite plan for carrying on the development of the mine and the treatment of the ores. Having once laid out our plans, and with the approval of your directors, carried them into effect, we shall look forward to the economical, and what is more important, the profitable working of the mine. It must not, however, be supposed that this is easy of accomplishment with an ore such as exists in your mine. Experiment after experiment may still be necessary, but from what can be gathered from the papers put before us, and the knowledge we have of the future developments in the way of manipulating ores of this character, we believe that there is a large quantity of ore in the mine, averaging from 10 dwts. to 15 dwts. per ton, and it is our opinion that such ore should be worked and treated at a profit of at least 1*l*. per ton. (Cheers.)

The CHAIRMAN: The report referred to by Mr. Bewick will be published as soon as we receive it.

Mr. BURGESS: Has the agent returned?

The CHAIRMAN: No. He is there at this moment.

Mr. BURGESS: Then your report is not founded upon information from your agent?

Mr. BEWICK: No. I said it was upon documents and other information placed at our disposal by the directors. (Hear, hear.) The only news from our representative so far takes the form of a

telegram to say that he has arrived. That was received last week, and there has been no time for him to send any report. He left here on the 5th December, and we cannot expect his answer before the lapse of a month. It will take him some time to examine the property, and probably four weeks will be required for the mail to briug his report home.

A POLICY DISCUSSED, BUT NO ALTERNATIVE ONE OFFERED.

Mr. OLDENBOURG : It seems to me that what we have heard from you now and from the new consulting engineer is the same old tale that we have heard so many times before. With regard to the treatment of these ores, there has been a question of experimenting for a number of years, and during the last two meetings we were hopeful to have received (we did receive at the last meeting) a report from you with regard to the treatment of 10 tons of ore which had come from the mine, and which had, I suppose, been treated in London and New York by all the known processes, so that the information you still say you require with regard to these ores you virtually possess. You have also sent out from time to time directors and other gentlemen to examine the mine and fully report upon it. It seems to me you are proposing to do the same again, and to receive further shipments of ore for treatment here on which you will spend a considerable amount of money. The policy pursued of old is to be continued evidently in the new company. Now, you cannot get any fresh information. I suppose the information you received formerly from the gentlemen who reported on the mine, along with that from those who have assayed your ores within the last year or two—these various persons I suppose have given you good and reliable information. Why, therefore, do you want to get over another 2 tons to be treated now? Why did you want a fresh report on the mine? Why cannot you work on what you already possess? Why spend the company's money upon matters with which you ought to be familiar with by now? I hope the fresh blood which you have infused into the board will prove of value, though I do not wish to say a word derogatory to your management. It seems to me that you are going on the old lines, but I hope your new consulting engineers and the new director will help you to carry out a more successful aud a more energetic policy.

THE NECESSITY FOR FRESH REPORTS.

Mr. LONG : With regard to the remarks of Mr. Oldenbourg, I think they seem to show that he cannot have had much experience in mining. It is a long-winded job uuder the best of circumstances. There has been, as far as I know, no scientific report until this last one, which is now in process of being made by the representative of Messrs. Bewick and Moreing. There was uo former report upon the mine except from the regular managers. Now, it stands to reason that, as we descend, we penetrate new strata, and must necessarily meet with different ores. (Hear, hear.) Hence, as the mine changes we must have fresh reports, and try fresh experiments, if we are to carry on the business at all. (Cheers.) I do not see how we can avoid it. Mr. Oldenbourg will do us a service if he will tell us what different course we can pursue. But on that subject he is sileut. If he has anything to suggest we are here to listen to him. (Hear, hear.) The truth is that no process has yet been found to treat the ores we have at present with commercial success. There are many processes that will treat the ores at a cost of 25s. for every 1*l*. worth of gold extracted from them. You can only get 3*l*. 15s. per oz. for your gold, and if it costs you 5*l*. to get that you had better keep that 5*l*. in your pocket.

Mr. OLDENBOURG : In your remarks you did uot say from whence you were taking these 2 tons. You did not say whether you were taking them from the deepest portion of the workings, though, I think, you were speaking of refractory ores. We know that according to reports from the responsible managers there were some 4,000 tons (estimated) of pyrites. In making my remarks I concluded there was a possibility of your receiving over here ores similar to those you previously had, and although I have uot followed of late the reports of the managers, I suppose the ores which we are now extracting from the lowest levels are not so refractory as those at the highest levels.

ORES IMPROVE IN DEPTH.

Mr. LONG : I am glad to say that is the case. As we descend the quality improves, and there is a larger proportion of free gold. It is impossible to tell what there may be hereafter, but as far as indications go they are favourable to the miue from the point of view of increased value in depth.

Mr. OLDENBOURG : Where are you taking the 2 tons from?

Mr. LONG : From the concentrates, taken at random from the old heap at the 78 level.

Mr. OLDENBOURG : If you take the coucentrates from various parts I do not see what practical conclusion you can come to.

Mr. LONG : You cannot have followed Mr. Bewick's remarks, because he entered iuto a number of questions about the treatment of these ores. (Hear, hear.)

Mr. OLDENBOURG : The ores have been treated by all known processes, and what is the result?

Mr. LONG : The result is this, that up to the present by no known process can you make the thing a commercial success. The ore changes as you go dowu, aud that is our hope.

VIEWS OF AN OLD DIRECTOR.

Admiral Sir LEOPOLD HEATH : The 10 tons you spoke of we sent to America, where they were tested by people whose special business it is to investigate ores of all the different known processes, the results of which they sent to us. We submitted their reports to experts in London, who advised us to test, what we are now speaking of, 1,500 tons of black pyrites taken from the 48-ft. level by one of these processes. That black ore is more intractable than any other. It is black, mixed with iron, and was subjected to the specified process out of the mine, and the result was a complete failure. We cannot get anything worth having out of it. The stuff which we are now working is far better. It is as high up as the 78-ft. level and as low down as the 116. It is pyrites mixed with quartz, and that is the stuff which is giving us, under the ordinary processes of stamping and amalgamation on the plates, 4 dwts. of free gold. We are getting concentrates to a very large amount, which are variously assayed at from 10 dwts. to 15 dwts. Those concentrates are now being reserved until Messrs. Bewick and Moreing can find out from some of the numerous experiments goiug on a process that will enable us to treat them cheaply. The black stuff up above, I think, we must forget all about for the present, and rely upon this grey stuff, which in the 78 and the 116, and also 28 ft. lower still in a winze we have sunk, shows decided improvement. That is what we are now working regularly, and we shall probably get 200*l*. a month from it towards the costs. Possibly, we may have to spend 250*l*. in getting it, but then there remain the concentrates, which are very valuable, and by and by will be treated profitably by some new process. The 2 tons will be highly coucentrated, and they are coming over expressly for Messrs. Bewick and Moreing's manipulation.

A SHAREHOLDER : I understand you are down 420 ft., and you say that you have quartz valued at 3 ozs. to the ton. (No, and laughter.) I should like to know have you decided to test the stuff at that level, or are you going to do so?

POSSIBLE CHANGE OF POLICY.

Sir LEOPOLD HEATH : We are actually crushing now in that same part of the mine, but do not run away with the notion that we have said it is worth 3 ozs. to the ton. Whether we shall go on crushing is doubtful. Possibly we may hold our hands and develop the mine in depth.

A SHAREHOLDER : I think it a mistake to go on crushing this low grade ore, and that your policy should be to go down.

Sir L. HEATH : I thought I had explained that that is what we propose to do. We do not like all at once to stop crushing when we have only gone on for a few months, but it is probable that we shall do so, aud temporarily confine ourselves to sinking.

Mr. LONG : The gist of the advice Mr. Bewick gave was to that effect. (Hear, hear.)

A SHAREHOLDER SETS FORTH THE ACTUAL POSITION.

Field-Marshal Sir FREDERICK HAINES : I have a resolution to propose, which I would preface by saying that it appears to me the mine is in a state of expectancy waiting upon science, and science only will be capable of dealing with these most refractory ores by the invention of a new process, and until that is done we shall uot be in a satisfactory condition. (Hear, hear.) When that day comes, and come it will I am sure, we can then safely affirm that we are iu possession of great potential wealth in haviug this large amount of concentrates and pyrites of various grades at command. We may hope shortly (because it appears to me that that is the one fault in every part of the world where mining is carried on, and more particularly in the Randt) that men of science will be anxious to develop a process which will bring money into their own pockets. Naturally they must be as anxious as we are. As regards the expensive working of the mine, I think throughout all the mines in India the rate of salary for European and native labour, is unduly pitched. Whether it be for managers, engineers, reduction officers or coolies, I think it is all on rather a high scale, and I am also inclined to believe that in the Wynaad the rate of labour must be somewhat heavier than in the more favoured province of Mysore. If you succeed in reducing expense on the mine I believe you will be conferring a great benefit on the mining interests of India and generally. I have no need to explain to this meeting that

I HAVE GREAT CONFIDENCE IN OUR BOARD OF DIRECTORS.

I think their very patience in examining all these processes, and carrying them out under intelligent supervision, has been a duty which they must continue to exercise if you deem it necessary to re-elect them, for only upon that line can they do justice to your property. (Cheers.) I propose, "That Genl. Light and the present board be re-elected to continue the management of the mine." (Cheers.)

DIRECTORS CANNOT BE BLAMED FOR REFRACTORY ORE.

Mr. P. C. DON : I shall be glad to second that motion. I do not think we can, as reasonable shareholders, blame the directors for the refractory character of our quartz. We are in good hands, and the company is being well managed. My conviction is that in depth we will find that which will repay us for all our past outlay.

Mr. BURGESS : I think it only fair to give the present directors another chance. They have been working under great disadvantages for many years, and appear to have done all that was possible for busiuess-men to do, and now that we have an addition to the board and an improved quality of the quartz, we shall do much better in the future. The new director seems to be a gentleman who understands what he is talking about. I have great pleasure in supporting the re-election of the present directors.

DIRECTORS RE-ELECTED UNANIMOUSLY.

Sir FREDERICK HAINES put the motion to the meeting, and it was carried unanimously.

The CHAIRMAN : Gentlemen, in my own name and that of my brother directors I beg to return you our thanks. We have been unfortunate; but if I had been associated with such a company as that of which Sir Frederick himself is a director (Balaghât Mysore), which is turning out quartz running ounces to the ton, I should have been as popular a director I have no doubt as he is. (Laughter.) But alas! it is not the case. I have been to the country; I have seen your mine; and as I said in my opening speech, I still believe that where gold is disseminated in the way that it is in the Wynaad everywhere, though in small quantities, sooner or later a mother vein must be struck and good results achieved.

BOARD WORK FOR LESS.

We can only do our best for you, and probably as there has always been an idea that this is an expensive board, I may tell you that though we have received Mr. Long, the four new directors will not cost you so much as the three old ones. (Cheers.) We are very much obliged to you.

Mr. COLEMAN : With regard to the balance of 15,000 unallotted shares, how is it that the liquidator has demanded a premium of 3d.?

The CHAIRMAN : That is a matter for him to answer.

Mr. COLEMAN : I think we ought to have them offered on the same terms as those to which we were entitled, and that no premium should be demanded. The nominal quotation mentioned in the circular of 3d. to 9d., it is well understood on the market means nothing at all.

Mr. LATTEY (solicitor) : That is more or less a legal point. The agreement provides that any shareholder who does not take up his

proportion of shares the liquidator may sell his right to allotment. Counsel advised that we were not right in following a precedent tried in another case of distributing those shares for nothing. The liquidator, as trustee for the shareholders who do not come in, must do his best for them, and, therefore, he was bound to offer them at a premium of 3d., and shareholders have the benefit of escaping all brokerage. Counsel advised that any other course was illegal, and we were bound to follow what he said. I am taking some myself at 3d. premium. I hope the whole of the shares will be taken at this meeting, and that we shall at once close the liquidation, for the sooner that is done the less the expense will be.

HAPPY NEW YEAR TO THE CHAIRMAN AND THE COMPANY.

Mr. BURGESS proposed a cordial vote of thanks to the chairman, and wished him a happy new year.

The CHAIRMAN: And I wish the company a happy new year—certainly a more happy one than the last 10, during which we can at least claim to have done our best in your interests. (Cheers.)

LATEST REPORT.

— (23rd Dec.)—The 116-ft. level drive west: We have driven in this end 6 ft. during the week; total length, 88 ft. Reef continues very hard, and of no milling value. Drive east: Here we have made better progress as the stone runs in heads, and we take advantage of these, and make better speed. In this end we have driven 9 ft.; total, 52 ft.; and I am pleased to say there is a slight improvement in the reef. The reef in the stopes maintains its quality, and our extraction is being kept up. Crushing is being carried on at the mill, and all our machinery is working well.—R. B. JOHNSTON.

OCEANA TRANSVAAL LAND CO., LIMITED.

RESOLUTIONS CONFIRMED FOR PAYMENT OF SCRIP DIVIDENDS WHEN DEEMED DESIRABLE.

AN extraordinary general meeting of this company was held at the Offices, No. 4, Sun Court, Cornhill, on Tuesday, in order that the following resolutions, which were passed unanimously at the meeting of the company held at the Cannon Street Hotel on the 22nd December, 1890, might be submitted for confirmation as special resolutions, viz.:—

(1.) "That the following clause be added to the articles of association of the company, and be distinguished as clause 115:—'115. The directors shall have power to arrange with any person who may be employed by the company, whether as a manager, surveyor, agent, engineer, director, local director, or managing director, or otherwise that the remuneration for his services as such shall consist wholly or in part of shares, stock, debentures, debenture stock, or scrip of any other company to which the company shall be entitled, and this clause shall have effect as if the same had originally been inserted in the articles of association of the company, and all arrangements made by the directors in accordance with this clause before the adoption of such clause are hereby ratified and sanctioned.'"

(2) "That the articles of association of the company be altered by adding thereto the clause following, to be distinguished as clause 116, that is to say:—'116. Any general meeting approving a dividend or bonus may direct that such dividend shall be paid wholly or in part by the distribution of specific assets and in particular paid-up shares or stock or debentures or debenture stock or scrip of any other company, and the directors shall give effect to such direction, and where any difficulty arises in regard to the distribution they may settle the same as they think expedient, and in particular may issue fractional certificates and may fix the value for distribution of such specific assets or any part thereof, and may determine that cash payments shall be made to any members upon the footing of the value so fixed in order to adjust the rights of all parties, and may vest any such specific assets in trustees upon such trusts for the persons entitled to the dividend as may seem expedient to the directors. Where requisite a proper contract shall be filed in accordance with section 25 of the Companies' Act, 1867.'"

Mr. Henry Pasteur (the chairman of the company) presided.

Mr. SAMUEL C. FOX (the secretary) read the notice.

CASH *v.* PAPER.

The CHAIRMAN: Gentlemen, you know that this meeting is called simply in compliance with the Act of Parliament, which requires that any alteration in the articles of association which may have been passed at a meeting shall be confirmed by a special meeting, to be held not less then 14 days after the meeting at which such alteration shall have been passed. The object of the resolutions—which you have no doubt read—is to give power to the directors at times, when it is desirable or necessary to carry out agreements, to remunerate persons in their employ, not in cash alone, but sometimes also in shares, or stock, or debentures, or scrip of any company in which this company may hold shares, or which they may be entitled to have. And also it is desirable that the directors should have power to pay and distribute, when it is thought advisable to distribute, amongst the shareholders fully-paid shares, or debentures, or scrip, or stock in any other company in which they hold shares. These are the objects of the resolutions, and I do not suppose that you will require any further explanation from me, and, therefore, I shall propose that the first resolution be now confirmed.

Mr. FOSS: I shall be pleased to second it.

The motion was carried.

The CHAIRMAN: I shall now move that the second clause—clause 116—be also added to the articles. Will anyone second that resolution?

Mr. FOSS: I shall be very pleased to do duty again.

The motion was carried.

The CHAIRMAN: Gentlemen, I may say that we have

NO FURTHER INFORMATION FROM THE OTHER SIDE

relating to any matter which interests this company or the Silati Company. We have had no letters by last mail from the Silati district. I hope the next mail will bring us some, and we look forward to good things before very long, which I hope we shall be able to communicate to you.

Major COTTON: I beg to propose a vote of thanks to the chairman and the directors.

Mr. Foss: I will second that.

The motion was carried.

The CHAIRMAN: I am much obliged to you.

The meeting then separated.

THE VIRGINIA (TRANSVAAL) GOLD MINING AND DEVELOPING CO., LIMITED.

A NEW PROPERTY TO BE TRIED—A STRONG APPEAL TO THE VENDORS.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Wednesday, when the following resolution was proposed:—

"That this meeting of shareholders of the Virginia (Transvaal) Gold Mining and Developing Company, Limited, in extraordinary general meeting assembled, endorses the opinion of the directors that it is desirable to purchase the Von Brandis and Pentland claims, and under these circumstances to suspend for the present the development of the Virginia property."

Alfred Jones, Esq. (chairman of the company), presided.

Mr. R. LAWRENCE SPICER (secretary) read the notice of meeting.

VIRGINIA PROPERTY NOT PAYABLE.

The CHAIRMAN: It is a matter of sincere regret to your board of directors that they are unable to meet you with any favourable report in regard to the Virginia property, which may be still regarded as unproved, although in all 1,247 ft. have been open cut and driven. Our manager has endorsed fully all the statements which were made in the prospectus as to the condition of the property at the time of purchase, but, as the title of the company shows, it was only a "developing" company—to develop what were good prospects. Unfortunately, it has turned out that what was believed to be a reef were only bunches, or pockets, and, after a little working, pinched out altogether. There are reefs upon the property there is no doubt, as they outcrop upon the surface, and Capt. Richards at once set to work to intersect them in the deep by driving four adits, attaching the most importance to adit level No. 2, as he believes that at the junction of this adit with the adit level north in Cooper's winze good results may be obtained. He (Capt. Richards) fully expected long since to have accomplished this, but as he drove in he found the ground so excessively hard he could make but very slow progress after some months' working, and no improvement taking place in the character of the ground, your board saw the difficulty that would arise in respect of insufficient capital, and brought this strongly before Capt. Richards and Mr. Sheriff (the company's agent in Steynsdorp).

A NEW MINE TO WORK.

The latter having had just about this time the Von Brandis property offered to him, determined to look into same, and consulted with Capt. Richards, who made a full inspection of the property, and both were so pleased with it that they unitedly strongly recommended its purchase to your board as "a most valuable property." Mr. Sheriff at once applied himself to getting it offered to us on the most favourable terms, viz., 800*l.* cash and 800 shares—Mr. Sheriff's influence having secured a considerable reduction from the price originally asked. The directors were not particularly anxious to change their sphere of operations, more especially as the Virginia property has not been really tested, and so cannot be looked upon as a failure until the reef in question has been cut and proved worthless; but from all the reports we have had in regard to the Von Brandis property being so satisfactory as to its becoming a payable property in a short time, your board have placed all the information at their disposal in your hands, in order that you may be able to come to a definite decision, and Mr. Sheriff has got a still further concession in regard to the deposit paid both on mine and mill, viz., 80*l.* on the former, and 50*l.* on the latter, or 130*l.* in all, against 150*l.* for mine alone. The amount of cash to be paid, viz., 1,700*l.* for mine and mill is so small, the remaining call of 5s. will, we think, be sufficient to bring this property (the Von Brandis) into a payable condition, especially as Capt. Richards, who is an extremely cautious man, in his cablegram, under date 2nd December, 1890, says—"Erect 10-stamp mill at once." In the letter just to hand, under date 15th December, Capt. Richards, referring to the Von Brandis, writes:—

PROGRESS REPORT.

"We are fixing a windlass on the shaft marked 50 ft. deep on the plan, for the purpose of enlarging and timbering it, and with the view of ultimately making it one of the working shafts. Lode in the bottom very promising, and pans good colours of gold; lode about 2 ft. wide. We are driving the 80-ft. level south of Curtis's shaft, the lode being 3 ft. to 4 ft. wide, composed principally of oxide of iron and quartz and good gold ore, which shows gold in the pan." The number of men employed in all is 38 kaffirs and 4 whites. Capt. Richards reports favourably in regard to the water rights attached to the Von Brandis. The total expenses of the company now at home and abroad are under 350*l.* per month, as some months ago the directors passed a resolution not to receive any more fees until the company was in a more prosperous condition. Your board has obtained 2,550 shares from the vendors as compensation for the deficient water rights in regard to the Virginia property. Your board, having carefully considered the proposed purchase of the Von Brandis property, and believing, from the information supplied to them from the other side, that it will quickly prove to be a payable property (as Capt. Richards calculates 5 to 7 dwts. will well cover cost of mining and milling), consider it advisable for the Virginia Company to make the purchase, and therefore I beg to propose the resolution as given above. (Hear, hear.)

Mr. SYDNEY CHAMBERS seconded the proposal.

VIEWS OF SHAREHOLDERS.

Mr. LANGLEY SMITH: When the project first came before me I was rather in favour of the scheme as it appeared in the directors' report, but when I began to examine it more carefully I found there were peculiar circumstances and aspects of the case. I find the property was sold for 5,000*l.* in cash and 27,000*l.* in shares. Up to the

present we all know it has turned out to be worthless, but we are now invited to embark upon a new property with the cost of the old one saddled upon us. In other words, we are asked to take the new mine, with the 27,000*l.* added to it, paid for the Virginia property to Mr. Sydney Chambers. Now, I cannot conceive why this property and all the shares should be identical, and why any future contribution by us should not be made the capital of the new mine without having to weight it with the 27,000*l.* we paid for the original sett. If we do so weight it we shall have the vendors taking half the profits of the new mine without any money payment or sacrifice whatever. (Hear, hear.) I think it rather better for the Virginia Company to be wound up altogether, and let the 5s. we have still to pay be the sole capital of a new company to work Von Brandis. It seems to me that we are treated almost as children. A gentleman sells a property that proves to be worth nothing, and then says I am going to take half your shares in a new venture, but you must pay for its development. I did not come prepared to move a resolution, but simply to express my views.

Mr. Tee: How much money has been expended upon Virginia Mine? What has been the result financially of that expenditure? I think it will be better to ask the directors to consider the advisability of winding up the one company, and starting on a fresh basis with the other one.

The Chairman called upon Mr. Chambers to reply.

VIEWS OF THE VENDORS' AGENT.

Mr. Sydney Chambers: Gentlemen, no one regrets more than I do the unsatisfactory result, so far, of the Virginia property. You are aware the No. 1 reef has proved non-payable, and that the No. 2 has not been struck, and hence we have recommended strongly this property to your notice. The remarks of the last two speakers aim in the same direction—a direction I fully endorse. I practically agree with you, although I acted as agent for the vendors of Virginia proper. Their letter of instructions to me was that I was to supply 15,000*l.* working capital. That money was supplied, and they maintained it would be sufficient. It has been almost all expended on the purchase and development of the mine, aud I quite agree (although the only profit I had is in holding some of the vendors' shares, which I should be prepared to sacrifice with the vendors)—I say I agree with you that the original vendors of the Virginia property may have some legal, though no moral or just claim to any portion of the Von Brandis claim. The Von Brandis claim (take my opinion for what it is worth) I most strongly recommend you to purchase. I maintain that when you subscribed to Virginia originally you were in a position to get the same information as the directors had. Look at the prospectus, and you will see that the inspection of no documents was waived, for nothing was suppressed. Every telegram, every letter, was either in the hands of the solicitor, or the secretary for inspection. Everyone, before subscribing, could get all the information that we had. You know perfectly well on what basis I floated the company. I thoroughly believed in the property. It was brought home by a gentleman who knew it, and any information we could get tended in the same direction, but unfortunately No. 1 reef has not turned out of value, and No. 2 has not been struck.

VIEWS AS TO VON BRANDIS.

All my most intimate friends, and many of my relations are in this, and most firmly do I believe that the Von Brandis property before the 5s. has been expended will be amongst the regular gold-producing companies of the Transvaal. I do not wish you to take my opinion only for we have an estimate from an expert not connected with the company or the property at all, who says for the expenditure of 3,000*l.*, seeing that the mine is so far developed, and seeing that we have the offer of machinery for 900*l.*, we have every prospect of success. Now, seeing all this, I advise you strongly to fall in with the proposition before you. You rightly say that the vendors of the Virginia sold you a property that seemingly is of no value, and you ask—why should they participate in the good results that may come from another property? I quite agree with that, and think also that seeing when the water right question arose they surrendered 2,500 shares we might successfully approach them for even a larger return of their original shares. (Hear, hear.) I quite agree with that, and will use my best influence to obtain for the company the return of a substantial quantity of vendors' shares. The price we ask for the Von Brandis machiuery does not amount to the sum we should have to pay for machinery here, much less to get it transported there. If instead of this circular there had been published a telegram from Capt. Richards that he had struck No. 2 reef in Virginia, not a word would have been said against that claim, and if we had had to find 7,000*l.* to erect machinery, the money would have been forthcoming. I have

SUFFERED AN IMMENSE AMOUNT OF ANXIETY

over this property, and nothing will compensate me for it but to see the Virginia Company rank amongst the gold-producing properties of the Transvaal.

Capt. Shackell: Mr. Chambers said he would use his influence to get the vendors to forego some of their shares if they would take an interest in the Von Brandis. Possibly, having a legal right, they might not give those shares up, and perhaps a voluntary winding-up would be the better alternative.

Mr. Reeson: The resolution should be, "On condition that the vendors forego a certain portion of their interest." I have not considered what that proportion should be.

Genl. Graham seconded this addition to the resolution.

Mr. Reeson: I suggest also that the directors should hold an adjourned meeting, and then tell us what the vendors propose to do.

LEGAL VIEW.

The Solicitor (A. Hooker, Esq.): It is quite clear that the point which has so intelligently been put by the last speaker is a vital one, and that is the whole position touched with the point of a needle. It has been obvious to the directors that seeing the original consideration has not, I may say, been altogether satisfactory, it is a little out of the way that the Von Brandis Mine should be at once weighted with the whole of the company's capital, instead of being only saddled with the 5s. call. That was submitted by me to Mr. Palmer, whether it would be possible to acquire the property without calling up the remaining 5s., and to propose that instead preference shares would be issued to anyone who proposed to take them, bearing a very high rate of dividend, so that practically unless the vendors came in and helped to subscribe they would be excluded, because the subscribers would get all the benefit that might come from the Von Brandis property. It would have the effect of depriving the vendors of a return to which they had no equitable or moral claim, and it would be the same to the proprietors whether they paid the 5s. in preference shares or in obedience to a call. Counsel said that could not be done, and that if we were to issue preference shares at a higher rate than was necessary to attract the money, the original shareholders might go to the Court of Chancery, and get an injunction to restrain the company from so doing. When you proposed that the company should be wound up, you hit upon the suggestion of counsel, for you have no alternative between letting the vendors' shares rank and winding-up.

A Shareholder: That would be an expensive operation?

A PERSONAL QUESTION.

The Solicitor: That is a personal question. (Laughter.) I should be sorry to see this company wound up for all that. (Hear, hear.)

Mr. Chambers: We have 7,000 or 8,000 shares unissued.

A Shareholder: What are the funds in hand?

The Chairman: Between 500*l.* and 600*l.* The vendors had 27,000 shares of which they have returned to us between 2,000 and 3,000.

A Shareholder: A resolution might be passed that the directors should be requested to negotiate for the purchase of the Von Brandis property, subject to their procuring a surrender of one half the existing vendors' shares.

A DIRECTOR WHO HAS SEEN THE MINE.

Mr. Colchester Weymss, J.P. (director): When I was at the mine I saw several of the vendors, who are scattered over a large tract of country difficult of access, and it would take a long time to be in communication with a sufficient number to get them to agree to such a resolution as that last suggested. Part of my duty was to obtain a remission from them of a certain number of their shares in consequence of the deficiency of water power, and the result was satisfactory, inasmuch as altogether over 2,000 shares were surrendered for that reason alone. You can now approach them with a stronger case. Our experience would lead us to believe that if strong representations are made to them, supported by a resolution, a considerable number of shares would voluntarily be returned, but as to communicating with them, it is a matter almost of impossibility, and I daresay a good many have parted with their shares, so that it would be difficult to follow them.

The Chairman: I appeal to Mr. Reeson, seeing the impracticability of the resolution to leave the original one as it stood, and let us do the best we can, as we are quite in accord with his view. So far as we have been in communication with the vendors, they certainly by their previous surrender have done their utmost hitherto. Most of the vendors are men of considerable standing, and wish to do all they can for the company. All through, in almost every instance, we have found that we have had to deal with straightforward people, and the amount of cash they got for the property, divided amongst them, was not worth mentioning.

The resolution was put and carried by a large majority, there being only four dissentients.

The Chairman announced that the board was also supported by a large number of proxies.

DIRECTORS FEELESS.

Mr. Tee: Will the directors forego their remuneration?

The Chairman: We have not been taking any for some months past, in accordance with a resolution we voluntarily carried amongst ourselves. (Cheers.)

Mr. Golding proposed, and Mr. Reeson seconded, "That this meeting is of opinion that a surrender of one-half the outstanding vendors' shares will be accepted as a satisfactory contribution by them towards the purchase of the Von Brandis property, and that the directors be requested to use their utmost endeavours to carry this out."

The motion was carried unanimously, as was also the vote of thanks to the chairman, with which the proceedings closed.

NITRATE RAILWAYS CO., LIMITED.

RESOLUTION UNANIMOUSLY CONFIRMED—COL. NORTH MEETS WITH ANOTHER ACCIDENT—"ALL QUIET AT IQUIQUE."

At the extraordinary general meeting of the company held on the 23rd day of December, 1890, the following resolution was unanimously passed:—"That the Bill intituled—'A Bill for enabling the Nitrate Railways Company, Limited, to convert their ordinary shares into preferred and deferred ordinary shares, and for other purposes,' be approved as introduced into Parliament." And a resolution to the same effect was unanimously passed by the ordinary shareholders, as distinguished from the general body of members. On Tuesday last, at an extraordinary general meeting held at Winchester House, both the said resolutions were submitted for confirmation as special resolutions.

Robert Harvey, Esq. (a director), presided.

Mr. J. M. Cowper (secretary) read the notice of meeting.

The Chairman: Gentlemen, in the first place, I have to apologise to you for the absence of our worthy chairman, Col. North, who has met with a trivial, though unfortunate, accident, which precludes his coming to the City for some few days. The accident he has met with is

A SLIGHT SPRAIN TO HIS ANKLE,

which entirely prevents him from walking. The vice-chairman, Mr. Lockett, had a most important engagement at about this time, and was also prevented from coming here, and hence the reason of my presiding at this meeting to-day. You are aware that this meeting is purely formal, called to confirm the resolutions unanimously passed on the 23rd of December last, but now that we are here I may refer to

CERTAIN RUMOURS, OF WHICH YOU MAY HAVE HEARD,

respecting some revolution, or political troubles, in Chili, and it may not be out of place for me to mention that these disturbances, whatever they may be, have not yet reached the Province of Tarapaca. I am not certain I can give you any idea of what those disturbances may be, but whatever they may be they have to do with the seat of

Government in Santiago or Valparaiso, and not with Tarapaca. Only yesterday we received a telegram from the representative of the company saying, "All is quiet at Iquique." This matter has nothing to do with the meeting, but I mention it for your satisfaction. The secretary will now read the minutes of the last meeting.

The minutes were read.

Mr. RIDSDALE: I think we might hear a little discussion on the resolution before you put it to the meeting. I see the Bill is to enable the Nitrate Railways to convert its ordinary shares into preferred and deferred ordinary stocks, but we are not told what percentage the one will carry over the other—whether it is 5 or 25 per cent. The Bill is also "for other purposes," but we have heard nothing as to what those purposes are.

The CHAIRMAN: I am merely proposing that the minutes of the last meeting shall be confirmed and signed as correct, and after that we will take your questions. (The minutes were confirmed unanimously.) With reference to Mr. Ridsdale's remarks, I may mention that it is proposed that

THE PREFERRED SHARES SHALL CARRY 7 PER CENT.,

and that the balance available for dividends shall go to the deferred shares. The amount fixed is 7 per cent., and the dividend is cumulative.

Mr. RIDSDALE: Personally, I fail to see the advantage that will accrue to the shareholders from this change.

The SOLICITOR (Mr. Budd) here read and explained the provisions of the Bill, which he said followed the precedent adopted some time ago by the Caledonian Railway.

A LEGAL QUESTION.

Mr. RIDSDALE: That can hardly be a precedent, as it was a stock-splitting by a corporation, and this is a limited liability company, and each of the 10*l.* bonus shares might bring a liability in case of the company winding-up.

The SOLICITOR: There is no distinction that I know of between a company under the Companies' Act and the Parliamentary Act. The shares are fully-paid, and there is no difference between fully-paid shares and stock, except as to the power of transferring fractions of stock.

Mr. RIDSDALE: Supposing the shares are issued for no consideration received, those shares will require to be paid up in full, in case the company goes into liquidation.

The SOLICITOR: The Act of Parliament overrides that.

The CHAIRMAN then proposed the resolution to the preference shareholders as given above.

Mr. J. J. SMITH (director) seconded the motion.

A SHAREHOLDER: Do I understand that our ordinary capital is going to be doubled?

The SOLICITOR: Nominally.

Mr. RIDSDALE: I again say I fail to see the advantage of this change, and you will go far to spoil your market.

The CHAIRMAN: It will be a great advantage to the shareholders, which I will be glad to explain to any of them privately at the close of the meetiug.

The resolution was first adopted with three dissentients, but afterwards all opposition was removed, and the resolution was carried unanimously.

The same resolution was then proposed by the CHAIRMAN, seconded by Mr. FOWLER, and put to the ordinary shareholders, independently of the preference shareholders, and carried unanimously.

This closed the meeting.

THE GORDON DIAMOND CO., LIMITED.

THE COMPANY TO BE WOUND UP.

IN order to suit the convenience of members of the Stock Exchange, the extraordinary meeting of this company was held at the Cannon Street Hotel recently, to consider, and if approved, to pass the following extraordinary resolution not requiring confirmation:—

(1.) "That it has been proved to the satisfaction of the company that the company caunot, by reason of its liabilities, continue its business, and that it is advisable to wind-up the same, and that Mr. Fredk. Whinney, of 8, Old Jewry, E.C., be, and he is hereby appointed the liquidator of the company."

And also the following, to be subsequently submitted, if passed, as a special resolution:—2. "It being proposed to transfer the whole of the company's business and property to a new company to be formed for the purpose, uuder the name of the New Gordon Diamond Company, or a similar name, the liquidator is hereby authorised to receive in compensation or part compensation for such transfer, shares or other like interests in, or other benefits from, such new company for distribution among the members, and without restricting such general authority, the liquidator is hereby authorised to enter into and carry out as he may be advised, the arrangement or scheme of re-construction referred to in the circular convening this meeting, or any similar arrangement."

Mr. A. J. Macdonald presided.

Mr. D. MACDONALD (the secretary) read the notice calling the meeting.

The CHAIRMAN moved the first resolution, and said that the great difficulty of the company had been the want of sufficient working capital, and they had in the past paid a dividend out of money that should have been retained in hand. The report of the committee was an exhaustive document, and complained of bad management which, he presumed, referred both to London and Kimberley. The company run into debt, and hoped to recover its position by the issue of debentures, which was

A FAILURE.

Mr. S. WATSON alluded to a circular issued by the company in April, 1890, and stated that he had found 104,000 shares had been sold upon the London market by one gentleman, and it struck him (the speaker) that the directors should give some reasons for the issue of the misleading circular of April, 1890, which had led the shareholders to purchase increased holdings of shares. He complained that a proper profit and loss account had not been issued to the shareholders. He complained that upon application at the office he had received misleading statements from the secretary.

The CHAIRMAN said that the shareholder was mistaken in thinking that the directors had sold any shares. It was a different matter, and had reference to shares that Mr. Posno held as trustee, and which in due course had to be sold and divided amongst the holders entitled to them.

Mr. C. J. POSNO corroborated the remarks of the chairman, and said that he had already given Mr. Watson the explanation privately.

After a further discussion,

The CHAIRMAN said that the directors agreed with the report of the committee.

The resolution (No. 1) was then put, and, having been seconded by Mr. F. D. DEAR, was carried.

Resolution 2 was also agreed to, and the proceedings terminated.

THE NEW ZEALAND AND RIVER PLATE LAND MORTGAGE CO., LIMITED.

AN INTERESTING SPEECH ON THE POSITION AND PROSPECTS OF THE COLONY AND THE COMPANY.

THE seventh annual ordinary general meeting of the shareholders of this company was held on Wednesday, the 14th day of January, at the Cannon Street Hotel, to receive the directors' report and statement of accounts; to declare a dividend; to elect directors and auditors; and to transact any other business of an ordinary general meeting.

Mr. W. K. Graham presided.

The SECRETARY read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, you will see by the report which we have presented to you that we recommend the total distribution for this year to be 6 iustead of 8 per cent. as hitherto. The directors regret this diminution of the dividend, but they recommend this course in order to accomplish that which they consider of greater importance, viz., the redemption of the promise made at the last general meeting of an augmentation to the reserve fund, which has been done to the extent of 8,000*l.*, increasing it to 25,000*l.*, which is now invested in Consols. Before saying anything further about this year's accounts I will ask you to consider with me the progress of the company for the last few years. Towards the end of the year 1887 there was a fall in the rate of interest in New Zealand, and the directors saw that to carry on the business of the company with a fair prospect of profit it would be indispensable to seek some other field of investment. This the directors believed they had found at the River Plate, and I think that when you have heard all I have to say on the matter you will agree that notwithstanding the exceptional times which we have recently passed through events have justified our policy. The directors had full power to commence business at the River Plate under the articles of association, but we decided not to take so important a step without consultation with the shareholders. We accordingly summoned a special meeting in October, 1888, when our recommendation received the approval of the shareholders. No action had been taken for the initiation of the new branch before the closing of the accounts on 31st October, 1888, and consequently the accounts for that year showed the full effects of the fall of interest in New Zealand. The profit for that year, not including the amount brought forward, was only 14,300*l.*

IN JANUARY, 1889, THE BUSINESS AT THE RIVER PLATE WAS BEGUN,

and as the directors recognised the existence of inflation there it was started on extremely cautious lines, the directors deciding to go slowly and safely, and from this and other causes—such as loss of interest on large sums while in transit from New Zealand to the River Plate—the earning power for the year ended October, 1889, had consequently not shown any considerable increase, and the profit for the year (the amount brought forward being again excluded) amounted to about 16,200*l.*, or nearly 2,000*l.* better than in the year ended October, 1888. At our last general meeting, that is, in January, 1890, when these accounts were presented we informed you that you might expect better results this year, and we then stated that the reserve fund should certainly receive a substantial addition, a statement which was much approved both by those shareholders who were present at the meeting, and by the written commendations subsequently received from many who were not able to be there. In the accounts before you for the year ended 31st October, 1890, the profit, excluding the amount brought forward from last year, is about 20,000*l.*, so you will see that the net earnings of the company are some 4,000*l.* better than they were last year, and some 6,000*l.* better than they were in the year before. I ought here to say that the profit would this year have been larger had it not been for the fact that we have to keep temporarily a considerable sum of money in London, in the process of supplying our lending agencies with funds, and when we had to check the output at these agencies, then the money accumulated to some extent in our hands. Our object is to place the money thus accumulating in the best obtainable temporary investments, such as will, as far as possible, yield to the company what it pays for its debentures. In every year, except the present one, we have accomplished this with entire success. At the period of closing our accounts on the 31st October last, however, prices of securities were much depressed, and we therefore thought it right to make an appropriation out of the profits towards meeting any possible loss upon ultimate realisation, if any such loss should occur. I will now return to my synopsis of the profits for the last three years. You will remember that they are approximately:—14,000*l.* for the year ended 31st October, 1888; 16,000*l.* for the year ended 31st October, 1889; 20,000*l.* for the year ended 31st October, 1890. Taking all things into consideration, I think we may say that these results of themselves are encouraging and satisfactory. The question, of course, arises whether the earning power which the company has been developing has been purchased by any diminution of safety; whether, in fact, mortgage business at the River Plate is a hazardous one? The best way to answer this question is by results. You know what has happened at the River Plate, you know through what a severe political and financial crisis the country has passed, and, consequently, to what a trying ordeal all business

has apparently been exposed. At the end of our financial year, the position we were in at the River Plate was as follows :—We had out on mortgage 490,000*l*., and out of this large sum the interest on only one loan—a loan of 1,200*l*.—was in arrear on 31st October. On all the other mortgages we have effected at the River Plate not a dollar of interest on any one was in arrear (and you will remember that iuterest becomes in arrear there if it is not paid six months in advance). I think, gentlemen, that you will agree with us that this is satisfactory, and I think that it is unnecessary for me to dwell on the fact that extreme care has been taken, that safe lines have been laid down, and that our representatives have ably and carefully conducted the business on those lines. In relation to the Argentine Confederation itself we will not venture to prophesy, but we must point out that we are dealing with

A COUNTRY POSSESSING WONDERFUL CAPABILITIES

for agricultural and pastoral development, and that we must every year see a larger proportion of food for Europe drawn from that source. The extent of available good land in the world is limited, and a nation which posseases that all important asset so largely as Argentina must progress. Events such as those we have witnessed during the past year cannot fail to impede its course, though we believe that they cannot permanently arrest it. We hear a great deal of reckless borrowing, and no doubt there has been too much borrowing, but you must remember that no inconsiderable amount has been employed in re-productive undertakings, and that each year the yield from those undertakings will come to this country in the form of increased exports from the Argentiue. Beyond these few remarks I will venture no further opinion on the future of the Argentine, but I will call your attention to statements of gentlemen who are, without doubt, well qualified to judge :—The first extracts, are from the report of the Argentine committee, communicated by Lord Rothschild to the Bank of England. Having read these extracts speaking in terms of confidence of the Republic, and also the remarks of the chairman of the London and River Plate Bank, who was a member of this committee, the speaker continued : Referring now to New Zealand the results have not been so satisfactory, but we have made the fullest provision, called for by our local board, for any probable loss as shrinkage of values in properties mortgaged to us. Even if present values should not show the improvement we expect, we have every reason to suppose that what we have already provided will suffice to cover any ultimate loss, if such loss should occur. New Zealand is rapidly aud surely recovering from the deep depression which has hung over the colony for several years past, and reliable evidence of gradual and steady improvement can be produced. In support of this view I will read you the following from the address of the New Zealand Premier to his constituents. Having read this address, which was received with applause, the chairman next read an extract from a leading New Zealand paper. The Wellington correspondent of that paper wrote speaking in favourable terms of the prospects of the colony. The chairman, continuing, said : This evidence of progress is most important, for we must bear in mind that this large increase in the exports of the period named was against a period which showed a large increase on the period preceding that. Now, gentlemen, you will understand from what I have said that the position of the company is essentially solid, and that if the results of the working have not been absolutely brilliant they have been steadily advancing. I have now to inform you of an important conclusion to which the directors have arrived. You will have noted from our yearly balance-sheets

THE STEADY GROWTH OF OUR DEBENTURE ISSUE ;

it has grown steadily from the beginning, and it is the strongest proof of the confidence reposed by the lenders of money in the sufficiency of the security which we have been able to offer for the money lent to us on our debentures. Every year, without exception, there has been a large addition to the amount, until now our issue has reached the sum of 963,558*l*., or close upon one million. Under the articles of association we could continue to take money on debentures up to the amount of our uncalled capital, viz., 1,800,000*l*., so that our borrowing margin is yet over 800,000*l*. Some of this money lent to us is on perpetual debentures ; the bulk of it is for terms of years, and at the end of those terms requires renewal upon what are called terminable debentures. Now this debenture question has two sides to it. While we gladly accept the constant and continued expression of confidence shown in the company by the lenders of this money, on the other side—our side—we feel the responsibility and disadvantage of these constantly recurring liabilities, and in our minds from the foundation of the company we had fixed a limit beyond which we would not take money on short-dated debentures. At the present rate of progress that issue before another year would go beyond a million ; the near approach of it to this amount compels us to formulate the decision which I have before referred to as that by which we, from the outset, had determined to be guided, and we have, therefore, now resolved to say that we shall recommend you to limit the issue of our debentures to 1,000,000*l*., and to forego all intention, now or in the future, to make any permanent issue against the present capital of the company beyond the 1,000,000*l*. ; and to give effect to this resolution we shall ask you to take the necessary legal steps at as early a date as may be convenient. This resolution, when put iu legal form and submitted to you for your sanction, will contain a provision for raising from time to time a limited amount of money beyond the 1,000,000*l*. for a short time, in anticipation of debentures falling due, but it is not intended to make or keep the permanent issue higher than the million. It will be a provision only for temporary purposes, so as to make it a practical and workable plan, and special money thus raised will be held in trust aud to a separate account for the purpose of retiring the debentures as they fall due. I would illustrate what I mean by the following example :—Presuming that we had borrowed one million we should be precluded from borrowing more for the purpose of extending our business, but suppose 150,000*l*. debentures fell due in May, aud that in March or April 40,000*l*. was offered to us, then we should take it, though for the month or two our total indebtedness would be 1,040,000*l*. instead of 1,000,000*l*. When the amount came due in May then 40,000*l*. out of it would not be renewed and the million or less only would remain. In adopting this important resolve we look for the very best results to the company, and one of the objects we hope to gain by the course we shall propose to you is gradually to reduce the amount of these terminable debentures and replace them, as far as possible, with debenture stock. While a lender of money had his choice of lending us money at a higher rate of interest on a terminable debenture, we had little prospect of his lending us that money for a longer period on debenture stock at a lower rate of interest. He naturally preferred the higher rate of interest, and shorter time for repayment. Now, we think with the limitation to the issue altogether to 1,000,000*l*., we shall gradually replace short-dated debentures by debenture stock, for by this limitation, among other reasons, we shall be able to offer to the lender of money a much better security ; he will have the whole of the security for the restricted 1,000,000*l*. issue, which now stands for a proposed issue of 1,800,000*l*. He will have the absolute guarantee that while the shareholders' legal liability continues for the 1,800,000*l*., the amount lent upon that liability is only 1,000,000*l*., or 800,000*l*. short of the amount he had originally agreed to take a part of. His security is thus very greatly improved, and we have a strong hope that, when our plans are fully formulated, the action we shall propose for your acceptance will end in this company obtaining their money in the future at a cheaper rate and in a better form. We feel sure the lender of money will appreciate the greatly increased security and advantages which we shall offer him, and will respond accordingly. And we feel sure the proposals involved in this plan will much commend themselves to you as shareholders, for while we shall hope to get the required funds for the company's operations upon better terms, in the future we shall be practically limiting the liability on your shares to a very large extent, in fact the liability under the proposed conditions will be very small indeed. Now the nominal liability is 9*l*. per share, but, of course, before any shareholder could lose this amount every shilling of our investments would have to be lost. This liability was fixed at 9*l*. per share on the assumption of our having a debenture issue of 1,800,000*l*., but if we limit our debenture issue to 1,000,000*l*., though we cannot legally alter the shareholders' liability on his shares, yet we practically do so in limiting the indebtedness of the company, for if we do not borrow the money we cannot be called upon to pay it,—and thus we, in a very large measure, limit the liability of shareholders, and *pro tanto* do away with that objection to our shares. If, at some future period, the operations of the company require permanent extension beyond the limit I have indicated, it may be effected by an issue of fully-paid preference shares at a fixed rate of interest, or by some other measure not extending the liability of the shares. But any such issue of preference shares would, of course, require the sanction of an extraordinary general meeting, and is not at present even thought of. While on the subject of our capital I must emphatically state that

THE IDEA OF MAKING A CALL HAS NEVER SUGGESTED ITSELF TO YOUR BOARD.

I particularly mention this, because at the meeting in January, 1889, an observation of the chairman was misinterpreted and wrongly reported, and some of our shareholders thought a call was in contemplation. When we heard of this we gave a most positive contradiction to the rumour, but we believe even now that the fear is not entirely dispelled in some parts of New Zealand, aud I take this opportunity of stating explicitly that the whole idea was an entire mistake, that the directors have never contemplated making a call, and that under no circumstances whatever would we seek to extend the company's business by obtaining money in such a manner. We should deem it a violation of the promises made when the company was formed. I do not think that there is any other matter on which it is necessary for me to touch, and I have only to add that we shall be pleased to answer any questions shareholders may desire to ask before the resolution which I am about to move is put to the meeting. I will therefore move "That the report and statement of accounts be adopted and circulated among the proprietors, and that a dividend at the rate of 6 per cent. for the year be now declared, on account of which, an interim dividend at the rate of 4 per cent. has been previously paid ; that 8,000*l*. be carried to the reserve fund, and that the balance of profit amouuting to 1,644*l*. 8s. 4d. be carried forward." (Applause.)

The motion was seconded, and after a brief discussion, to which satisfactory replies were given, put to the meeting and carried.

The other formal business was transacted, and hearty votes of thauks to the London board and colonial staff closed the meeting.

SAMUEL JAMES'S REPORT ON MINING MARKETS FOR THE MONTH OF DECEMBER, 1890.

THE MINING MARKET.—During December many ups and downs occurred in the prices of mining shares. Early in the month an active market was experienced, and prices responded quickly to the better demand on behalf of the public. "Bears" also in trying to cover helped up prices against themselves. Big profits were looming in the distance when American Rails and other speculative stocks were pressed for sale, and sellers seemed to lose their heads in attempts to get quit of stock. The Mining market, of course, sympathised, and prices rapidly receded until old prices, and even lower ones, in some instances, were touched. It was now the opportunity of shorts to cover, and their efforts to do so at once steadied prices. A fair number of discoveries have been announced this month which have had a good effect upon the prices of shares in the particular mines, as well as on the general market. For some time previously little or nothing had occurred to relieve the dull monotony in many old-established mines, therefore the announcements made by the Pigg's Peak, Callao Bis, New Gold Hill, Almada, Flagstaff, and one or two others were exceedingly welcome, and helped to cast a gleam of sunshine upon the departing year, which had notably been a bad one for investors generally.

At all times I am williug to give the best advice I possess respecting mining properties, and have endeavoured through my monthly reports, which have been published in the daily and weekly newspapers at great expense, to keep investors posted with the chief points in the various reports of certain mines. I have not failed to point out shares which have, in my opinion, been selling far above the price prospects warranted, and iu following me many of my friends and clients have saved themselves serious losses, whilst many others might have done had they studied my bi-weekly lists a little more closely. The market closes with a decidedly firmer tendency, and I shall be much surprised if January month does not bring higher prices for a large number of mining shares.

SOUTH AFRICAN SHARES are slowly gaining hold on the public

favour, and a larger business was done during December than I remember for many months past. Should methods for working the mines and reporting the returns be adopted to command the confidence of the public, there may be once more a lively market, but we shall not see the absurdly high prices again which were reached during the former South African boom. Both English and Kaffir labour is more plentiful and cheaper than it was. Competition in the matter of economies is commoner amongst the managers, and I hope to see the day when work can be done as cheaply on the Randt as it is in India, Australia or the American Goldfields. Then, and not till then, will shareholders get their fair proportion of the returns.

INDIAN GOLD SHARES have been in better demand, and at one time the market looked like going much higher, but a desire to take profits manifested itself, and prices fell back to nearly old levels again. Judging from the returns and the better results shown by native labour prices should improve. Two or three should advance very shortly, and will no doubt do so upon buying to a small extent only on the part of the public.

COPPER SHARES have been neglected somewhat, and prices in most instances have declined, Rio Tintos leading the way. Few people are surprised at the fall in the latter, as it was fully anticipated that as soon as the French buyers wished to realise, they would not be able to find a market for their high-priced shares. The copper market just now is in a peculiar position, for, notwithstanding the decrease in stocks and larger consumption, the price of the metal recedes and gives a cue to the Copper share market.

ALMADA.—In several of my circulars I have called attention to the change in management and prospects. As far back as June last, I called attention to the profit of $2,724 for the four months ending April, 1890. The price of the shares was then about 1s. 3d. To-day, 1s. 9d. to 2s. 3d.

APPALACHIAN.—The ordinary general meeting is to be held on the 22nd inst. I regret to say I am still a shareholder, and hope the meeting will, by a great majority, decide to wind up this now well tried property.—3d. to 6d.

CALLAO BIS. — The telegram advising the "10-stamp mill had crushed 380 tons of quartz, which yielded 555 ozs of gold," and added "Mine improving," was not considered quite satisfactory, the price of shares having since declined. Shareholders must exercise a little patience. Remember the Independiente Mine has only recently been acquired, and that sufficient time has not yet elapsed for any large amount of development work to have taken place. Some people, I note, affect to be dissatisfied, but, I note, they do not offer to sell their shares; on the contrary, they express a desire of purchasing more at a lower price.—Price, 7s. 3d. to 7s. 9d.

CERRO DE PASCO.—The new manager, Mr. Howse, a thoroughly practical man, reports the bottom drift looks well for ore. Any day may bring news of a good discovery at this point.—Price, 6d. to 9d.

DURBAN ROODEPOORT.—The favourable views I entertained of this property have been fully borne out by recent events. The dividend of 2s. per share since declared, and the return of 1,406 ozs. of gold for December, have been appreciated in the market, as will be seen from the enhanced price of the shares, $3\frac{11}{16}$ to $3\frac{13}{16}$.

ETHERIDGE UNITED.—A little more inquiry has recently been experienced for these shares, and now that Messrs. John Taylor and Sons have assumed the management, it is hoped the capital will be effectively used in development of the mine. Already their prospects are improving, expenses having been considerably cut down without any falling off in the returns. This instance shows how hopeless it is for shareholders to pin their faith to directors because they are on the boards of several mining companies. I do think the directors are responsible for the non-collection of the large amount of unpaid calls.—Price, 1s. 6d. to 2s.

FLAGSTAFF.—A good demand has been experienced for these shares and the price at one time touched 10s., but this was too tempting to several large holders, who availed themselves of the opportunity of turning their scrip into cash. Although the shares are lower I still consider the price far too high, and believe when the ore now being raised is sold, the profit, if any, will be a very small one, and certainly not of the magnitude shareholders have been led to expect from certain learned reports which have been recently issued and published in the daily papers. There is no anxiety displayed by the directors to meet the shareholders.—Price, 7s. 9d. to 8s. 3d.

FRONTINO AND BOLIVIA.—This mine still continues its satisfactory course, and shareholders who purchased these shares at 5s. and lower on my recommendation have no cause for dissatisfaction. Hold on to your shares, as I expect bigger profits still. The dividend of 8d., paid 11th December, was for three months' working, the September dividend being 6d. per share. November returns showed a profit of 1,503*l*. It is gratifying to find the substantial balance of 4,921*l*. still remains to the credit of profit and loss after payment of dividend, and that there is also a sensible but very rare fund called the reserve fund with 1,620*l*. invested in $2\frac{3}{4}$ per Cents.—Price, 15s. to 16s.

GOLDEN GATE.—I say about the quantity of gold to be extracted from this property as I have many times lately said about the unsold ore of the Flagstaff Mines (also American by the by), that the unknown quantity commands the larger price in the markets, and bearing this well in mind I have not advised a sale of shares since the price reached 10s. to 12s. 6d. some weeks ago. Indeed, I have told several clients to purchase, and I expect to see the price considerably higher between now and June next, the date named for the next clean up.—Price, $1\frac{1}{16}$ to $1\frac{3}{16}$.

JUMPERS GOLD.—The November report, showing a summary of the October working, duly reached me and is fully appreciated. I would that all the Randt companies issued similar particulars, and believe, did they do so, there would not be such loopholes of escape as many of them now prefer to give all their agents. At a glimpse under this system any extra cost in production is immediately noted, any lessened duty or skulking becomes transparent. The December return of 3,414 ozs. must be considered eminently satisfactory.—Price, $2\frac{1}{2}$ to $2\frac{5}{8}$.

MONTANA.—The general developments are favourable and encouraging. The ore *reserves* are about the same as in July last, and the mine appears to be worked at a monthly profit of about $29,000. A return which should warrant better prices, 15s. to 16s.

MOSMAN GOLD.—I certainly think shareholders are entitled to have the accounts brought up to a later date than 31st December, 1889. There can be no valid reason for such a loose and slovenly manner of book-keeping. Accounts from the mine should be received monthly, and full particulars could easily be given of all accounts, say to within three months of the general meeting of shareholders, instead of being nearly 12 months behind as those were which were submitted to the meeting on 11th December last. The money charged for office expenses, viz., 642*l*., ought to command accounts to a later date.—Price 2s. 6d. to 3s.

MYSORE GOLD.—A new departure has been made by this company in selling by tender 1,000 ozs. of gold locally. This will benefit the company to a considerable extent, as the exchange is in favour of sales there.—Price, $5\frac{13}{16}$ to $5\frac{15}{16}$.

NEW GOLD HILL.—It was high time a discovery of ore took place, as a more disappointing balance-sheet I scarcely remember perusing. Only fancy an expenditure of 7,093*l*. to raise 79*l*. worth of gold!—why the transfer fees showed better results. It now appears a reef containing rich ore has been cut in the 160-ft. level of the Barnhardt Mine, but of what value or to what extent proved the reports and cablegrams are so far silent—still by some persons the discovery is thought to be important. Should the ore in bulk come up to the assay value of $190 per ton, it will be the best strike made at this mine for many years past.—Price 2s. to 2s. 6d.

NEW GUSTON.—Shareholders were pleased to receive the dividend and bonus of 3s., or at the rate of 60 per cent. per annum, and to further learn the company is likely to pay many more dividends, judging from the present prospects of this comparatively young mine. "The manager states the property improves in value as development work is being pushed forward. The mine looks better and is of greater value to-day than at any period before in its history."—Price, $2\frac{3}{4}$ to $2\frac{7}{8}$.

NEW QUEEN.—In June last I particularly called the attention of investors to the increasing returns from this mine, and predicted a better price for the shares. Since then the directors have declared two dividends of 6d. each. The next dividend is payable on the 15th inst., and shares are still cum. dividend.—Price, 8s. 6d. to 9s.

NINE REEFS.—A mine I have for years studiously abstained from recommending.—Price, 2s. to 2s. 6d.

PIGG'S PEAK.—The return for December is not yet to hand, and when received will cause severe disappointment, I expect, to those who are anticipating an improvement upon the last. I am informed various causes will militate against a large return.—Price, $1\frac{3}{4}$ to $1\frac{7}{8}$.

POTOSI.—The result of 18 days' work with 20 stamps, viz., 600 ozs. of gold from 690 tons of quartz, cannot but be considered an improving feature. Another important matter now being looked after is the large quantity of gold present in the tailings, nearly $\frac{3}{4}$ of an oz. per ton. It might be wise to send a sample of these to the Cassell Gold Extraction Company, and inquire the cost of extraction. I have no doubt the gold could be profitably recovered for the shareholders. The lode is improving in size and quality as greater depth is attained, and it is sincerely to be hoped, after their 10 years of patient waiting and uncomplaining paying of calls, that the shareholders are nearing the dividend stage. Undoubtedly the district is rich in gold, and one of the great difficulties has been to find capable management; now this seems to have been secured, the question of additional capital should not prove a very serious matter; present prospects certainly warrant it.—Price, 2s. to 3s.

ROMAN GRAVELS.—A considerable improvement has taken place in the drivage south in the back of the 80 south. The lode is now valued at 3 tons of lead ore and $1\frac{1}{2}$ tons blende. Capt. Waters does not think that any of the lower levels have touched this bunch of ore. He also thinks this will turn out to be a big shale bunch. The shares of this mine are cheap, perhaps the cheapest of any British lead mine. Do not delay making a purchase.—Price, 1s. 3d. to 1s. 9d.

SHEBA GOLD.—Last June I wrote as follows:—"Many persons are waiting until the close of this year before purchasing shares in the vain hope of getting in at the bottom. I do not think it would be wise to defer purchases until the mill is ready to work." The price now commanded by the shares fully warrants the above remarks.—Price, 21s. 6d. to 22s. 6d.

WEST ARGENTINE.—It was with real pleasure I heard this company's directors had secured a valuable concession in the Red Mountain district, and having for neighbours such mines as New Guston, Yankee Girl and American Belle. I trust the directors will use their best endeavours to have the new property developed as quickly as possible. It appears to me here lies their last chance of doing anything for the shareholders. I sincerely hope the shareholders will not entertain such a mad scheme as seems to meet with a late director's approval. Four bad mines will not make a good one, and I defy anyone to prove the contrary. I should like to see the office removed, worse luck could not attend the company elsewhere.—Price, 9d. to 1s. 3d.

WHEAL GRENVILLE.—To many shareholders the last meeting produced a surprise. Few indeed were prepared to learn that this regular dividend payer was immediately to be transferred to a call-paying mine, and the amount of call to be so exceptionally heavy viz., 2*l*. 10s. per share. Doubtless the executive still possess the confidence of the shareholders, as the price of the shares, instead of falling as some supposed would be the case, actually recovered the amount of call immediately. Some Cornish croakers were disappointed, I hear, that the price did not recede. In view of the opening up of the eastern portion of the mine, and the strong opinions held as to its richness by experienced experts, I would advise a purchase of the shares, especially as the capital required to properly exploit the ground lying between West Frances and the present workings is now assured. Dividends will be resumed at the next meeting without doubt. I would advise intending investors to read the chairman's speech at the last meeting. If anyone living can foretell the future of this mine he is the man.—Price, $13\frac{3}{4}$ to $14\frac{1}{4}$.

YANKEE GIRL.—From the time I first asked my clients to take an interest in this mine at par I have never ceased to recommend it. In the face of the dividends already paid and the return for December

showing a net profit of about 13,320*l*., at a cost of 3,270*l*. from 580 tons of ore raised, I can only repeat, hold on to your shares. You are interested in a property almost unparalleled in the history of limited mining. Where is another example of such large and quick returns having been made to the adventurers? Various adverse reports have been floating about, with the object of depressing the shares, but in the face of Mr. Crawford's cable from Denver, Colorado, "Mine is improving—better than ever—the mines look splendid," I opine the advice I give is quite justified.—Price, 15s. to 16s. premium.

I had intended writing a few words about each of the following properties, but time does not permit. Glenrock, Quebrada, Idaho, Ophir Concessions, La Luz, Dickens Custer, Valley Gold, Indian Consolidated, Nundydroog, and Crown Reef, all of which are worthy the attention of investors.

OF THE 25 COMPANIES favourably mentioned by me in my last report, I find 10 advanced in price, 7 remained stationary, and 8 declined to a trifling extent.

My clients are supplied each month with my Mining Share List, believed to be the most complete issued in London or elsewhere. It shows at a glance the following particulars, viz.:—Names of mines currently dealt in, prices last and this month, capital, shares issued, last dividend declared, par value, and amount paid.

I shall be happy to supply this list to applicants on receipt of stamped addressed envelope.

SAMUEL JAMES.

14, Angel Court,
Throgmorton Street, London, E.C.,
January 10th, 1891.

CUMBERLAND GAP PARK.—The transfer books of this company will be closed from the 17th January to the 21st January, both days inclusive, for annual meeting to be held at Cumberland Gap Tennessee, on the 21st inst.

OPHIR CONCESSIONS.

MR. E. DE KERGARIOU, the company's agent in Manica, has returned to London, having located the "Bartissol Reef," and has made a report of the property. From this document we gather the following interesting facts:—The property comprises 50 claims, 2,200 metres in length. The main reef is traceable, running nearly east and west, giving gold throughout, and in claims Nos. 14, 17 and 41, remarkably rich, showing visible gold freely, and panning on an average 2½ ozs. of gold to the ton. The width of the main, or centre reef in claim No. 17 on the surface is 5 ft., and 7 ft. at a depth of 37 ft., at which depth visible gold shows freely throughout the lode. The north or No. 1 reef running parallel with, and 30 from, the centre reef, is traceable through claims Nos. 8, 10, 12, 14, 17, and 20, and from samples taken from the surface out-crop, very satisfactory results were obtained. The company appears to be well off for water, there being three rivers either running through or in proximity to the property. Timber is also abundant. The 50 claims located on the main reef have been allocated to the sub-company, the Sabi Ophir Mining Company, Limited, which company has shared the expenses of Mr. De Kergariou's expedition. The directors in issuing this report congratulate the shareholders "on the success which has been attained by their agent and representative in having located a reef which they have reason to believe is the richest yet discovered in East Africa; and in assigning these claims to the Sabi Ophir Mining Company, in which the Ophir Concessions, Limited, holds so large an interest, they feel assured that the value of the unsold claims belonging to the company is greatly enhanced." With reference to the action in Manica of the Chartered Company of British South Africa, the following cable was received from Mr. Moodie on the 29th December last, *via* Kimberley:—"Manica occupied, Chartered Company; all rights respected; all quiet: sending full information." Since the dispatch of this cable from the property the Chartered Company's people have been ordered to retire and observe the *modus vivendi*. Accompanying the report are certificates of assays by Messrs. Johnson, Matthey and Co. and Mr. F. Claudet.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, JANUARY 17, 1891. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

ANGLO-MEXICAN MINING CO., LIMITED.

THE REGRETTABLE ABSENCE OF MR. HOPKINS—DIVIDEND SUSPENDED THROUGH EXCEPTIONAL CAUSES—IMPROVEMENTS IN THE MINE—SATISFACTORY OUTLOOK.

THE adjourned ordinary general meeting was held at the City Terminus Hotel, on Wednesday, to receive the report of the directors, and the statement of accounts to 30th June, 1890, and to transact the general business of the company.

William Lloyd, Esq. (director), presided.

LETTER FROM MR. HOPKINS.

The CHAIRMAN: Gentlemen, I have received this letter from our worthy chairman, and I will begin by reading it, because it explains why I occupy his position to-day.

"I am sorry the general meeting of the Anglo-Mexican Company was not adjourned for a longer time than a fortnight. I have not yet resumed active business, and feel at present I should not be equal to the duty of presiding at the meeting in a manner either satisfactory to myself or the shareholders. Under these circumstances I must ask you kindly to take the chair, and to apologise to the shareholders for my enforced absence.—Yours very truly, GEORGE HOPKINS."

(Hear, hear.) With your permission I will occupy the chair on this occasion, and the assistant-secretary will read the notice calling the meeting.

The notice having been read by the ASSISTANT-SECRETARY (Mr. Langmead),

The CHAIRMAN proceeded: I shall now propose "That the report be approved and adopted." It is needless for me to say how deeply I regret having to take the chair on this occasion, and especially as it is the result of sad domestic affliction which has visited our chairman. I regret it immeasurably in that respect, and also because I feel utterly incapable of performing the duties of the day with the ability and tact, which so remarkably characterises the chairman of this company. (Hear, hear.) But I have one qualification which, perhaps, will justify me in taking the position, and that is that I have taken a good deal of trouble to get at the bottom of the affairs of this company, and to master all the details. Therefore, I can, with some confidence, offer any explanation which shareholders may require. The report, I am sorry to say, is not so favourable as to make my task easy on this occasion, but I think there is nothing in it, as I shall be able to show, which should discourage the shareholders from hoping for a satisfactory future. (Hear, hear.) We are all aware of the fluctuations which are inevitable to mining, and we have been subject to one of them during the year to which these accounts refer. It is due, in a great measure no doubt, to the grade of the ore being considerably reduced, or rather I should say, to the vein becoming thinner in parts where we are at present working, but there has been an opening made into a different part of the mine, which gives us

THE GREATEST POSSIBLE HOPE.

I see by the assays, only just received, that the one portion of the working is giving something like 138 ozs. of silver to the ton. If that lasted to any extent we should be in a position to declare a much larger dividend than was declared last year, and I think there is no reason why all the investigations recently made as to this property (not only that portion which has at present been worked, but on other parts of the property, which is something like 25 square miles in extent) should be wrong—that it contains, from recent investigations, indications of great mineral value. Of course, the investigations only go to the surface at present. There have been no borings of any kind, but what they have found is silver and also gold. I have looked through the accounts with the greatest care, and it seems to me that although we are at this moment unable to declare a dividend, as we did this time last year,

THE BALANCE-SHEET FOR THE 11 MONTHS SHOWS 22,000*l.* PROFIT.

That is quite equal, provided we had received the money on this side, to have paid 7½ per cent., and the reason we have not received that money here the accounts show pretty plainly. It is chiefly because 13,000*l.* has been spent on capital account. It also shows the remote position of this mine with regard to the port from which silver is shipped. We are something like 200 or 250 miles from Mazatlan. A large portion of that distance is along the flank of the Sierra Madre, and consists of nothing better than mule paths. The consequence is that during the rainy season those paths become utterly impassable, and we are obliged to take in a large quantity of stores for the supply of the men, for there are no means of getting them within reasonable distance. Hence we have to provide for that rainy period, so that there appears in these accounts something like 32,000*l.* worth of stores. That is an enormous amount, but I am afraid it is inevitable.

PROFIT ON STORES.

At the same time it will be seen by the accounts that the profit on these stores, when they are sold and made use of, has left on these 11 months something over 6,000*l.*, which is a very considerable profit, when you consider that it more than represents the entire cost beyond the actual expenses of the mine—that is to say, it pays the interest on the debentures, and all the administration expenses both in New York and London, insurance, various local expenses, and a variety of other items. Every expense, it would appear, beyond the actual cost of the mine, is covered by the profit made on the stores, so that the money is placed at substantial interest. Looking through the expenditure, the returns of the 11 months, previous to the 11 months of this year, I find there is really no large amount of difference. I think the difference is between 6,000*l.* and 8,000*l.* less than it was during 1889, when we paid the 9 per cent. dividend. Consequently, I am encouraged to believe that there is a future for this mine such as will enable us to continue paying very handsome dividends. In examining the returns from the mine I find that we spend actually in mining operations—that is until the silver is delivered at the port of shipment—something like $19 per ton, and putting on enough to pay 9 per cent. dividend on our 370,000*l.* capital, it seems, at 25 ozs. to the ton manipulated, or rather "leached," which is the final operation, would suffice to pay everything that can be desired. It also seems that during 1889 the result of the "leaching" was something like 29 ozs., so that there is a very considerable margin beyond what we required to pay the 9 per cent. dividend, and I really do not see why the results should not be just as advantageous in future years as they are at present. We have sunk the new shaft (which will cost a considerable sum) to 820 ft. We have indications in the workings from the bottom of the F shaft, as was read to the meeting the other day, of something like 92 ozs. per ton. The vein is said to be 7 ft. wide, and in this we have one great advantage, that there is little or no waste. Of course, the driftway is apt to be something like 3 ft. or 4 ft., and that keeps well within the 7 ft., so that there is little or no waste. I am sorry I have not a map, because, as an engineer, I am rather accustomed at the Institution to point out on a plan or map what I am talking about, which helps me materially, but it would seem that the vein which we have been pursuing we have already investigated 1,000 ft. deep, and there is no knowing how far it may go still. There have been, according to the plans sent from the mine, indications that in the upper part of the mine a vein was found something like 40 ft. thick. That was before this company had anything to do with the property, and we do not know what the average assay per ton was, but it is marked on the plan as a vein 40 ft. thick, and if so, it is really

ONE OF THE MOST STRIKING MINERAL VEINS OF THE WORLD.

I have seen a good deal of Mexican mining at the Rio del Monte, and elsewhere. The Rio del Monte is one of the most profitable mines that ever existed, but I am not aware that it ever had to deal with a vein of that thickness, though it has very rich ore. I see no reason why there should not be an equally good result obtained from the Anglo-Mexican. It is the wish of the directors that it should be so, and every endeavour will be made to arrive at the most economical means of working, so as to get the greatest possible benefit.

LABOUR AND DISTANCE DIFFICULTIES.

The great disadvantage we labour under is the distance we have to communicate and the time it takes to do so. It takes three months before we can know what the silver is worth. It has to go to Panama, and from thence to New York, so that there is always a large amount of silver on the way, and in possession of the reduction works in the United States. I am endeavouring now to find out the best means to reduce expenditure in mining, though how it can be done I can hardly tell at present. The report of the directors, which has been drawn up by Mr. Hopkins, is so admirable and so much to the purpose that it is unnecessary for me to go through it. The statement he makes in regard to expenditure that has been found necessary, and which has prevented us from paying a dividend, is to the point. I should mention that a good deal of this expenditure has been in machinery, which will facilitate operations materially. In fact, this account includes the whole expense for the compressors, the new hoist, &c., which will be of great advantage, inasmuch as at times we have difficulty in getting, or in retaining, sufficient men. The Mexicans are very fond of public holidays, which take place once a week, or oftener. They also go away for their seed-time and harvest, so that one-third of the year is absolutely lost as far as labour goes. A year or two ago we imported about 150 Chinese, who had to be taught their business, but I believe are now going on well. Exchange has been in our favour, but that is a fluctuating item. Perhaps it would be just as well to read the letter, a portion of which only was read to the last meeting.

23rd November.—The face of the east drift shows a large body of ore in sight. We have broken into the footwall, and have thus exposed the full width of the ore, which is about 7 ft.; in appearance there is no change. You will note from the assay list that the results of the samples taken are low in value. We are following the drift closely up with a stope, and I am glad to find that there is some good ore coming in above the level. You will note that a sample on the

19th inst. assayed 92 ozs. in silver. East drift on the main vein above Santa Herlinda tunnel level, advanced 10 ft.; total, 10 ft. We have managed to keep the machine drill at work pretty steadily, but as it has been necessary to enlarge the cross-cut for the purpose of laying a track, the progress we have made does not appear so great as it otherwise would. We have exposed several feet of ore, the exact width of which I am unable to give you, as we are leaving ore on the hanging-wall. I am anxious to push this work ahead as rapidly as possible, and I hope to be able to open up a new mine in these old workings. I propose at the same time driving a parallel drift on the stringer of ore we were working before we commenced to cross-cut. The developments already made are quite encouraging, and the prospect is deserving of further investigation.

I will also read the letter last received, which arrived yesterday, and is decidely encouraging.

28th November.—I have given instructions to push ahead the work of opening up the old workings above Santa Herlinda tunnel level. Our work thus far has been of a decidedly encouraging character, and I shall expect to open up a good deal of ore in this part of the mine. For some little time past I have been investigating the country in the immediate neighbourhood of the company's lately-acquired timber lands. I find that it is a well mineralised country. There are veins running in every direction. Unfortunately our efforts thus far have not developed any vein of sufficient importance for me to take the necessary steps to acquire possession by what is called "denouncement," in the name of the company. The samples we have taken, with one exception, all show low-grade ore, containing in each case a small amount of gold. This is, of course, from the surface, that is, the croppings of the vein. I have by no means given up hopes of finding something that it will be worth while to acquire and work for the company, and I have left very full instructions to continue the investigations with this object.

I am sorry to say our manager has been obliged to leave the mine for some time on account of illness, and equally sorry am I to add that our secretary, Mr. Ford, has been laid up a considerable time from the same cause. The chairman concluded, as he had commenced, by moving the adoption of the report.

Mr. AYRES: I second the motion.

Carried unanimously.

DISCUSSION.

Mr. LEWIS: I think you have left us, as shareholders, rather in an indifferent position as regards information during the year. During the whole of that time you have not once communicated with us. True, we might get news by applying to the office, but I do think a circular might have been sent to us to show the state of affairs. As regards ourselves, we have been sufferers for a great many years without any benefit except the 9 per cent. paid last year, which would reduce the dividends for the whole period to a bagatelle; but, of course, it is much better business for the directors who get paid for their services. This is a result somewhat disappointing to shareholders who were told by American gentlemen when they came over that they were going into a mine with "walls of silver." It does seem a most unfortunate business that for four years, notwithstanding glowing accounts, we have been sufferers. One matter, you referred to yourself. You said you would be better able to explain the position if you had had a map. We also should be better able to understand it if you gave us one.

UPON MY WORD I DO NOT KNOW WHERE THE MINE IS.

(Laughter.) It is often the case in productive mines that a map is given. You mentioned that 150 Chinese are employed, but did not give the total number of workpeople.

The CHAIRMAN: Something like 400. It varies necessarily from the circumstances I have mentioned. We generally try to keep about 400 constantly employed.

Mr. LEWIS: I was thinking that a mine employing 400 persons with its manager ill is in a dubious position. You cannot help illness, but could you not fortify yourselves against the contingencies of that kind by employing a sub-manager.

The CHAIRMAN: There is one so employed, who is almost, if not quite, as well qualified.

Mr. LEWIS: I hope you will be rather more free with your communications during the coming year, and that we shall also receive an interim dividend shortly. Calls in arrear—we are paying interest on 10,000*l.*, and it is not pleasant to see money outstanding that should have been paid into our coffers.

THREE QUESTIONS.

Mr. INGRAM: First, what steps have been taken to get in the calls in arrear? What prospect is there of them being collected and applied in reduction to the 10,000*l.* owing? Secondly, what steps have been taken to obtain a Stock Exchange quotation, and if any, what has been the result? Thirdly, when may we expect an interim dividend? I observe we are paying the managing director in New York 836*l.* 17s. 1d., and the directors in England 1,283*l.* 6s. 8d., amongst five. I always think directors worthy of being paid for their work, but these two items come to a large amount. 872*l.* 10s. 2d. seems to be a very large item for interest, and I should like some explanation of these various amounts.

A SHAREHOLDER: I should like to ask why the profit on exchange is not carried to income?

The CHAIRMAN: It is placed to suspense account.

The SHAREHOLDER: But why should it not be available for division with the other profits?

The CHAIRMAN: It will be eventually. The auditor will explain that.

A SHAREHOLDER: With regard to expenditure on new works, I believe the total to date has been quite 80,000*l.*, and the statement formerly of the directors was that we could not declare a dividend, because the revenue profit had to be expended on capital account, and yet I see 13,000*l.* has been spent this year. Have we come to the end of capital expenditure?

The CHAIRMAN: I hope so.

EXPLANATIONS.

With regard to the condition of the mine, I have fully explained it as far as I can. As to the sub-manager— we believe him to be perfectly qualified. Mr. Sydney Jones is the general manager, and speaks in the highest terms of the sub-manager. Mr. Jones has only gone away to consult doctors, and has been recommended to take a short voyage. He writes to say that in San Francisco he hopes to obtain miners, particularly those who can use the drill. Shares are held as security for calls in arrear, which are owned by most respectable people in London, and it would hardly be wisdom or policy to insist upon the payment, and the forfeiture of the shares would be no good.

A SHAREHOLDER: How much is paid up?

The CHAIRMAN: 1*l.* per share, and the shares are in first-rate hands.

A SHAREHOLDER: I think that is scarcely fair to us. If the mine goes to a premium it is certain that everybody will pay, and meanwhile we have to take the risk.

The CHAIRMAN: These shares are not in the names of the persons who originally had them, and who are not worth powder and shot as far as we can learn. The dividend goes towards the payment of calls.

A SHAREHOLDER: Is interest being paid?

The CHAIRMAN: I take it it will be. Application was made for a Stock Exchange quotation through our brokers, Messrs. Greenwood, but the reply was that as two-thirds of the shares were held on the other side a quotation could not be given. I think the holders will see the advisability of dividing the shares a good deal more, and meanwhile, until that has been done, we have been recommended not to make any further application. The directors' fees is a personal question, and I have the authority of Genl. Hopkinson to say that so far as we are concerned we shall do what our chairman may think best in the matter. (Hear, hear.) There is no desire on the part of the directors to make use of this company for their own personal advantage—quite the contrary. (Cheers.) It is impossible to say whether we are at the end of capital expenditure, but we think we are. We shall not require any outlay of a considerable kind as far as we can see.

REPORTS ALWAYS APPEAR IN THE "MINING WORLD," AND ALL OTHER MINING PAPERS.

I have no objection whatever to a statement being made to the shareholders by circular, but every mail we send a statement to the mining papers which invariably appears. I am quite competent to make a map, and there is a model of that portion of the property where the mine exists, which may interest shareholders to see at the office. The lower part, where the mill is, is nearly twice as high as any mountain in Scotland, and the mine is 600 ft. higher still. It is on the slope of the Sierra Madre, and, though we have no snow, we are subject to torrents which are sometimes severe. I am afraid I cannot give positive information about the interim dividend. The accounts only go down to June and July, and we cannot tell. They come home in a most clear and admirable way. Our chairman has once or twice prophesied before he knew, and I am not disposed to do so. I have to propose the re-election of

OUR MOST WORTHY AND ADMIRABLE CHAIRMAN, MR. HOPKINS,

who retires by rotation, and I shall be glad if the meeting consents to his re-election, and will add to that the expression of sympathy with him in the great loss he has sustained, which prevents him from being present on this occasion.

Genl. HOPKINSON seconded the motion, which was carried unanimously.

Mr. FINNIS proposed the re-election of the auditors, Messrs. Deloitte, Dever, Griffiths and Co., at the same remuneration.

The AUDITOR'S REPRESENTATIVE: At the time of making up the accounts the exchange was exceptionally favourable, and as the gain is represented to some extent in the capital expenditure during the year, rather than take the profit to the credit of revenue, and have to pay it back possibly in the current year, we advised the board to place it to suspense account, so as not to fictitiously increase profits, and, therefore, not to have to reduce them hereafter. It is a shifting quantity.

The CHAIRMAN: There was a loss on exchange the previous year.

Mr. LEWIS proposed a cordial vote of thanks to the chairman for his courtesy and full explanations.

The motion was seconded, and carried unanimously.

THE GRASKOP MILL AND MINING CO., LIMITED.

THE FIRST TRANSVAAL COMPANY FORMED IN LONDON THAT HAS PAID A DIVIDEND OUT OF ITS GOLD PRODUCE—BASIS LAID FOR BIGGER DIVIDENDS IN FUTURE.

THE second ordinary general meeting was held at Cannon Street Hotel, on Thursday, to receive the report of the directors, and the balance-sheet and statement of accounts to the 30th September, 1890, and to transact the ordinary business of the company.

L. Cloete, Esq. (chairman of the company), presided.

Mr. J. G. HALLIMOND (secretary) read the notice of meeting.

PATIENCE HAS BEEN REWARDED.

The CHAIRMAN: Gentlemen, I need hardly say it is with some satisfaction your directors present their report to you on this occasion. You have been very patient, but at last your patience is to some extent rewarded, and I trust we are now in a fair way to reward it still more substantially hereafter. The report is in your hands, and also the balance-sheet, and my only regret is that so few shareholders are present. At meetings when we have not had such a satisfactory report to present I have seen larger gatherings, but still I have no doubt that the report in itself has conveyed a certain amount of satisfaction to many shareholders not present, and that they are satisfied they are in good hands, and to this opinion we incline from the general manner in which the report (as well as the balance-sheet) has been received. It is, however, necessary for your directors to say a few words in connection with your property of which they could not give very full details in the report. You are, of course, aware of the many difficulties Transvaal companies have had to undergo in connection with their affairs

Many of those difficulties have arisen from the action, or rather inaction—I will not call it wilful—of the Government of the country. They are not a very progressive people. They are slow to receive the force of new ideas.

THE CHAIRMAN ALMOST A "BOER," BUT NOT A "BORE."

I happen to have had some considerable experience of them, and may almost say that I am one of them myself, for my forefathers were of that race, and had I not been so fortunate as to have been brought to England at an early date I might have been a "Boer" myself. (Laughter.) In that case, like them, I should have believed in nothing save what I saw. They could not be got to believe in railways, or the necessity of constructing roads, and, in fact, they have done everything to retard progress. Machinery is taxed, and their object is not so much to develop the resources of the country as to get all they can out of you by taxatiou. However, by degrees the enormous development of the Witwatersrandt and the large influx of Europeans, associated with the gradual education of their own children, has brought a little more light into their Government during the last few years. This enlightenment will, I hope, help you, because it will not be long before roads and railways are brought near your property; but we, of course, could not wait for that, and so we have still to contend with all these difficulties.

A UNIQUE POSITION.

If you go back to the history of the country for the last few years you will find there are very few Transvaal enterprises; in fact, there is not one which was originally formed in London that has so far declared a dividend out of the actual produce and profits of its mill returns. (Cheers.) We are the first to reach that happy position. Other companies have done so by sales of land, by selling properties, and by financing, but none of them have done so out of the *bonâ fide* earnings of their mill, and the extraction of gold from the quartz taken from their mines. You will find that your capital is very large—nearly 100,000*l.* odd—but very little of it was hard coin—it was almost all paper. The company was formed with 60,000*l.* or 70,000*l.* capital at first, but the actual cash received has been but a very few thousand pounds indeed. I cannot recall to memory now the exact sum, but I know the quantity of gold you have produced is considerably more than the cash your shareholders have subscribed, and a great deal of that money has really gone in the way of rent.

ADVANTAGES OF PERSEVERANCE.

It only shows you that by quietly sticking to a property, pegging away, and reducing expenditure in every possible way, and by having good management on the spot and at home, many of the properties that are now languishiug can be made to pay. The chairman and directors of mining companies in addressing their shareholders are usually very eloquent on the subject of "prospects," but their experience is based upon what they hear from managers or from people who have been on the property. I do not wish to be egotistical, but I would tell you, although I am not an old man, it is 20 years since I put my money first into properties within a couple of miles of this one. I have watched all those fields during that interval, and watched also the progress of this company. You have waited only a few years, but I have waited many years. There is no doubt that in all gold mining ventures, particularly in the Transvaal, and especially in the De Kaap and Witwatersrandt district of that territory, most persons interested in properties there will find they will be rewarded if only they have patience. You have had patience, and you have had a small reward which, I trust, at the next meeting will be very much larger. I anticipate that it will be so. All the reports, speaking generally, from the surrounding properties, show that they are improving, and as we are able by reason of our earnings to prospect more our chance will be greater, aud expenditure on that poiut I do not think you will mind incurring. (Hear, hear.)

OPERATIONS EXTENDED.

As soon as we found we were making large profits we put on more white men to prospect the reefs. At present we are only working the natural deposits of rotten reefs; the regular reefs we have never thoroughly examined for the simple reason that we have not had the means. A certain amount of the earnings is being set aside with a view of opening up and showing what they are. The general accounts are that they are satisfactory, and I hope, before long, you will not only have the 20 stamps at work, but also the Huntington mill. This mill would have run before, but we have had difficulties with regard to its transport, and the loss of some parts *en route*, which were fortunately insured. I may say we are

GREATLY INDEBTED TO THE MANAGER

for the very able and economical manner in which he has worked your property. (Hear, hear, and cheers.) Not only has he worked very hard at the point from which the returns are being made, but he has looked to the future and has endeavoured always to try to find other valuable working places. That these are being worked is entirely due to his intelligence and tact. At the last meeting of your company we promised—I do not imagine we made many promises—that we would give you a plan of the property. That you have received with the report, and it may be of interest to you, because, in the future, we will quote the numbers in the squares where the different operations of the company are taking place, so that you may follow them with some interest. (Hear, hear.) If there is any question in connection with the report and accounts I shall be glad to answer it. I should point out one or two matters with reference to our property, which, I think, will strike you as men of business. You will find that in the Witwatersrandt, about which there is so much "blow" at present, that the average of their September crushings is 12.75 dwts.

ENCOURAGING FACTS.

Now, for the year ending December 31st our return is 13.20—that is nearly 1 dwt. better. You will also find that our expenses for the 12 months have averaged 18s. 6d. per ton, including everything in the Transvaal, and also the remittance of gold to us, and all the way through we have received the satisfactory average price of 3*l.* 18s. 2d. per oz., which is a few pence beyond the value of standard gold. In the Witwatersrandt the costs, roughly speakiug, of the best and most economically worked companies are about 1*l.* per ton, and you may take from that that they have coal on the spot, and pay nothing for transport, whilst at present we are paying 6s. for transport. With a view of reducing this cost, and now that we are making money, we purpose acquiring a few animals of our own for transport purposes. I have been on Graskop farm, and there is hardly an estate in the whole of the Transvaal which has such graziug advantages as that. It is very high up, and men send their cattle to that neighbourhood to get them fat and in good coudition for work. I think in the last report I foreshadowed to the shareholders the great advantages of electricity as a motive power for mining. The adoption of this would have necessitated the removal of our mill and its re-erection close to the present works. It was found, however, on close examination by an expert, that while we should have ample motive power at our disposal, there would be a lack of water for milling purposes, so that the matter is at present in abeyance, but I think the shareholders will agree with me that it will be a great advantage when we are able to adopt electricity, as this will at once take off the 6s. we are now paying for transport. Although we came to this resolution two years ago, we have not been able to carry it out fully in consequence of the want of water. At present you have the great advantage that

ALL YOUR WORK IS DONE BY WATER POWER,

otherwise we would not have been in a position to pay you a dividend, because neither the mill nor the water motor attached thereto has ever been out of repair since it was set to work. That is greatly to the credit of poor Mr. Hobbs, under whose superintendence it was put up. In conclusion, I must express the hope that those who are shareholders in other companies, not in the fortunate position of being able to pay a divideud as we are, will bear with their directors, as you have borne with us, and look with confidence to the future. (Cheers and laughter.) I now propose the adoption of the report and accounts, and renew my willingness to answer questions. (Cheers.)

Major TRAVERS (director): I second the motion.

QUESTIONS.

A SHAREHOLDER: Can you tell me if our lease is held direct from the Balkis Company or from the Government?

The CHAIRMAN: From the Balkis Compauy, but we pay the nnual rent direct to the Government.

A SHAREHOLDER: Is it true that there is a small tramway being laid to facilitate transport?

The CHAIRMAN: No. We have had plans, but have fouud it would not work.

Mr. STEVENS: I should like to ask for some explanation of the item "other payments," 2,503*l.* 6s. 10d.

The CHAIRMAN: They are entirely in connection with the liquidation of the old company. All the items can be seen in the ledger.

Mr. STEVENS: Are auy more such payments to be made?

The CHAIRMAN: There is 150*l.* iu suspense, which we have debited to the company, but may not have to pay.

Mr. STEVENS: Having raised the question, are we completely clear of all liability to Balkis Company?

The CHAIRMAN: Absolutely clear. The rent has been paid far into 1891.

A SHAREHOLDER: What is the extent of Graskop?

INTERESTING FACT.

The CHAIRMAN: About 5 miles square, or 10,000 acres. It was the first farm that the Transvaal Government ever themselves bought for a goldfield, and was also one of the first on which the precious metal was discovered. The Government threw it open as a goldfield originally 20 years ago, and it is, in fact, the premier goldfield of South Africa. Graskop is practically the centre of proved goldfields, for Pilgrims' Rest and Macmac Creek both take their rise from Graskop.

A SHAREHOLDER: When do you expect the Huntington mill to be at work?

The CHAIRMAN: It has arrived now, and we hope will be working almost immediately.

A SHAREHOLDER: When that is at work, what do you think the output will be?

The CHAIRMAN: I should be sorry to say exactly, but probably it can deal with 15 to 20 tons a day.

Mr. STEVENS: Is our lease more or less in perpetuity—more I hope?

The CHAIRMAN: It has about 12 or 13 years to run, and then is renewable on another payment, but not of a heavy kind.

A SHAREHOLDER: Why did we pay 15,100*l.* to the Balkis Company?

The CHAIRMAN: It was really a set-off. The Balkis Compauy are shareholders, and it was a set-off against what would be due to them on reconstruction, and which they agreed to take in shares.

The resolution was carried unanimously.

THE DIVIDEND.

The CHAIRMAN proposed, and it was seconded, "That a dividend at the rate of 5 per cent. per annum be paid to the shareholders for the six months ending 30th September, 1890." We could have made it 10 or 15 per cent., but thought it better to keep a good reserve.

The resolution was carried amidst cheers.

The CHAIRMAN: I propose the re-election of one of my colleagues, Major Travers, who has helped me a great deal iu connection with this company, and to whom the company is indebted in a variety of ways.

Mr. WIGHTMAN seconded the motion, which was carried unanimously.

Major TRAVERS: I am extremely obliged to you. I take a great interest in the company, and joined the old one at a time of difficulty, so that it has been a source of considerable satisfaction to me to see the position at which it has arrived to-day. We could not have done what we have without the most loyal and thorough support of our staff both here and in South Africa, and I am sure you may rely on that loyalty in the future until we pay you—well, until you are satisfied with the paymeuts. (Laughter.)

A HINT TO OTHER COMPANIES.

The CHAIRMAN: I think we made a very good contract with our manager. He was to have a certain salary, but as soon as he had earned 5 per cent. he was to get 200*l.* increase, and for every other 5 per cent. 50*l.* or 100*l.* I think that is a contract that every gold

mining company might make with advantage. Give a man a fair salary to live on, and encourage him with 200*l*. or 300*l*. on the first 5 per cent. paid in dividends. The first 5 per cent. is the hardest to earn, and when once you earn it you ought to be able to go on paying well.

Major LESLIE proposed the re-election of the auditor, Mr. Hercules Nicol.

Mr. CUMMINS seconded the motion, which was carried unanimously.

The CHAIRMAN: One of my co-directors has joined the board since the last meeting, and inasmuch as he represents some of the new blood in the company, and was one of the first to find capital for it, I will ask him to say a few words in connection with our affairs and his ideas in connection with Transvaal mining generally. (Cheers.) To me personally, whose knowledge has been acquired from visiting the Transvaal half-a-dozen times, I am quite surprised that Mr. Ogle is so well informed on the subject that he is so well able to keep in touch with the company by the acquisition of knowledge that is very useful generally, and to this company particularly.

A SORE POINT TOUCHED AND AN EXPLANATION GIVEN.

A SHAREHOLDER: Will he touch upon the low price of shares in the market. (Laughter.)

The CHAIRMAN: There are a good many unbelievers and always a plentiful supply of vendors' shares. Some of these vendors are mere diggers. They get 5,000 or 10,000 shares given them for their claim—men who are living in miserable huts and working hard all day. They go to a store keeper and say, "what will you give for this paper," as usually it is marked not for sale for six months or a year. These vendors' shares are thus sold at almost any price, and then people say the holders do not believe in the properties, whereas, they part with them to the store keepers because they sorely need whatever money they can raise upon them, so as to get bread to eat.

MR. OGLE GIVES SHAREHOLDERS THE BENEFIT OF HIS EXPERIENCE.

Mr. JOHN OGLE: The chairman has said a great deal too much about my knowledge of gold mining. Mine is simply book knowledge gained from studying the reports and accounts that come from the other side. The conclusion I have come to is that the first thing you have to do in starting a gold mine is to get a good manager, and then look out for a mine. If you have a good manager in most cases you have a good mine. The majority of gold mining failures have been due to bad managers. It is quite clear in this company that if we had had the same manager as we have now, we should never have required any re-construction—there would have been no necessity for it. This company ought to have paid a dividend within the first twelve months of its existence, which is proved by this fact that the first month our manager got out there he returned a profit against the serious loss of the previous manager. (Cheers.) The property we have long known to be a good one, and our astonishment was that we could not get a profit from it, but it is, as I said, purely a question of management. There is some slight credit due to the board, generally speaking, for supervising the reports and the accounts, and keeping in touch with the manager, and letting him understand that they know something about what they are dealing with. He can give you his advice and they can give him their opinion, based on what they gather from his letters, and from the experience of other mining men who come from the spot, as well as by studying the reports and accounts of other companies.

MR. OGLE A BUYER AND NOT A SELLER.

I am a large shareholder in this company, and have shown my faith in it by not selling a single share. (Cheers.) What I have done is to take up vendor's shares, as I have had the opportunity. There have been a great number belonging to diggers on the market, which, being fully paid, are not readily marketable. The market will only take partly-paid shares, because they think there is something wrong about vendor's shares, and to assist the diggers I have taken over a number of their fully-paid shares and given them partly-paid shares in exchange—not a bad bargain for myself, and a good one for them under the circumstances. In reading Mr. Criswick's advices, and consulting our chairman, who has had a good deal of experience there, I feel no doubt whatever that there are bright days in store for this company. The board are looking to the future, as well as to the present, and are preparing themselves for a considerable extension of work, which they hope can be done at a slight expense—not only in prospecting but in working reefs which we hope will be very much richer than the surface deposits. That is the opinion of everybody who knows anything about mining out there. You will see by the accounts that

WE MIGHT HAVE PAID A MUCH LARGER DIVIDEND,

but if any difficulty had occurred we should have had either to make a call on our shares of the last 3d. or to have come to the shareholders to ask them to assist us in some other way. I think you will admit, although we have had a great many complaints that a larger dividend has not been paid, that we have acted wisely in keeping a considerable sum in hand. I hope we may at the end of another six months see our way to give you another dividend. (Cheers.) You may depend upon it if we do not do so it will not be for want of good returns, but it may be that we may desire to expend the money on the development of the mine. I only hope that even before our next meeting you will hear from us in a sense that will be wholly satisfactory to you. (Loud cheers,)

The CHAIRMAN having endorsed what his colleagues had just said about the dividends,

Major LESLIE rose, with great cordiality, to propose a vote of thanks to the directors for their able and successful administration, and to the chairman for his lucid exposition of the affairs of the mine. He quite agreed with that gentleman and with Mr. Ogle that the future was full of hope, and that its basis was the success of the past. He thought their thanks were due also to the staff both here and abroad, who had laboured most successfully. It was a feature about this company which did not distinguish many others, that when a person went to the office to ask for information, he received it to the fullest extent, and although the directors, of course, would not answer improper questions, yet they thought it better to err on the safe side by giving the fullest information rather than keep the shareholders in the dark. They ought to feel gratified by this distribution, which was the earnest of many more to come.

Mr. COMBS quite endorsed the remarks that had been made by the previous speaker, and for that reason heartily seconded the resolution. He was glad that not only the directors but the staff here and in South Africa had been mentioned.

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, said; I only hope we may continue to have your kind wishes and your cordial thanks for some considerable time to come.

A NEW AUTOMATIC MACHINE.

AT the invitation of Mr. Ernest G. Hoffmann, a party of Pressmen assembled on Tuesday last at 3, Creed Lane, Ludgate Hill, to inspect a new combined printing, weighing, and delivery machine that he has just perfected. The machine is worked like the already well-known automatic machines by the insertion of a coin, when the investor receives a ticket upon which is stamped his weight and the date of the month, and he likewise receives either a box of matches or a packet of confectionery. The introducers of the machine also propose, when it is before the public, to include an accident insurance ticket for the penny paid. We are informed that a company is to be formed to work the machines, and that the prospectus will be in the hands of the public in about a fortnight's time.

THE YURUARI COMPANY, LIMITED.

A TELEGRAM CONFIRMED.

THE secretary advises receipt of letters from the mine, dated Chile, December 26th, in which Mr. Pryor states: "While the mine continues as per my previous advices, the lode shows marked improvement, both in No. 9 level west Cenicero and in No. 5 west of Water shaft. I enclose copy of my last letter, and need not therefore repeat my opinion as to the necessity of further developments, without which returns cannot adequately represent the capabilities of your property. Provided you place me in a position to undertake these, in my opinion (as far as a miner can offer an opinion as to the prospects of a mine) this property will prove of highest value."

The manager advises despatch from the mines of 11 bars of gold, value about 2,900*l*.

The secretary adds that from a notice by the Postmaster-General, mails in future to and from Venezuela will be monthly, instead of fortnightly, as hitherto.

Confirmation of last telegram has been received as follows: "Returns for fortnight: 190 tons; 580 ozs., 170 skimmings, equal to 750 ozs."

HOLLOWAY'S OINTMENT AND PILLS.—These remedies are unequalled throughout the world for bad legs, wounds, foul sores, bad breasts, and ulcers. Used according to directions given with them there is no wound, bad leg, or ulcerous sore, however obstinate or long standing, but will yield to their healing and curative properties. Many poor sufferers who have been patients in the large hospitals under the care of eminent surgeons, and have derived little or no benefit from their treatment, have been thoroughly cured by Holloway's Ointment and Pills. For glandular swellings, tumours, piles, and diseases of the skin there is nothing that can be used with so much benefit. In fact, in the worst forms of disease, dependent upon the condition of the blood, these medicines, used conjointly, are irresistible.

PEACE, Manager.

AT the half-yearly ordinary general meeting, held at the Cannon Street Hotel, London, on Tuesday, the 20th January, 1891, the Right Hon. Sir Lyon Playfair, K.C.B., M.P., in the chair, the following report was presented :—

The Directors have to report that the net profits of the Bank for the past half-year, after making deductions for interest on deposit accounts, current expenses (including subscription to life insurance fund), bad and doubtful debts, and rebate on bills not yet due, amount to 41,225*l.* 3s. 2d., which, added to 9,179*l.* 8s. 8d., the balance brought forward from the previous half-year, makes a total of 50,404*l.* 11s. 10d. now to be disposed of.

Out of this sum it is recommended that 32,000*l.* be appropriated to the payment of a dividend at the rate of 8 per cent. per annum, free of income tax ; that 5,000*l.* be added to the reserve fund, which will then amount to 280,000*l.* ; that 1,305*l.* be placed to the credit of redemption of premises fund, and in reduction of furniture account ; and that the remainder, 12,099*l.* 11s. 10d., be carried forward to the credit of the next account.

The Directors have also to report that, in conjunction with the leading Banks, Financial and Mercantile Houses in London and elsewhere, they have, on behalf of the Bank, joined in the guarantee given to and by the Bank of England for a period of three years, in connection with the liquidation of the affairs of Messrs. Baring Bros. and Co.

By order of the Board,
THOS. J. SCOTT, Secretary.

Bartholomew Lane, E.C.,
14th January, 1891.

N.B.—The dividend will be payable on and after Saturday, the 31st January.

THE ALLIANCE BANK, LIMITED.

		£280,000 0 0

We have examined the foregoing accounts in detail, with the books and vouchers of the Bank, and find them to be properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs. Further, we have ascertained by actual enumeration the correctness of the items of cash and bills of exchange in hand, and have inspected the securities representing the Bank's own investments in Government stocks, &c., and also those held on account of advances and loans, as well as those belonging to customers, and we find them to be in due accordance with the books and accounts of the Bank.

THOS. A. WELTON (Welton, Jones & Co.),
J. F. CLARKE (Turquand, Youngs & Co.), } *Auditors.*

The Secretary read the Notice convening the meeting.

The Chairman authenticated the "Register of Transfers" by impressing thereon the Common Seal of the Company.

The report and accounts having been taken as read,

It was proposed by the Chairman, seconded by Mr. Mackenzie, and resolved unanimously, "That the report and accounts, as presented, be received and adopted."

The Chairman then declared a dividend for the half-year ending 31st December, 1890, at the rate of 8 per cent. per annum, free of income tax, payable on and after Saturday, the 31st January.

It was proposed by Mr. J. M. Stobart, seconded by the Rev. Wm. Bentley, and resolved unanimously :—"That this Meeting desires to express its appreciation of the action of the directors in joining the Baring Guarantee Fund, initiated by the Governor and Directors of the Bank of England, to whom the best thanks of the commercial community are due for their promptitude in averting a grave financial crisis."

It was proposed by the Chairman, seconded by Mr. Peel, and resolved unanimously : "That the thanks of the meeting be given to the managers, the branch managers, the secretary, and the other officers and the staff of the Bank for the care and diligence with which they had performed their duties during the past half-year."

It was proposed by Mr. J. H. Lomas, seconded by Mr. W. H. Hutchinson, and resolved unanimously : "That the thanks of this meeting be also given to the chairman and directors for their careful attention to the business of the Bank during the past half-year." (Signed) LYON PLAYFAIR,
Chairman.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE VAN CRISIS — ALMADA AND NEW GOLD HILL ATTRACT ATTENTION—UPS AND DOWNS IN OTHER SHARES—ALL ROUND DECLINE IN HOME SHARES—BETTER OUTLOOK FOR NEXT WEEK.

TIME and space almost fail us to do justice to the correspondence we receive concerning Van affairs. The importance of the present crisis will justify the prominent position we give to Van this week. We are bound to say that the letters we receive are dead against the local management, and although one or two writers differ from the great majority as to what the future of the management should be in London, the preponderating opinion is that it should remain the same with perhaps the addition of one or two new members to the board. In fact, some of our correspondents roundly declare that if the *personnel* of the board be materially changed, they will have nothing to do with the re-construction. It therefore seems to come to this—that if fresh funds are to be procured for Van, the local management must be altered, the present board retained and fresh members added thereto.

Does the history of Van justify re-construction? What are the facts? The total produce of the mine from the commencement to the present time has been sold for the enormous sum of 1,068,824*l*., to which lead contributed 988,158*l*., and blende 80,666*l*. The dividends paid to the shareholders have amounted to 381,375*l*., and the highest price ever reached by the shares was 84*l*. 5s., at a time when the capital was in 12,000 shares of 4*l*. 5s. each. The largest dividend declared in any one year was in 1876—47,250*l*., or three guineas per share.

Furthermore, it should be added that the lode was richly productive from the adit to the 120-fm. level, where a band of grit cut off the production. To get below this band of grit has occupied much time and caused great expense. The lode has "twisted," but has commenced to be productive again, and the reasonable probability is that the company is now on the top of a fresh deposit, equally as rich as that from which the former returns were made. The new capital will prove whether this be so or not within a reasonable time. Allowing for the difference in the price of lead between now and what it was in the halcyon days of Van, it would be midsummer madness were the shareholders to abandon such a mine at such a stage. If they did so, and a jury were afterwards to consider their case they would return a verdict of "Financial Suicide whilst in a state of temporary insanity." They have no intention of doing anything of the kind, and we anticipate with confidence the complete success of the re-construction scheme.

To revert to general mining affairs. The week has been somewhat uneventful.

Almada at one time changed hands at 2s. 7¼d., but do not close so good, although a large business has been done. Callao Bis have been 8s. 9d. buyers, some thousands changing hands, but sellers coming in they do not close so good. In Don Pedros there has been considerable excitement caused by the receipt of a wire stating the manager had struck 5-oz. stone, and the shares suddenly sent to $1\frac{3}{16}$, $\frac{2}{16}$, but this afternoon changed hands at 20s., 22s. This company is a standing example of success, following upon the most dogged perseverance, and is an object lesson for the shareholders of its near neighbour, St. John del Rey, to whose affairs we again call attention this week. About 44,000*l*. has been subscribed towards the debenture issue. The shares rose on the announcement of this fact. There have been big buyers of Gold Hills, and in the view of many, they will go much better. The North Carolina papers attach great importance to the discoveries made at Gold Hill, particularly as it has been in wholly new ground, 400 ft. from the main Barnhardt shaft, and on the main vein, so that "it has every possible indication of extending to the lowest point reached, 400 ft." There is another mine in the same district—New Russell—the meeting of which will be held on Monday next. Appalachians are in a bad way. The mine was closed down on January 1st, and if anything further is to be done with it fresh funds will have to be provided. Certain shareholders have been appointed to consult with the directors as to the future plan of campaign. The company owns a splendid mill, on which it has spent 20,000*l*., but the board are now waiting the result of the treatment of New Russell ores by the process of the Gold Ores Reduction Company. Should that be successful, then the directors will have a policy of action, instead of inaction, as at present, and shareholders may expect to receive the reward of re-construction. There have been renewed dealings in Golden Gate and Golden Feather shares, and better prices are to be had. On the other hand Moutana, Pahang Corporation, West Argentine and Palmarejo shares are all down. The circulars sent out by the board of the latter company have been read unfavourably by the market.

Yuruari shares have changed hands by thousands, but prices, though indicating firmness, do but scant justice to the position of the mine, and the satisfactory crushings that are being sent home. We should not be surprised to see a substantial advance upon present quotations, judging from the nature of last week's dealings.

In the Indian section the movements have been unimportant. The telegram from the Champion Reef Company, accentuating the importance of the late discovery, has been read with favour, and so also has the report issued by the directors of the Goldfields of Mysore, to which we make full reference in our leader columns. We publish this week a chart of the Nundydroog Mine, which may be studied with profit and interest by our readers.

There has been some animation in the Australian section, which was led off by a good rise in Australian Broken Hills, consequent upon good news from the mine. Gympie Great Eastern and Golden Crown are both up, but New Livingstone and New Queen have fallen—the market considering them too high even at quoted prices.

The Kaffir market has been on the down grade. With the exception of the partly-paid Moodie's shares, all land descriptions have been on the inclined plane. Scarcely a week passes that we have not to record a fall in Oceanas, and as for its precious progeny Silati River, the market never mentions it. Diamond shares have also toppled somewhat heavily. In Gold shares Pigg's Peak Ordinary and Preference have each lost somewhat of the late rise. Most of the other African gold shares are lower, with the exception of Geldenhuis, Johannesburg Pioneer, Spes Bona, Crown Reef, Durban Roodepoort and Jubilee. There is better news from Sheba.

The Copper market has been firm, and all descriptions are up—notably Tharsis, Rio Tinto and Namaqua.

If the week's business had been solely confined to Cornish shares, how doleful would have been the tale. Without a single exception prices drooped all round—Dolcoath leading off with a 3*l*. fall

in anticipation of a poor dividend at Monday's meeting. The 6s. 6d. dividend declared by East Pool sent the shares down 1*l.* Carn Brcas fell 2*l.*; Cook's Kitchen 1*l.*; Wheal Agar 1*l.*; and other shares also mark a decline. The mines are apparently looking well, but it is the uncertain state of the tin market that is troubling them. The Wheal Basset meeting resulted in a call of 6s., and a fall in the shares.

The market outlook is good, and we should not be surprised to see a good flow of business and better prices during next week.

Kaffirs.

The market has been somewhat free, and a good many bargains have been booked, in many cases at higher prices. Geldenhuis, Johannesburg Pioneer, and Wemmer appear to be the favourites.

Business.—The following have risen:—Sheba, 1/16; Aurora, 1/8; Bankets, 6d.; Crown Reef, 1/8; Durban Roodepoort, 1/8; Geldenhuis, 5/16; Johannesburg Pioneer, 3/4; Jubilee, 1/8; Spes Bona, 3/8; Van Ryn, 1/16; and Wemmer, 3/8.

The falls are as follows:—Piggs Peak, 1/8; Piggs Peak Preference, 1/4; City and Suburban, 1/8; Crœsus, 6d.; Ferreira, 1/2; Forbes Reef, 1s.; Henry Nourse, 1/8; Heriot, 1/8; Jumpers, 1/8; Langlaagte, Block B, 1/16; May Consolidated, 1s. 6d.; Robinsons (De Villiers), 1/16; and Witwatersrandt (Knight's), 2s.

Diamonds.

Very few transactions have taken place, and where shares have changed hands it has generally been at lower rates. New Jagersfontein and De Beers have been the greatest sufferers.

Business.—The following have declined:—De Beers, 3/16; Gordon, 6d.; New Jagersfontein, 3/8; North-Eastern Bultfontein, 1/16; and Burma Ruby, 1/16. There is no upward move to note on the week.

Lands.

For some unexplained reason Exploring shares have been forced for sale, and in consequence have had another fall of 15s. London and South African Explorations are also lower as the result of the week's operations.

Moodies and Transvaal Gold are better in tone.

Business.—Those that have fallen are the following:—Bechuanaland, 1/16; Exploring, 3/4; Exploration, 1/8; Johannesburg Estate, 1/16; London and South African, 1/2; Moodies, fully paid, 1/16; and Oceana, 1/8.

The only rises are in Moodies (10s. paid), 1/16; and Transvaal Gold, 6d.

Australians.

The chief attraction has been in Australian Broken Hill shares, which have improved and leave off a fairly good market. Gympies have been enquired for and close slightly firmer.

Business.—A rise has to be recorded in Australian Broken Hill, 3s. 6d.; Day Dawn Block, 3d.; Gympie Golden Crown, 1s.; and Gympie Great Eastern, 9d. The declines are Ethcridge, 3d.; Mount Shamrock, 3d.; New Livingstone, 6d.; and New Queen, 6d.

Indians.

There has been little or nothing doing in this market, and as a consequence there are few alterations to record. Mysore Reefs certainly appear a cheap purchase at present price.

Business:—A rise has taken place in Glenrock of 3d.; Goldfields of Mysore, 1s.; whilst a fall is shown in Mysore Reefs of 6d.; and Nundroog, 1/16. Others remain unchanged.

Copper.

A somewhat spirited business has, at times, been displayed in this class, and prices have again hardened, Tharsis and Rio Tinto having been in especial favour.

Business.—The following have improved:—Capes, 1/8; Mason and Barry, 1/8; Namaqua, 1/8; Panulcillo, 1/16; Rio Tinto, 1/4; and Tharsis, 3/8. No other changes to note.

GENERAL FOREIGN SHARES.

A very good business has been done in this class during the past few days, and low priced shares appear again to be coming into favour. Golden Gates and Golden Feathers have again been in demand at improved rates.

Palmarejo and Pahang Corporation have both been offered, and for the moment are somewhat lower.

Business.—An upward move has occurred in Almada and Tirito of 9d.; Callao Bis, 9d.; Colon, 3d.; Don Pedro, 6s.; Esmeralda, 3d.; Frontino and Bolovia, 6d.; Golden Feather Channel, $\frac{1}{8}$; Golden Gate, $\frac{3}{16}$; Idaho, 3d.; Jay Hawk, 3d.; Spitzkop, 3d.; and St. John del Rey, 6d.

Amadors have fallen $\frac{1}{8}$; Elmore Gold, 3d.; Montana, 1s.; Monte del Oro, 6d.; New Gold Hill, 3d.; New Viola, 3d.; Pahang Corporation, $\frac{5}{16}$; Palmarejo, 1s. 6d.; Pinos Altos, 6d.; Ruby, 3d.; Venezuelan-Austin, 3d.; and West Argentine, 6d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIAN MINES.

CHAMPION REEF.—A telegram from the mine dated 22nd January is as follows :—"Lode opening up well; north drift, Dalyell's shaft, 3 ft. wide; gold is visible throughout."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—A telegram from the managing-director resident at Broken Hill, dated 16th January, states :—"Have found the vein between the 280 level west and the 180 level. Ore is as rich as ever."

BROKEN HILL PROPRIETARY.—For the week ending 15th inst. there were 5,252 tons of ore treated, yielding 1,050 tons of lead, containing 194,324 ozs. of silver. The leaching plant realised 2,400 ozs., making a total production of 196,724 ozs. silver.

DAY DAWN P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending January 17th, viz. :—"930 tons, 962 ozs." (Estimated value, 3,270*l.*). "Lost one day break down machinery."

GYMPIE GOLDEN CROWN.—"200 tons yielded 163 ozs. Estimated value, 586*l.*

MIDAS.—Cable from the mine : "Yield for week, 61 ozs."

MOUNT LEYSHON.—A cablegram dated 18th inst. from the manager at Charters Towers gives the fortnightly crushing :—520 tons crushed 300 ozs. gold; 20 stamps mill ran 252 hours; proceeds, 840*l.*"

WAIHI.—The directors notify that the 30,000 new shares offered for subscription to the shareholders on the English register have all been applied for and allotted.

FOREIGN MINES.

ALMADA AND TIRITO.—The board have issued a circular which embodies the reports we have published for some weeks past from the mine.

BURMAH RUBY.—Major Kunhardt, Royal Engineers, arrived at Mogok on the 15th inst., and took over charge of the Burmah Ruby Mines, as chief engineer and general manager. Mr. F. H. Kirby, a director of this company, is also in Burmah, and is carefully inspecting the property and its prospects.

MEXICAN EXPLORATION.—The directors will, at the meeting of shareholders to be held at the Cannon Street Hotel on the 2nd February, propose a dividend of 10 per cent. for the year ending 31st December, 1890, to carry to a reserve fund securities estimated at 2,500*l.*, and to carry forward 1,384*l.* The transfer books will be closed from the 26th January to 9th February inclusive.

NORTH MEXICAN MILLING.—Cablegram from Mr. Hofmann respecting the first week's working :—"Produced $2,000; cost, $1,000. New belting caused frequent stoppages."

PAHANG CORPORATION.—The Singapore agents advise by cablegram the shipment of a further 13 tons of black tin per Cyclops and Polythemus.

TICKETING FOR TIN ORES.

A tin ticketing took place at Redruth on Tuesday last, when 249½ tons were offered, with the following results :—

VALUE OF ORES SOLD FROM EACH MINE.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

LUIPAARD'S VLEI ESTATE.—Licenses for Dec., 330*l.*

SHEBA.—Cablegram from the manager: "North cross-cut No. 6 level : Rich quartz has been struck."

HERIOT.—It has been decided to stop all operations on the 31st inst pending fresh financial arraugements or re-construction.

NI-WOT.—Cablegram :—"Have cleaned-up after a week's run with 48 stamps. Result, 155 ozs. amalgam, 10 tons concentrates and 12 tons smelting ore."

VICTORY HILL CONSOLIDATED.—The manager states (14th Dec.): The only changes of importance are that the cross-cut in No. 2 has proved the reef 4 ft. wide, and in No. 3 winze, the reef is 5 ft. wide, with an extremely rich blotch of gold on the footwall.

PIGGS' PEAK ESTATE.—The company has received intelligence that the recent heavy rains have prevented continuous transport of ore to the mill, but that there is now a favourable change in the weather, and there will be a clean up at the end of the month.—W. SMITH.

GOLDFIELDS OF SOUTH AFRICA.—Advices are to hand from Mr. Cock, who is in charge of one of the expeditions of the Goldfields of South Africa, Limited, in Mashonaland, stating he has pegged out 100 claims for the company on Concession Hill, in the neighbourhood of the Umzwezwi River. He has sunk a shaft 30 ft. deep, and has discovered a reef 7 ft. wide, of which 6 ft. carries visible and payable gold.

TRANSVAAL GOLD EXPLORATION.—The following particulars are from general manager's advices of December 22nd, 1890 :—Mines : Ophir Hill, Theta Vein : Ore extracted, 10 tons; assay value, 7 oz. 9 dwts. gold per ton. Eastern extension : In Nos. 1,209 and 1,210, the vein was 2 ft. to 3 ft. thick and very rich; 3 tons were extracted, assaying 30 oz. 14 dwts. of gold, and 20 tons assaying 10 ozs. 9 dwts. of gold per ton. The vein in all the eastern workings was opening out well. Mill : The battery and pans were working in an efficient manner. Transport of Theta and Mu ores was proceeding.

ORIENTAL AND SHEBA VALLEY.—Cablegram :—"The average assays for last week were 13½ dwts. per ton. Have made rich strike in quarry. The rich strike is from 10 to 12 ft. thick. The streak could be followed for some distance." And the directors have telegraphed to know the average assay of the ore in the rich strike reported. The board have received the following telegram in answer to their inquiry as to the value of the ore in the rich strike reported in the mine, viz. :—"New strike estimated at 1 ft., 5 ozs. per ton ; from other, 1 oz. per ton. Retaining wall new mill given way, will cause stoppage new mill for one month ; will be repaired at once. Estimate damage at 2,000*l*. Now running 45 stamps."

AKANKOO.—We have to day received letters from the manager up to December 22nd, as follows :—New reef : The location of this discovery is about 400 yds. to the south of this house, where some very large and important old workings exist. We are down 35 ft. with the trial shaft, but the ground is not yet sufficiently opened to give you the size of the reef, nor its direction. This I hope to do in my next. The quartz is blueish white, and what we have broken at present goes over ½ oz. to the ton free gold. The native workings pass down the side of the reef, and I am told they worked for a black shale on one side of the lode, which is very rich in gold. The quartz was too hard for them to deal with. Progress : North-east end of adit driven 23 ft., distauce from collar 97 ft. Hold through into old adit which is now in course of being re-opened and retimbered. The ground I have proved in opening up the north-east end shows that you possess at least 7,000 tons of quartz from the 60 to adit level under the Akankoo Hill, and safe from the swamps, so that this stone can be extracted. It pans well, some exceeding an oz. per ton for free gold. South-west end adit : Advance this week is 21½ ft., all securely timbered. All along this length the quartz pans richer than I have ever seen it at this mine, excepting where cross-cut met the reef at 100-ft. level. Huntington Mill : Carpenters have been busy all the week fitting beddiug strips of karko into channel irons of wrought frame, and the engineer has been engaged in fitting keys to the gearing and pulleys on the shafting and rotating cross-head. I am waiting for belting.

W HORO CONCESSION EXPLORATION.—Report from the manager at the mine, dated 18th December :—I beg to send you below the report of the work done here from the 1st to the 15th of this month. Buildings : Two masons and their boys have completed the masonry of the married men's rooms and rooms for meals, and one carpenter and a labourer has been at work on the woodwork of these buildings. No. 1 tunnel : I have had one miner and eight boys at work in this tunnel, in the cross-cut to the south and No. 2 west drive. Cross-cut south : In the cross-cut 24 ft. 6 ins. have been driven. The ground has become very much softer, with a few colours of gold. No. 2 west drive : This drive has been advanced 6 ft. The ground continuing hard, and showing a 5 dwt. prospect in the pan, with a good show of pyrites. Winze in No. 2 tunnel : I have had two men and 10 boys in this winze, which is now down to the depth of the intermediate tunnel. The pannings show much less free gold, in fact the last couple of feet hardly showed 1 dwt. of free gold to the ton. And the average of the 7 ft. sunk during the fortnight would not amount to more than 1½ dwts. After consulting Mr. Edgar Taylor I have commenced at a vertical depth of 42 ft. down the winze a drive to the east to meet the No. 2 west drive in No. 1 tunnel, and a drive to the west towards the intermediate tunnel. This drive towards the intermediate tunnel will need a winze put down to counect the two. This work is put in in order to expedite the ability to bring the large reserve of ore by No. 1 shaft to the battery in order the quicker to commence crushing. Till the adit level is in under the winze in No. 2 tunuel. the ore will be taken from No. 1 tunnel through the No. 2 west drive, past the winze in No. 2 tunuel, along the drive now being made going west from 42 ft. down the winze, to the winze to be made between this level and the intermediate level, then shot down this winze to the intermediate level, then along the intermediate level by a tramway to the air shaft of the adit level, shot down the air shaft and trammed from the bottom of the air shaft along the adit round to the battery. Intermediate tunnel : This tunnel has been advanced 39 ft. 6 ins. during the 15 days. the ground coming softer soon after the beginning of the month. Three men and 14 boys being at work here. There is no change to report besides the softening of the rock. Adit level : This level has been driven 7 ft. during the 15 days. Three men and 13 boys have been at work here. The rock continues very hard, the price paid per foot being 5*l*. 10s. I would suggest that a rock-drill should be procured to drive this tunnel quicker, the compressor to be driven by a small turbine taking water from the pipe to the battery. Battery : Mr. Castle estimates that the erection of the battery will be completed about the second week of January next. He is now erecting the Frue Vanners. Pipes and pipe line : I hope to complete the pipe line and the bulk of the small dam at the fall by the end of this month. Through some error on the part of the shippers of the first and second loads of rivetted pipes, we are short of rivets to complete these pipes. I have heard that the large lot of pipes is now at Delagoa Bay, and I have arranged transport so that they should be here soon. Labour : The labour generally is the same as last month.

COMMERCIAL NOTES.

METALS.

THE Metal market has been steady during the current week. Bank rate has been reduced to 3½ per cent. Bar silver has declined to 47⅝d.

IRON.—Manufactured is steady, but orders continue very scarce. Scotch warrants have been done from 47s. 9½d. to 47s. 1d. cash for m/n. To-day's prices are 47s. 1d. cash, and 47s. 2½d. one month buyers. Furnaces in blast, six. The stock of warrants now stands at 571,930 tons, being a decrease of 4,866 tons for the week. The shipments have been 4,717 tons against 6,411 tons for the corresponding week last year.

COPPER has been steady, closing rather firmer. GMB Warrants have been sold from 53*l*. to 53*l*. 7s. 6d. cash, and 53*l*. 10s. to 53*l*. 15s., three months ; closing at 53*l*. 10s. cash, aud 53*l*. 15s. three months. We quote English tough, 57*l*. to 59*l*. ; best selected, 58*l*. 10s. to 61*l*. ; strong sheets, 65*l*. 10s. to 66*l*. India sheets, 61*l*. to 61*l*. 10s. Yellow metal, 6d. Ore, &c., 9s. 9d. to 11s. per unit.

TIN has been firmer. Straits sold from 91*l*. 10s. to 91*l*. 15s. cash, and 91*l*. 15s. to 92*l*. three months ; closing at 91*l*. 12s. 6d. cash, aud 92*l*. three months. The Dutch market has been steady at 55fl. to 55¼fl. for Banca and Billiton. English ingots, 94*l*. 10s. to 95*l*

TIN PLATES are firm, and we quote ordinary coke, 17s. 9d. to 18s. Liverpool.

SPELTER has been firm and we quote ordinary brands 23*l*. 5s. to 23*l*. 10s. ex ship here to arrive, and 24*l*. spot.

LEAD has been quiet and closes rather easier. We quote soft Spanish, 12*l*. 15s. to 12*l*. 17s. 6d. ; soft English, 13*l*. ; L.B., 13*l*. 7s. 6d. ; sheets, 14*l*. to 14*l*. 5s.

QUICKSILVER. Rothschild price is 8*l*. 12s. 6d. ; seconds about the same.

ANTIMONY quiet, 70*l*. to 71*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JANUARY 24TH.

DON PEDRO GOLD MINING CO., LIMITED.

IMPORTANT TELEGRAM.

21st January.—Mr. John E. Dawson, secretary, forwards copy of a telegram received this morning from Brazil. 5 ozs. to the ton is such an extraordinary yield that the directors have thought it prudent to telegraph to the mine for confirmation, but have not felt justified in keeping back the telegram.

— Telegram, Marianna, 20th January :—"Sampling ; the lode generally rich and large ; 5 ozs. at per ton plentiful."

MANICA OPHIR.—Mr. W. Scott, the secretary, notifies that the registered office of this company is now 229, 230, and 231, Gresham House.

ROMAN GRAVELS CALL.—The Roman Gravels directors have made a call of 1s. a share. They are very reticent about the matter—more so than the shareholders, who have to pay it, and who have written to us warmly on the subject.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (22nd Jan.)—Wheal Maria, Capel Tor lode, Eastern shaft: In the 112-fm. level west the lode is 3 ft. wide and continues to yield saving work for copper and mundic ores. In the 100-fm. level west the lode is 2 ft. wide, composed of capel and quartz, with a little copper and mundic ores. Watson's engine shaft: In the 172-fm. level west the lode is 3 ft. wide, composed of strong capel and quartz, with fluor and small quantities of copper and mundic ores. In the 160-fm. level east the lode is 3 ft. wide, very promising, and continues to yield 3 tons of copper and mundic ore per fm.—I. RICHARDS.

DRAKEWALLS (21st Jan.)—During the past month the 160-fm. level has been driven east 2 fms. 6 ins.—in last 3 ft. the lode has very much improved, and will yield 7 tons of mundic per fm., with rich stones of copper ore, and a little tin. Nothing has been done in the bottom of mine since my report of last week, owing to the breaking of one of the large main iron loops in connection with the pumping rod. The men have been engaged breaking mundic in the bottom of the 132 and 147-fm. levels. The 160-fm. level west has been driven in the past month 4 fms. 6 ins. The lode here is of an exceedingly promising character, and will produce 9 tons of mundic per fm., some rich stones of copper ore, and a little tin; ground easy for progress. The rise in the back of the 160-fm. level has been put up 2 fms. 3 ft. 9 ins., the lode in which is yielding 7 tons of mundic per fm. The lode in the stope in the back of the 160 west is producing 10 tons of mundic per fm. The 147-fm. level has been driven east 2 fms. 3 ft. 3 ins., the lode producing 5 tons of mundic per fm., rich stones of copper ore, mixed with a little tin. In the 147-fm. level driving west the lode is of a highly promising character, and is yielding 6 tons of mundic per fm. and 1 ton of copper ore; 2 fms. 4 ins. has been driven in the past month. The men are taken from the back of the 147 east and put to sink a winze in the bottom of the 147 in order to effect a communication with the rise in the back of the 160 as soon as possible, and this ground will then be laid open for stoping the mundic. The stope in the bottom of the 132 east will yield 7 tons of copper and mundic ores per fm. The lode in the stope in the bottom of the 132 west of the cross-course continues to yield 5 tons of mundic and 2 tons of copper ore per fm. The contractors are carting away another pile of arsenic soot. We are busy burning the copper ore and tin whets for the next samplings. Now that the weather is more favourable we hope to get on with taking out the ground for foundation for the jiggers.—H. RODDA.

EAST GRASSINGTON.—The following report, dated January 21st, has been received from the mine manager:—Hammond shaft: In the 47-fm. level west we have, as anticipated, passed through the nip, and the vein is to-day 18 ins. wide, carrying lime spar. barytes and lead ore, worth 20 cwt. per fm., the richest ore going down strong in the sole of our drivage. A stope in back of level in a vein 18 ins. wide, worth 12 cwt. of lead ore per fm. King's sump: Drivage east in a vein 2 ft. wide, carrying lime spar, gossan and lead ore, worth 20 cwt. per fm. Stope east of winze in a vein 2 ft. wide, producing 15 cwt. of lead ore per fm. No. 2 sump is down 33 ft. below the 47, in a vein 2 ft. wide, carrying soft sugary spar and gossan, well mixed with good quality lead ore, worth 10 cwt. per fm. Two stopes in back of the 37 east worth respectively 10 and 12 cwt. of lead ore per fm. Harris Main Engine shaft: In the 47 east the vein has further improved, and is upwards of 2 ft. wide, and with well-defined walls, carrying spar, barytes, with branches of lead ore, worth fully 22 cwt. per fm. I am glad to say the most productive part of the lode is going down strong in the foot or soles of our level, and augurs well for future developments at an increased depth. Stope in back of level in a vein 2 ft. wide, worth 12 cwt. of lead ore per fm. No. 1 stope in back of 37 east of shaft in a vein 2 ft. wide, worth 12 cwt. of lead ore per fm. No. 2 stope west of shaft in a vein 2 ft. wide, worth 13 cwt. of lead ore per fm. Machinery throughout the mine in good trim, and working smoothly. Dressing and surface operations pushed forward as fast as the severe weather will permit. Our last sale of lead realised 495*l*. 4s. 6d. We resume roasting and smelting again this morning.

LEADHILLS (19th Jan.)—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein about 4 ft. wide, and keeping too dried for producing ore. The stope above the 145 south of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 15 cwt. of ore per fm. The two stopes above the 145 north of Wilson's shaft are worth 20 and 10 cwt. of ore per fm. respectively. The 130-fm. level north of Jeffrey's shaft is in a vein 4½ ft. wide, mixed with nice-looking quartz and damp, but only spots of ore. The three stopes above the 130 north of Jeffrey's shaft are worth 30, 20, and 20 cwt. of ore per fm. respectively. The rise above the 130 south of Jeffrey's shaft is in quartz of very much better quality, with stones of ore. The stope above the 130 north of Wilson's shaft is worth 5 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a vein 3 ft. wide, charged with quartz, and only spots of ore not to value. The stope below the 115 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 30 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in a vein about 4 ft. wide, showing improved quartz, but still too dried for ore. The 70-fm. level south of Wilson's shaft is in a vein 5 ft. wide, charged with improving quartz, but without ore. The 35-fm. level south of Flat Rod Shaft is in a very kindly vein 4½ ft. wide, yielding 45 cwt. of ore per fm. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm. Sarrowcole vein: The rise above Gripp's adit, north of George's Roust vein is in a vein 4 ft. wide, mostly quartz, but almost entirely without ore.—T. NEWBIGGING.

MID-DEVON.—Report for week ending 17th January.—Surface: With exception of stopping two hours on Sunday to clear ice the wheel has worked continuously and effectively. A shaft. Influx of water increasing; it now takes 3¾ revolutious of wheel to cope with it; it is in jack to bottom of the 80. C shaft: The No. 3 stope worked on by six men; vield of ore 2¾ tons per cubic fm.; the strata, although hard, contains large deposits of chlerite, axinite, aud friable garnet. There are indications in south side of easier strata, it is more porous, and has a better cleavage, and rather points to an improvement, as the deposits of chlorite are also making in that direction.—J. NEILL.

ROMAN GRAVELS (22nd Jan.)—The 155 fm. cross-cut is driven 8 fms. 5 ft., and we calculate that the forebreast is now within, say 3 fms. of the lode. The 140 north is driven 73 fms. 2 ft.; the vein here has been in two or three divisions of late, and the drivage has gone forward on the footwall part, which is now, however, coming back to, and will soon, we think, be found in junction with the main or hanging-wall portion, when no doubt an improvement will take place, since the division now being carried shows nice strings of lead ore and blende, and is improving as the end advances. The new winze from the level above is 7 fms. 3 ft. deep, and will come down at a point, say 15 fms. in front of said forebreast; lode in present bottom of the winze producing 1¼ tons per fm. The 140 south is driven 73 fms. 4 ft.; lode in present end about 3 ft. wide, producing nice cubes of lead ore and blende. The lode at the 125 south is about 3 ft. wide, producing some very nice stones of blende, and has improved in character during the last 2 or 3 fms. driving. The four stopes in back of this level—one south and three north of Lewis winze average 1½ tons each per fm. The three stopes in back of the 110 south of Watkin's winze average 1½ tons each per fm. The stope in back of ditto south of main shaft is worth 1 ton per fm. The lode in the drivage south from Jones's winze in back of the 80 south is to-day worth 2½ tons of lead ore and 1 ton of blende per fm. No. 1 stope in back of said drivage is worth 1½ tons of lead ore and 1 ton of blende per fm. No. 2 ditto is worth 2 tons of lead ore and ½ ton of blende.—A. WATERS.

SOUTH CONDURROW (21st Jan.)—There is nothing new to report on in Marshall's shaft. Sinking below the 123 east of cross-course is worth 12*l*. per fm. The 40 end east of King's is worth 7*l*. per fm. Three stopes in back of the 40 are worth about 9*l*. per fm. each. We are pushing on the cross-cut at the 70 east to intersect the north section of the lode.—W. RICH, W. THOMAS.

SOUTH DARREN (22nd Jan.)—The stope under the 142 west is worth fully 1½ tons of silver lead ore per fm. for about half the length of the stope; the other part is at present producing more copper, and not so much lead. The stopes above this level are worth respectively 15, 15, and 10 cwt. of silver lead ore per fm. The stope in the 130 west is worth 12 cwt. of silver lead ore per fm., with good copper. Drawing and dressing is being pushed on.—I. MITCHELL.

WEARDALE LEAD.—Report for week ending 17th January:—Ore raised for week, 68 tons; ore dressed for week, 83 tons; ore and slag smelted for week, 141 tons, producing 73 tons of pig lead.

WEST WHEAL GRENVILLE (20th Jan.)—The 120 cross-cut driving north is now extended 81 fms. The granite rock in this drivage is of a favourable character, and somewhat easier for progress The 120 driving west of cross-cut on branch is extended 14 fms. We have no change of importauce to report in this end. The 120 east of cross-cut is extended 8 fms. 4 ft. The branch in this end continues of much the same character as for some time past.—J. SKEAT, NR TEMBY.

WHEAL CREBOR (20th Jan.)—In the end driving east at the 156-fm. level we have just struck a crossing. What we have seen of the lode beyond the crossiug has an improved appearance. The mineral it is producing is of a better quality than any we have seen in this level, and it is letting out water to that degree that we expect in a few days the 144 winze will be drained. The productive part of the lode in the 144 end driving west of cross-cut is 1 ft. wide. yielding 2 tons of mixed ores per fm. The lode in the stope in the back of the 144 west of cross-cut is worth 6 tons of copper ore and 5 tons of mundic per fm. The tributers are now cleaning and dressing their ore for the next sampling, but the severe weather is makiug very much against the work.—P. D. HOLMAN.

WHEAL UNY (21st Jan.)—We stopped our engine on Saturday last and changed a pole at the 130. The poles in the shaft are all in good condition at present. We are again in fork, and shaftmen working in bottom of shaft. No change in lode since the meeting. The 203 end west is changing; the ground is easier for driving, which is a good indication for an early improvement. Stuff from 193 winze west assayed 93 lbs. of tin to the ton. The 182 end west is improving, and now worth 10*l*. per fm.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (25th Dec.)—Extracts from letters from the superintendent:—"To-day I cable as follows:—"New discovery 40 ft. west, 5th winze; ore ground developed 40 ft.; assays over 30 ozs.; present breast not looking so well; pushing drivage." In explanation I have merely to add that in the last day or two the breast at 24 north end, 100 lode, has improved again, showing considerable ore scattered through its whole width. A general sample taken yesterday from one blasting (about 8 tons of rock) assayed 21.3 ozs. per ton without rejecting auy waste. This proves that what is ore is of high grade, as the ground, such as it was yesterday, did not show more than one part of ore to four or five of waste. To-day the miner informs me that the breast contains a streak 2 ft. wide, of clean mineral; consequently we may reckon to be in paying ground again, and I hope it will continue to improve northward. Since writing the foregoing I assayed two samples from the miue, and beg to inform you of the remarkable results obtaiued, viz., No. 1, general sample from the north end, 24 level, 100 lode, silver, 61.8 ozs. per ton. No. 2, sample from ore streak in breast, 2 ft. wide, silver, 109.1 ozs. per ton. The above samples were taken underground by Mr. Gasson (our miner), and he describes them as representing respectively the average grade of the whole breast, such as the rock was broken in last evening's blasting, and the average grade of the streak of clean ore, 2 ft. wide, that is being carried iu the centre of the drift.

— 30th Dec.—I beg to call your attention to the enclosed memoraudum, showing the progress at the 24 north end, 100 lode, up to last Saturday, the 27th inst.:—The ore grouud developed was 61 ft., including 5 or 6 ft. driven on poor ground, which may have been a loose ball of waste. You will observe that at the end of the week the width of the lode was 6½ ft., the paystreak 5 ft. wide, worth about 18 tons ore per linear fm., with an assay value of 99.7 ozs. per tou, according to a general sample taken from the rock such as it was blasted down. The general sample assayed yesterday gave 84.6 ozs. per ton, and the miner informs me that the ore is now fully 6 ft. wide. In my opiuion this ore body is likely to be of the same length as that of the main lode (about 300 ft.), and the regular course of the 100 lode keeping its parallelism with the parent lode is a very important feature. The high grade of the ore, as shown by the daily samples assayed, the handy width of the lode and compactness of the paystreak, which will permit of very economical working, are all circumstances that promise handsome profits in the near future. We are driving the west cross-cut 5,308 north, and 4,969 east at tunnel level, and have also started another cross-cut west at a point about

5,340 north, and 4,991 east at the 24-fms. level, a little north of No. 7 winze. The former is expected to cut the 100 lode in about 20 ft., and the latter in about 30 ft. The object of the former is to prove whether the ore body lives as high as the tunnel level (about 140 ft. above the 24), that of the latter is to provide ventilation at the 24 drift on 100 lode, where the exhaust from the machine drill is becoming insufficient to give air for the men.

AUSTRALIAN BROKEN HILL CONSOLS.—Report for fortnight ending December 11th.—Engine shaft sunk 20 ft.; total, 481 ft.; country easier, containing more slate. 370-ft. level west, driven 9½ ft.; total, 61½ ft. Country hard but jointy, with a seam of calcspar showing. 280-ft. level west driven 24 ft.; total, 265 ft. Strong formation continues with bands of ironstone containing slugs of galena. Rise northerly section risen 7½ ft.; total, 7½ ft. The galena mentioned in last report continues, and the lode generally shows a more solid appearance during the last few feet. In consequence of the high temperature increasing with the ascent, the rise has been discontinued and a winze, which will complete the connection between this and the 180-ft. level has been started. Water shaft: North cross-cut driven 11 ft.; total, 11 ft. Country very hard, underlying south. Block 95, shaft sunk 6 ft.; total, 72 ft. 6 ins. Country very hard. The ore on sarface is now being bagged for dispatch to Freiberg.

AVALA.—Report for December.—Shuplia Stena Mine: Main adit No. 12 stope is followiug up an important run of mineral; the coursc is leading into an unexplored part of the mine; this stope, together with No. 13, produced 155 tons of ore. Stope No. 2 has developed in various directions, yielding 133 tons. Mineral was mined from other stopes to make up a total of 438 tons. Horse tramming has been successfully introduced into the main adit. Preparations for the new deep shaft are in an advanced stage. Reduction works: Treated 304 tons. Coal has, to a large extent, taken the place of wood in the new furnaces.—W. E. FRANKS.

BRATSBERG.—Mining report for week ending 10th January.—Hoffnung Mine: I am pleased to be able to say that the lode at No. 2 adit level is to-day yielding fully 1½ ton per fm., and otherwise looking very encouraging. The rise in the back of this level continues to produce about ¾ ton per fm. At No. 3 adit level the lode is still divided, and worth ½ ton per fm. The rise at this level is yielding about 1 ton per fm. No. 4 level and the rise against Ball's shaft remain unchanged. Johannes Mine: There is but little or no change here since last report. As we find that the water in the winze going down on Johannes lode at the old cross-cut level is sinking, evidently draining through to the deep level on Howard lode, we think it desirable to cross-cut into Johannes lode at the most westerly poiut on the former as soon as possible iu order to see the nature of the lode, which will then enable us to decide as to the best way of working for the future ventilation of this mine. Moberg Mine: Here, for the preseut, we are driving towards the maiu part of the lode, and as we are frequently meetiug with branches we expect to strike this very soon. Surface work and remarks: We have a large gang of men on the work about the re-erection of the dressing machinery, but owing to the very severe frost we have had almost continuously for about two months, combined with a very slight fall of snow covering the courses; we have had a good deal of trouble with the water for the saw mill, the river having been unusually low previous to the setting in of the frost. During the past two days, however, it has been comparatively mild; therefore, we are in hopes of getting it to run again and making better progress. Navigation on the Bandak is stopped by ice.—J. D. HOLMAN.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for the fortnight ending 8th November.—No. 9 level: This level has been driven a further distance of 17 ft., making total distance from the eastern boundary 480 ft. The formation is principally diorite. but is well defined, carrying good walls. In the stopes above the reef will average 5 ft. in thickness, aud is well mineralised. No. 7 level west: The stope above this level is yielding payable stone. No. 5 level west: Fair quality stone is being raised both from the foot and hanging-wall reefs. No. 4 level: On the hanging-wall reef is still yielding payable stone. No. 2 underlie shaft: The contractors have sunk a further depth of 7 ft., making total depth below 1,108 ft. plat, 283 ft. There is no change in the country. No. 3 underlie shaft: The contractors have completed the timbering of the shaft, and laid down the double truck-road. This completes their contract of 50 ft. It is intended to open out at the bottom of the underlie, and then cross-cut for the footwall before sinking is again resumed.

— 27th December.—Crushed 1,530 tons of quartz for Mill's Day Dawn United Gold Mines Company, Limited, for a yield of 1,571 ozs. of gold.

DAY DAWN P.C.—Report for fortnight endiug December 6th.—The output of quartz is 1,135 trucks. Sent to the Excelsior mill 1,134 tons. The penthouse, man way, and timbering of the shaft have been completed, and the sinking of the shaft commenced, which has been sunk 5 ft., making a total depth of 30 ft. below No. 12 plat; the formation is 9 ft. wide, carrying no stone at preseut. No. 12 level has been extended a further distance of 15 ft., making a total distance of 248 ft. from the underlie; there are 6 ft. of stone in the face of this level, of good quality. The leading stope over this is carrying 6 ft. of stone of fair quality. No. 3 stope: 5 ft. of stone of fair quality. No. 4 stope is carrying 6 ft. of stone of good quality. The stope going west from the No. 2 winze is carrying 3 ft. of stone of good quality. The number of trucks of quartz hauled from each level is as follows:—No. 12 level, 258 trucks; No. 11 level, 426 trucks; No. 10 level, 205 trucks; from No. 2 shaft, No. 6 level, 100 trucks; stopes over the No. 5 level, 146 trucks; total 1,135 trucks. No. 2 underlie shaft: The No. 4 west level has beeu extended a further distance of 25 ft., making a total distance of 203 ft. from the shaft; there is a slight change in the face for the better. I started to cross-cut on to the footwall, thinkiug there might be stone there, but after driving 13 ft. we came across the footwall, the usual hard red granite. The No. 5 east level has been extended a further distance of 17 ft., making a total distance of 202 ft. I have discontinued driving this level for the present; the winze on this level has beeu sunk a further depth of 3 ft., and holed through to No. 6 level; total depth 67 ft. The cross-cut in the No. 5 west level has been driven 7 ft., making a total of 43 ft., with no sign of the footwall yet; we are in diorite country full of small veins of quartz. The stope over the No. 5 level is still carrying about 7 ft. of stone, of fair quality. The stopes over the No. 6 west level are still turning out a little stone, but only of medium quality. I have taken six men off the deadwork and put them to take out a small block of ground nnder No. 6 level, the stope in which is carrying 1 ft. of stone, of fair quality. No. 6 east level has been extended a further distance of 34 ft., making a total distance of 331 ft.; there is no sign of auything in this level as yet. Lease No. 1,280: The western drive has been extended a further distance of 17 ft., making a total distance of 100 ft.; the ground is still pretty hard; the formation has, however, opened out slightly, and is now about 1 ft. wide, but carrying no stone. In addition to the above work we have laid down about 50 ft. of skids, and put ladders in a portion of the underlie, where the grade is steeper than usual; have also lowered the pump another 25 ft. If all goes well we shall be in a position to commence driving another level next week at a point about 70 ft. below our present one.—T. LESTER.

EMMA (24th Dec.)—Since writing you 17th inst., shoot in upraise from level No. 4 has been completed, and drift from top of raise started towards winze from Cincinnati level, which has been advanced 10 ft. in the vein. We are also drifting from bottom of winze towards drift from top of upraise; this drift advanced 12 ft. also in vein. The distance between bottom of winze and top of upraise is about 40 ft.; we therefore expect to make connection during the coming week. The eastern part of the mine continues most encouraging. The ore mentioned in my last report as being *en route* to market has been sold. The result is 31,327 lbs. net ore, which sold for $122.60 per ton of 2,000 lbs., bringing $1,920.35. We have mined this week about 5 tons more of this ore, besides some 9 tons second grade, making about 34 tons of second grade ore on hand worth about $40.00 per ton, and 5 tons first grade ore at $122.00 per ton; this vein is stroug, but the ore is fouud in pockets. I feel quite confident that this discovery will prove of immense value. I have great hopes of its opening into a large vein or deposit as we approach the hanging-wall. Could we get our ore to market this find alone would more than pay expenses at the mine. I am now trying to get teams to haul the ore down the canyon (8 miles) to the railway, and hope to succeed in making another shipment ere the snow is too deep. The mine force is reduced to 20 men, the work being concentrated to old Emma tunnel level winze from Cincinnati level and upraise from No. 4 level. As soon as connection is made between winze and upraise I will have men to place in the ore ground, and believe the result will be most satisfactory.—H. C. WALLACE.

EMMA (3rd Jan.)—The holidays intervening since my letter of 24th ult., I am unable to report the amount of work I should like to, for the miner will have his holiday; hence there is no material change in the mine. However, the encouraging outlook is in nowise diminished, but on the contrary continues most favourable, and strengthens our belief in the speedy encounter of larger ore bodies, both in the Cincinnati ground and in the eastern part of the mine now being developed from the Old Emma tunnel. Drift from top of raise from No. 4 level advanced but 7 ft.; total, 17 ft. Drift from bottom of winze advanced 5 ft.; total, 17 ft. Character of vein matter in both places uuchanged. From Old Emma tunnel level we mined about 5 tons first grade ore, aud some 5 tons second grade, making about 8 tons of first grade, assaying about 125 ozs. silver, and 50 per cent. lead per ton, and about 39 tons second grade, assaying about 30 per cent. lead and 40 ozs. silver per ton. I am endeavouring to get teams to haul this ore dowu the canyon and to market, and hope to succeed soon, weather permitting. I shall be able to do this, and also follow with other shipments.—H. C. WALLACE.

ESMERALDA.—The manager reports under date January 6th:—The Durand south winze has been extended 42 ft. during the week, the face being now 1,382 ft. from the shaft. The vein is regular with smooth walls; the quartz contains black streaks and sulphurets. The ore ehimney has a southerly dip, and if it continues its same course, we shall have to run about 200 ft. more to cut it in the lowest level.

— A cablgram was received yesterday, sayiug "The drift has been extended 87 ft. since January 6th, and is now out 1,469 ft., and that au upraise has been started to eut the ore body."

FLAGSTAFF.—Letter from A. L. Swope, dated January 3rd, received 20th January:—I did not send in a report last week, on account of the men going to Salt Lake for the holidays. They have not all got back yet. Six of them came in last night, and went to work this morning. Will report fully next week.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines dated 24th November aud 7th December, both of which arrived together 22nd Jan.; also a letter from Messrs. Restrepo, dated 11th November. The statement for the month of November is as follows:—831 tons of ore produced 2,222 ozs. of bar gold. Tributers' gold produced 833 ozs. of bar gold; total, 3,055 ozs. of bar gold. Also 2,090 lbs. of sulphurets containing 231 ozs. of bullion. Estimated value of the gold and sulphurets, 7,699*l.* 10s. 10d. Cost at the mines, Medellin, and in London, and paid for gold bought of tributers, 4,305*l.* 8s. 3d. Estimated excess of returns, 3,394*l.* 2s. 7d.

GYMPIE GOLDEN CROWN.—Report for fortnight ending 4th December:—I have to report that driving north on the Crown reef at the 240-ft. level is being continued; the body of crushing stuff averages about 1 ft. in width, and is payable. On the March reef at the 240-ft. level the north drive and stopes are also being carried on as usual; the reef is small, but is carrying fair gold. During the past month 200 tons of stone have been raised and crushed for a yield of 163 ozs. 6 dwts. 18 grs. smelted gold. The Golden Pile Gold Mining Company have beeu granted permission to cross-cut through to your workings at the 670-ft. level on the Eastern Phœnix reef, which is about 50 ft. from their western boundary; their object for doing so is for the better ventilation of their mine. Lease 777 two unile: The cross-cut east from the main shaft at the 210-ft. level is now advanced a total distance of 187 ft. from the shaft. The slate met with at the 150-ft. level in sinking the main shaft has just been met with in the rise ou the Peter and Paul reef, at a distance of 35 ft. from the floor of cross-cut. The reef is from 6 ins. to 1 ft. in thickness, of good quartz, aud there is every indication of gold-bearing stone being met with here at an early date. At the eastern shaft the well-hole has been snuk 12 ft., and was finished on the 1st December. At the 130-ft. level the eross-cuts east and west are now being carried in, and have been advanced a total distance of 12 ft. each way.—T. RAMAGE.

HARRIETVILLE (12th Dec.)—Fortnightly report.—The following progress has been made during the past fortnight, viz.:—Mons Meg Mine: The drive north of tunnel J on the main lode has been extended 17 ft.; total, 516 ft.; the lode has averaged 6 ft. in width, although for some distance the footwall has not been seen. We are now cross-cutting to this wall, and at this point the lode is 9 ft. wide,

the wall not having yet been reached. Fair prospects of gold are obtainable from side to side of the drive, and most of the stone is being crushed. This shoot has been payable for the last 60 ft. of driving. We are about to start on the shoot with a view to testing its extent and to commence stoping. We should have here over 300 ft. of backs. We shall also drive to the shoot from the end of the level north of tunnel K. The rise at the back of the 50-ft. level above tunnel J is up 80 ft.; the lode here is 10 ft. wide, and payable throughout. The south drive 100 ft. above tunnel J has advanced 35 ft.; total, 170 ft.; the lode is widening, being now 4 ft., and payable throughout. This is evidently a portion of the shoot on which the rise from the 50-ft. level is being put up. The cross-cut from the north drive at the same level is in 4 ft. west. We intend rising from here to the shaft below the tunnel K. The returns for the month of November from this mine were 405 ozs. 3 dwts. of gold from 724 tons of ore and 103 tons of sand. Guerdon Mine: Tunnel J has advanced 29 ft. towards the Guerdon lode, making a total of 337 ft. from the Mons Meg lode; the ground is fairly hard, and we have started a rock-drill here. South Mons Meg Mine; The drive north of the lower tunnel is now 156 ft. long, having been extended a further distance of 38 ft.; the lode is 3 ft. wide, consisting of soft ferruginous sandstone, with numerous veins of quartz. For the past 20 ft. a little gold has been obtained, and the lode presents a most encouraging appearance, much resembling that in the drive north of tunnel J. Tiddledee Mine: The drive south of tunnel D towards the Mons Meg has advanced 17 ft.; total, 844 ft.; the lode is 4 ft. wide, and of a very promising appearance, being well mineralised, and carrying occasional colours of gold; the ground is hard. The drive south-east of tunnel D towards Tracy's old workings has been extended 22 ft.; this drive is on a small lode of quartz, which is barren. The rise at the back of the 100-ft. level below the intermediate has now communicated to the winze; the lode is small and poor. New lease, west of Tiddledee: The drive south of tunnel D on the new shoot has not been extended during the fortnight. We are stoping at the back of the level, and have also commenced to sink a winze on the auriferous shoot. The lode continues to be payable in the stope, and should turn out about 1,000 tons of ore between the present level and the surface. The drive south-east of tunnel B, which is being extended towards the new shoot, has advanced 9 ft. This drive is on a massive lode, 4 ft. wide, of promising appearance. Jackass Mine: The shallow tunnel north of tunnel D is now 42 ft. long. This should intersect a new shoot of auriferous stone recently discovered at the surface at a further distance of 25 ft., where there will be 57 ft. of backs. Should the shoot prove payable here we shall soon be able to intersect it again from tunnel C at a further depth of 90 ft. The returns from the new lease for the month of November are 80 ozs. of gold from 300 tons of ore. This is satisfactory when it is considered that the whole of the ore was obtained from the drive, and that the lode matter was not separated from the barren rock, it being cheaper to crush than to hand-sort it. General prospects: On the whole the general prospects of the company are at present more favourable than they have been for many months. All extraordinary surface expenditure is at an end, so that should the new shoots which are being developed prove of a permanent character, they will be worked out as expeditiously as possible and at a minimum cost. Machinery: All the machinery, including rock-drills, is working very satisfactorily.—T. G. DAVEY.

MYSORE (31st Dec.)—The lode in the 770 north of incline shaft is 2 ft. wide, and estimated to be worth 1 oz. The lode in the 700-ft. level north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in the 620 north of Rowse's is 1 ft. wide, and estimated to be worth 1 oz. 10 dwts. There is no change in the 466 cross-cut (north-west of Rowse's), except the ground is a little better for driving. The lode in the 236 north of Rowse's (on No. 3 fold) is 3 ft. wide, and assaying 3 dwts. 2 grs. Schaw's shaft: The lode in the 450 north of shaft is 1 ft. wide, and yielding quartz of low quality. The lode in the 450 south of shaft is 1 ft. 6 ins. wide, and assaying 3 dwts. In the 320 north of shaft the lode is 9 ins. wide, and yielding occasional stones of quartz. In the 320 south of shaft the lode is 8 ins. wide, and estimated to be worth 10 dwts. Tennant's shaft: The lode in the 360 north of shaft is 1 ft. wide, yielding a little quartz, and presenting a more promising appearance. The lode in the 290 south of shaft is 1 ft. wide, composed of schist and quartz. The lode in the 290 north of shaft is 3 ft. wide, and estimated to be worth 1 oz. 10 dwts. In the 180 north of shaft the lode is 1 ft. 6 ins. wide, getting more settled again and better defined, and yielding quartz of low quality. Stopes: The lode in stope in back of the 700 south of Rowse's shaft is 3 ft. wide, and assaying 1 oz. 3 dwts. 12 grs. The lode in stope in back of the 700 south of incline shaft (on the wide lode) is 4½ ft. wide, and assaying 12 dwts. 18 grs. The lode in stope in back of the 700 north of Rowse's shaft (on the fold) is 3 ft. wide, and assaying 5 ozs. 5 dwts. 8 grs. The lode in No. 1 stope in back of the 620 north of cross-cut from the incline shaft is 3 ft. wide, and assaying 1 oz. 12 dwts. 16 grs. The lode in stope in back of the 620 south of the incline shaft is 2½ ft. wide, and assaying 4 ozs. 1 dwt. The lode in No. 1 stope in back of the 620 north of shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 5 dwts. 8 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in stope in back of the 600 south of Rowse's shaft is 4 ft. wide, and assaying 1 oz. 9 dwts. 4 grs. All the other stopes throughout the mine are just the same as when last reported. Rising: The lode in the rise in back of the 236 south of Plummer's shaft is 3 ft. wide, and assaying 2 dwts. The lode in the rise in back of the 290 north of Tenuaut's shaft is 2½ ft. wide, and estimated to be worth 1 oz. The lode in the rise in back of the 180 south of Tennant's is 2 ft. wide, and assaying 3 dwts. Sinking: Rowse's shaft is now deep enough for the 770-ft. level, and we shall begin at once to drive north of shaft. The level will start in country rock, but we hope to meet with the lode very soon. Glen shaft: The ground is a little more favourable for sinking and letting out an increased quantity of water, but there are no indications of the near approach of the lode. The lode in the winze in bottom of the 320 south of Schaw's shaft is 1 ft. wide, and yielding occasional stones of quartz. All the surface operations are going on with their usual regularity. Mill samples: New mill, 2 ozs. 15 dwts. 17 grs.; old mill, 1 oz. 8 dwts. 6 grs.—J. GILBERT.

MYSORE REEF (31st Dec.)—Fortnightly report.—Harvey's shaft: The 460-ft. level north has been advanced 16 ft.; now 151 ft. from shaft. We are through the main shoot of quartz in the present end, and there are a few small stringers of quartz, showing a trace of gold. This end is now suspended, and the men put to blast out the side of level to make room for tackle, preparatory to commence sinking a winze below the level. Rise above the 460-ft. level: Has been put up 6 ft., and is communicated with the cross-cut west from the bottom of winze below the 400-ft. level. These men are now driving south of shaft at 460-ft. level to make a place to fix a donkey pump. Winze below the 400-ft. level: During the past fortnight we have been driving west from the bottom of winze, and in 12 ft. 3 ins. communicated with the rise. I find there is a horse of black rock 18 ft. thick between two distant runs or shoots of quartz. I shall later on drive a cross-cut east at the 460-ft. level to intersect the eastern run and drive south on it, as I am under the impression we shall meet with the shoot of ore now worked on in the back of the 400-ft. level. Intermediate level south between the 320 and 400-ft. levels has been extended 12 ft. 6 ins. The lode is of greater width than the drivage, composed of quartz and arsenical pyrites, assaying 10 dwts. 10 grs. of gold to the ton. Stopes in back 400-ft. level: The lode is 12 ft. wide and worth 6 dwts. of gold to the ton. Stopes in back 320-ft. level: The lode is 6 ft. wide, and worth 6 dwts. 12 grs. of gold to the ton. Surface: Everything is proceeding satisfactorily.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—Report for fortnight ending 31st December:—North shaft: This shaft has been sunk 9 ft., making a total depth of 91 ft. from surface; the water continues about the same, and the ground is getting a little stiffer. We are now about 4 ft. below the old workings which came into the shaft, and are now sinking in stiffer ground; the vein of quartz which we have had from surface, and which has always shown gold, has suddenly taken a very flat underly, about 4 ft. above the present bottom, and is now in the hanging of the shaft; if it continues that underly we shall have to make a slight bend in the shaft to keep with it. South Trial shaft: The cross-cut west has been advanced 2 ft., a total distance from shaft of 24 ft. There is no change; the rock is very hard, and the coolies can make but slow progress by hand. South shaft: This shaft has been sunk 17 ft., a total depth of 25 ft.; the rock is getting harder in the bottom, and I expect progress will now be slower. Buildings: Fair progress is being made with the erection of the pumping engine at north shaft, and it will be started at the earliest date possible. The bungalows in course of erection are also making good progress.—L. EVANS.

NEW CALIFORNIA.—Mine report for second half of December:—The 2,000-ft. level west of shaft, in 522 ft.: The end of this drift shows quite an improvement since last reporting, and though we have not yet reached pay, the ground is softer and prospects much better. The 2,000-ft. level east has a vein 18 ins. wide, of low grade. The 1,900-ft. level west, No. 2 winze, and underhand stopes: This working continues to yield large quantities of good grade ore; the lode is 3½ ft. in width. We are now expediting the sinking of the winze to connect with the 2,000-ft. west drift. The 1,800-ft. level west, stope on north spur east of No. 3 winze: This branch of ore has narrowed to 6 ins. since last reporting, that width of vein being rich enough to pay well for its working. Prospect rise on main vein at 50 ft. from shaft: This rise has not yet met with anything of any consequence; the lode continues about 1 ft. in width, and well defined. The 1,900-ft. level stope east of No. 3 winze, prospecting drift west of shaft: This stope is in splendid ore 3 ft. in width, of smelting ore, assaying 5 ozs. gold and 14.50 ozs. of silver per ton. We shipped yesterday 40 tons of smelting ore, a good part of which came from this working. We have started a stope to strike this ore a little below this place. The 1,500-ft. level west of shaft, south vein, east of junction: The vein in these stopes is of a very regular width (15 ins.), and holds out well. Last returns from the mill for this ore showed a yield of 9¼ ozs. from 16 tons. The 1,100 ft. level east rise and stopes: These workings are in good pay; the vein is 2½ ft. wide, and strong. Latest milling returns are 24½ ozs. gold from 64 tons crushed, which, under conditions of easy mining, leaves a good margin for profitable treatment.—A. RICKARD.

NEW DEVALA MOYAR (30th Dec., 1890).—The work is mainly being carried on in our bottom level, which is being extended east and west by rock-drills. In the drive east of the 116-ft. level, we have driven during the week 6 ft.; total length 58 ft. The ground continues hard, and although we are in the reef it is of no milling value. In the drive west of the 116-ft. level, we have driven 6 ft.; total length, 94 ft. The walls of the reef at this point are more vertical, and the reef resembles the stone we have in the level above, and is low-grade quartz. The stope at the back of the 78 level is still in milling quartz and we have a large reef of good quality stone in the west end of this stope. The stope at the back of the 116-ft. level carries a large reef of fair value, and showing pyrites disseminated throughout the stone. We are short of hand stopers, but we expect some shortly.—R. B. JOHNSTON.

NEW EBERHARDT (28th Dec.)—Mine manager's report.—Total weight of ore assorted and put on the ore dump ready for shipment to the mill, 20 tons; assay value of same as per mine samples, $47.14 per ton. We have met with no change during the week from the fact that but few of our men have worked in the mine owing to the Christmas holidays. Our prospects are favourable at this writing, and the men are all wofking with a will and trying, as it were, to aid me in carry out out my ideas.

NEW GOLD HILL.—The following letter has been received from the company's agents, dated Salisbury, North Carolina, 9th January, 1891:—Mr. Mauney brought us to-day a cake of fluxed gold weighing 543 dwts., which is the result of 17 days' milling in December. We sent the same to-day to the United States Mint at Charlotte, N. C. You will understand that this gold does not come from ore milled since we struck it rich in 160-ft. level, and the Martin shaft. Mr. Mauney informs us that the ore in the Martin shaft has also become as rich as that in the 160-ft. level, but the vein is not so large. Mr. Mauney received your cablegram of to-day, and answered as follows:—"Assay of ore in the 160 ft., $192.00 per ton; also rich in Martin shaft. I will send samples." He had sent some of the ore to the United States Mint at Charlotte, and had just obtained the assayers report when your cablegram arrived. Sample No. 1: 9 ozs. 2 dwts. gold, and 2 ozs. silver per ton; value, $192 per ton. Sample No. 2: 2 ozs. 1 dwt. gold per ton; value, $43.40 per ton. The latter is the average of the entire vein. The mining men in this vicinity are very much interested in the prospects of Gold Hill, and everything here certainly looks bright at present for the interest of the company.—CRAIGE and CLEMENT.

NEW HOOVER HILL.—Report for December:—Provost shaft:

We are breakiug a large quantity of low grade ore around these old workings. Driving south at the 50-ft. level; driven 2 ft. Cross-cut east driven 15 ft.; there is a large body of quartz here, panning from a few colours of gold to $1 per ton. Sinkiug below this level we have sunk 27 ft. There is a small vein of quartz, which pans from $6 to $8 per ton. The mill ran for the month 21 days; crushed 706 tons of ore; yielding 61·88 ozs. of bullion, which I am shipping you.

NEW VISO (15th Jan.)—Since sending you my report for the general meeting of shareholders the weather has been unusually severe, which has interrupted all our surface work to a considerable extent. Our underground work has proceeded as usual. The San Guillermo deep adit is being driven across the lode; we have cut into it 7 metres, and as yet there is no indication of being near the other side; the part now crossing the forebreast consists of very kindly-looking quartz, containing strong spots of tin. On the whole it looks more promising than anything we have seen at this level for some time past. We have discovered a new and very kindly lode iu the Mi Amor Concession, just underneath the tiu-bearing alluvial being worked by the tributers, and referred to in my last report. I intend, therefore, driving on its course, believing there are good chances of opening productive ground.—R. R. NANCARROW.

OSCAR (16th Jan.)—Manager's report.—Hodgkinson's lode: The shaft is being sunk by six men; the lode in bottom is 3 ft. wide, which at present assays 2 dwts. 14 grs. The 200-ft. level north shows a good quartz lode over 4 ft. in width; assay value, 3½ dwts. The same level south is carrying nearly 4 ft. of quartz, assaying 2 dwts. 2 grs. gold per ton. The quartz in the 150-ft. level south has increased to nearly 18 ins. in width; assay value, 2 dwts. 13 grs. The levels north and south from winze in bottom of 150-ft. level are each driving iu good ground. Quartz 3 ft. wide, assaying respectively, 5 dwts. 5 grs. and 5 dwts. 21 grs. gold per ton. The quartz in stope working in bottom of 100-ft. level is still holding 3 ft. wide, and assays 9 dwts. 3 grs. gold per ton. Other workings no alteration.

OURO PRETO (23rd Dec.)—Incline shaft No. 1: The stuff was cleared and the road re-laid for 12 metres. Incline shaft No. 2: The stope in the roof was carried forward chiefly through quartzite, the ground broken amounting to 50 cubic metres. The water in this shaft has latterly increased considerably and has given some trouble. The 365 level south-west was advanced 2.30 metres. The ore has been pinched by a bar of hard schist, and is now about 50 centimetres thick. The 365 level north-east was driven 2.00 metres in graphitic schist, letting out a little water, but as yet without ore. The 315 level north-east: The bar of quartzite mentioned in last report still continues in one side of the level, but the lower side is in massive quartz. The distance driven was 1.60 metres. Rise 21 over 315 north-east was put up 1.70 metres. The ore has slightly increased in size, but there is a thick bar of schist between it and the hanging-wall. The 265 level south-west was advanced 2.00 metres through schist, with a small branch of quartz against the roof. Rise over 265 level south-west was put up 6.50 metres, and is now fairly in the ore-body found under the 215, being full size in lode, composed of quartz with an abundance of tourmaline and pyrites. Cross-cut under 235 carries a good branch of ore against the roof, but the lower part is in solid schist. The heading will be prolonged to explore the footwall under the stopes above. The distance driven was 1.70 metres. The 265 end north-east was advanced 4.50 metres, and is now crossing under No. 2 shaft; it is in a very fine body of lode, of which only part is carried by the end. The 175 end south-west: Driving has been resumed within the last few days, and the end was advanced 90 centimetres through unproductive ground. Rise over 175 south-west was extended 1.50 metres; the lode continues very regular and compact, consisting of quartz with patches and strings of arsenical pyrites. Winze at 120 level north-east was sunk 1.60 metres, making a total of over 10 metres from the hanging-wall; the bottom is still in the sterile quartzite. Stoping: In the north-east section the communication between the 235 stopes and the stopes inside of No. 2 shaft has been eularged, and about 300 cubic metres of lode were broken around the opening. The ore is holdiug away toward No. 1 shaft, and there is still a good deal on the hanging-wall to be removed. Two stopes are being carried upwards from the 235 stopes ou a wide branch of the lower lode, and are producing good tourmaline ore. The stopes in the bottom of old workings are also producing a large amount of quartz, but this does not carry much pyrites. The new stope in the north-east side of No. 2 shaft shows distinctly that quartz makes just behind the quartzite of the shaft, and when the 265 north-east level gets under this, and a communication is made it is expected that a large amount of ground for stoping will be opened north-east of the shaft. In the south-west section the priucipal workings were over the 265 and 315 levels. At the 315 level two stopes near No. 1 shaft are in massive quartz lode with good tourmaline ore against the footwall, but in the remaining five stopes the lode consists of interstratified bands of quartz schist and quartzite, requiring a good deal of picking. In the 265 stopes the lode is more regular and pyritic, though of lesser width. A fair amount of good quality ore was also produced at this level, and over the 215 by the removal of lode pillars no longer required. Surface: The heavy rains have caused several small land slips on the watercourse, and a good force had to be employed to clear and take down dangerous parts. Fortunately no serious stoppage of the machinery was caused. The rains also interfered with the construction work, and little progress could be made with the furnace. Now, however, the platform is all prepared, and site of furnace is roofed in, and masons are workiug regularly on it. —H. J. Gifford.

PAHANG CORPORATION (6th Dec.)—Extract from letter from the manager: The mines: The work in the mines has been going on fairly satisfactorily, as much so as we are likely to get with Chinese labour. In Willinks' Nos. 2 aud 3 winzes they have beeu much hindered by water. The No. 3 winze, you will recollect, is that in which the lode is of very good quality, and also of a good size, with fairly defined walls. The bottom of this winze is I ifind 15 ft. above the No. 2 Willink's drive. This drive is at the present time 60 ft. distant from the winze, I am, therefore, hurrying on the drive as fast as possible, and have refused to raise the price in the winze, as when the drive is immediately under it we can put in a rise and uuwater the winze. This drive will also connect No. 3 winze with the tramway. I have started to drive from No. 1 winze, Willink's, to No. 2 Willink's. This will unwater No. 2 at a depth of 30 ft., and will, in its turn, be unwatered by the drive under water-race, known as Joseph lode, but which is, in reality, on Williuk's. We have, last month, re-started on Willink's No. 4 winze. This on the surface appears to be to the south of the direction of Willink's lode, but it shows a sharp underline to the north, and will probably meet the lode at no great depth. Fair stones of tin have been lately taken from this, and the lode seems to have the same characteristics as Willink's No. 3. We have now got the ground secured in Pollock's, and have erected a wooden shoot with hopper from the middle drive to the tramway. Formerly the ore was passed through the winze into the bottom drive, and considerable hand labour was uecessary. We shall at once commeuce tramming the ore from this middle tunnel to the stamps. The bottom tunnel on this lode is, I am pleased to say, looking extremely well. The lode is a large one, some 4 ft., and the ore of fair quality. This is encouraging, as it is the deepest working on the lode. Cambell's lode is most disappointing, with all the ground open; there is not a single place where the ore is good enough to stope on. Whim Dullum or Nicholson's lode: The winze upou this lode was, if you remember, flooded out, and it remains to either put pumping machinery upon it, or cross-cut to unwater. The latter course is perhaps preferable, as the heaviest water is apparently surface. I find that in the original cross-cut proposed it would be necessary to drive from 700 to 800 ft., a serious undertaking. I hope, however, that we shall be able to find a nearer point in a valley on the other side of the hill. In Jeram Batang I hope to cut the lode in Teague's cross-cut before the Chinese New Year, early in February. If the lode proves satisfactory there it will be advisable to at once erect a battery and commence a cross-cut for another part of the lode.

PESTARENA UNITED (15th Jan.)—No. 1 lode: In the 160-fm. end north, the lode has widened to 1.70 metres, and is estimated to produce 7 tons of ore per fm.; worth 10 dwts. per ton. In the winze sinking under the 130-fm. level, the lode has narrowed to 1 metre, but gives no ore to value. In the 120-fm. level, the men are stripping down the side of the level against a branch, and are raising a little milliug ore. The lode in the 90-fm. end south produces 8 tons of ore per fm., worth 1 oz. per ton. Caunter lode: The 120-fm. eud east, still produces a little low grade ore. The winze sinking under the 110-fm. level continues to produce about 6 tons of ore per fm., worth 10 dwts. per ton. In the 90-fm. end west from old cross-cut on supposed Caunter, the lode is looking promising, and is estimated to produce 4 tons of ore per fm., worth 12 dwts. per ton. In the 70-fm. end west, the stope has been squared up to the end, and the men will now commence to drive west on a small vein, which comprises the lode. The 70 end east carries a lode 1 metre wide, showing two veins of ore, which are producing 4 tons per fm., worth 12 dwts. per ton. A cross-cut has been started from this level to drive north-east to intersect the No. 1 lode; this cross-cut will have to be driven about 30 metres, and will take seven months. Driving of the 46 fms. end east has been resumed, but up to date nothing of importance has been met with. The 150 fm. cross-cut has traversed a division showing a little pyrites, and the ground is somewhat easier for driving. There is nothing new that calls for remark in either the 55 fm. cross-cut or the Morghen adit. Surface: The mill stones are all bought to the mine, and good progress is being made in transporting the timber. Up to this date we have been able to keep 22 mills running, but I fear we shall not be able to do so much longer, because the water is too little for the machinery Val Toppa Mine: The lode going up into Tagliata No. 2 presents much the same appearance as when last mentioned. There is no change in the rise over the intermediate level; it still shows a small string of quartz, but gives no ore of value. Stopes: Two of these have fallen off considerably, viz., the stope over the intermediate or eastern branch and the stope under No. 1 level on the flat lode, aud as they will not pay for working I propose at the end of the month to stop these places and pay off the men. I calculate we shall have this month about 80 ozs. of gold from Val Toppa district and 350 ozs. from the Pestareua district.—W. M. Roberts, T. H. Messa.

RUBY (3rd Jan.)—Dunderberg: We have nine men on day's pay, and eight tributers at work here. We have cleaned up the 500-ft. level, and I have put two men to work extracting and following the quartz. Have made connection between the 600-ft. and 700-ft. levels, and will proceed to prospect the streak of ore in the upraise from the 700. The air iu both places is good now. The 700 incline advanced 8 ft.; total, 58 ft. Lord Byron: We have four men on day's pay and 13 tributers at work. The ore in the winze has given out, and we are now sinking through a body of very low-grade ore, about 10 ft. in diameter; this is very discouraging, but must surely lead us to something good ere long. We are now within 60 ft. or so of the 165-ft. level, and if the ore continues going down, I think it will be advisable to run the 165-ft. drift another 100 ft. and prospect it with the engine. Bullwhacker: We have six men at work. The mine looks slightly better than when last reported on. Tacoma: We have two men at work who have been prospecting on the iron they struck in the drift.

WEST INDIAN NEW GOLD MINING CORPORATION, LIMITED.

PROSPECTS "BETTER THAN REPORTED."

22nd January.—Referring to the recent circular issued by the board, in which the shareholders were informed that the sluices on the Sabana River were being actively pushed forward, and from which Mr. Johnson, the mining superintendent, anticipated a good success, the directors are pleased to state that a cablegram has just been received as follows:—"I consider our prospects even better than reported iu my letter." The board iu reply have cabled as follows:—"Ample funds are being remitted for additional labour to increase output of alluvial washings." Several influential shareholders having expressed a desire that the board should consult the eminent firm of mining engineers, Messrs. John Taylor and Sons, with a view to the development of their property, negotiations are now in progress with that object.—H. Edwards, Secretary.

Removal.—The offices of Laughton and Company are removed to more convenient premises, 1, Essex Street, Strand, W.C., where all communications should be addressed.

Middlesborough Town Company.—We understand that the ordinary meeting of shareholders has been duly held at Middlesborough, Kentucky, U.S.A. and that the resolutions proposed were unanimously adopted.

REPORTS OF MEETINGS.

THE MINING COMPANY OF IRELAND.

(FROM OUR DUBLIN CORRESPONDENT.)

ON the 15th inst. a general meeting of the above company was held at the Lecture Hall, Westmoreland Street, in this city.

Mr. A. Shackleton presided.

The report and statement of accounts, previously published, were taken as read.

The CHAIRMAN, in moving the adoption of the report, said the business before them was simply to wind up the company and its concerns with as little expense as possible. and with all convenient speed. Profits and consequent dividends in such a case were impossible. The directors' attention and energy were directed to making the most possible of the property of the company, and they thought so far they had succeeded fairly well. The Glendalough property had been disposed of by public auctiou, after full publicity had been given as to its nature and all its conditious, and they might, therefore, fairly assume that its highest obtainable value was realised. The sale was made in July last, but the consummation of the transaction had only lately been arrived at. Anyone conversant with such sales would understand how tedious the settlement of such matters was. They were now taking preliminary steps to dispose of their property at Ringsend and Ballycorus. Some legal arrangements connected with the Ringsend property needful to render it more marketable were being carried through, and so soon as these were completed they would lose no time in offeriug the properties for sale. There was a double advantage in keeping the business at those places in active operation, inasmuch as it enabled them to offer them for sale as going concerns, and they were also making a profit out of the lead manufactures, which would go materially towards meeting the expenses of conducting the affairs of the company until they were wound up. Some time must necessarily elapse before the Slievardagh property was in a fit condition for sale. The stocks of culm were gradually being reduced towards a manageable compass. They were getting the best price obtainable for this article by making sales directly to the consumer. No wholesale purchaser of the lots in bulk would give anything near the price which they thus obtained. They hoped by the time they had disposed of the Ringsend and Ballycorus properties that the Slievardagh collieries and stocks thereat would be in a suitable state to admit of their being offered for sale.

Mr. R. S. CHANDLEE having seconded the adoption of the report,

Mr. DANIEL said he saw in the accounts an item of 10,000*l.* Government stock at 2¾ per cent. What was the present value of that? Was it 10,000*l.*, or was it bought at 10,000*l.*?

The CHAIRMAN said 10,000*l.* was the sum actually invested. Some of the stock was bought at over the present market quotation, and some under.

Mr. DANIEL said the present price of stock was 96½ per cent.; therefore, the value was 300*l.* less than stated in the report. He saw that 6,538 ozs. of silver iu lead was valued at 3s. 9d. per oz. Was that silver still in the lead?

The CHAIRMAN said it was, and was actually being taken out at present.

Mr. DANIEL: The cost of extracting the silver from the lead should be deducted from the 3s. 9d. an oz. The sum of 1,700*l.* was put down for unclaimed dividends. Where was that? What was the salary of the secretary? What fees did the directors receive? Did they receive any sum iu addition for going down the mines, and what number of attendances did the directors give for their fees?

Mr. WYNN wished to know, as to the Slievardagh Colliery, when the large reductions, promised in the directors' report, in rents and royalties were likely to become available? The amount charged in this half-year's report was 440*l.*, whereas in a correspouding report, a year ago, it was 430*l.* for rent and royalties, and in the half-year before this the amount was 450*l.*—so that, practically, the amount of rent and royalties was undiminished. As to the Glendalough Estate, the net procceds from sales of stores was 166*l.*, whereas he had reason to know that the amount paid was actually 250*l.*—therefore, 135*l.* was practically unaccounted for. He also pointed out that the net proceeds of the auctiou were 87*l.* less than the amount actually paid, the auction fees having been paid by the purchaser. Looking at the report, no doubt, the accounts showed a profit of 52*l.*, but on examination this was more apparent than real. There was a sum of 82*l.* 7s. on the credit side for dividends on Government stock, but that was not a trading profit, and, if deducted, there would be found a loss of 30*l.* On the Slievardagh Colliery he found a balance with a loss of 313*l.*, and he was surprised it was so small, as the total expense was 1,044*l.* 17s. The smallness of the loss was explained by the sale of old machinery, which could not be taken into consideration as a trade profit. The real loss on the Slievardagh Colliery was 614*l.* In Luganure there was a loss of 376*l.*, and, according to his view, on the face of the account there was a total loss of 706*l.* He urged that the affairs of the company should be closed as soon as practicable, and asked the chairman to give them some definite information as to their property.

Mr. LENIHAN said eight years ago the company was 12,000*l.* better off than at present. In 1882 there was a balance in their favour of 38,000*l.* and now the balance was but 26,000*l.* In face of this loss the sooner the company was wound up the better. It was ridiculous to have the company going on at an annual loss of from 1,200*l.* to 1,500*l.*

Mr. T. H. WEBB: The real question was, whether it would be better to advertise the whole assets of the company in bulk and put them up for sale, or go on as they were going, and gradually realise the assets? The latter, in his opinion, was the much better course, as many of the shareholders were surprised to find there was not a much greater loss on the half-year's working.

In reply to Mr. Gordon, who suggested the voluntary winding-up of the company,

The CHAIRMAN said 10,000*l.* was the sum the company paid for the Consols, and they held 10,360*l.* in Consols, which cost 10,000*l.*, and they believed they were worth that at present.

Mr. HEARNE said he regarded the balance-sheet as a bogus one.

The CHAIRMAN: That term is very offensive. The Consols had been put dowu at their present value. The silver in lead was put down at 3s. 9d.; the present selling value of silver was 4s. 2d., so that the expense of taking the silver out was allowed for. The unclaimed dividends were in the accounts. The secretary's salary was 350*l.* a year, and, considering the business done in the office, he thought it economically managed. The directors' salaries amounted to 400*l.* a year, and the attention they gave to the business fully entitled them to their fees.

Mr. WYNN: What was exactly the position of the company with reference to Slievardagh?

The CHAIRMAN: It had been surrendered to the landlord. The stores were valued at 127*l.* Additional stores were bought and paid for, making 165*l.*, and they were then sold at a profit.

The CHAIRMAN then put the adoption of the report and accounts, which he declared carried.

Mr. DANIEL wished to move an amendment, and said it was unfair for the chairman to prevent him by putting the motion for the adoption of the report.

The CHAIRMAN said he thought it was a resolution Mr. Daniel proposed to move.

Mr. HEARNE said this was a piece of sharp practice on the part of the chairman, who had declared that the "ayes" had it, although the "noes" had it.

Mr. DANIEL moved, "That this meeting do not accept the report, and that the meeting be adjourned for a month or such time as may be sufficient to enable the directors to correct the report and make it conformable with the facts." He said the report was wrong in several respects, and ought not to be adopted in its present state.

Mr. J. SMITH seconded the amendment.

After a scrutiny the amendment was declared carried by 201 to 102, and the meeting was adjourned for a month.

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR FIRST HALF OF JANUARY.

The mine superintendent cables to the following effect:—Ore shipped, 300 tons. The estimated value cannot at this date be given for reasons stated in the circular sent to each shareholder on the 12th November last. For the information of shareholders the directors have no reason to supposc that the value of the ore will be any less than it has hitherto been.

NEW GUSTON CO., LIMITED.

OUTPUT FOR FIRST HALF OF JANUARY.

THE mine superintendent cables to the following effect:—"Ore shipped, 300 tons." The estimated value cannot at this date he given for reasons stated in the circular sent to each shareholder on the 13th November last. For the information of shareholders the directors have no reason to suppose that the value of the ore will be any less than it has hitherto been.—BEDFORD MCNEILL, Secretary.

AMERICAN BELLE MINES, LIMITED.

SATISFACTORY NEWS FROM THE MINES.

A CABLE has been received from the company's solicitors iu New York stating that the transfer of the property to the company has been effected. Share certificates (10s. paid) will be ready for issue on Saturday, January 24th next, in exchange for bauker's receipts for that amount, and shareholders holding allotment letters should send them in at once.

Properties.—Under date the 8th of January, Mr. Crawford writes:—Our properties are all looking well. In the Silver Bell we are opening out ore bodies at the lower levels, simply drifting in them to get through them; have extended the drifts some 35 ft., and cross-cut over 19 ft.; no sign of walls or end of ore bodies. The property is simply immense. They are fiudiug through these ore bodies some rich stromeyerite, a rich ore, composed of sulphide of silver and copper. You can readily see why we have not produced as large an amount in Decemher from thesc ore bodies it is on account of not being able to commence stoping until we have them opened. Another thing that has been delaying us somewhat has been the state of the ore market, the smelters did not have the money to pay for our ores, and not having a contract on the Silver Bell ores, they took the advantage, and wanted to charge us a high rate for treatment, which we did not feel inclined to pay, and would not pay, as it is the most desirable ore that we are producing in Red Mountain for smeltiug; however, we will soon have men wanting our ores, and I have made a coutract for three months' output of the high grade ores, and will now place quite an amount in the market. The National Belle is showing large quantities or ore in almost every direction that we are drifting. The Hudson is also looking very well indeed, and we have a grand property in these groups of mines, and in a very short time will be producing large quantities of ore from all of them.

Cables.—The following cables have also been received from Mr. Crawford:—"Silver Bell ore body, No. 7 level, explored 19 ft. wide by 35 ft. in length; good ore is still being found in every direction. Shipments show ore to run from 50 ozs. to 300 ozs. per ton." "National Belle: There is a great improvement in value in sinking." "Hudson: We have struck fine body of ore; better grade Hudson. The mines look splendid." "Estimated value of December output, principally from Silver Bell, 8,000*l.*; working expenses, 2,500*l.* Immense body of ore, Silver Bell, in No. 7 and 8 levels; have not yet commenced stoping. As market improves for our ores are iu shape to increase output double or treble amount."—B. MCNEILL, Secretary.

ELMORE'S PATENT COPPER DEPOSITING COMPANY, LIMITED.—The directors of this company anuouuce that they have issued invitations to the leading journals to inspect their works in operation, near Leeds, on Tuesday, the 27th inst. This will be the first public inspection of the Eluore system for the manufacture of copper articles by electro deposition, and should be of great interest, as it will demonstrate upon a large scale the character of the invention. The train will leave St. Pancras at 9 a.m., returning the same day.

MR. JUSTICE NORTH has appointed Mr. Edward Hobbs (Hobbs, Ravenscroft and Co.), 110, Cheapside, E.C., official liquidator of the Arpad Gold Syndicate, Limited.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

Sir CHARLES METCALFE, Bart., Chairman.
B. B. TRENCH, Esq., Deputy-Chairman.
L. Balfour Burns, Esq. | Major J. W. M. Cotton.
Sir Stuart S. Hogg. | Richard Smith, Esq.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business :—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular contaiuing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Financial Reader.—As we fully expected, the shares you mention have fallen almost to a nominal quotation after being rigged to over £4.

"*Once Bit, Twice Shy.*"—We advise you to pay no attention to the cabled prices from Melbourne.

N. W. Clifton.—From present appearances you should hold, and sell on the first good rise.

S. W. S. (Bath).—The shares are likely to go better; buy a few more to average. Bank shares are always risky, and South Africans especially. See our notice in last issue.

Tyke, Junior.—No. 1, yes; particularly at present low price. No. 2, in about a fortnight from now. Nos. 3 and 4 might be bought, but simply for the market rise.

J. M. T.—The best list is that published by Martin and Phillips. Candidly speaking, we do not think the other worth the money.

G. W.—Will be doubled presently.

T. T. T. (St. Albans.)—We must certainly congratulate you upon your choice. Both mines named have excellent prospects, and what is essential, good management.

Plymouth (M.J.)—You, of course, strengthen your market by taken up, but on the other hand, if you have your shares carried over, you help the "bears" and keep the price down.

Flintoff.—If you become a subscriber to the Mining World your inquiries are answered *free of* charge.

C. H. (Greenock).—Great Kruger gold, certainly not—Don Pedro. Yes, it is supposed to be 5 ozs. to the ton, and it is likely to be true.

Champion.—The buyer pays the call until after this account.

B. R. Blower.—Cannot advise you to join the scheme.

Y. X.—Are thought well of by those who should know. The management is respectable.

A. Goodchild (St. Margaret's)—A fairly good speculation, but we cannot advise you to deal with the persons named.

Lowprice.—In about two weeks' time it is expected the company will be in a position to give the shareholders a full account of the recent discovery.

Catlin.—There are no dealings here. Why not try the people you speak of?

Moorish.—Are not safe as investments. Mysore and Ooregum would be better.

B. C. (Sunderland).—It would take very little to send the price up. The mine is, according to reports, looking first rate.

The Mining World.

LONDON: SATURDAY, JANUARY 24TH, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

CHART OF THE NUNDYDROOG GOLD MINING CO., LIMITED.

Notes by the Compiler.

The Mysore Chart presented with the Mining World of August 9th last year, and that published in our last issue, have been received with such general interest that it is hoped the Special Supplement to this day's issue will be equally welcome, more particularly to those who are shareholders in the Nundydroog Company.

This Chart, which is constructed upon exactly the same lines as that of the Mysore Mine is based upon the official and telegraphed figures, and

only begins with the period of regular crushings, and not from the formation of the company. In the early days of this mine the shares were dealt in at 3½, and were subsequently unsaleable at 6d. each. It will be noted that during the period covered by the Chart the highest price was 2⅜ in April, 1890, and the lowest was ⅛ in November, 1889, but in neither case does the quotation seem to have any relation to the crushings at those dates.

The realised value of 1890 gold is intentionally left blank at the top of that year in the table, as at present writing only 11 months' gold has arrived and been sold for 53,574*l*.

So far the dividend list is short; nevertheless it ranks next to the Mysore among Indian gold mines.

NUNDYDROOG DIVIDENDS.

	£	s.	d.
1888.			
Oct. 18th.—0s. 9d. per share on old (4½d. " new)	5,112	15	0

4s. 4d.	£31,390	3	4

IMPORTANT CORRECTION.—In his anxiety to complete the comparison of Indian gold mines at the earliest possible date the compiler made a serious mistake when drawing the curve of ounces yielded by the Mysore Company in the months of October, November and December, 1890. As the figures then given are correct, readers who are interested can easily alter the curve by a line running over dots exactly five squares, or 1 in., higher up for those three months. The error was discovered too late for correction last week.

MARKET PROSPECTS.

AT a time like the present, when investors seem afraid to go in for anything but gilt-edged securities, it is difficult to judge whether the long-expected revival in the Mining market is likely to make its appearance shortly, or whether it is to be postponed indefinitely. We are inclined to believe that brisker times are close upon us in regard to the interest in which our readers are more particularly concerned. Be that as it may, however, there can be no doubt about one thing. There is a time for all things, and this is emphatically a time for buying. The shock given to public confidence by the Baring troubles has not yet disappeared, though the reassuring statements made at the metropolitan bank meetings have had a salutary effect; and, as we have said, investors are still timid. Want of business invariably leads to a lowering of prices, for the jobbers are as a rule, chronic bears, and in the mining department they lose no opportunity of "banging" prices. This is, of course, hard upon those who, for whatever reason, wish to realise their holdings; but there are few evils in this world which have not their compensating advantages, and the losses of those who have to sell, mean bigger profits for those who wish to buy. Readers of the MINING WORLD need be in no difficulty as to the directions in which they should look for investments. If they are more particularly inclined to pay a more or less high premium for shares upon which handsome dividends are paid, how could they better employ their money than in Mysore, Nundydroog, New Guston, Yankee Girl, Namaqua, Colombian, Hydraulic, or Great Laxey? If, on the other hand, they are content with shares whose value is more or less prospective, there are abundant opportunities of purchasing to advantage. Take Frontino and Bolivia, which has just announced a profit of 3,394*l*. for November, Champion Reef, Gold Fields of Mysore, Almada and Tirito, Callao Bis, Emma, Colorado, the two Day Dawns and the two Gympies, Mount Leyshon, La Plata, Valley Gold, Etheridge United and Flagstaff. These are only a very few of the shares that at present prices promise to yield a good return to the investor; but they are a sufficient indication of our view that those who have money at their command need not, at such a time as the present, have any difficulty in putting it out to advantage.

THE NEGLECTED ORES OF INDIA.

IT is only in recent years that the extraordinary richness of India, from a mineral point of view, has come prominently before the British public. The doctrine has been accepted without reservation that India is rich in all the metals, and particularly in gold, but the enquiry has not been particularly diligent, neither has it been widespread as to where those riches have come from. The public have not, in truth, preserved a nonchalant attitude in this respect. If the information came to them they would be glad to have it, but the necessity to put themselves to any trouble to get it has not been sufficiently strong or tempting. The great success that has been met with in gold mining on the Colar field, the tantalising nature of the operations that have been conducted in the Wynaad, and the new goldfield that appears to be opening up in Bengal, have each tended to rouse the British investor from his lethargy, and we see day by day there are now no shares sought after on the market with more eagerness than those which hail from India.

There has recently appeared a *brochure*, entitled "The Mineral Wealth of India," which is published by Thacker and Co., of Bombay, in which the author, Capt. Collingwood Townsend, of that city, has sought directly to impart to others the great interest he feels in the iron ores of India, which are "in some places extraordinarily rich." In order that this pamphlet may be read he has condensed his remarks as much as possible, and by so doing has shown his keen knowledge of human nature, not to speak of the exigencies of human time. India, he remarks, gets its iron from England, whereas an untold supply lies within her own domains. We cannot follow Capt. Townsend in his diatribe against Indian gold mining. It is not the way to get capital to work the iron ores of India to decry an industry which success has justified. So far as gold mining has gone the result has been creditable, and is likely to be more remunerative in the future, for obvious reasons, than it has been in the past. He is strongly of opinion that the iron industry may be locally developed—first, by the actual extraction of the mineral from the ores, and next, by the working of pig iron into its various forms of malleable metal. It need not be pointed out to one so competent as Capt. Townsend that hitherto the great difficulty has been the distance of fuel from the iron. Without the former the latter cannot profitably be dealt with. Capt. Townsend is, therefore, at pains to insist that this is not always the case, though he admits that it very often is so. The most productive iron district of India he describes as the Raniganj group in Bengal where iron, coal, limestone (for flux), and fire-clay for the furnaces are all found together. The author refers to other iron fields such as the Warla, the Warora, &c., and indicates a general belief that operations are feasible, and at all events shows that he has thoroughly grasped his subject. In the development of the iron ores of India he attaches much importance to the adhesion of British skill and experience, and ventures on the prophecy that "Indian iron will one day command the market of the world." He puts forward a really excellent suggestion. It is the custom for the rich natives to send their children to this country to study for the professions, but Capt. Townsend rather suggests that they should be sent there to study the iron industry, for from this great results may be expected. We have said enough to indicate that the *brochure* is one of considerable practicable value, and in a future issue we may have occasion to refer to another important portion of it—that in which the merits and defects of the Indian workmen are dealt with.

GOLDFIELDS OF MYSORE REPORT.

ALTHOUGH Goldfields of Mysore, Limited, is more a land than a mining company, a good deal has been done by the directors to prove the property, and the issue of their operations has shown that they have not misjudged its valuable character. No important discovery has been made, but the workings have been encouraging in many respects. Several good shoots of ore have been met with, particularly in the workings from the south shaft. In the 20-ft. level the assays have shown the lode to be worth ½ oz. to the ton, and on one occasion the winze sinking below the level was reported to be worth over 1 oz. to the ton. It is at this point the board have suspended operations—a decision which will surprise those who forget that the company was primarily formed to accomplish development work to a certain extent and then to dispose of portions of the property, so developed to other concerns specially organised to work them. The principal feature of the financial year which ended last September was the exploration of the Golconda and Oriental blocks, and the directors describe the results as "highly satisfactory."

The directors regard the discovery, at 30 ft. from surface, as of great importance, and at the time so did the market, for the shares rose substantially upon the faith of it. The business of selling blocks of land has been slow, but the directors are in treaty with people who really appear to mean business.

Meantime the necessity for economy has been realised, and the board and managers have commenced at home by voluntarily relinquishing the whole of their fees. As there was no obligation upon them to do so, the shareholders ought to remember this in the day of their prosperity, and not forget it as a sister company did on a memorable occasion still fresh in the memory of most of us. At a former meeting of Goldfields of Mysore the 22,000 shares the company holds in Champion Reefs Mine were held in light esteem by one of the speakers, but now they are a valuable asset, consequent upon the discovery of a rich lode in that company's mine. The report will be regarded by the shareholders as being more favourable than the circumstances of the past year may have probably led them to anticipate.

THE MINE OWNERS' TRUST LIMITED—AN ENTERPRISE OF MERIT.

THE object of this enterprise is to do for mining enterprises that which the trust companies have so successfully done for other departments of investment. In a word, the object is to promote, and assist in promoting, "sound mining enterprises as joint stock companies." Of the four directors who will manage the Trust, three at least are personally known to us as practical and experienced men—Mr. J. T. Hopwood, Mr. Vaughan Waldron Jones and Mr. Findlay

Wallace—and they may be relied upon for sound and capable administration. In carrying out the extensive and in some degree original plan of operations laid down, the board propose to bond or lease mineral properties and develop them to such an extent that the introduction of fresh capital will be warranted, and then to dispose of them—a process that is likely to be attended with profit to the Trust, and advantage to those who may become its customers. The Trust will also act as the agents for the purchase and sale of properties, and will generally be a medium between investors and the prospectors and owners of sound mining concerns. In other words it will be a Trust company in the truest sense of the word, working at a fair rate of profit, but not pocketing, as the promoter so often does, nearly all the available capital, and leaving the bones of the concern to bleach upon a joint stock shore. We quite agree with the prospectus, that a business of this kind is likely to be very lucrative, whilst at the same time it may be carried on in the truest spirit of fairness to those who may become its customers. The Trust practically invites the public to enter into and share the profits of the middle man, but at the same time it acts in such a way to its customers that their risk, by preliminary inquiry and working, is reduced to a minimum.

So far as regards the general scope of the Trust. Now, the business character of the board, of which we have already spoken, is exemplified by the manner in which its members have already set to work. They have gone to the Red Mountain district of Ouray County, Colorado, where they have secured a group of claims in the vicinity of Yankee Girl and New Guston mines. In regard to New Guston, with its capital of 100,000*l*., it has paid since November, 1888, 23s. 6d. per 1*l*. share in dividends, and the output continues to improve almost month by month. Yankee Girl, which was only taken over last July, had down to the end of December last made a profit of 86,410*l*. on its capital of 260,000*l*., out of which profit two dividends have already been declared. Equal success appears to be in store for American Belle Mine recently started, respecting which and kindred enterprises, some two months ago, we published a highly interesting interview which one of our representatives had with its managing director, Mr. Crawford. The geographical situation of the group of mines acquired by the Trust is contiguous to New Guston, Yankee Girl and American Belle. Careful reports upon the properties have been written by Mr. Philip Argall, M.E., which are open for inspection at the offices of Mr. Henry Richards, No. 11, Poultry, where every other information can also be obtained. There is no reason whatever to expect that the success achieved by the mines we have named will be limited to them. The reports, the assays, the development work—in fact, every test to which mining properties can be subjected in their initial stage, go to show that the success will be repeated in the case of some at least of the mines acquired by the Trust. Whilst admitting to the full the uncertainty of mining, we cannot conceal the impression we have gathered from the documents which have been placed at our disposal, that in the properties now secured by the Mine Owners' Trust an unusually favourable chance is presented to the investor; whilst apart from any such consideration, the general scope of the company's business appears to be of an enticing and practical kind. We have to add that the capital of the Trust is 30,000*l*. in 1*l*. shares, all of which but 250 are now offered for public subscription at par. The remaining 250 are founders' shares, which do not rank for dividend until after the ordinary shares have received 10 per cent. They will then receive one moiety of the remaining profits—the ordinary shares receiving the other. It will thus be seen that the whole of the capital subscribed by the public will be available for the legitimate business of the company, and that the shares of the founders receive nothing unless profits are earned—not even the out-of-pocket expenses that must have been incurred in forming the Trust.

ST. JOHN DEL REY DEBENTURES.

We desire most earnestly to call the attention of St. John del Rey shareholders to the position of the debenture scheme as set forth in the circular of the directors, the full text of which will be found in our present issue. It appears that only 180 shsreholders have applied for debentures to the amount of 43,400*l*. The total number of shareholders is about 900, so that only one-fifth have come forward to avert that drastic plan of re-construction which is absolutely certain should the present method of raising money come short of the needs of the company. If the remaining shareholders did but a part of their duty the whole of the money would be found, and the immense annoyance, trouble, and expense of reconstruction would be saved. The directors invite the shareholders to follow their example, and take their proportion of the debentures, otherwise the alternative is as clear as the sun at noon day, and a very unpleasant alternative it will be.

ST. LOUIS BREWERIES.

Although the speeches delivered by Mr. Bevan (chairman of the company), and by Mr. Milburn, a director who has visited the breweries, were extremely interesting and practical, it must be owned that that which fell from Mr. Monro was the most important utterance of the three, and fully merited the applause with which it was received by the shareholders. Thrice has this gentleman visited the breweries, and each time has he become more impressed by the solid nature of the business and the continued prospect of high dividends the enterprise held forth. A 15 per cent. dividend in these days, when 3 per cent. can scarcely be obtained in this country, is something of which to speak, and particularly when coupled with so many reasssuring facts that it is likely to be maintained, if not increased, during a period to which no practical man would care to set bounds. When Mr. Monro was on the spot he, to employ an American expression, "used his intellect." Amongst other things to be noticed was the increase in the barrellage of 40,000; the writing-off of 40,000*l*. worth of beer in stock, not because it is not there but as a matter of prudence; the rapid increase of the population of St. Louis; the increase of the population of the United States themselves in 20 years from 30,000,000 to 60,000,000; the friendly nature of such competition as exists, and the fact that out of 15,000,000 sterling of capital invested in these breweries 4,000,000 sterling is held by the Americans themselves, the net result of the whole being that he sold out a lucrative investment in a provincial brewery in this country, and invested it in American breweries. Greater proof of confidence in the present position of the St. Louis breweries, and the potentiality of their resources, could not be given. The discussion which followed his speech was practical. Several shareholders asked for fuller accounts, including a trading account and the item of depreciation fully set forth, but the chairman, whilst promising all information at the offices, thought it better in public meeting to withhold particulars which might be used to the detriment of the company by its competitors. This reticence must be commended rather than censured, for it is exercised by the directors of all trading concerns, whether operating in this country or abroad. The impression left by the meeting was that the breweries are in a sound and healthy position, and that the handsome dividends which have hitherto been paid are likely to be exceeded rather than reduced in years to come.

CHAMBER OF MINES FOR LONDON.

The idea of a Chamber of Mines for London has often been mooted in private conversation, but Mr. George A. Ferguson, editor of the *Mining Journal*, has been the first to give to that idea definite shape. His view is that the proposed Chamber of Mines should take the form of a mining section of the London Chamber of Commerce, and he argues with great force that a mining section might do no less useful work in connection with this industry than the numerous other sections of the London Chamber of Commerce have done in their respective spheres. Mr. Ferguson feels warmly on the subject, and, therefore, writes strongly. He says;—"Those, too, who desire to see mining freed from the indefatigable attentions of the legion of those shady, conscience-less promotion-mongers and blackmailers, who pollute City life and bring discredit upon legitimate mining enterprise, will recognise in a Chamber of Mines a powerful antidote to the effect of their adroit manœuvres." With every word of this all true friends of mining will be agreed, and will accordingly wish the proposed Chamber of Mines every success.

PALMAREJO AFFAIRS.

In a circular issued to the shareholders of the Palmarejo Mining Company, Limited, the directors give an account of the operations carried on at the mines for the three months ended 30th November last, which, they state, have been in every respect satisfactory. 542 ft. of tunnels and rises had been driven since the last quarterly report, in order to improve and complete arrangements for delivering ore from the various working faces to the store bins at the upper terminus of the railway. Besides the many thousand tons of ore already extracted and on dump ready for transmission to Zapoté, so large a supply of ore of the value of $30 and upwards is now uncovered and available for stoping, that no further purely exploratory work need be undertaken until the mill is at work. A very heavy head of water was tapped in the Dios Padre tunnel on the 2nd October, at the point of junction of the Prieta and Blanca lodes. This water drained off, and work was resumed in the course of a few weeks. The presence of this water is regarded as a favourable indication of large and rich bodies of ore between the Socorro and Dios Padre levels, an opinion which is confirmed by the valuable discovery in the No. 1 winze in the Socorro tunnel, announced to the shareholders in the report dated 30th September last. A large force of mechanics and workmen have been and is employed in the erection of the mill at Zapoté. The long continued drought in the river, from August to end of October, caused much delay in the delivery of timber for the framework of the building, but it is now all in hand, and the directors expect the mill to be completed and ready for work during the coming spring. Until the total cost of the construction and development works at Palmarejo and Zapoté could be ascertained, the directors preferred to obtain funds from time to time as they were required, instead of running the risk of causing annoyance to the shareholders by repeated appeals to them. It now appears beyond question that all the outstanding liabilities of the company, the whole cost of the works, and the supplies for the mill, will be covered by the sum of 75,000*l*. The company's articles of association authorise the issue of 200,000*l*. in debentures, and the directors are now inviting subscription for the 75,000*l*., which they consider will be sufficient for all purposes. In order to render these debentures a really first-class security the directors put themselves in communication with the Mexican Explorations, Limited, and this company, which has an uncalled capital of 185,000*l*., has agreed on reasonable terms to guarantee both the principal and interest of the whole of the present issue of 75,000*l*.

7 per cent. debentures. The report concluded by stating:—"The brilliant prospects of the mine, and the absolute guarantee of both principal and interest by an independent company warrant your directors in making an issue of 7 per cent. debentures, and strongly recommending them as an investment of a far higher class than is generally offered to shareholders in mining uudertakings on the security of their property, and they hope that these debentures will be at once taken up by the shareholders in the Palmarejo Mining Company, so that no interruption or delay may be caused to the works which are now so nearly completed."

THE MONEY MARKET.

CITY, FRIDAY EVENING.

REDUCTION OF THE BANK RATE.

ALTHOUGH scarcely expected, the Bank directors have this week lowered the rate of discount from 4 to 3½ per cent., but this is still more than 1½ per cent. above the market rate. Over 700,000*l*. in gold had been taken from the Bank on the *Gazette* week, chiefly for Holland and South America, but as the Bank of the Netherlands reduced its rate from 4½ to 4 per cent., there has been less fear of the demand for that quarter, although it has continued. Tbe Bank return, in spite of the export, shows an increase of 255,000*l*. in the reserve to 17,540,000*l*. through the reflux of coin and notes from circulation. At this time last year the reserve stood at 11,580,000*l*., and the rate was 6 per cent. The public deposits through the tax collections have increased 2,200,000*l*., and the private deposits have been depleted 1,262,000*l*., the result being a decline in the proportion of reserve to 43¾ per cent. The Government Securities are rather less, and thc private securities have increased 870,000*l*. in connection with Messrs. Baring's bills. Discount has been weak at 1⅜, ⅞ per cent., and money offering at 1 per cent. and under. With the low value of money the exchanges have tended adversely, but the effect has been checked by the sharp fall also on thc Continent. Deposit rates have been reduced to 1½ and 1¾ per cent. for money at call and notice.

The markets during the week have been featureless apart from one or two special descriptions. The fluctuations from day to day were of a trifling character, and in some instances couuteracted, day by day, the effect of the previous movement. The traffic receipts of the various English railway companies were regarded as satisfactory, considering the unfavourable weather. The Scotch liues in addition had to contend with the effects of the strike, and hence were the greatest sufferers. In all probability there will be some curtailment in the dividends, as the effect of the strike has to be borne in the half-year completed at the end of this month. The Caledonian Company apparently have not suffered to such an extent as the North British, but the latter, notwithstanding a decrease of over 60,000*l*. since the strike commenced, in the aggregate still show increased receipts, due presumably to the augmented returns from the Forth Bridge traffic. The strike now shows some signs of collapsing, and for the sake of the country generally it is to be hoped that a settlement will be arrived at, the South Western dividend being less than for the corresponding period revived fears that investors had allowed sufficient margin for the increased cost of materials and the rise in wages. The Chilian revolution still drags on, and the telegrams that are received point to a gloomy state of affairs, but the Bonds have not dropped much, as the bondholders have little to fear from the financial condition of the country. The changes ou the week shows a gain of about ⅛ in the Funds, and ¼ to ½ in Colonial Inscribed and Indian Government Stocks. Foreign Government Bonds were a trifle higher, but Argentine Sterling Loans rose 1¾, and Uruguay issues 1 to 2½ per cent., the latter on the announcement that the April dividend would be paid. A trifling reduction is shown in the Home Railway market, North-Eastern showing the greatest decrease, while Hull and Barnsley, Metropolitan and Great Northern were exceptionally good. Americans have been listless, and prices have receded ¼ to ¾, aud Illinois shares exceptionally 3. Grand Trunk Stocks have about maintained their own, but Mexican Stocks were not so good by ½ to 1½ per cent. Breweries have been active, but the tone was not decidedly favourable. Eastmans, and Hammond's Meat, and Hudson's Bay were steady.

There was a further efflux of 30,000*l*. in gold from the Bank to-day for Holland, but 10,000*l*. in sovereigns arrived from Portugal. These operations made no difference in the Money market, where the excessive supply controlled rates in the absence of business. Three months' bills were quoted lower, at 1¾ per ceut., and loans were offering all round at ¾ to 1¼.

Bar silver declined this afternoon to 47½, Mexican dollars to 46⅜, and Rupee Paper 4 and 4½ per cent. to 80¾ ¾, and 82¾ ¾ respectively.

Very little business was reported at the Stock Exchange to-day, and the tendency in the absence of support was dull. The Funds receded ⅛, Consols for cash being 97⅛, ¼, aud India Stocks were also as much lower. The Forcign Government market has been distinguished by a further fall of 1 to 1½ in Brazilian Bonds, while Chilian and Uruguay issues, on the contrary, were ½ higher. Buenos Ayres issues, however, again gave way on the further advance in the gold premium to 216 per cent. International descriptious were practically unaltered. A fresh fall has to be recorded in all the leading Home Railway Securities, the North-Eastern dividend, at the rate of 7¾ per cent., having a depressing effect on all the "heavy" lines, which receded ½ to 1, while the stock of the company in question was 1¾ lower at 164⅞ to 165½. Brighton "A" aud Great Eastern alone show a trifling gain. The Chatham Company will pay the full dividend on the Arbitration Preference, and carry forward rather more than 40,000*l*. American Railroad Securities were dull and listless, New York Central dropping 1, and the rest ⅛ to ½. Both Grand Trunk and Mexican Stocks were put down ¼ to ½ per cent., while Central Argentine Stock recovered 1, to 82, 85. Buenos Ayres Great Southern was as much lower, at 163, 166. Nitrates were neglected, but Eastmans Meat, Hudson's Bay, and Brush Light were lower; a recovery, however, was showu in Bryant and May and Salt Union Shares. Guinness Stock fell 2, to 316, 318.

Annexed are the final quotations to-day:—Consols Account, 97⅛, 97¼; Egyptiau Preference, Three-and-a-Half per Cent., 93½, 94; Egyptian Unified, 97⅛, 97⅜; French Four-and-Half per Cents., 104¼, 104¾; Hungarian, 91⅝, 91⅞; Italian, 91⅜, 91⅝; Mexican, Six per Cent., 91½, 92; Peru Corporation Ordinary, 10½, 11½; Peru Corporation Preferred, 28, 30; Russian, 1873, 98¼, 98¾; Portuguese, 56¼, 56½; Spanish, 75½, 75⅝; Turkish, 1871, 98¾, 99¼; Turkish Defence, 102, 102½; Caledoniau Railway, 120⅜, 120⅝; Great Eastern, 91⅞, 92⅛; Great Western, 162⅛, 162⅜; Brighton "A," 160½, 160¾; North Western, 177⅛, 177⅜; Metropolitan, 79, 79½; Metropolitan District, 30¼, 30¾; Midland, 148¼, 148½; North British 52⅛, 52⅜: North Eastern, 164⅞, 165⅛; South Eastern "A," 94⅜, 95⅛; Mexican Railway Ordinary, 47¼, 47½; Grand Trunk 9½, 9¾; Grand Trunk First Preference, 62⅞, 62⅛; Grand Trunk Second, 41⅜, 41⅝; Grand Trunk Third, 22¼, 22½; Canadian Pacific, 77⅛, 77⅜; Denver 19⅜, 19⅝; Erie, 20¼, 20½; Milwaukee, 55⅛, 55⅜; Lake Shore, 109¾, 110¼; Louisville, 79⅜, 79⅝; Atlantic First, 32⅝, 33⅛; Ontario, 17⅛, 17⅜; Ohio, 19, 19½; Norfolk and Western, 57, 57¼; Reading, 16⅝, 16⅞; Reading 5 per Cent. Bonds, 55, 56; Union Pacific, 46⅛, 46⅜; Wabash Preference, 19½, 20; Ottoman Bank, 14⅝, 14¾; Anglo-Telegraph, 48¾, 49¼; National Telephone, 4⅜, 4⅝; Hudson's Bay, 18¾, 19¼; Suez Canal, 96¼, 96¾; Guinness Ordinary, 316, 318; Allsopp's Ordinary, 43, 44; Bryant and May, 14, 14¼; Eastmans Meat 13½, 13¾.

THE GLENROCK CO., LIMITED.

NEWS FROM MR. FARRELL AND FROM THE WYNAAD.

23rd January.—Your directors have pleasure in communicating to you what information has reached them since the date of the last circular. Reports have from time to time been sent to the various mining and financial papers. Mr. Farrell arrived in New Zealand in October last, and the necessary legal formalities on the part of the local company, holding the Premier Mine, had then to be complied with, and it was not until the 14th inst. that a cablegram was received from the solicitors instructed to investigate titles and accept transfer of properties, reporting that same had been examined and transferred into the name of the Premier Consolidated Gold Company, Limited, of London, in which this company holds its interest, free from incumbrances. The principal work of development at the mine is the driving of the low level adit, as recommended by Professor Black and Mr. Beale; this, Mr. Farrell advises, is being pushed ahead, aud the first 90 ft. of open cutting have been completed; the 180 ft. now being driven will be through schist country rock, and at the end of this the main vertical reef should be cut. This extensive tunnelling and driving to those unacquainted with mining operations, may appear tedious and uninteresting. It is, nevertheless, absolutely necessary to intersect the reefs at depth, and so secure a continuous supply of quartz for the reduction works. From the mouth of the adit there is a cart road to the reduction works, and a tram from the mine to the mill can be laid with an easy gradient. Driving upon the upper level is also being continued with very favourable prospects and the best possible indications, but no very considerable quantity of ore can be expected until the adit now being driven is completed, when, by driving on the reefs, ample stoping ground will be available for the full mill power. In a letter dated 12th November, 1890, from Mr. W. J. Farrell, received 31st December, he says:—"Since last writing on the 30th October, I am pleased to report that an entirely new shoot of gold-bearing stone has been met with in extending our top level. It has developed into a good fair-sized lode." The mine manager reports: "The (new) reef in the tunnel is about 2 ft. thick, with a little gold in it. I think it will improve shortly, for the ground alongside of the reef is getting softer." Telegram received 29th December, 1890:—"107 ozs. gold got from quartz and mullock in driving level." Your directors have been in treaty for some time past, and have concluded arrangements, in accordance with the powers conferred upon them under the company's articles of association, for a lease of two river-dredging claims, both situate on the Molyneux or Clutha River, near Alexandra, iu the Province of Otago. Against the capital to be employed by this company, which is rendered available by the redemption of the West Argentine Debentures, the lessors contribute claims and part of the machinery, and the arrangement is that after this company has cleared its expenditure, one-half of all net profits earned is to be paid to the lessors. Thc lease is for fourteen years, and the property not far distant from the mine in which this company is now so largely interested. The dredging industry in the colouy is becoming a most important one, and Mr. Farrell is very confident of its proving remunerative. The terms are exceptional, and the venture promises the best elements of success with but a minimum of risk. Indian Estates.—Negotiations are pending for tbe lease, for 14 years, of the Indiau estates for the purpose of cultivation; a small yearly rental will be payable to this company, and a participation in profits. The mining rights over these Indian estates will be retained, so that should those companies at present working in the Wynaad attain any definite success at depth, the extensive mining rights over 5,000 acres belonging to this company may yet prove valuable. A call of 6d. per share will bc required on February 16th. Call notice is enclosed herewith.—W. P. OWEN, secretary.

P.S.—In a letter just received from Mr. Farrell, December 8th, he says:—"There is nothing new to note beyond the fact that the reef in the uprise has widened out to 3 ft., and continues to carry a little gold. Although the quartz now crushed will be considerably under our past handsome yield, nevertheless it is pleasing to note that, however poor, it will, I think, prove sufficiently rich to pay for necessary dead-work in opening up the permanent way. Of course, it is in the low-level which we expect to cut the rich shoots already proved, living down underfoot, bnt still I shall feel much disappointed if we do not strike equally as rich stone overhead—and, perhaps, any day, as there are very promising indications showing in thc face of our main drive at present."

SALT UNION.—The quantity of salt delivered by the Salt Union, Limited, between 1st January and 31st December, 1890, was approximately 1,629,000 tons compared with 1,549,000 tons during 1889.

AFFAIRS IN SOUTH AFRICA.

Kimberley, 30th December, 1890.

THE MAITLAND MINES.

I DO not suppose that one in a thousand has ever heard of the Maitland Mines. They will not be found on any share list—indeed, I am not aware that the shares have ever been quoted; nevertheless, a company exists, called the Maitland Mining Company, and as a document concerning it, in the shape of the manager's report, has just been published, I may as well enlighten your readers on the subject. This mine is situated near Port Elizabeth, and as a mine it has had a queer sort of existence and as many vicissitudes as any individual in South Africa, which country, by the bye, is, *par excellence*, a country of strange ups and downs. As far back as 25 years ago the Maitland Mines were talked about, but the fact was that at that period so exceedingly ignorant were colonists on the subject of mineralogy that they really had no idea what they were talking about. Every now and again it became the fashion for 10 or a dozen Port Elizabeth men to make up what amounted to a pleasure party to go to the "mines." When they got there they did their best to look and talk learned; picked up bits of ore, wrangling and even quarrelling over them, and finally making up their quarrels over the good cheer which they had taken good care to pack in the vehicle which conveyed them. As to whether they had been handling tin, lead, silver or iron ore, I am led to believe none of them had the slightest idea; some natives were left in charge of an overseer to pick and scrape at their own sweet will for a week or two—then no funds were forthcoming, and nothing more was done for another two or three years. This novel method of working a mine was kept on at intervals up to the time of the discovery of the Witwatersrandt goldfields. Port Elizabeth being naturally a busy place, and people of all classes constantly passing through, it is not to be surprised at that in due course passing mineral experts were asked by influential townspeople to go out and inspect the Maitland Mines, and, this being done, the good people of Port Elizabeth had the pleasure of learning that they had a silver and lead mine within a comparatively short distance of their town. To form another syndicate was a very easy matter for a lot of Port Elizabeth merchants, a manager appointed, and a proper staff and machinery procured to work the ground in a systematic manner. This was about two and a-half years ago, the very time when practical mining engineers were very scarce articles in South Africa. As you are aware at that time there were scores of men who gave themselves out as mining engineers, who not only did not know felspar from ironstone, but who had never driven a tunnel in their lives. The syndicate, unfortunately, got hold of one of these men, and the result was that the concern stood a very fair chance of coming to grief; but the directors were wise in their generation; two or three of them had been up to Johannesburg and obtained a few wrinkles, and the consequence was that about six months ago the mining manager got his *congé*, and Mr. Cadwell was appointed in his stead. Mr. Cadwell has just sent up his report, and, so far as it goes, and taking into consideration that he has been at the helm so short a time, it reads very well. The following extracts are from this report:—"As far as my copper mining experience goes I find by driving east and south I can get at the richest part of the lode." "As far as I have driven for the silver lode the results have been very satisfactory." "Yesterday, on my rounds, Mr. Hill showed me some stuff which he had blasted out. I do not want to see anything better." "As to the property, I cannot say enough about it—language fails me. I can only direct your attention to what has happened in the Transvaal. Thousands of pounds have been spent there by the residents of Port Elizabeth and never recovered, whilst this grand property was under their noses." I leave your readers to draw their own conclusions.

THE AVERAGE PER TON.

As months roll on you and your contemporaries have from time to time published the monthly returns of the Witwatersrandt output. Although the gold industry, from a speculative point of view, is under a cloud, from a mining point of view progress is both satisfactory and encouraging. The increase of work from dealing with 40,000 tons monthly to 72,000 tons is proof positive that attention is being turned to mining, and that the days of pegging out claims, and waiting with your hands in your pockets for someone to buy them of you, have passed probably for ever. Although the output has not increased in equal ratio with the ore crushed, the average of the whole of the main reef was pronounced three years ago to be not more than 12 dwts., so that the crushings now are much fairer than they were 12 months ago. The average per ton for the past 12 months has been calculated by a gentleman who has taken a deal of trouble in the matter, and has published the following return:—

	Dwts.
December, 1889	18.23
January, 1890	14.98
February	14.68
March	15.03
April	13.89
May	14.25
June	14.14
July	14 27
August	13.33
September	12.61
October	12.21
November	12.44

These are figures that no goldfields need be ashamed of, and although some of the mines like Langlaagte Estate and Robinson's still endeavour to make their output look very much richer than the average, a day of reckoning will surely come, for Robinson's do not even now crush their main reef, which is the bulk of the gold-bearing strata, and Langlaagte Estate, in order to keep up their outturn, are reported to be resorting to the unminer-like system of understoping.

THE MANICA OPHIR MINING CO., LIMITED.

AFTER TWELVE MONTH'S ENFORCED SILENCE, AN IMPORTANT REPORT IS SENT BY THE MANAGER.

I AM desired by my board to send you the latest information received from Mr. Vaughan Williams, the company's manager. You will find extracts from his letters on the other side. I have also to inform you that Major Langlands, a director of the Ophir Concessions has joined our board.—W. SCOTT, Secretary.

EXTRACT FROM LETTER OF 22ND SEPTEMBER, 1890.

After the most frightful hardships and illness I have arrived after 12 month's silence. You must have been uneasy about it, but it was utterly impossible for me to communicate with the outer world from where I was and impossible to retrace my steps. At Tati I wrote you that a man, named Clement McArthur, had informed me of a road by which I could be at Manica in six weeks' time. He was unwilling to go and I was unable to get anyone to drive the wagons, either white or black. It was quite impossible for me to reach the coast in time by retracting my steps, so after considerable haggling he agreed for the sum of 350*l.* and his food to conduct the wagons. We made capital progress for the first three weeks, the path then died out and we got lost. However, we steered due east and arrived at the Manyetzi River in good time. As ill luck would have it, there came a tremendous storm which flooded all the rivers and delayed us a few days. On arriving at the Lundi River, we found that river was overflowing its banks, and we waited here three weeks in the hope of it going down. Finding it useless to wait any longer, I took the bottom of the wagon out, and with the wood of the cases made a punt, by which we crossed everything safely, except one who got caught by a crocodile. In one day we were all struck down with fever. The rains now set in with such violence, that the whole country became a swamp, and we were not able to move the wagon more than 10 miles to a mountain in the district of a chief called Majibiri. There we all had a relapse from which unfortunately poor Tom O'Connor never recovered. The rains lasted six months, and the natives assured us they had never seen the like before. Tom O'Connor was a man of 50 years of age, an old Californian with experience in Australia and the Transvaal. He would have been of great service had he, poor fellow, lived. We buried him, sewn up in his blankets. In the month of April we left our camp, the ground having become a little drier, but through the chain of mountains we were unable to move, rocks, forest and rivers delaying us at every turn. During the whole of this time I was suffering from fever, the fever being intermittent. At the Tilgirie River the wagon stuck in the middle and I had to sleep in the middle of the river that night. After 10 months' fever I arrived in safety, and can congratulate the company on the salubrity of the district I have chosen, being situated on an affluent of the Buzi River named River Revue. Gold there is in abundance, and water and climate magnificent, though the coast is very unhealthy. I have now to proceed to Beira to see the representative of the Mozambique Company, and to get the claims properly located. For this purpose I have hired a barque, and sail from here in a couple of days' time. I have brought provisions and goods here for self, and the payment and feeding of natives employed in the mines, and have given an order on the company for the amount. Should the company be agreeable to retain me for the future, I shall be glad to remain as managing director providing the terms are sufficiently liberal. What I have gone through for the company deserves a considerable douceur."

OCTOBER 14TH.

When I arrived at Chiloane, I was suffering from a very severe cough which then attacked my lungs, and I was delayed some three weeks there; I set sail on the 11th October with unfavourable winds, and am now at Beira and start to-morrow for the interior (Manica and Kittive.) I have now two months before me to prospect, after which the rains will set in for three or four months, and I shall then, if still alive, proceed to Natal to recruit my health. Mr. Kergariou has, I understand, on very good authority, discovered something very good. He has started for Chiloaue, *en route* for Europe, with cases filled with stone rich in gold. Please send me a Frazer and Chalmers 5-stamp prospecting battery (with silver also). Everything I have bought at Chiloane is fearfully dear. There is enough to last me three or four months, and I have ordered flour which will arrive, I hope, by the 1st of November. In the way of white men for the first 12 months I only need half-a-dozen miners and a good carpenter; this will keep expenses down, as I can do all the necessary work myself, and while in Natal will get a good man, whom I know, to superintend the battery, which will be quite large enough for testing the reefs. I do not know whether they supply boiler, &c., for this battery, but with a good carpenter we can do with water power. Still a small engine would be very useful, wood being in enormous quantities. No alluvial gold in paying quantities has yet been discovered. It is all reef. My station is some 150 miles up the Buzi River, and the district where auriferous ground is is called Kittive, and is some 50 miles from station at the Buzi. I have chosen this route as being the most accessible. My new route will be accessible for launches to within two days' march of the mines.

MONDAY, 27TH OCTOBER.

I have settled with the natives for two canoes, 10 men and their food for five days for 5*l.*, and I am well satisfied. I have to mount the river for five days and then to march 2½ days. I'll guarantee, if the company back me up, that I shall have my machinery going before any of the other companies, though I am a year behind them, for they will never be able to get their heavy machinery up till the railway is built, whereas I can take mine up by river all the year round."

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD

VAN.—A WARNING.

SIR,—I trust shareholders will not allow the management of this company to fall into the hands of a local clique. This is the worst thing that could happen to Van. As in Cornwall, so it is in Wales—there seems to be a malicious pleasure if what they call "outsiders" lose their money. The best way to make us lose our money is to place Welshmen on the board. If this is done—no re-construction for me. I have heard rumours to the effect that the recent agitation against Capt. Williams is due to the action of a local clique working against him on political and other grounds. Capt. Williams has played into their hands by writing reports that have been much condemned, and that have not been borne out.—I am, &c.,

ANTI-CLIQUITE.

VAN AFFAIRS.

SIR,—The extreme fairness of the MINING WORLD in allowing the letters of its correspondents to appear both for and against the Van Mine has emboldened me to write on the subject of the affairs of this much canvassed mine. I hold 50 shares in the company, and such is my opinion of the prospects of the concern that if a new local manager be appointed, and the present board be retained in office, I will at least take 100 of the new shares—that is to say, if the folly of my fellow shareholders, who may not take their allotments, gives me the chance to do so. I say, change the manager at the mine because, weighed in the balance of his reports, he has been found wanting. I say, stand by the old directors, because they have done nothing worthy of official death. They have expended the company's funds with economy, and they have met the requirements of the manager, against whom, until quite lately, not a word was said. The most that I would consent to would be an addition of one or, at the most, two members to the board. We are crossing a stream, and if we swop horses we know what will follow. If any attempt be made to remove the present directors, or our esteemed secretary, Mr. Lavington, I, for one, say that I will have no part or lot in another Van re-construction. If, on the other hand, we retain these gentlemen and so secure the advantage of their knowledge and experience, we shall do well. We shall be acting as men of sense and commercial prudence.—I am, &c.,

A HOLDER OF FIFTY SHARES, BUT ONE WHO CAN INFLUENCE HUNDREDS.

P.S.—I read the report of the last meeting carefully, and think that Mr. Hamilton would make a good director to add to the board.

VAN MINE.

SIR,—I have read with much interest the sensible and practical letters which appeared in your two last issues, every word of which I quite endorse. Sincerely do I hope the shareholders will attend in a body on Monday next, and unanimously decide to appoint both a new manager and new directors. The position is this: Immediately the resolution passed at the last meeting is confirmed then the old Van Mining Company ceases to exist, and the duties of the present board are at an end. Unless a sweeping change is made1, along with several large shareholders, will certainly not subscribe to the new issue, but, as dissentients, adopt another course. Not only is this the feeling of myself and friends, but of the bulk of the shareholders. I most unhesitatingly affirm that the present directors have proved themselves incapable of conducting the business of the company, or they certainly would never have allowed it to drift into debt 2,000*l.* or 3,000*l.* without calling the shareholders together, or taking them into their confidence. In my opinion they are, to say the least of it, deserving of a vote of censure, and ought not for one moment to think of seeking re-election but at once make way for abler men. I say, change your directors and manager, then confidence will be restored all round, and Van shares will at once jump up. Let me strongly urge upon the shareholders to try and be present. The power is in your hands, and whether the Van Mine is to live or die, rests entirely with you. Each one of you read and digest "Lancashire Shareholder's" letter in last week's MINING WORLD, where plain facts are put before you, and act on them.—I am, &c.,

ONE OF THE LARGEST SHAREHOLDERS.

London,
January 21st, 1891.

[Our Van correspondents will find in this week's "Mining Market" a *résumé* of what Van Mine has done for its shareholders in the past. —ED. *M. W.*]

THE "BLESSINGS" OF CIRCULARISING.

SIR,—Mrs. Malaprop said that "comparisons is odorous." Sometimes they are instructive.

I note that circularising dealers have been fattening on the fears they have succeeded in producing on ignorant and nervous shareholders.

I was pestered with advice to sell Golden Gate Alluvial shares and Golden Feathers. It is true they were 3*l.* and 25s. respectively at the time, and as a "bear" I should have got out with a profit. But how get back, when they are, as they are, *within a measurable distance of large dividends?*

As it is, I cannot get shares, bought six weeks ago, delivered.

I am personally grateful to the circularisers, as I bought more at low prices; but why cannot I *get them delivered?*—I am, &c.,

CONSTANT READER.

P.S.—I hear no snow has fallen in California and the season is a very dry one, which means "early mining."

21st January.

OOREGUM ORDINARY AND PREFERENCE SHARES.

SIR,—In your remarks in last Saturday's issue on the Ooregum ordinary shares, you observe "in whatever way they do settle it (the Court of Final Appeal) it is hard to see wherein the ordinary shares will benefit."

Surely if 15s. per share has to be paid up on 120,000 shares, *all* shares must benefit by the release of all profits for dividends.

Again, if the preference holders are condemned to find the 15s., are you sure that, failing to trace the original allottees, the ordinary shareholders are implicated?—I am, &c.,

ORDINARY SHAREHOLDER.

Weymouth,
January 22nd.

AFRICAN BANKING CORPORATION, LIMITED.

SOUTH AFRICAN writes:—"I have had a prospectus of the above company sent me, which I have carefully read, and perhaps you will allow me, as one who knows something of South Africa, to make some remarks on it, from an investor's point of view. The prospectus is full of statistics showing large increases in the imports and exports of South Africa from 1886 to 1889, but does not show that both imports and exports were higher in 1882 than they have ever been since, every year showing a great decrease from 1882 till the year the prospectus quotes first (1886).

Neither does the prospectus show that the two British South African banks are making smaller profits than they did eight or ten years ago. Nor is any reference made to the fact of two important South African banks of over 50 years' standing having lately come to a disastrous end, bringing complete ruin to most of their shareholders. From an investor's point of view it is necessary before putting one's savings into a new venture to inquire what manner of success has attended companies of a similar kind in years gone by. Judged by this standard, the history of banking in South Africa has not been encouraging.

Fifteen years ago the London and South African Bank was obliged, after large losses and all its remaining capital locked up, to close its doors, never to re-open them.

A little over 10 years since the Oriental Banking Corporation was glad to give up its South African business. This was taken over by the Bank of Africa, then being started under what were thought favourable auspices. For a couple of years it did fairly well, but by another year it was found that, out of the paid-up capital of 500,000*l.*, one-half had to be written off as lost, besides the whole of the reserve fund amounting to 75,000*l.*, two-thirds of the reserve being made up of premiums got from the shareholders on a new issue of shares.

About the same time the Standard Bank, which is universally admitted to be a carefully managed concern, had also to write off a large sum from its reserve fund.

The losses of the local institutions, both at that time and since, have been much larger in proportion to their means, and the general opinion in the colony is that few of those that remain are in a solvent condition.

The cause of all this is not difficult to seek. South Africa in the past, whatever it may be in the future, has been subject to periods of inflated trade often accompanied by violent speculation to be succeeded by times of terrible and long-continued prostration.

The speculation referred to has been generally indulged in by all classes, and has during the past 10 years been in diamond, gold and latterly in land company shares.

During these times of excitement the banks are largely applied to for advancing money on scrip, most of which stands at an inflated price, and is worth possibly a tithe of its nominal value. As long as prices keep advancing everything goes well, and large profits are made on paper, but whenever the tide turns, and the banks wish repayment of their advances, there is a terrible howl against the banks for their asking for their money again.

The opinion seems rife in the colony that the banks exist simply for the sake of advancing money to all who may apply, whatever the nature of the security may be. Even when a South African has accepted a bill or promissory note, he does not think it by any means a necessity that it should be taken up when due.

The conclusion I have come to is that investors had better leave the African Banking Corporation, with its capital of 2,000,000*l.* "to be increased by the directors at their discretion to 5,000,000*l.*, alone." This is what, from my knowledge of South African affairs, I think investors in the colony are most likely to do—they have had quite enough of banks for awhile to come.

HOLLOWAY'S PILLS AND OINTMENT.—Rheumatism and Gout.—These purifying and soothing remedies deserve the earnest attention of all persons liable to gout, sciatica, or other painful affections of the muscles, nerves, or joints. The Ointment should be applied after the affected parts have been patiently fomented with warm water, when the Ointment should be diligently rubbed upon the adjacent skin, unless the friction causes pain. Holloway's Pills should be simultaneously taken to diminish pain, reduce inflammation, and purify the blood. This treatment abates the violence, and lessens the frequency of gout, rheumatism, and all spasmodic diseases which spring from hereditary predisposition, or from any accidental weakness of constitution. The Ointment checks the local malady, while the Pills restore vital power.

LOMA GOLD.—The shares of this mine have for some time past been under a cloud, having been purchased last year by a number of weak speculators (at, by the way, three times the present price) who have been compelled by circumstances to realise, and hence the price has ruled at levels entirely unwarranted by the position and prospects of the concern. The time appears, however, now to have arrived when a change must take place, and prices again be upon the up-grade. The reports are of a very favourable nature, and information of an important character is likely to arrive within the next few days. *Verb. sap.* It should be borne in mind that the price of the shares is now so low that no further relapse can reasonably be looked for; while on the other hand every indication points to a large advance within a very short time. Shares now 1s. 9d. to 2s.—From Mr. Thos. Thompson's *Mining and Investment Circular.*

REPORTS OF MEETINGS.

THE ST. LOUIS BREWERIES, LIMITED.

DIRECTORS ISSUE A SATISFACTORY REPORT, AND DECLARE A DIVIDEND OF 15 PER CENT., BUT SHAREHOLDERS ASK FOR FULLER ACCOUNTS, PARTICULARLY AS TO DEPRECIATION AND SURPLUS PROFITS, BUT FAIL TO GET FULL INFORMATION, FOR REASONS ALLEGED.

THE second ordinary general meeting was held at Winchester House, on Wednesday, "to receive and, if approved, adopt the report of the directors and statement of accounts for the period ending 30th September last; to authorise payment of dividends; and to elect directors and auditors."

Alfred H. Bevan, Esq. (chairman of the company), presided.

D. WILLINK, Esq. (secretary), read the notice of meeting, and the report of the directors was taken as read.

RESULTS OF 10 MONTHS WORK.

The CHAIRMAN: Gentlemen, in making our appearance before you to submit the first annual report of the directors of the St. Louis Breweries, the directors have very much pleasure in meeting you, because they feel that they can do so with an open face, inasmuch as they are quite assured that you will regard as satisfactory the report which is in your hands. (Cheers.) I should like to remind you that the company was formed to purchase all the issued shares of the St. Louis Breweries Association with the exception of 13 shares, which were held by the American directors as qualification. For this reason there appears in the profit and loss account the dividend declared by the American Association amounting to 219,995*l.* odd. That, you may remember, was for 16 months, but as the company only took over the profits from the 1st December, 1889, the amount earned prior to that date had to be paid to the vendor, and after payment of that account the sum which will remain available for the purposes of this company as shown in the profit and loss account is 158,319*l.* odd. Consequently the period covered for the accounts herewith is 10 months. That I wish you to distinctly recollect, because I think it is currently thought in London that we are paying a dividend for 12 months, whereas we are only paying for 10 months. (Cheers.) Holding, as we do, only the shares of the American Association we have not any strict right, nor would it be politic to publish the accounts of that association, but the shareholders will be interested to know that the profits have enabled the American board of management, prior to the declaration of the dividend mentioned, to

WRITE OFF A SUBSTANTIAL DEPRECIATION,

which, I believe, is referred to in the report under the heading of 40,000*l.*, by which the valuation of the beer in stock has been written down. I wish to explain to you that the 40,000*l.* has been written off profit and loss account by calculating the beer on hand on the 1st October at a lower price per barrel than the price at which previous stocks stood in the books of the American Association. The beer was taken at a fair valuation, not a fancy valuation, and has been written down to the value named in order to place ourselves in a proper position. The company when first started purchased 18 breweries from the association, but it has since been found advisable to sell two of them, but I wish to ask you not to consider for one moment that we have lost the trade of those two breweries—their trade has simply been absorbed by the other breweries, so that we do not lose anything at all.

PROGRESS OF TRADE.

It will be interesting and satisfactory for you to know that the sales for the 10 months have amounted to 686,747 barrels, which is at the rate, for the year, of 824,096 barrels. This shows an increase on the corresponding period of the previous year of something like 41,000 barrels. (Cheers.) I think that in itself is sufficient proof and evidence of the stability of the company. (Cheers.) In St. Louis we have never professed for one moment to tell you that there were no other breweries there, but I am very happy to tell you that the relations between the one or two breweries which do exist and ourselves are most friendly, and everything appears to work most smoothly. There is no real opposition at all. It is satisfactory to know that

A LARGE NUMBER OF THE COMPANY'S SHARES ARE HELD IN AMERICA.

That alone is an immense proof of the confidence that is felt by the Americans themselves in the prosperity and stability of the company. Something like 120,000*l.* worth of shares are held over there, which is an enormous amount. Those shares are held, as Mr. Milburn reminds me, by our local board on the spot. I may not be wrong in stating that Mr. Ellis Wainwright, who is our director and president, alone holds 30,000*l.* worth. (Cheers.) The directors have felt extreme regret in the delay in publishing the report and accounts, but it has been caused largely through a slight misunderstanding which arose as to the proper date on which the auditors should arrive in St. Louis. I am happy to tell you that the directors have now made such arrangements that it shall not occur again, and also that the dividends shall be made payable as nearly as possible during the early part of June, and the early part of December every year. I do not intend to say very much more to you, but I think the report is full in itself and very satisfactory. I should not be doing right if I did not for one moment refer to our friend Mr. Ellis Wainwright. He, as you probably all know, is our president in America, and we have had the honour and pleasure of seeing him during the last year in England for some months, and during those months had an opportunity of forming our own opinion of him, and that opinion is briefly this—that in Mr. Ellis Wainwright we have a true friend to the company. Not only that, but he is a gentleman of high standing and position over there, a practical brewer, and very much interested in the brewery. We have had very great confidence in all that he has done for its success. I think that fact alone will be a great inducement to you to have great confidence in the company. The London directors are no men of straw. They are not what are called "guinea pigs," but they are all connected more or less with commerce in London, and are well able to look after the interests of the company. (Cheers.) Two or three of them are connected with the breweries of London, and are more or less practical brewers, and the remainder are practical business men, who give to the company their time and their constant advice. I regret that I have not yet had the opportunity of visiting America—I wish I had—but we are happy to see present two gentlemen, Mr. Monro and Mr. Milburn, who have made personal acquaintance with the breweries, and are able to give you the fullest information you may require. I shall, therefore, ask Mr. Milburn to make a few remarks upon the breweries, which I have no doubt will be most interesting to you. I beg to move "That the report and accounts, as submitted, be approved and adopted," and in the meantime Mr. Milburn will, perhaps, kindly say a few words. (Cheers.)

VIEWS OF AN EYE-WITNESS.

Mr. ROBERT MILBURN (director), who was heartily received, said: I have great pleasure in seconding the adoption of the report, and as the chairman has called upon me to say a few words to you respecting my recent visit to St. Louis, I think I should like to explain that I have very carefully inspected our different properties out there, and can assure you, from personal knowledge and careful examination, that they are most excellent breweries, magnificently equipped, and doing, as you know by the results, a very satisfactory business. I will not say very much respecting the management, but will leave my colleague, Mr. Monro, to deal with that. He knows the gentleman concerned more intimately than I do, but I must express my view, that it would be quite impossible for our institution to be managed in a more straightforward, able, and energetic manner than that in which it is being managed by the present board, especially under the guidance of Mr. Ellis Wainwright. Wherever I have been in America I have heard these breweries spoken of in the highest terms, and Mr. Wainwright referred to as the man *par excellence* to manage a large undertaking like this. (Cheers.) You may think we are harping upon the question of management too much, but, as business men, you may see its vital importance. (Hear, hear.) It is easy to spoil a good undertakiug by having inferior and improper management, and, therefore, I should like you to clearly understaud that we have a good (and if any shareholder has been able to make enquiries respecting our represeutatives in America they must be extremely satisfied) president and board of management supporting him. I should like to say one word with regard to the question we hear mooted in different localities as to the opinions of American breweries generally. Perhaps I ought not to dispose of your time in this way, but I have heard from different shareholders that they hear

DIFFERENT OPINIONS AS TO AMERICAN BREWERIES.

I think there is one matter to guide your views materially, and that is—carefully see from whence you get the information. If you get the information from people who know nothing about breweries, who have taken their views from people as ignorant as they may be themselves—I say, receive it with caution. (Cheers.) Now, if you look, and see who are those who have given you a fair idea of the business, who recommend these American Breweries, and who hold them in high reputation (there are indifferent breweries of course, but I am speaking as to the majority and the best), when you hear that these men have carefully examined the properties, and know a great deal about the busiuesses and the trade generally, and find that they are those who have carefully inspected the breweries, and made all necessary inquiries, then I think you must admit that credit is to be placed upon their statements rather than upon those of persons who have not been to America, who know nothing about the trade, and who are therefore disqualified from expressing a correct opinion. (Cheers.) The chairman has succinctly, but pretty fully, given you his view of our business, and I hope you will consider his statement to be satisfactory. (Cheers.) The chairman has explained carefully the 40,000*l.*, as to which there has been some little misconception. We have even heard it said that the directors have written off 40,000*l.*, because the beer was bad. Now, we do not know what bad beer is in St. Louis, and, consequently, we should be dishonourable if we put it in our balance-sheet that we had written off from actual profits if it had been upon a deterioration of quality. The beer was valued at the time at a fair valuation, and that which pertaius to a great many breweries, but, inasmuch as we have had a successful year, it was thought prudent to form a sort of reserve to conserve our resources, and to write down our stock by this sum of 40,000*l.* There has been some little confusion inregard to that point, and, therefore, I hope after this explanation every shareholder will understand it. With regard to the valuations, of course you have your own auditors, who have looked into them. We have informed you that Messrs. Price, Waterhouse and Co. have examined the accounts, and they will tell you that these valuations are extremely liberal. I do not know that I have very much more to say, but I should like my friend Mr. Monro, who is so well acquainted with the St. Louis Breweries, to address a few words to you. (Cheers.)

VIEWS OF ANOTHER EYE-WITNESS.

Mr. RUSSELL H. MONRO (director), who was also received with cheers, said: Gentlemen, I have visited St. Louis three times in the period which embraces the present report, and on the occasion of each of these visits I became more and more satisfied as to the solid nature of the business, and also as to its future success, and on each occasion I was more impressed with the immense advantages of the combination, and the way in which the management was being conducted. During each visit I became better acquainted with our managers, and I can safely say that you cannot fiud anywhere a more competent, intelligent, hard-working board than we have in St. Louis. Many of these men, I am proud to say, have become personal friends, more especially our president, Mr. Ellis Wainwright, whose ability, integrity, and shrewdness is acknowledged all over the United States. In this

great city of the West, where the population has nearly doubled in the last 10 years (for the census of 1890 was nearly 600,000 inhabitants as against 325,000 in 1880), the increased value of real estate is so great that it is impossible for you, even in this City of London, to realise it, for cities like Chicago and St. Louis show increased values in 10 years such as would take 100 years even in London. As to the business done, what our report shows is an increase of 40,000 barrels, but the fact is that we may really call our increase 66,000 barrels, for our directors in St. Louis have cut off some shipping, or foreign trade, at great distances from the city, because it was unprofitable, and our home sales are now actually 66,000 barrels in excess of the corresponding period in the previous year. The proper way to look at the report is this : if the whole capital was paid up you require 72,000*l.* a year to pay your preference shares, and at 15 per cent. you require 135,000*l.* for the ordinary shares, which together makes 207,000*l.*, and you have really earned at the rate of over 240,000*l.* If you will take up your reports you will see that you have the profits for 10 months set down at 158,000*l.*, which your directors advise you to appropriate according to the report. To make the 10 months into a year you have to take an estimate for the two months, say one-fifth of that 158,000*l.*, which is about 32,000*l.*, you have then the 40,000*l.* written off the value of beer in stock, and you have a further sum of 13,000*l.*, which it has been thought advisable to write off as a loss arising from the closing down of the Miller Brothers Brewery, which, of course, is no real loss, as you have still the Miller Brothers' trade, carried on by other breweries on far more advantageous terms for the future, and this loss will not occur in another year, neither will the 40,000*l.* be written off the beer in stock. By doing this latter you merely carry forward that amount of profit to future years, and it is just the same as if you had taken out the beer stock at the same price as the previous year, and carried that 40,000*l.* to an ordinary reserve account. Economies in the management from the amalgamation are yet in process of development, and cannot be fully felt for at least another six months, as in so large a concern it has been found impossible to bring about radical changes all at once. For the coming year we are especially favourably situated with regard to materials, as all our malt and hops are already purchased and paid for, at prices which compare favourably with those embraced in the present report.

WHAT IS THE SUM?

As to the depreciation, it was impossible to deal with that in your prospectus, as all these 18 breweries were separate concerns, and had not then been amalgamated, and so the profits were given, stating that they were without depreciation, and on such a gigantic property you may well imagine this is no inconsiderable sum. I do not suppose that anyone in this room knows more about this splendid business than I do, as I have resided on the spot and investigated every part of it most thoroughly, and I tell you that I this day hold five times the number of shares that I did when the company was floated. Before I sit down, gentlemen, I should like to say a few words about American breweries generally, if you will give me a few minutes more of your attention, and the subject I should like to touch upon is the unaccountable distrust that seems to exist about these American breweries.

AMERICAN BREWERIES AS INVESTMENTS.

I have endeavoured to trace the cause of this, and I can safely say that one of the most important reasons for this distrust is the superficial view taken by brokers and dealers in the market. It has constantly occurred to me that after advising friends to invest in these breweries that they have told me that they have been dissuaded from doing so by the advice of their brokers or their bankers. The only reason for this advice that I have been able to discover is that these brokers and dealers have not taken the trouble to gauge the actual position of these breweries, and in talking with them personally they have been totally unable to give any sound argument whatever for their views. The replies that I most constantly receive are, first, that they do not believe that cute Americans would sell them if they were such splendid concerns ; secondly, that they are always hearing of competion going on to ruin English capital. Neither of these are sound arguments. The reasons that these businesses have been sold are the same as have caused the conversion of all the old-established businesses into limited liability companies in this country. In fact, these American vendors have had even greater reason for the sale of their properties, because the progressive nature of their businesses has compelled them to re-invest all their earnings in their own concerns.

MR. MONRO'S PROOF OF CONFIDENCE.

Having built up their businesses, they like to retire and realise a portion of their savings, which they have put back for so many years, so as not to have all their eggs in one basket. Yet even then what do we find? They do not sell by any means all their holding, for we know that out of the 15,000,000*l.* capital of these American breweries over one-fourth, viz., nearly 4,000,000*l.*, is held by the Americans themselves. With regard to the competition, I, as a practical brewer of many years, know well what competition we have had to face in this country, but still you must all admit that brewing businesses with us at home have proved exceptionally profitable ; and I can safely say that fear of competition for American breweries is very much less than in this country. So strong were my personal feelings in this matter, that after I had been several months in the United States and thoroughly investigated the future prospects of these splendid businesses, I sold out my capital from a very successful provincial brewery in England, and invested in American breweries. Further, if this competition is such a bugbear, is it not strange that in most of these American breweries, especially in St. Louis, City of Chicago, and Bartholomay, the presidents of the American companies should be the largest shareholders? Competition is a bugbear to England with its 3 per cent. increase in population, but in the United States, where the population has increased from 30 millions to over 60 millions within the last 20 years, there is room for all. With regard to the St. Louis Breweries, as your chairman has already told you, I do not think any business could possibly be on a safer footing. There are only two other large breweries in the city, and both of these do chiefly what is called a foreign or shipping trade, and with both these breweries, with whose presidents I am personally acquainted, we have most amicable relations and business-like arrangements against interference with each other's trade. (Cheers.)

DISCUSSION COURTED.

The CHAIRMAN then invited the fullest discussion, and promised to answer all questions that could be replied to without detriment to the business.

Mr. Carter, Mr. Gillford and other shareholders having made some remarks on the report and accounts, and particularly asked questions as to the depreciation account and the holdings of the directors in the United States,

The CHAIRMAN explained this was not a trading company, but held the shares of the American Association, and looked for its income to the dividends declared on those shares, so that it would not be proper to publish the American accounts, but that shareholders could have the fullest information on calling at the office. There was a large interest in the company held on the other side.

Mr. GILLFORD (Bristol) said he thought the accounts should be more fully stated, and that there should be a trading account. Let the accounts, in other words, be presented like those of English trading concerns.

The CHAIRMAN said it must be borne in mind that the company had competitors who would be only too glad to get hold of their figures and use them for their own purposes.

Mr. MONRO explained that Mr. Carter was under a misapprehension in dealing with figures in the prospectus as he had done, and showed that the anticipations had been verified, that the mortgage debt was not repayable for 25 years, and no anxiety on the part of holders to sell the bonds.

After unimportant remarks by Mr. DUNCAN, the report was unanimously adopted, as was also a subsequent resolution with refereuce to the dividend mentioned in the report.

Mr. MONRO proposed the re-election of his retiring colleagues in eulogistic terms, and Mr. GOODRICH seconded the motion, which was carried.

The auditors were re-elected, and the meeting closed with votes of thanks to the directors in America and in England.

THE MOUNT ALBION SILVER MINING AND SMELTING CO., LIMITED.

A "FORMAL" MEETING CALLED, WHICH TURNS OUT TO BE IMPORTANT—DIRECTORS TAKE STEPS TO IMPROVE THE MANAGEMENT AND INCREASE THE RETURNS FROM THE MINE.

THE sixth ordinary general meeting of the company was held at Winchester House, on Thursday, but the directors proposed that the meeting be held *pro forma* only, and adjourned to a day in March next, of which due notice would be given. The notice stated "the yearly accounts are now being prepared by the accountants, and it is proposed to lay these before the shareholders at the meeting in March, as before."

Mr. J. I. Wright (director) presided.

Mr. T. E. SMITH (secretary) read the notice of meeting.

DIFFICULTIES INVOLVE FOUR MONTHS' DELAY.

The CHAIRMAN : Gentlemen, I have to apologise for Mr. Sichel, who is unable to fill the chair to-day, because of an indisposition through which he has almost entirely lost his voice. The past financial year has been one of grave anxiety to your directors. In the first month we were suffering from a drought which had continued for a considerable time. Our water was exhausted and we were unable to continue smelting. The drought was followed by heavy torrential rains—so heavy indeed, that in the low lands there was a flood, and in the upper lands the roads were almost impassable. No less than 3*l.* per ton was demanded for the carriage of ore from the mines to the smelter, a distance of only two miles. Besides that our fluxes were saturated with water rendering it almost impossible for smelting operations to be continued with anything like chance of profit—in fact, there was considerable loss. This state of things lasted for nearly three months, and hence, four months out of the working year were stopped by misfortunes, over which no person had any control, and so we could not earn those profits we had hoped to do when we last met you. About this time, or some little time after, on examining the cost-sheets we discovered that though we were paying 500*l.* more each month for development work, still there was a decrease in the output and in the bullion produced. This determined us to seriously consider the management. After considerable consultation we determined upon a change, and wrote to Messrs. Moffat and Young to that effect—in fact, we gave them notice of the termination of their agreement with us.

CHANGE OF MANAGEMENT.

This determination was only arrived at after the gravest deliberation, because you must acknowledge that gentlemen who had been the owners of the mine, who held between 70,000*l.* and 80,000*l.* worth of shares, and who had made a present to us of 20,000*l.* on the past year, deserved some recognition from us, but we thought that the interests of the shareholders demanded that there should be at any rate a new manager. After advertising we engaged Capt. Rogers. I might say that some little time after that letter was received at Mount Albion we had a most imperative demand from the Queensland Bank ordering us immediately to reduce our overdraft. This overdraft had existed from the very formation of the company, and when I tell you that in the last month of 1889 it was something between 10,000*l.* and 11,000*l.* you may understand that the determination of the bank

CAUSED SOME LITTLE FLUTTER IN THE DOVECOT.

I am happy to say that within 48 hours we had wiped off the whole of the overdraft—(loud cheers)—and I am still happier to say that at the present moment our total indebtedness here and abroad is not more than 1,000*l.* or 1,200*l.* Reverting to Capt. Rogers, the terms upon which we agreed with him were 650*l.* per annum, with a share of the profits after the shareholders had received 10 per cent. He arrived at the mine on October 16th, but previous to starting in August we had asked him to make a thorough examination of all our property, and to give us his honest conviction of its prospects. We have received a voluminous report from him in which, though he

grumbles considerably at the method in which the mine has been conducted in the past, he stakes his professional reputation upon

THE GREAT VALUE OF THE MINES.

though he insists that it is necessary we should go deeper. He says that the direction of the mines has not been what it might be, and that the levels are more like burrowiugs than galleries; whilst the object seems to have been to some extent to pick out the eyes of the mine. The character of the ore has largely altered during the year, and, recognising this, the manager recommends that we should have coucentrating plant, but this is a question of such vital importance, that we shall not decide upon it without the fullest information. Since he has been there, in November, there has been a considerable increase in the amouut of bullion produce. In December (the month in which he had the full charge) there were 12 days during which the furnace was shut down for repairs, but duriug the 14 working days that remained, he produced bullion at the rate of 140 tons a month—an excess of about 20 per cent. over any month's production during the past year.

A DISCOVERY.

Since then we have received a telegram that he has discovered a quantity of smelting ore in the West Albion. Probably the observations I have made will dispose of the rumour that has been circulated, that the directors are nominees of the vendors. That is disproved by our sendiug out a new manager to displace those gentlemen. (Hear, hear.) There have been also rumours that the company was on its last legs financially, but that has been disposed of by my statement that our total indebtednes is at present only between 1,000*l.* or 1,200*l.* Mr. Wilsou has lodged with the directors a notice that he intends to offer himself for a seat on the board, and as he holds 5,000 shares, and has been to the mines and knows a considerable amount about them, we shall welcome him, if elected, with great cordiality, for it will take a part of the burden from our shoulders. (Cheers.)

NOT A FORMAL, BUT AN IMPORTANT, MEETING.

Mr. C. RAPHAEL: The notice sent out stated that this would be a "formal" meeting, and doubtless that expression has prevented many shareholders from attending. The room is nearly empty, but I think it would have been full if those words had not been put in the notice. We have been almost 10 months without information, and though two meetings are required by the articles of association, they should be held at distinct intervals of six months, and not almost together as in this case. I have looked into the returns, and find that the bullion produced iu 1889 showed an average of 266 ozs. of silver to the ton, whereas in 1890 we only got an average of 175 ozs.—showing that the ore has become poorer. In November, 1890, we averaged 79 ozs., and in December, 1890, 187 ozs. to the ton, but the whole averaged much more. We smelted in 1888-90 652 tous with the small smelter, but with the large smelter, of which we heard so much before it was erected, we only smelted 560 tons; so that with the small smelter we did better than with the two combined. I should like to get information about that. The managing directors receive 1,000*l.* a year, but as they have now been displaced I should like to know when their pay ceased, and also whether it is true that the managing director has been absent for seven months from the mine. These are important questions which most of the shareholders would like to have answered. As to the West Albion discovery—are the ores uscd as a flux?

The CHAIRMAN: They are smelting ores, and I cannot tell you much about them as we have only a telegram.

Mr. RAPHAEL: I have beeu told that we will require to smelt our ore with some flux—a baser ore.

"WHISKEY BOTTLES" AS A "FLUX."

Mr. SICHEL (director): We have been using whiskey bottles.

Mr. RAPHAEL: Did we find bottles in the mine? (Laughter.)

Mr. LOW: I am an original shareholder and should like to ask how the present output compares with what it was when this company was floated in London. The shareholders were indicated as likely to have a dividend of 21 per cent. on a capital of 200,000*l.* Now, we have 1 per cent., and if we are only producing the same as two or three years ago I think the outlook is not bright.

The CHAIRMAN: The output is greater than stated in the prospectus. I was not connected with the board at the outset, and am, therefore, free to say that I do not think anything has happened to cast reflection on the original board. Previous to the telegram about the West Albion discovery we received a letter urging us to find means to carry the shaft down, and we think he has done that, and that this is a result.

Mr. RAPHAEL: I understood that we had great difficulty in getting flux, without which smelting is impossible, and that if you have to bring it from the outside the freight is excessive.

The CHAIRMAN: I believe Capt. Rogers has discovered flux on the property recently.

NOT TEETOTALERS AT MOUNT ALBION.

Mr. WILSON: I do not think there has been any want of flux, and some of the ore can be smelted without it. One flux is ironstone, of which we have an abuudance. At other times limestone is required—it all depends upon the nature of the ore. I believe the mauager has also found "whiskey bottles" useful, and they can be had by the cartload. (Laughter.)

Mr. SICHEL: Bottles have a lot of alkaline and salt in theu, and much of our metal can be only fluxed with salt.

The CHAIRMAN: The ore has been a little poorer since last year, and I have giveu you the reason why so much bullion has been produced—the drought followed by torrential rains. So that it was impossible to turn out the same quantities. The ores are very refractory, and it was the advent of Capt. Rogers that put matters right. It is impossible to determine beforehand the exact production of a mine, because you are dependent both upon the quantity and quality of the ore. That the quality should have been deficient is our misfortune and not our fault, and we regret it quite as deeply as you do.

Mr. RAPHAEL: That is the very qucstion I asked, and the very explauation I wauted to have. We have been told that the ore has become poorer and the mine has been mismanaged.

The CHAIRMAN: We did not believe in the management, or we should not have sent over Capt. Rogers. The secretary has supplied me with information in reference to the amount of silver in the ore raised per ton. From November, 1887, to November, 1888, the amount of silver was 50 ozs. to the ton, and in 1889-90, 45 ozs. The less silver the greater the difficulty in extracting it. There is no doubt the former owners took all the silver they could get at surface, and did not do development work. We have 6,500 tons there which do not appear in the accounts at all, but this would yield 20 to 30 ozs. per ton. We are waiting for full information from the manager as to the cost of the concentrating plant, and you will be called together in March to consider the meaus of raising the wherewithal to provide it, should it be deemed necessary. We have no proof of the absence of the managers from the mines for six months, and there has always been one there.

JUSTICE TO THE VENDORS.

Mr. SICHEL: They spent 1,000*l.* out of their own pockets to increase the returns, and have behaved most honourably, and iu a manner quite exceptional.

Mr. BROWN thought the management required a good deal of criticism, and although the vendors might be very gentlemanly, the shareholders had suffered severely from their counection with them. An inducement to investors here was that the vendors held so many shares, and he would like to know how their account now stood. He supposed the meeting in March would be to ask for more money.

Mr. SICHEL said that no mouey would be asked for if it could be avoided.

Mr. BROWN expressed the hope that the directors would meet the shareholders with a full report at the forthcoming March meeting. He understood that this was to be a formal meeting, but the business had turned out to be very important, and particularly the statement from the chairmau.

The CHAIRMAN promised that as full a statement would be laid before the meeting next March as possible, but when the directors were asked to be prepared with an answer on cvery subject that might be raised they were asked to do more than ordinary man could comply with. The directors had done their duty to the company as well as if the affair were entirely their own. (Cheers.) They had worked only with one object in view.

Mr. BLYTH (director): The interest of the vendors is still represented by 78,000 shares which are here and are not for sale.

The CHAIRMAN: The balance-sheet is in the hands of auditors, and the result of the year will show that we have worked at a profit. (Cheers.)

A SHAREHOLDER: You stated that the character of the ore had altered.

The CHAIRMAN: Yes; iu the sense that more difficult treatment is required.

DIRECTORS HOLD 14,610 SHARES.

Mr. SICHEL: Not a single transfer of a share belonging to a director has gone through the office during the last six months. My holding is 5,700 shares, and with those of my immediate circle it is 8,700 shares—every one bought at 1*l.* and eveu at oue guinea.

The CHAIRMAN: I bought a considerable number last year at 21s.

Mr. RAPHAEL: I will say that Mr. Smith, the secretary, has given me every information courteously and fully when I have called at the office.

The resolution was carried.

Mr. WILSON promised to do all he could for the company, aud said when he returned from the mine he bought 5,000*l.* worth of stock. With careful management he thought they would have a better year in 1891 than the past had beeu.

The CHAIRMAN was thanked for presiding.

THE APPALACHIAN, LIMITED.

MINE WAS SHUT DOWN ON JANUARY 1ST—GOLD ORES REDUCTION COMPANY APPALACHIAN'S BEST CHANCE—DIRECTORS WHO HAVE SERVED THE COMPANY FAITHFULLY—COL. McCOY'S SHARES AND COL. McMURDO'S ESTATE.

THE ordinary general meeting of this company was held at the Cannon Street Hotel, on Thursday.

There had been a postponement necessary, because all the accounts had not been received from the mine; "also, the directors consider it to the advantage of the company to give the manager the further opportunity he requires to complete the developments referred to in his reports, and enable him to give a definite opinion as to the prospects of the miue."

John Ogle, Esq. (chairman of the company), presided.

Mr. CHAS. E. GREEN (secretary) read the notice of meeting.

MINE SHUT DOWN.

The CHAIRMAN: Gentlemen, when we issued this report we had not the whole of the vouchers to submit to the auditors, and thought it better to postpone calling the meeting until the accounts were in regular form, more especially as many of the shareholders expressed the wish that the accounts and reports should go out before the meeting. We have 3,446 shareholders, and the expense of sending out twice to them is considerable, and would have reduced our small available balance. The report of the directors, as well as the reports sent to the Press, give you the unfortunate result of our operations at the mine, and we have very little more to say except that, pending this meeting, under our instructions, the mine was closed down on January 1st. It is a question for the meeting to decide what shall be done, and meanwhile we have certaiu suggestions to offer which will enable you to form a further judgment. The ore produced from the mine is difficult to operate upon—it contains a kind of greasy substance that prevents us from getting out the gold. Now, the Russell Company has made arrangements with the

GOLD ORES REDUCTION COMPANY

to treat their ore. That ore has been treated here, and it is found that the bulk of the gold can be extracted. Now, one of our suggestions is that we should keep our mine in charge of watchmen at a small cost, until we know what the result is of dealing with the Russell ores. Should it be successful, then I have no doubt the Gold Ores Reduction Company will be willing to put up the necessary plant, and work for us on a similar basis. Of course they may alter their terms

somewhat when they find what is the cost of working the Russell quartz, but they have not been successful in getting any quantity of rich ore yet we, have enormous quantities of low-grade ore, which have not been tried because we have had no means to do so, but this Gold Ores Reduction Compauy may show us a way out of the difficulty.

THEIR MACHINERY IS ON THE RUSSELL MINE

already, and we shall soon know the result. There is another patentee. called Mr. Pomeroy, who is working the Chapman Mine, and who wishes us to wait for his results also. In his case he has a mine, but not the machinery, and his idea is that we might work together—we using his process and he using our machinery. Those are questions quite in their infancy, but they involve better issues than are put before you in our report. Both these patentees are very confident of success. Of the members of the old company only 222 remain, and the new shareholders are 3,224, so that I think it would be wise to let the latter know how the company was formed, and other particulars as to what we have done as directors. On the formation of the new company four directors were appointed, two of them being directors of the old company, Mr. Martineau and Mr. Cadogan, whilst Mr. Cummins and myself were asked by some of the largest shareholders to join the board, and we have stuck to our posts. (Cheers.) Mr. Cadogan has only just resigned, but we have had the knowledge of his experience up to now. The capital put down in the accounts was that of the old company and its debentures. We had to issue 5s. shares, and, therefore, there were four shares given for every previous 1*l*. share. The contract was one which had been agreed to by the old company, and which we could do nothing but fulfil. We paid off all the debts and debentures of the old company, and have had 7,300*l*. to work with. the bulk of which has been spent, and I do not think we could have been more economical than we have been. Mine managers are very expensive, and the whole establishment was formed on the basis of Mr. Tozer's report, which was of a very favourable nature. Acting on our instructions, he appointed Mr. Skyrme manager, and after a time we wrote asking him to carefully read Tozer's report, and make his notes of it as to how far he agreed or differed, and the reply was that he confirmed Mr. Tozer's report entirely. It is only up to a recent period that he failed to say that he was satisfied with the mine, so that

THE BAD NEWS CAME UPON US VERY SUDDENLY INDEED.

The board are in a degree dissatisfied with Mr. Skyrme because he did not lead us up to bad news. The good news and the bad followed each other quickly, so that we were unprepared for it, and unprepared equally to advise the shareholders. The moment we heard the bad news we called this meeting, and should, indeed, have done so earlier if all the information we wanted had been in our possession. The main question is what course shall we adopt in the future? We think that by employing a night and day watchman, and somebody in charge, the expenses can be reduced to about 42*l*. a month, and in the meanwhile we shall learn what the Gold Ores Reduction Company has been able to do for our neighbour, the Russell. I have only to express my willingness to give any information, and I now move the adoption of the report.

Mr. CUMMINS (director) seconded the motion.

A SHAREHOLDER: Will you give us information as to the head office expenditure, 627*l*., and the item of sundry creditors in London, 210*l*.

AN EYE TO THE MARKET.

Mr. BLINCO: When anybody comes to a mining meeting knowing that the mine has been a terrible failure there is a disposition to examine into something, and to criticise something if possible. We cannot criticise the mine, and therefore must confine our attention to the accounts. I scarcely expected a suggestion from the chairman that would afford much ground for hope, and I cannot follow his remarks with regard to 42*l*. a month for night watchmen and a caretaker. Such details are highly interesting to the board, but I should like to know as to what will eventually help the price of the shares, for that is my sole interest. I gave 2s. for my holding, and the probable value to-day is 1½d. You have spent about 7,000*l*. at the mine, which has been reduced by bullion won to about 6,500*l*., and after paying sundry creditors you will have about 1,000*l*. in hand as on 31st October last. Can you not issue the 42,880 shares at a price that would, say, produce 1,000*l*.

The CHAIRMAN: We cau only issue those shares at par.

Mr. BLINCO: It does not make much difference, as the figures stand the same. I anticipate that the miue will be hopelessly stopped in about six months' time unless you can put before us some different scheme from that what you have recommended to-day. Personally, I should like to know the worst, in order that I might cut the loss. On a report like this nobody can find anything to say but that the money has been lost.

A SHAREHOLDER: Have the directors taken their fees since the mine has been in such low water, and do they intend to do so?

ARE DIRECTORS RESPONSIBLE FOR THE MARKET?

Mr. JAMES MCKEAN: I fancy the shareholders will be rather inclined to meet the report with a negative. To move a resolution of that kind will show at once a want of confidence in the board and in directors who have seen the shares drop from 2s. 6d. to 1½d. The balance-sheet seems to me to be a very questionable one to issue. First of all, the directors have only taken account of the net amount which has been realised from the reconstruction, but, as a matter of fact, the total amount realised was between 34,000*l*. and 35,000*l*., and 28,000*l*. seems to have gone, nobody knows where. We have a perfect right to ask where that money is, what was the cost of re-construction, and how much debenture capital was paid off. The cost of the mine is put down at 333,000*l*., and the result of one year's work is 1,141*l*., which costs something like 5,000*l*. to get—that on a mine standing at one-third of a million as its nominal value. The shareholders will think that the whole thing is childish. The question may come up later as to what ought to be done, but I should be quite prepared to move a vote of want of confidence in those who have hitherto managed the company, and whatever may be the issue we cannot do worse than by having fresh men put in their places. The present board have had a very fair trial, with an unsatisfactory result. I hold 600 shares which cost me nearly 2s. each.

Mr. BLINCO: I will second any motion for a committee of investigation that you may move.

WAS THERE AN APPALACHIAN "BOOM."

A SHAREHOLDER: What is the present holding of the directors. Have they unloaded on the top of the "boom?"

The CHAIRMAN: I never was a large shareholder. I hold 1,000. I was asked to join the board to try and save the company, and I have done my best under great difficulties.

Mr. CUMMINS: I hold about 7,000 shares, and had only 1,000 in the old company. (Hear, hear.)

A SHAREHOLDER: What is the selling value of the plant at the mine?

The CHAIRMAN: The directors' fees are 100*l*. each per annum, and for three or four months I have devoted the greater part of every day to the business of this concern. The directors' fees for 16 months are 533*l*. There are only two now, and they will be reduced in that proportion. The rent is 235*l*.; salaries, 162*l*.; books and stationery, 79*l*.; audit fee, 46*l*.; and general expenses, 11*l*. Deduct the transfer fees (395*l*.) and you have the cost of the London office, 627*l*. The new board had nothing to do with the re-construction, but when put in office they found certain contracts which they were obliged to carry out. The company has a claim against the estate of the late Col. McMurdo of 106*l*. owing to an error, and there are sundry creditors in London—Col. McCoy 30*l*., and Capt. Montague 73*l*. (which he does not intend to claim), and the auditor 46*l*. (since paid), and documents connected with the mortgage 27*l*.

A COMMITTEE OF INVESTIGATION PROPOSED AND OPPOSED.

Mr. MCKEAND: I propose: "Resolved, that the further consideration and adoption of the report and accounts be deferred until the report of a committee of shareholders now to be appointed has been received, and that the directors and officials be desired to afford them all the information they may require."

Mr. BLINCO seconded the motion.

The CHAIRMAN: We shall resolutely oppose this amendment, because we know we have done our duty fully and honestly. I have no desire to remain a director of any company where my services are not required, but I ask those who think we have done our duty to vote against the amendment.

Mr. BLINCO: No one has said you have not done your duty, but you need not oppose inquiry.

The CHAIRMAN: We shall oppose anything in the nature of a committee of investigation, though we are extremely anxious, and intended to propose it ourselves, that three of the largest shareholders should be deputed by you to examine with us into, and consult upon, the business of the company.

STRANGE ASSERTION.

Mr. BLINCO: I cannot allow the chairmau to have the last word. He has suggested a committee of his own selection.

The CHAIRMAN: Most certainly; I did nothing of the sort. (Cheers.)

Mr. BLINCO: Practically it will be so, and a committee of the sort you mentioned will not satisfy the wishes of the shareholders.

The CHAIRMAN: I distinctly ask you to nominate your own committee, only with the proviso that they should have a substantial holding in the company. They will then report to a future meeting. We have nothing to conceal, but this gentleman has the impertinence to say that I want a committee of my own choosing, when I said nothing of the sort. We have proxies sent unsolicited by large shareholders, but these we cannot use unless there is some factious opposition. We shall be

HAPPY TO MEET A COMMITTEE IN CONFERENCE.

Possibly while the committee are acting we may get further advices. Col. McCoy is the largest shareholder, and he has sent his son to report on various facts, and will let us have the result. The estate of Col. McMurdo is also largely interested. All these facts can be put before the committee, who can make suggestions as to the futurc.

Mr. BLINCO: Are the directors going to draw 100*l*. a year?

Mr. WHITEMAN: Do you expect directors to do your work for nothing? (Cheers.) I thiuk their fees are very moderate. If you want to make a man do his duty you must pay him. (Hear, hear.)

MR. OGLE WARM.

The CHAIRMAN (warmly): I have not been paid the salary of a clerk. No clerk in the City of London would have spent the hours in your service for the same rate of pay as I have done. (Several VOICES: We will support you.) We do not propose to fill up the vacancies on the board. Our policy of waiting is distinct, and definite. We want to see what will be done for the Russell ores by the Gold Ores Reduction Company. We are following the footsteps of the Russell, who have faith, in which quality I do not abound. The properties are, however, identical, only in the opinion of the vendors and Mr. Tozer ours is better—at any rate it is no worse. We have about the finest mill to be found in those parts, the cost of which was over 20,000*l*. It is impossible to say what it will sell for. If sold, the person who takes it ought to buy the mine also. It is quite true that Mr. Tozer got excellent results from the crushings, and so also did Mr. Skyrme as long as the good ore lasted. I am bound to say I think Mr. Tozer's report was too strong, but what could we do but act upou it?

COL. MCCOY'S SHARES.

A SHAREHOLDER: Does Col. McCoy hold the same number of shares as he did at the meeting in 1889?

The CHAIRMAN: Oh, no. He has sold a large number, but holds a very large quantity still. Originally there were 360 members in the company, aud now only 222, so that the balance must have sold their shares, and in justice to Col. McCoy, it should be stated that he had to pay off the debentures, and he took up a lot of shares that would not otherwise have been taken.

A SHAREHOLDER: The directors ought to have had better prospects before them before they recommended us to go into this re-construction.

The CHAIRMAN: We never advised you to do anything of the kind. It was after the re-construction that we werc asked to come and aid you, and we have done so to the best of our power.

(Cheers.) We oppose the amendment, but the same result will be achieved

IF YOU TREAT US IN A GENTLEMANLY MANNER.

The amendment was then put and lost, whereupon the original motion was put and carried.

The following gentlemen were then unanimously agreed to as a committee: Mr. Wightman, Mr. Norton, and Mr. McKeand.

Mr. BLINCO: I shall propose myself. (Laughter.)

The CHAIRMAN: I shall decidedly object to your nomination because of the impertinent character of your remarks. When a gentleman gets up to address a meeting he ought to know what he is talking about. I have worked my hardest for this company, and consider your remarks most unjustifiable. I also object to the nomination of Mr. McKeand, who has made strong remarks.

APOLOGY *v.* EXPLANATION.

Mr. MCKEAND: I do not think I referred in any personal manner to the directors. I shall be sorry if the chairman thinks I reflected upon him in any way, for I certainly had no intention of doing that.

The CHAIRMAN: I accept your apology.

Mr. MCKEAND: It is partly an apology. (Laughter.)

The CHAIRMAN: Well, explanation. I presume the intention is that we should meet you again. (Hear, hear.)

The date of the adjournment was left to the committee, and a vote of thanks to the chairman closed the business.

ELMORE'S AUSTRO-HUNGARIAN PATENT COPPER DEPOSITING CO., LIMITED.

AN IMPORTANT STATUTORY MEETING — WORK IN AUSTRO-HUNGARY AND GERMANY—THE BASIS LAID OF WHAT PROMISES TO BE A LARGE BUSINESS.

THE first general meeting of the above-named company (being the statutory meeting required to be held within four months after the registration of the company) was held at Cannon Street Hotel, yesterday. At this meeting notice was given that the following resolutions would be proposed :—

(1.) "That the name of the company be changed to Elmore's German and Austro-Hungarian Metal Company, Limited." (2.) "That article 84 of the company's articles of associatiou be rescinded, and that the following new article be iuserted in lieu thereof: '84. The qualification of a director shall be the holding of 200 shares of the company.'" (3.) "That article 107 of the company's articles of association be altered by omitting the following words at the commencement thereof: 'Notwithstanding anything iu the last preceding article contained, or any rule of law or equity to the contrary.'"

James Rock, Esq., J.P. (a director of the company), presided.

J. SHURMER, Esq. (secretary), read the notice of meeting.

RECORD OF PROGRESS.

The CHAIRMAN: Gentlemen, it is unfortunate, both for you and for me, that our chairman, Sir John Morris, should be obliged to be absent to-day. I have a letter from him stating that owing to the decease of a near relative he is obliged to leave town, and cannot get back in time for this meeting. Therefore, I have been requested by my colleagues to take his place to-day, and if I fail to put matters before you as clearly as no doubt he would have done, I must ask for your indulgence under the circumstances. (Hear, hear.) It is quite needless in a meeting of shareholders in the City of London to tell those present what a statutory meeting is. The meeting to-day is a statutory meeting, but I will just tell you what it is not, and that is that under ordinary circumstances it is not a meeting for the transactiou of business. Usually the shareholders and directors meet face to face; the chairman makes his statement as to what has been done since the company was registered; he then makes his bow and the meeting is at an end. But to-day the board have thought it well to utilise the preseut meeting, and to avoid giving you the trouble of assembling here on another occasion by placing before you the resolutions which you have just heard our secretary read. With regard to those resolutions, I will defer any reference to them until I have said a few words as to what your directors have done since they were entrusted with the management of your affairs. Your company was registered nearly four months ago, and we have had since that time to meet very frequently to get through the large number of legal formalities which are necessary from the very nature of the company itself.

DIFFICULTIES PROMPTLY OVERCOME.

You must, of course, be perfectly aware that it is much easier to start a company to do business in England than it is to start an English company in a foreigu land to do business in that land, and particularly when that business is based upon patents. We have the formalities relating to the patents to go through, and also to obtain the license to trade, which, according to the rules of each country, are required to be obtained, and must be bestowed by each Government. In order to obtain that license our solicitor has taken the proper steps. I might say before that, as far as the English formalities go, everything has been done, and is absolutely complete. We have taken a complete transfer of the Austro-Hungarian patents, and with regard to Austria, everything is going on as fast as it can go, through our solicitor and his legal representatives in Vienna. Again, another difficulty arises there, inasmuch as there is a sort of double-barrel difficulty, there being two countries, Austria and Hungary. We have double formalities to encounter, and therefore have had a great deal to do in the way of arrangement, so as to get through the earlier stages of the busiuess. But, at the same time, we have not been idle in regard to carrying on the business. We have not waited for all legal formalities to be completed before seeing how we can get to work, and in order to do that our general manager and Mr. Stepney Rawsons have been in Austro-Hungary (to which I confine myself for the moment), and have inspected a number of sites for works, and taken into consideration the commercial and geographical advantages or disadvantages of all the sites offered to them. We have under their advice gone so far as this: we have decided, provisionally, of course, upon a

SITE IN A REMARKABLY GOOD SITUATION

for transport, both for our raw material and our finished product, for fuel, in cheapness, and abundance, and for labour, and we have the option of land for that purpose in the site to which I refer. We have also negotiations in hand with regard to a portion of our works, business being carried on through existing industrial agencies, which I would rather not refer to more particularly because the matter is not sufficiently forward to be referred to publicly, and it might injure the progress of negotiations were I to mention it. With regard to Germany, you are aware by the circular which has been addressed to you that not long after we started the Austro-Hungarian Elmore Company we had the opportunity of acquiring the German Wire Patents, and the other rights arising from them, and from the Elmore processes generally in Germany. We thought it extremely important for this company to acquire those rights, because Germany is even a larger field for this kind of manufacture than Austro-Hungary, and to get a footing in that country upon the basis of the patents we have acquired, with all the knowledge of the processes of working them, and other rights which we hope to acquire in Germany, we shall, I hope, there make even better progress than we have made in Austro-Hungary. We have arrived at this stage: we are at the present moment in close negotiations, and upon the point of completing those negotiations, for

A VERY LARGE AND SUITABLE MANUFACTORY,

which was built for another purpose, in an exceedingly good site both for transport and for other purposes in connection with our manufactures. The manufactory is large, and it is new —in fact, one portion is not quite finished, and it has these most important features: it has 550 horse-power by water, with new turbine, all perfectly fitted up with gear belonging thereto, and with one important point in connection with the supply of water which would be deemed by any practical man to be of great importance, that the dam upon which our supply rests is uot one that is likely to break away, for it is of natural rock. Besides that, the manufactory has steam and boiler power, a fine chimney 100 ft. high, and everything necessary for our purposes, and Mr. Elmore, oue of our co-directors and the introducer of this process, is now in Germany for the purpose of completing the arrangements, and also obtaining the necessary plant, dynamos, and machinery we shall waut for the Elmore process. I have most important letters here and plaus of the buildings—the latter showing their large extent. Mr. Elmore writes in the most hopeful way as to the importance of what has been done. He went to Germany mainly for the purpose of examining sites. He went, in fact, to meet a German friend of minc who knows the company well and the result is as I have now stated, that we are just on thc point of settling these most important negotiations; and although we have not iu this compauy, as the French company has, a M. Sécretan to assist us—although like Hercules in the old fable we cannot call for the waggoner—yct we are prepared to put our own shoulders to thc wheel, and believe that if we do not beat the French company and their able manager in the time of actually getting to work, we shall be a good second in the race. (Applause.) With regard to the process, I take it for granted that that is known to you. The manufacture of copper articles by a process which almost takes it from the lowest stage and puts it iuto the finished one, almost by natural and automatical processes, is

INDEED A WONDERFUL PROCESS.

(Cheers.) I have seen it myself, and a more beautiful manufacturing process has never been invented. With regard to its value, we have the testimony of experts in this country, to wit, Dr. John Hopkinson, who is, I suppose, almost at the head of experts for this class of manufacture. He writes in the highest terms about it, and we have, moreover,

THE PRACTICAL TESTIMONY OF M. SECRETAN,

thc eminent French copper authority, aud the founder of the Société des Metaux, as to whose ability in regard to copper manufacture in all its branches no one can say a word against. I should say something about thc company in regard to its financial position. We have allotted 50,000 shares, which are very largely paid up, especially considering the difficult financial period through which we have been passing. They are allotted to about 580 shareholders—a tolerably large *clientèle*—aud I am almost surprised not to see more of them here this morning. Wheu we see a meeting of this kind not crowded it implies that *prima facie* the shareholders have confidence in their directors—a confidence which, I hope, we shall not abuse. The interim certificates are ready, and the fully paid certificates will be issued very shortly. Although I think I have given you all the information in my power, yet I shall be happy to answer any questions that may be addressed to me. (Applause.)

THE SPECIAL MEETING.

The CHAIRMAN paused for observations from the shareholders, but no one rising to speak he proceeded to say: I hope I have stated matters fully enough to make everything clear. We will now proceed to what is the extraordinary meeting, and the solicitor will tell us that these are special resolutions (see above), and the first is to alter the name of the company. That almost follows naturally from the addition to the business of the company, but with regard to that point I wish to make one remark, which is this:—It is possible that in the development of our business in Germany we may have to form or devise some German arraugement which might have a bearing on the name we hold in this country. Therefore, whilst the directors will take power to alter its title, yet as the name cannot bc actually adopted until it has been approved by thc Board of Trade, we simply ask you to give us power to alter the name, and leave it with us as to the time at which that name shall be altered. I now propose resolution No. 1 as above.

Mr. MACFARLAN (director): I second the motion.

Carried unanimously.

The CHAIRMAN: The next resolutions (No. 2, above) are resolutions which we place before you in order to obtain a special settlement on the Stock Exchange—these alterations being required by the committee of that body, who have made a modification since they intimated the need of a first resolution. The addition, I do not think, will make any important difference, and I will read it to you and propose it as one resolution:—"A first director may act before acquiring his qualification, but shall in any case acquire the same within one month from his appointment, and unless he shall do so he shall be deemed to have agreed to take the said shares from the company, and the same shall be forthwith allotted to him accordingly."

Mr. MACFARLAN: I second the motion.

Carried unanimously.

The CHAIRMAN: The next resolution (No. 3, above) is also necessary for the Stock Exchange, and the solicitor may add a word of explanation.

The SOLICITOR here read the whole of clause 107 of the articles, to show the bearing of the alteration, and said the words it is proposed to strike out are at the beginning of the articles, and are merely formal, and do not affect the substance.

The motion was seconded as before, and carried unanimously.

This terminated the business of a satisfactory meeting.

EAST POOL.

DIVIDEND OF 6s. 6D. PER SHARE.

A TWELVE WEEKS' MEETING of adventurers in East Pool was held on the mine on Monday.

Mr. John Branwell presided.

The statement of accounts showed that the labour costs had been 7,379*l.*; merchants' bills, 3,292*l.*; Wheal Agar adventurers, 75*l.*; stannary assessment, 14*l.*; balance ton rates account, 61*l.*; dues, ¼ profit, 620*l.*; total, 11,442*l.* On the other side, 228 tons 1 cwt. 2 qrs. 23 lbs. of tin have been sold for 10,894*l.*; wolfram, 992*l.*; arsenic, 775*l.*; copper and halvans, 350*l.*; Mines and General Telpher Company, 121*l.*; discouuts, 18*l.*; sundries, 113*l.*; income tax, 20*l.*; property tax recovered on appeal, to January, 1890, 232*l.*; total, 13,535*l.*, leaving a balance profit of 2,093*l.*

The committee reported that Captain Curtis, who had been suffering from ill-health for some time past, had been appointed to the entire control of the tribute department, and Mr. John Bishop to be underground sub-agent at a salary of six guineas a month. They recommended a dividend of 6s. 6d. a share, carrying forward 13*l.* to the reserve fund.

The CHAIRMAN remarked that although the profit was not great, they had returned more tin than at the former account. The difference arose from the fact that the average price of tin this quarter was 47*l.* 15s. 4d., whilst last quarter it was 53*l.* 5s. 3d.; so that if they had had the same price for their tin as they had in the quarter before they would have been able to give them three or four shillings dividend more. The average produce of the mine was a little better than last time, 45 lbs. as against 43 lbs., a higher produce of 2 lbs. per ton. He moved the adoption of the report and the committee's recommendation.

Mr. J. JEFFERY seconded, and it was carried.

THE ALLIANCE BANK.

A BIGGER DIVIDEND—THE LATE CRISIS, AND THE ACTION OF THE BOARD.

THE 40th half-yearly ordinary general meeting of the Alliance Bank, Limited, was held on Tuesday at Cannon Street Hotel.

Sir Lyon Playfair, K.C.B., M.P. (chairman), presided.

The CHAIRMAN said he had to congratulate the shareholders upon the state of the accounts aud the report now presented to them. (Hear, hear.) They were aware that during the period which the accounts represented there had been a period of

CONSIDERABLE ANXIETY IN THE MERCANTILE WORLD.

The failure of the great house of Barings to meet their obligations appeared at onc time so menacing, that the Bank of England came forward with great courage and power to try and give the Barings sufficient time to realise their assets, which showed a considerable surplus over their liabilities, but which required some time for a proper and safe realisation. The Bank of England, as they knew, asked the other banks to help them by forming a guarantee fund, and all the important banks in London, and a large number of those in the provinces, responded.

250,000*l.* GUARANTEED.

Their own contribution to the guarantee fund was 250,000*l.* (Applausc.) He thought it would bc gratifying to them to know that from all the information which they could receive that the realisation of the assets and the payment of the liabilities were proceeding so satisfactorily that there was no probability of the liabilities of the banks, incurred under the guarantee, having to be met, but the fact of the banks having come forward so liberally and promptly certainly saved a great commercial disaster. Under these circumstances it was necessary that they should increasc their ready morey for any contingencies that might occur, and that would explain to them why they stood in the accouuts with a larger sum of money at call, and with cash iu hand and at the Bank of England, than in previous accounts.

STRONG CASH POSITION.

The cash in hand and at the Bank of England, when the accounts were closed in December, 1890, was 100,000*l.* more than at the same date of 1889, and the cash at call was 250,000*l.* more. They were, therefore, put in a strong fiuaucial position to meet any contingencies had they arisen, but he was glad to assure them that there was not a single case of their regular customers who applied for accommodation after the Barings' difficulty who did not promptly receive it. The investments, of course, had to bc calculated upon the lower prices of securities which prevailed owing to the disturbance; but, notwithstanding that, the investments stood at 75,000*l.* more than in the corresponding period of 1889. They would be asked on that occasion to place 5,000*l.* to reserve, and if that was done their reserve fund would stand at 280,000*l.* Their recommendations, as in the report, were that they should pay a dividend at the rate of 8 per cent. per annum, free of income-tax, and he hoped they would be able to continue this increased dividend, and to carry forward 12,099*l.* to next account. The directors had carefully considered the matter of carrying forward so large a sum, but in view of the present cheap rate of money they had come to the conclusion that it would be wise to preserve a substantial balauce of the kind. He then moved the adoption of the report and accounts. (Cheers.)

RESOLUTIONS.

Mr. DANIEL MACKENZIE seconded the resolution, which was adopted.

A dividend at the rate of 8 per cent. per annum for thc half-year having been declared,

Mr. J. M. STOBART moved "That this meeting desires to express its appreciation of the action of the directors in joining the Barings' Guaranteed Fund, initiated by the Governor and Directors of the Bank of England, to whom the best thanks of the commercial community are due for their promptitude in averting a finaucial crisis."

The Rev. W. BENTLEY seconded the resolution, and it was agreed to *nem. con.*

The proceedings of a highly satisfactory meeting terminated with votes of thanks to the manager, branch managers, secretary and staff, and to the chairman and his co-directors.

WHEAL BASSET.

CALL OF 6s. PER SHARE.

A QUARTERLY MEETING of thc adventurers in Wheal Basset was held on Thursday on the mine.

Mr. W. McKeand presided.

The accounts and agents' report were taken as read. The former showed that the expenses amounted to 6,824*l.* 15s., which included labour costs, 3,927*l.* 2s.; coal and timber, 1,674*l.* 6s. 8d.; merchants' bills, 1,135*l.*; stannary assessments, 5*l.*; income tax, 32*l.*; and bank charges, 49*l.* On the credit side, 84 tons 13 cwt. of tin had been sold for 4,864*l.*; extra carriage, 4*l.*; discounts, 56*l.*; spare material, 42*l.*; making a total of 4,968*l.*, and leaving a loss on the 12 weeks' working of 1,856*l.*, and a balance against the mine of 2,448*l.* The average pricc of tin per ton had been 55*l.* 10s. 6d. against 57*l.* 14s. in the last account.

The committee's report showed that the returns were 19 tons of tin less than the previous quarter, and the average price 2*l.* 4s. 6d. less, making a difference to the mine of about 1,300*l.* This had arisen from having stamped about 800 tons of stuff less, and the produce falling off from 38½ lbs. to 34½ lbs. per ton. The bills were about 400*l.* less than the previous quarter, but included still about 400*l.* for extras. The underground work was still being pushed on vigorously, and about half the men were employed in developiug the mine by sinking, rising, and driving; and a fresh contract had just been made to communicate the 230-fm. level with the tin ground gone down in the bottom of the 190. In the past year they had raised 22,974 tons of tin-stuff, which had yielded 396 tons 7 cwt. of tin, or about 38¾ lb. of tin ore to the ton, realising 22,203*l.* 2s. 2d., or an average of about 56*l.* per ton. Against this the expenses had been 29,059*l.*, leaving a loss on the year's operations of 6,856*l.* The openings throughout the mine during the year had not been very cheering, but it was hoped that the amount of poor grouud which had been driven through had brought them so much the nearer to the richer bunches, which they had every reason to expect the ground would afford.

On the the motion of Mr. J. JAMES, seconded by the CHAIRMAN, a call of 6s. per share was made.

Mr. LIDGY said he understood that the committee ceased their dutics with that meeting, and having regard to the fact that they were the largest shareholders in the mine and had paid strict and careful attention to its interests, he would move their re-electiou.

Capt. PENBERTHY seconded, and his own name having been added to those of the committee, the resolution was carried.

It was decided to hold the next general meeting on the mine on April 23rd next.

A vote of thanks to the chairman concluded the meeting.

MOUNT SHAMROCK GOLD CO.,

CHANGES IN THE LOCAL MANAGEMENT—THE VISIT OF MR. RANKIN.

THE annual general meeting was held on Tuesday at the Guildhall Tavern, under the presidency of Mr. Graham King, chairman of the company.

The CHAIRMAN, in moving the adoption of the report and accounts, said Mr. Rankin, one of the directors, had been to Australia, where he had an opportunity of investigating the company's affairs and making such alterations as he thought necessary. At the instigation of Mr. Rankin, their managing director in the Colouies, Mr. Simpson had resigned, and Mr. James Higgins, an old Cornish miner of great experieuce, had been appointed in his place.

BENEFITS OF THE CHANGE.

Sincc the change much progress had been made, and it was expected that a permanent lode would be found along the eastern wall. The shaft had been sunk 50 ft., and when funds were available they would go on sinking further, as it was expected that the bismuth ore would disappear as they sunk deeper. At present the ore was very refractory, and had baffled the most experienced metallurgists in the colonies. To provide working capital they had been compelled to sell a quantity of tailings, but there were still above 10,000 tons left, which were roughly estimated at 30,000*l.*

Mr. Matthew's seconded the chairman's motion.

AN UNSUPPORTED SUGGESTION.

Mr. TREDGOLD thought the minc could never bc made to pay, and

suggested that proceedings should be taken against the vendors, as well as the late directors and promoters. Notwithstanding all the changes, little good had been done, and he was of opinion that if the shareholders went to law they would get a portion of their money back. These views met with no support.

The motion was then agreed to.

Mr. RANKIN gave, at the request of several shareholders, an account of his visit to the property. Their new manager had been working the mine from an open lode, and they had suffered through having to work the mine in a very primitive manner. He was satisfied, however, that they had a good property, and that the ore was very rich.

A vote of thanks to the chairman terminated the proceedings.

ST. JOHN DEL REY MINING CO., LIMITED.

A STRONG APPEAL TO THE SHAREHOLDERS.

THE directors, being extremely desirous to avoid having to resort to a re-construction of the company, appeal to those shareholders who have not applied for debentures, for the following reasons: From 180 shareholders they have received applications for 43,400*l.* of debentures. These 180 shareholders hold 70,000 shares. The total number of shareholders is about 900, therefore only one-fifth have come forward to assist in averting re-construction, and of the holders of over 600 shares only one-quarter appear in the list of subscribers. The directors beg again to point out the favourable position shareholders will be placed in by subscribing for their proportion of debentures, as compared to the company being subject to re-construction. Their proportion of these debentures is 25 per cent. of their present holding, and on that they will receive interest at the rate of 10 per cent. per annum. In a re-construction they would be called upon to subscribe at least 50 per cent. of their holding, and receive no interest until profits are earned, besides their shares being subject to forfeiture if unable to take up the new shares. The director, therefore, trust that all will make an effort to avert re-construction. The directors will take their proportion, and they hope that each of the 700 shareholders who has not subscribed will take a small amount if he cannot conveniently take his full proportion.—J. HOCKIN, Managing Director.

ARGENTELLA MINES LIMITED.

A CIRCULAR has been issued to the shareholders of this company giving the recommendations of Professor A. H. Heath and Mr. E. T. Stead, two of the directors who have recently visited the property. These gentlemen recommend that "cross-cuts be driven to the north and to the south at a suitable point near the forebreast of No. 3 adit, Rowe's workings. The northern cross-cut will be driven towards the Argentella southern quartz reef, and will prove the ground considered by Capts. Tonkin and Broad-Roberts to be the richer portion of the Argentella band of country. It will also intersect the cross feeder on which the winze has been sunk. The southern cross-cut will be driven towards the Affricana reef, and will intersect it. This reef may prove to be of great value. It is recommended that the Affricana reef be also explored at the opening in the Ogliastrone Valley, at about 590 ft. above the sea. The north quartz reef, Argentella reef, should be explored by driving an adit at a point selected on the northern outcrop, where there is a joint in the quartz of favourable appearance. No. 2 tunnel: It is recommended that the lode be cross-cut at the present fore-breast, and that the adit be carried farther into the mountain. This east and west lode seems to be between the Argentella southern quartz reef and the Affricana reef, but until more exploratory work be carried out, the exact position of this adit cannot be given." Capt. Roberts has been instructed to commence all the works advised.

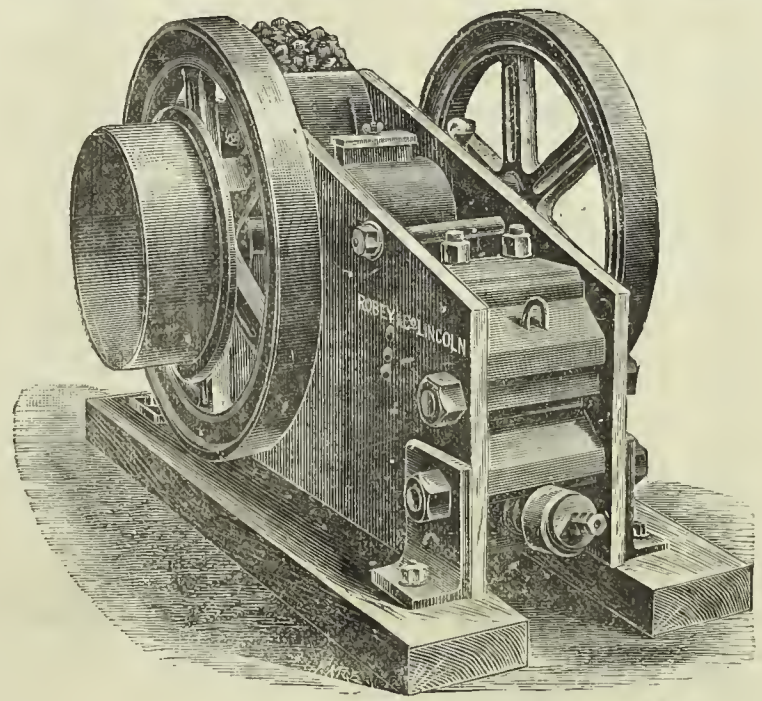
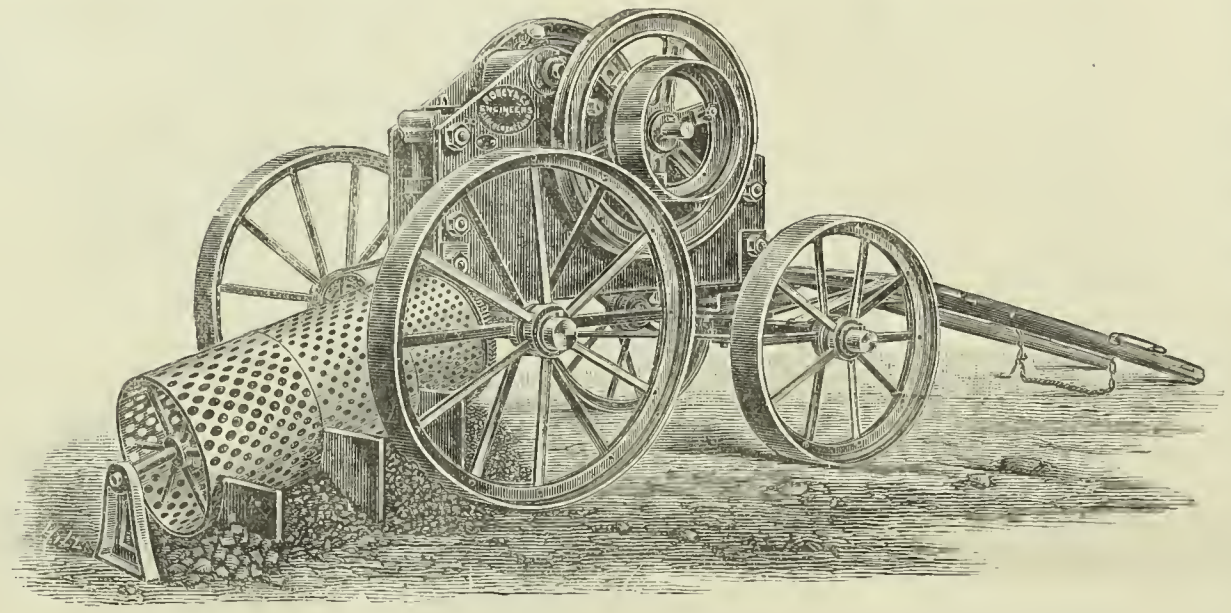
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

STOCK EXCHANGE SETTLING DAYS.

Settling days on the Stock Exchange are as follows :—

CONSOLS, Monday, 2nd February, 1891.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MINING MARKET HAPPY—INDIAN SHARES RAMPANT AND DIFFICULT TO BUY—FLAGSTAFF AND CALLAO BIS—GENERAL FOREIGN SHARES UP—UNEVEN MOVEMENT IN KAFFIRS, COPPERS, AND AUSTRALIANS—BAD TIMES FOR HOME MINES.

THE winter of the mining market's discontent has been made glorious summer by the welcome briskness of business, and the not less welcome rise of prices. When, with the final stroke of the editorial pen, we last week foretold "a good flow of business and better prices during the coming week," we felt we were like a statistical Jonah preaching in the streets of a sceptical Nineveh. Indian shares have been chiefly active, Goldfields of Mysore leading the way. All sorts of rumours were current during the week. One was that the Mysore Company was prepared to give 50,000*l.* for a section of the Goldfields property, into which its lode was trending. Another was that Balaghat was to the fore with 15,000*l.* in the hand in the shape of cash, and 25,000*l.* in the bush by way of shares, and the third that Nine Reefs and even Indian Consolidated were suppliants at the Goldfields door. Though the fabric of this vision is not altogether baseless, it is doubtless exaggerated. Properties will be bought and properties will be sold, but as to the terms no one seems yet to have any right to speak, and certainly they were not mentioned at the Gold Fields meeting. At the same time they will be stiff, very stiff, if we may judge from what Lord Ribblesdale said, that "the board place a very high value upon the property which our customers wish to acquire."

The market, it must be owned, views with some trepidation a further watering of Mysore capital, and comments have been freely passed as to selling one year a portion of territory to the Champion Reefs and buying not long after another portion from Goldfields. The desire of the market is to see Mysore and all the other mines worked upon the merits of what they already possess, but in this connection the views of Mr. John Taylor will be read with respect, and to them much weight should be, and will be, attached.

Since the meeting an important telegram has been received from Goldfields property, the text of which will be found appended to our full report of the proceedings. There is no doubt a future before this company far more brilliant than the wildest dreamer would have thought possible a couple of months ago. The shares have been as high this week as 22s. 6d., but, strange to say, fell on the meeting, though they have since somewhat recovered. To the pertinent question asked by an Ooregum shareholder last week an equally pertinent reply is this week given by the "compiler of the charts," which have recently appeared in these pages. The importance of the Champion Reefs discovery is accentuated by a further report. The Champion lode has been distinctly struck in the two deepest shafts, and its value is beyond question. The whole of the shares of the New Devala-Moyar Company have been issued, and the company is now in possession of ample working funds. We anticipate a substantial advance for Devala shares in the near future. Without an exception, Indian shares are all up—Balaghat, Champion Reef, Mysore, Mysore Reefs, Mysore West, and Wynaad (with the calls paid), Nine Reefs, and Ooregum. The outlook for Indian shares is indeed bright.

Flagstaffs have been the great feature of the general foreign market. At one time the shares changed hands at 11s. The telegram published further on helped this rise. Emmas rose in sympathy, but we hold that the hour at which these shares should be purchased has not yet struck, for the winter is far from passed in the vicinity of Alta city—whatever it may be here. We expect to see a relapse in both these shares before a really bigger rise occurs, and indeed Flagstaffs close by no means so firm as they have been. Prof. Vincent is, of course, triumphant. His face during the last week has been like that of Mr. Perriweg, "one vast substantial smile." It has not been necessary that he should speak the words, "I told you so"—he has *looked* them. We heartily congratulate him on a Flagstaff faith that has been undiminished by years of trial, and on a patience that now seems on the way to being rewarded.

Equally brisk have been the dealings in Callao Bis, from which we publish a good telegram received to-night. The hopeful news from Don Pedro has been confirmed, but the shares are without change. Frontinos are decidedly better, and New Russells were firmer on the meeting. There has also been an advance in several other foreign descriptions, which are higher, with scarcely an exception.

Loma shareholders have had their hearts cheered by the news of a preliminary crushing. We agree with the manager that the result telegraphed speaks well for the future. That result is 1 lb. of gold for every 80 hours worked. Colon has made its last call of 1s., and the shares are now fully paid. Several proprietors at the recent meeting expressed a wish that this should be done. With the proceeds the liabilities will be paid off, and there will be an ample supply of shots in the locker for the company's further requirements. There has been firmness in Colombian Hydraulic, and Gravel Gold is a mine that is likely soon to come to the front.

The Australian market has been flabby. New Queens have been down on the accident to the air-compressor, though the manager adds, somewhat inconsistently, "There is nothing wrong *at* the mine." He probably means *in* the mine.

There has been an upward movement in the Kaffir section, but not in its land department. An expert from South Africa, to whose opinion we attach considerable weight, has this week favoured us with a visit, and given it as his opinion, from what he knows, that the report of Mr. Alford will be found correct, so that according to this the prospects of Silati shareholders are not of a very hopeful kind. There was a rumour on the market that the directors intend to make the final call on the shares, but prior to doing so to obtain further reports from other experts who will be expected to verify or contradict the famous Alford report. There has been a good deal of business in Transvaal Gold Company's shares, and Graskops are coming into notoriety. In the Gold section the movement for the most part has been upward. Piggs Peak (Ordinary and Preference) have recovered some of their fall, and there has been also firmness in Ferreira, Geldenhuis, Stanhope, and a few others. The chief fall has been in Johannesburg Pioneers, which have been freely offered. The Diamond section has been uneventful.

Active has been the Copper market, but the rises of half a-crown one day have been neutralised by similar falls the next.

The record of Home Mining shares has again been of a dreadful kind. Dolcoaths fell 7*l.* on the 12s. 6d. dividend declared on Monday, although the manager announced that the mine was looking better than at the last meeting. Cook's Kitchens have also dropped 3*l.*, and other descriptions are down in sympathy. The last fortnight for Cornish mining has been almost appalling.

The settlement, which was concluded on Wednesday, showed that there was very little stock on the market, and as a consequence prices have improved in a number of shares, and it would take but very little buying on behalf of the public to put quotations very much better. This has been proved in the Indian and Kaffir markets, both of which close firm.

If, when we wrote last week, we were able to say the indications were hopeful, with still more confidence can we make a similar statement to-night.

Kaffirs.

There has been a considerable volume of business in this market, and although prices have varied almost hourly since Wednesday, yet, on the whole, the market closes firm at enhanced values. The chief dealings have been in City and Suburban, Ferreira, Geldenhuis, Kimberley Roodepoort, Langlaagte, Nabob, Piggs Peak, Simmer and Jack, Stanhope and Wemmers, each of which has had a good rise.

The shares most offered have been Johannesburg Pioneer and Jubilee, both of which close lower.

Business.—The rises are as follows:—Piggs Peak Ordinary and Preference, ⅜; Aurora, ⅛; Bankets, 1s; City and Suburban, ¼; Crœsus, 4s.; Durban-Roodepoort, 1/16; Ferreira, ½; Geldenhuis, 7/16; Glencairn, 2s.; Heriot, ⅛; Kimberley Roodepoort, ½; Kleinfontein, ; Langlaate. 7/16: Langlaate Block B, 1/16; Maiu Reef, ⅛; May Consolidated, 6d., Modderfontein, 1/16; Nabob, 3/16; Salisbury, New, 1/16; Simmer and Jack, ⅛; Stanhope, ½; Wemmer, ¼; and Witwatersrandt (Knight's), ⅛.

The falls are in the following:—Bothas, 1s.; Doornkop, 1/16; Forbes Reef, 1s.; Johannesburg Pioneer. ¾; Jubilee, ⅛; and Robinson. 1/16.

South African Lands.

There has not been very much doing in these shares if we except British Chartered, Exploring, Transvaal, and Ophir. The first three have been enquired for, and have improved, whilst the latter have been somewhat freely offered, and have in consequence declined.

Business.—Those that have risen are as follows:—British South Africa Chartered, 3/16; Exploring, ¼; Johannesburg Estates, ¼; and Transvaal Gold, 3s. The falls are in Bechuanaland, Exploration, Ophir, and Zoutpansberg of 1/16 each. Others remain stationary.

Diamonds.

There has been little or nothing doing in diamond shares, with the exception of De Beers, which close a shade lower.

Business.—The only change in this class to note is a fall of 6d. in Bultfontein and 1/16 in De Beers. Others remain unchanged on the week.

Making-up Prices. Jan. 26th, 1891.	Diamond Shares.	To-night's Prices.

½	Burma Ruby Mines	7/16 — 9/16

Indians.

There have been large dealings in this class of shares during the past few days. This has been especially the case with reference to Mysore Goldfields, which have changed hands in thousands. They closed last Friday at 14s. 6d. to 15s. 6d., since which they have been as high as 22s. 6d. buyers, and closing to-night 1, 1⅛. It is common talk on the market that Mysore is going to purchase a part of their land for 50,000*l.*, and that both Indian Consolidated and Balaghat Companies are also about to become buyers. Champion Reefs have been also in demand at 22s. 6d., and close firm.

A demand has, to-day, set in for Nine Reefs, which have advanced and close strong. Mysore Gold, Nundydroog, and Ooregum have also improved slightly.

Business.—Those showing a rise are: Balaghat, 2s.; Champion Reef, 1/16; Goldfields of Mysore, 1/16; Mysore Gold, ⅛; Mysore Reefs, 9d.; Mysore West and Wynaad, 9d.; Nine Reefs, 1s. 6d.; and Ooregum Ordinary and Preference, ⅛.

Australians.

There has not been very much doing in this class during the last few days, and prices have not appreciably altered. Australian

Broken Hill Consols have been enquired for, but close the same as last week.

Business.—The falls are shown in Cumberland of 9d.; Etheridge, 3d.; Gympie Great Eastern, 6d.; Mount Shamrock, 3d.; whilst the only rise is in Mosman of 6d.

COPPER.

We have again experienced a busy week in copper descriptions, and a general advance in prices has taken place. Rio Tintos appear to be the exception, and although large dealings have daily taken place they close a shade easier.

Business:—The following have improved: Capes, Libiola, Mason and Barry, Namaqua, and Tharsis, each to the extent of $\frac{1}{8}$. The only fall is in Rio Tinto of $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

There has beeu a firm market for several of the low-priced shares. Almadas have changed hands freely, but have not altered in price. Amadors have improved, but the shares appear to be unworthy of attention. Some thousands of the Callao Bis shares changed hands, at one time as high as 9s. 6d., but to-day prices have relapsed, closing at 8s. 3d. to 8s. 9d., showing, however, a small rise on the week. Colons are a shade weaker in consequence of the call of 1s. which the directors have just made. The wire about Don Pedro having been confirmed announcing a new lode struck has caused these shares to harden, and some brisk dealing has taken place in Frontino. A good month's crushing has caused buyers to come on the market, and higher figures to rule. Lomas have been freely dealt in, and close a shade firmer. New Gold Hills have been in demand. Russell Golds appear to be again coming into favour. Yuruaris have been largely dealt in, but have not altered in price.

Business: The rises are as under:—Amador, 1s.; Callao Bis, 3d.; Colombiau, $\frac{1}{8}$; Colorado, 6d.; El Callao, $\frac{1}{8}$; Emma, 1s.; Esmeralda, 3d.; Flagstaff, $\frac{1}{16}$; Frontino and Bolivia, $\frac{3}{8}$; Golden Feather, 6d.; Idaho, 9d.; New Gold Hill, 3d.; Old Lout, $\frac{1}{8}$; Pestarena, 6d.; Tolima, $\frac{1}{2}$, and West Argentine, 9d.

The falls are in the following: Colon, 6d.; Coromandel, 3d.; Pinos Altos, 3d.; Potosi, 6d. and Yankee Girl, 1s.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, 23rd January:—"3 tons of ore, containing 23,000 ozs. of silver, raised dnring the week; fourth shipment, consisting of 3 tons of ore containing 23,000 ozs. of silver, will be shipped for London per steamer leaving Adelaide on 4th day of February."

BRILLIANT.—A cablegram from Charters Towers, 27th January, reports that the company has crushed during the past three weeks 1,150 tons for 2,100 ozs. gold, value 7,800*l*., and paid a dividend (15th) of 2s. per share."

BROKEN HILL PROPRIETARY.—For the week ending 22nd instant there were 4,715 tons of ore treated, yielding 990 tons of lead containing 193,315 ozs. silver. The leaching plant realised 1,300 ozs., making a total production of 194,615 ozs. of silver.

BROKEN HILL PROPRIETARY.—For the week ending 29th inst. there were 5,025 tons of ore treated, yielding 955 tons of lead, containing 195,975 ozs. silver. The leaching plant realised 1,850 ozs., making a total production of 197,825 ozs. silver.

DAY DAWN P.C.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold, ex Bulimba, which realised 3,528*l*. 11s. 7d.

MIDAS.—Cable from the mine:—"Yield for week, 63 ozs."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram from the Mount Morgan Gold Mining Company, Limited, Queensland:—"We pay 41,600*l*. next Monday, being dividend of 10d. per share (free of dividend tax) for the month of January."

NEW QUEEN.—The following cablegrams have passed between the mine at Charters Towers and the London office, viz.:—Received from mine 19th January: "195 tons, yielding 189 ozs. gold." Sent to mine 20th January: "What explanations can you give; small quantity; poor quality; is anything wrong?" Received from mine 23rd January: "The clean-up is small owing to air compressor broken down; there is nothing wrong at the mine; crushing looking better at the present time. The erection of air compressor will be completed by 2nd February."

FOREIGN MINES.

ANTIOQUIA.—Advices for November state: "Prodnce, 525*l*.; cost, 820*l*. 14s. 9d.; estimated loss, 295*l*. 14s. 9d.

ELKHORN.—Cable information from Capt. Plummer states:—"Bnllion shipped for week ending the 24th January, $9,000."

CALLAO BIS.—The directors have received a telegram from the superintendent at the mines, stating as under:—"456 tons, 343 ozs. owing to the ore being very refractory. We are now putting high-grade ore through the mill."

COLOMBIAN MINES CORPORATION.—At a general meeting held on Wednesday, a dividend at the rate of 10 per cent. per annum was declared.

ESMERALDA.—A cablegram reccived reports:—"Araise of 28 ft. has been made for the week towards the south orc body in the Durand."

FLAGSTAFF.—The following cable message was received from the manager of the mine:—"Have fine body of ore 12 ft. wide, 14 ft. long, all first-class ore, going down toward 10th level." [The code words for 10th and 7th are so similar that as there is no 10th level in the mine it mnst mean 7th level].

GRAVEL GOLD MINES OF COLOMBIA.—Cablegram from Mr. Welton, the engineer who is constructing the ditch:—"Commence washing end Febrnary."

NEW CALIFORNIA.—Cable from the mine manager:—"December output 495 tons, yicld 438 ozs. of gold, value 1,555*l*., costs 920*l*. (mining profit 635*l*.); expenditure on new claims, Governor Adams and Rhode Island, and general development account, 190*l*.—RICKARD."

PINOS ALTOS BULLION.—The out-turn for the week ended 17th inst. was $8,000.

ZARUMA.—A telegram from the manager at the mines states:—"Mill working 17 days; crushed 420 tons of quartz, producing 285 ozs. of bullion."

HOME MINES.

COOK'S KITCHEN.—The call made at the meeting of this company was 7s. 6d.

DOLCOATH.—A dividend of 12s. 6d. a share was declared. Capt. Josiah Thomas stated that the mine was looking better than at the last meeting.

PEDNANDREA.—The meeting takes place on Thursday next, on the mine, and a call of 4s. per share is anticipated.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 171 AND 175.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

Thomas Reef (27th Dec.)—During the past week about 1 ft. only has been sunk, making total depth 7 ft. below 54 fm.

Graskop.—The consignment of gold from the November crushing (285 ozs.) has been sold, through Messrs. Johnson, Matthey and Co., for 1,106*l*. 16s. 10d., or 3*l*. 17s. 8d. per oz.

Transvaal Gold Exploration and Land.—The directors will pay on Saturday, the 31st instant, 50 per cent. of the debenture issue of the company, amounting to 18,725*l*.

Salisbury.—The crushing of this company for November was 825 tons, yielding 870 ozs. 7 dwts., equal to 1.055 ozs. per ton, which was valued at 3,047*l*. 9s. The total expenditure for the month was 2,296*l*. 12s. 10d.

Durban-Roodepoort.—Advice by cablegram states that the recent bad weather had caused some delay in the working, but nothing was very serious, and all difficulty is now arranged ; also that the new battery of 45 stamps had been started. The old battery of 25 stamps will also coutinue crushing for present on the old site.

Central Langlaagte.—Notice is given that the share registers of this company will be finally closed to-day (Saturday) in order to make the necessary arrangements for the exchange of the shares in this company for those in the Paarl Central Gold Mining and Exploration Company, Limited, as resolved upon at the special general meeting of shareholders of this company, held at Johannesburg on April 29th, 1890.

Wassau.—The yield of gold for the month of November last was 90½ ozs., of the nett value of 344*l*. 7s. 9d. During this month the mill worked 20 days 17 hours, and crushed 181 tons of lode, giving a yield per ton of 0.49 oz. By latest advices from the mine, dated 24th December last, the work of erecting the boilers and pumping machinery was going on as fast as possible.

Akankoo.—The company have received letters from the manager at the mine up to 5th January, in which he reports as follows: North-east end of adit has advanced 31 ft., retimbered throughout. The total distance from mouth of level, 158 ft. South-west end of adit has advanced 19 ft. I am making an effort to get into the old working at this point with the object of putting down a winze, but unfortunately a heavy run of dry sand came down from the old stopes before I could get my frames up and spiling boards fixed. I cannot, however, go any further without a winze for the next level, so I must endeavour to get through somehow. Middle level: This is a level which cross-cuts the reef and starts from the turntable by the saw bench. I find this is standing for a long way in without timber, the original timber having rotted and fallen in. This has been cleared during the past week for a distance of 150 ft. in open cutting and 97 ft. in the tunnel and rails laid throughout this length. I regard the opening of this tunnel on this level an important piece of work. It reduces the distance to the mill from the winzes where we shall be hauling quartz by one half, as compared with the distance round by the mouth of the old adit, besides improving our ventilation. Huntington mill is now erected. I am waiting to hear from up the river about the missing pieces of the stone breaker, and belts and bolts. I am glad to hear the statutory meeting went off well. I think the betting is very much in our favour that we pay a dividend before any other company on the coast. Unless I receive orders to the contrary, I will delay re-erecting the mill for the present, and endeavour to crush a few hundred tons and send you some gold. From the show of the gold in the quartz at the flow of the adit level at the south-west end, were we are re-opening, we are on a rich shoot at this point, and as the next stope from the 60-ft. level will lie in this ground, I may be able to make you a good return with a small output of quartz. Prospect shaft on new reef is down 39 ft. The water has increased so much, that I have thought it better to suspend operations for the month to allow it to subside in the swamp. I am sending you a box of samples, two pieces from the new shaft, both showing visible gold, and one piece from the old reef, I think it was taken from the 100-ft. level a few months ago.

COMMERCIAL NOTES.

Metals.

Copper has been quiet. GMB Warrants sold from 53*l*. 10s. to 52*l*. 17s. 6d. cash, and three months prompt from 53*l*. 15s. to 53*l*. 5s. To-day's prices are 52*l*. 15s. cash, and three months, 53*l*. 2s. 6d. We quote English tough 56*l*. to 58*l* - best selected, 59*l*. to 60*l*. ; strong sheets, 65*l*. to 66*l*. ; India sheets, 61*l*. to 62*l*, ; yellow metal, 6d. ; ore, &c., 9s. 6d. to 11s. per unit.

Tin has been easier. Straits declined from 91*l*. 10s. to 90*l*. 10s. cash, and 92*l*. to 91*l*. three months ; closing at 90*l*. 10s. cash, 91*l*. three months. The Dutch sale of Banca went at an average of 54⅛fl. per 50 kilos parity, 91*l*. 5s. per ton ; English ingots have been done at 93*l*. 10s. to 94*l*.

Tinplates have been firm and in good demand. We quote ordinary coke, 18s. per box, Liverpool.

Spelter was very firm, and 24*l*. was paid for spot parcels, but has gone easier, and to-day, we quote 23*l*. to 23*l*. 10s. for ordinary brands according to delivery.

Lead has been weak. We quote, soft Spanish, 12*l*. 12s. 6d. to 12*l*. 15s. ; soft English, 12*l*. 15s. to 13*l*. ; L.B. China pigs, 13*l*. 5s. ; sheets, 14*l*.

Quicksilver.—Rothschild's price is 8*l*. 12s. 6d. ; second hands, 8*l*. 12s.

Antimony easier, 69*l*. to 70*l*.

DON PEDRO GOLD MINING CO.

Telegram Confirmed.

Mr. Dawson, the secretary, informs the shareholders that the telegram of the 20th inst. has, this morning, been confirmed, and that Mr. Tonzean now adds that "a rich line has been discovered southern part of No. 8 shoot." The information now reads, "Sampling the lode ; generally rich and large ; 5 ozs. at per ton plentiful ;a rich line has been discovered southern part of No. 8 shoot."

Manicaland Shares.—There are distinct indications of an important movement in the shares of the various companies whose interests lie in Manicaland and the adjoining country. These shares have apparently escaped the notice of investors notwithstanding all the accounts of the extraordinary richness of this country which are now arriving almost daily. A good deal of quiet buying has lately been going on, and from the influential quarter from which it arises we anticipate seeing considerable further developments. Judging from the price now being paid for these claims, and the character of the buying of the shares of the companies with claims at their disposal are worth immediate attention. An upward movement is noticeable in the shares of the Zambesi Gaza and the Zambesi Sofala, and, no wonder, considering that the "Twins," as they are called, jointly own 1,000 mining claims in this country, and that the capital of the two is only 85,000*l*. As usual, we suppose, investors will wait until these shares, which to-day are quoted at 13s. 6d., 14s. 6d. have risen to something like 8*l*., 10*l*. per share, when they will buy and then complain that mining does not pay.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (28th Jan.)—There is no change for remark at any of our points of operation nnderground since my last advice. We have not been able to do anything at the No. 10 level this week. The very heavy rains we have had have so much increased the quantity of surface water going down through the old stopes from No. 4 that the pumps have not been able to keep the bottom levels clear. We have to-day got some new launders fixed, and hope to catch up this surface water, which is now going down to be pumped up again. The large reservoir has been full and running over since Monday, so that we have a supply for all purposes for some time to come. Winding and crushing is being pushed on as fast as it is possible to pass the stuff through the machines, and everything is working well.—H. NOTTINGHAM.

DRAKEWALLS (29th Jan.)—The lode in the 160-fm. level driving east is still looking well, yielding 7 tons of mundic per fm., and occasional rich stones of copper ore, mixed with a little tin. In the 160 driving west the lode is producing 9 tons of mundic per fm., with stones of copper ore, and gronnd easy for exploration. The lode in the rise in the back of the 160-fm. level will produce 9 tons of mundic per fm. for the length of the rise (9 ft.) The stope in the back of the 160 west continues to yield 10 tons of mundic per fm. The lode in the 147 driving east will prodnce 4 tons of mundic per fm., with stones of copper ore mixed with tin. In the 147-fm. level driving west we are now passing through two or three small cross-courses, which for the present disorder the lode. The lode in the winze sinking below the 147 east is looking well, and producing for the length of the winze (9 ft.) 10 tons of mnndic per fm., and ground easy for progress. The lode in the stope in the bottom of the 132 east is prodncing 7 tons of copper and mundic ores per fm., and the stope in the bottom of the 132 west of the cross-course 5 tons of mundic and 2 tons of copper ore per fm. We have taken on more hands, and are getting on with the taking out foundations for the jiggers, &c., as fast as the weather will admit.—H RODDA.

LEADHILLS (26th Jan.)—Brown's vein: The 145-fm. level north of Jeffrey's shaft shows a vein above 6 ft. wide, of an nnfavonrable character, for bearing ore. The stope above the 145 south of Jeffrey's shaft is worth 25 cwt. of ore per fm. The stope above the 145 sonth of Wilson's shaft is worth 20 cwt. of ore per fm. The two stopes above the 145 north of Wilson's shaft are worth 20 and 5 cwt. of ore per fm. respectively. The 130-fm. level north of Jeffrey's shaft is in a vein 5 ft. wide, showing a nice rib of spar and spots of ore. The three stopes above the 130 north of Jeffrey's shaft are worth 30, 10, and 30 cwt. of ore per fm. respectively. The rise above the 130 south of Jeffrey's shaft is prodncing stones of ore, but not to value. The stope above the 130 north of Wilson's shaft is worth 35 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein above 3 ft. wide, mixed with spar and ore worth 5 cwt. per fm. The stope below the 115 north of Jeffrey's shaft is worth 20 cwt. of orc per fm. Thc stope above the 115 sonth of Wilson's shaft is worth 25 cwt. of ore per fm. The 85 fm. level north of Jeffrey's shaft is in a vein above 5 ft. wide, almost wholly of hard dried stone, and entirely without ore. The 70-fm. level south of Wilson's shaft is in a vein 4½ ft. wide, charged with quartz, bnt stone just dark enough for producing ore. The 35-fm. level sonth of Flat Rod shaft is in a vein 54 ft. wide, well mixed with quartz and damp, with ore worth 40 cwt. per fm. The stope above the 35 sonth of Flat Rod shaft is worth 20 cwt. of ore fm. Sarrowcole vein: The rise above Gripp's adit north of George's Roust vein is wo th 5 cwt. of ore per fm.—T. NEWBIGGING.

MID-DEVON.—Report for week ending 24th Jannary.—Surface: For the first two days of week compelled to keep ice broken on water-conrses and at the wheel to keep it going; since then weather has moderated and wheel working regularly. A shaft: Water in fork to the bottom of the 80. C shaft: The No. 3 stope worked on by six men; yield of ore quite eqnal to 2¾ tons per cnbic fm.; strata nnchange l in its composition and still points to an improvement.—J. NEILL.

ROMAN GRAVELS (29th Jan.)—The 155 cross-cut is now driven 9 fms. 1 ft.; the gronnd has become very mnch harder dnring the past few days, and the forebreast shows strings of carbonate of lime, both of which indicate onr near approach to the lode. We are very pleased with the general character of the rock at and abont said forebreast, and consider it is favonrable for finding a productive lode. We hope to have very good news to report to you from here next week. The 140 north is driven 74½ fms. We have been going forward here 3 or 4 fms. on the footwall division of the vein, which is now taking an easterly direction, and will shortly be in junction again with the hanging-wall part, which has hitherto carried the ore. The new winze from the 125 coming down at a point, say 13 fms. in front of above forebreast, is 8 fms. deep, the vein at present bottom producing 1¼ tons of lead ore per fm. The two stopes in back of said 140 are each worth 1 ton of lead orc aud saving stuff for blende to the fm. The 140 south is driven 74 fms. 2 ft. 6 ins.; lode at present in two divisions, but without change to notice since last reported. We have resnmed driving the 140 sonth-east on cannter lode. The vein here is at present in two divisions, which are together 3½ ft. wide, very wet, and producing stones of lead ore and blende. The said divisions will soon be in jnnction, when we believe a bunch of ore will be met with. We see little or no change in the 125 south, or the stopes in back of the level since last report. The drivage sonth from Jones' winze is to-day worth 2 tons of lead ore and 1½ tons of blende to the fm. The two stopes in back of the drivage are together producing 3 tons of lead ore and 2 tons of blende to the fm. Other points throughout the mine are jnst as when last reported. We are preparing a parcel of blende for sampling next week. The severe weather prevented anything being done on the dressing floors with the fine ore and slimes nntil the past two or three days, hence the delay of our sales.—A. WATERS.

SOUTH DARREN (29th Jan.)—The following bargains were let on Satnrday last for one month:—To stope nnder the 142 west by eight men at 6*l.* 10s. per fm., and 14*l.* per fm. to sink 1 fm. long, worth 1½ tons of silver-lead ore per fm., with the exception of a part in the west end of the stope when there is very good copper and not so much lead. To stope above the 142 west by six men at 4*l.* 10s. per fm., worth 15 cwt. of silver-lead ore per fm. To stope in the same level by six men at 4*l.* 5s. per fm., worth 15 cwt. of silver-lead ore per fm. Four men are put to stope in the bottom of the 142 level east. This place is not yet let. The lode is worth about 1 ton of silver-lead ore per fm. Two men who were in the 130 west are tramming. On Tuesday last 15 tons of silver-lead ore was sampled.—J. MITCHELL.

WEARDALE.—Report for week ending 24th January:—Ore raised for week, 69 tons; ore dressed for week, 22 tons; slag smelted for week, 27 tons, producing 6 tons of pig lead.

WEST WHEAL GRENVILLE (27th Jan.)—The cross-cut driving north at the 120 is extended 82 fms. 3 ft. The granite in this end contiuues of a favonrable character. The 120 west of cross-cut is extended 16 fms. 0 ft. 6 ins. We have put the men to cross-cut the elvan standing south of this drivage, which has shown a little tin. Our object in doing this is to ascertain if anything of value may be standing in this direction. The 120 driving east of cross-cut is extended 9 fms. 0 ft. 6 ins. The branch in this drivage continues to show arsenical mundic, with which we find a little tiu associated.—J. SKEAT, N. TEMBY.

WHEAL CREBOR (27th Jan.)—The lode in the 156 end driving east of the new shaft has a very strong appearance, contaiuing a little mineral of good quality, but not enough to value. It is 4 ft. wide, and still letting out water. The 144 winze has been drained by it, and in a few days we hope to resume the sinking of this wiuze. The lode in the end driving west of cross-cut at the 144 is worth 2 tons of copper and mnndic ores per fm. The stope in the back of the 144 west of cross-cut is worth 6 tons of copper ore and 5 tons of mundic per fm. There is nothing new to report in onr tribute department.—P. D. HOLMAN.

WHEAL METAL AND FLOW (27th Jan.)—During the past week shaftmen have been driving east on the conrse of the Metal lode, which is fully 2 ft. wide, composed of peach, prian, and a little tin, and from the kindly nature of the gronnd no one knows how soon we may be rewarded. The burning honse is completed, and we have commenced to burn the tin. On Snnday morning early the shafting of the 12-head battery broke, which has necessitated our stopping six heads. This we hope to get replaced by a new one soon.—S. P. CURTIS.

WHEAL UNY (28th Jan.)—Hind's engine shaft is now down 11 fms. 3 ft. below the 230-fm. level. We pnrpose sinking another 3½ fms. to make the lift 15 fms. We hope and expect this lift will turn ont somethiug good, by the appearance of the lode and granite in the sonth which has nearly cnt ont the elvan. The 230 end to drive west, by six men, at 9*l.* 10s. per fm. No improvement in the lode here. The 230 end east, by four men, at 8*l.* per fm.; worth about 6*l.* per fm. The 203 end to drive west, by four men, at 9*l.* 10s. per fm.; worth for tin 10*l.* per fm. A winze in bottom of 193 west, to sink by six men, at 10*l.* per fm.; worth, for length of winze, 20*l.* per fm. The 182 end west to drive, by two men, at 7*l.* 10s. per fm.; worth 9*l.* per fm. We set 22 tribute pitches at tribntes varying from 7s. 6d. to 13s. 4d. in the £. We shall sample on Friday for next week's ticketing two weeks' tin.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report received from the manager at the mine, dated 3rd Jannary:—Development: Driving north end 24-fm. level on 100 lode with machine drill; drivage, 66 ft., 61 ft. of which was driven on ore gronnd, worth from 12 to 16 tons mineral per linear fm. (estimated average). The breast at end of the month was a good one. Exploration: Cross-cutting west from breast 5,308 north, 4,969 east, at tnnnel level; drivage 4 ft. on limestone. The object of this cross-cut is to explore the 100 lode, and prove whether the ore body found at the 24-fm. level lives at the tunnel level. The distance to be driven through is expected to be from 20 to 30 ft. Ore reserves: The main stope is 180 ft. long and abont 12 ft. wide, on an average, and the present back is estimated to be worth 50 per cent. in orc. The height of the stope is 27 ft. above the track at 24 level in its northern end and 30 ft. in its southern part. We do not know to what height the ore lives, bnt it is looking now as strong as before. The stope at 31-fm. level north and south of No. 7 winze is 70 ft. long, and about 7 ft. wide; the back is only 16 ft. below the rail at 24-fm. level; worth about 30 per cent. ore. The stope at 36-fm. level on 100 lode is 50 ft. long, and about 10 ft. wide; the back is 39 ft. below the track at 24-fm. level; this stope has improved lately, and is now worth about 40 per cent. mineral. The stope in back of 24-fm. level between Nos. 4 and 5 winzes has not been touched for a long time; the back is about 20 ft. above the 24 track, but its valne in mineral cannot be estimated at present. Surface work—ore dressing: Rough ores extracted from the mines, 1,270 car-loads, estimated 1,016 tons; yield from same after cobbing, 564 tons. Stamping: Cobbed ores and smalls sent to mill, 550 car-loads, estimated at 495 tons; matter from smelter, 9 tons; total crushed, 504 tons. Roasting: Stamped ores sent to the reverberatories. 1,867 charges at 1,000 lbs., 583.5 tons. Leaching: Roasted ores served to vats, 508.5 tons; tailings discharged, 535.5 tons; precipitate obtained 12,435 lbs., assay value $14,872.68. Refinery: Silver obtained in the month, 11 bars; valne at Alamos mint, $11,568.25. Smelting: We had a seven days' campaign, and passed through the furnace 60 tons ores and products; the pig lead obtained was 651 bars, worth in silver $2,773.64. Prospects: The new discovery made at the 24-fm. level north end, on the 100 lode, seems to be of importance. The grade of the ores from the 61 ft. driven is considerably higher than nsnal, and if the ore body is as large as indications seem to promise we shall have a snbstantial increase in our ore reserves, and if the average grade of the whole ore body proves to be as high as the part of it so far developed has shown, we can expect fair profits from the working of said deposit. Labour has been scarce, and we have on this score beeu nnable to run all departments at full speed. Firewood is also becoming scarce, and in order to induce wood-cutters to come in sufficient nnmber to make a good stock we shall have to raise the price again to $8.50 per cord. Salt is still plentiful, but we are taking steps to get a fresh supply of 1,000 to 1,500 farregas within the next few months. Water is so scarce, owing to the absence of winter rains, that we are depending entirely on the mine and two wells for our supply, and we are not getting more than one-half the amount required for all departments, which is, naturally, a source of considerable hindrance.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated 6th December, and from Messrs. Restrepo, dated 12th December. The statement for the month of November is as follows:—342 tons produced 177 ozs.; average, 10 4-10ths dwts. Estimated valne of gold, 525*l.*; cost at the Mines, Medellin, and in London, 820*l.* 14s. 9d.; estimated loss, 295*l.* 14s. 9d. During the month sums amonnting to 276*l.*, included in the above statement of

cost, were expended in Colombia on capital account, and the remaining cost included an extra stock of stores for the mine available for future use. The new mill has been running on attle and mineral from No. 5 level only, as the wire rope incliue was not conveying mineral to the mill from the Nos. 2 and 4 levels.

ASIA MINOR (19th Jan.)—Ara Dere Mine: The lode in the end has been cut off by a cross-course, and we are now advancing north to find it. The rise will be holed to surface this month, and then stoping will be commenced on the run of ore opened by the drive. The lode in the winze is worth 18 cwt. silver-lead. Chief miue, Petri main level; The lode here has greatly improved the last two days, and this morning some good stones of fine silver-lead ore were broken. This level is the deepest in the mountain, and any discovery at this poiut would be of importance. Intermediate Hamburg: End east from long cross-cut east from Savalan Pass and main adit are all showiug favourable indications. Savalan (special drivage) continues to bear ore finely dessiminated through the lode, and is letting out a large quantity of water. Dolu Derc Mine: The cross-cut for the Pappa Sawa lodes is now in altered rock, and we think the lode is near at hand. The lode in the drive east from brook is of great width, aud we are engaged in cutting through it. Kaja Bashi Mine: The lode is yielding 12 cwt. silver-lead and large quantities of blende. Pappa Sawa Mine: We are cutting through the lode in the lower level, and good patches of silver-lead ore are being met with. Duriug the winter the underground operations will be carried on in all the mines with the utmost vigour.

BALAGHAT-MYSORE (7th Jan.)—North engine shaft: This shaft has been sunk 13 ft., or 83 ft. below the level. I regret to say the quartz contiuues small, and only assays 4 dwts. 21 grs. of gold per ton. The 500-ft. level north has beeu driven 19 ft. 4 ins., or 398 ft. from the shaft; the quartz has improved in size, from 10 ins. to nearly 2 ft. wide, and assays 1 oz. 2 dwts. 20 grs. of gold per ton. The No. 1 winze in bottom of this level has been sunk 6 ft., or 27 ft. 6 ins. below the level; the quartz coutinues to maintain its size, viz., about 2 ft. wide, but does uot assay so rich as formerly, being now only worth 1 oz. 6 dwts. 3 grs. of gold per ton. The stopes iu the back of this level produce quartz of about 1 ft. wide, and assay on an average 5 ozs. 14 dwts. 23 grs. of gold per ton. The 410-ft. level north has been advanced 9 ft. 6 ins., or 816 ft. 6 ins. from the shaft; the ground continues of a kindly nature, but as yet it does not yield any quartz. The No. 2 winze in the bottom of this level has been sunk 5 ft. 6 ins., or 81 ft. below the level; the lode is improving in appearance, and yields a little quartz, and will I think soon further improve. The No. 3 winze in the bottom of this level has been sunk 3 ft. 6 ins., or 48 ft. below the level; the quartz is about 3 ins. wide, and worth about 5 dwts. per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay on an average 2 ozs. 9 dwts. 5 grs. of gold per ton. The plat stopes also in the back of this level yield quartz of about 8 ins. wide, and assay 1 oz. 12 dwts. 16 grs. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 1 ft. wide, and assay on an average 4 ozs. 12 dwts. 2 grs. of gold per ton. The plat stopes also in the back of this level yield quartz of about 9 ins. wide, and assay 5 ozs. 10 dwts. 1 gr. of gold per ton. The 270-ft. level south has been driven 2 ft. 6 ins., or 636 ft. 6 ins. from the shaft; the grouud is at present unproductive. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay about 3 ozs. per ton. Tne stopes in the back of the 270-ft. level north produce quartz of about 9 ins. wide, and assay about 1 oz. per ton. Haines shaft: The sinking of this shaft is being pushed forward as fast as possible, and I hope to get it complete to the 270-ft. level some time this month. Surface: The general work at surface is progressing satisfactorily.—J. PRYOR.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 22nd November.—No. 7 tribute: After stoping about a week. the stoue the tributers have been working ou nearly cut out; there are still small bunches of stone mixed through the formation, but not in sufficient quantity to be payable. The tributers are now getting a crushing of about 18 tons put through, and will clean up on Monday. The tributers in the No. 5 lease broke through to the rise with the underlie after making a further depth of 4 ft., making a total distance risen and sunk 77 ft.; they have since been engaged in cutting down the sides of the rise to make it wide enough for the underlie; they have also laid down 40 ft. of skids, and are getting everything in good order to stope in a few days, and they intend to take out a trial crushing from the reef in sight as soon as possible. In the company's stope from the back of No. 6 south-west level we have had about 10 ins. of reef in 14 ft. of formation; there is about the same amount of stone in the face of stope at present. We have sunk the winze from this level a further depth of 9 ft. with 4 men; we have had an average of from 2 to 2½ ft. of reef during this sinking. In the bottom of winze there is about 1 ft. of reef on the eastern side, and 18 ins. on the western: excellent stone, equal to any that we have yet had in the winze and showing good gold. We should have made better progress with the sinking if the formation had not opened out to from 4 to 5 ft. under the reef, giviug us from 6 to 7 ft. of stuff to hand with the windlass; shall have to sink another 3 ft. to be down a sufficieut depth from the level. Have driveu the No. 7 south-west level a further distance of 20 ft. for the fortnight. with four men; the first ten days' work siuce then have had six men in the level; making a total distance from the old underlie, 74 ft. Have had a little stone in the formation, with some leaders in the hauging-wall showing gold; there is an improvement in the level during the last two or three days, as there is more stone and better ground for driving. The level has to go a further distance of 58 ft. to break through to winze; shall keep three shifts driving here, and also think it advisable to start a small drive from the winze to meet the level, as we must get the level through to the winze before we can start stoping to auy advautage. Had one man stoping from No. 6 north-east level along the boundary a week, wheu the reef cut out. There is a little stone going down on the footwall, which can be tried at some other time wheu we have a man or two to spare. Have raised about 32 tons of stoue for the fortnight for the company, and 19 tons for the tributers; total, 51 tons; about 8 tons in hopper at present. During the fortnight a trial crushing of 24 tons 5 cwt. of stone from the winze was cleaned up for the satisfactory yield of 65 ozs. retorted gold; machinery and workings in good order.

BRATSBERG.—Report for week ending 17th January.—Hoffnung Miue: No. 2 adit level is worth 1 ton per fm. We have started to rise close by the present end of No. 2 adit level (which we shall hereafter call rise No. 2) where the lode is worth 1½ ton per fm. The rise in the back of this level previously reported on, for distinction, we shall call rise No. 1; here I am glad to be able to say we contiuue to open up a productive lode, present value being ¾ ton per fm. At No. 3 adit level the lode, contrary to expectations, has not improved, remaining of same value as last week, viz., ½ ton per fm. The rise in the back of this level is producing about 1 ton per fm.; but the lode is very wide, and looks disordered. No. 4 level is yielding about ¾ ton per fm. The rise here we daily expect to hole to Ball's shaft. Johannes Mine: The western level on Howard lode is unproductive; we have now suspended this level for the time, and started to cross-cut towards Johannes lode, there being about 10 metres to drive before we expect to intersect. The eastern level on Howard lode contains good saving work, and still appears to improve as progress east is made. Owing to this part of the mine being ventilated by the aid of pipe connections with the air compressor, and the unusually low state of the river causing a limited air supply, we have curtailed operations at this mine for the time being, hence besides two stopes we have stopped the rise for the present. Surface work and remarks: The re-building of the dressing machinery is going on pretty rapidly, but the limited water supply combined with continued severe frost causes it necessary to employ a double set of men at the saw mill in order to keep going. The Elizabeth Morton has been chartered, and being in Skien River will be loaded forthwith.—J. D. HOLMAN.

CALLAO BIS (5th Jan.)—Independiente: Since the 21st ult. the shaft has been contiuued a further distance of 2½ ft.; from surface, 124½ ft. No change has takeu place. The ground is very similar as when last reported. Water very quick, which gives us a deal of trouble with the steam pump. The No. 2 level west has been continued a further distance of 12 ft.; from shaft, 136 ft. Lode 4 ft. wide, of fair value; water proceeding from the face of the drift very freely. No. 2 raise is continued 24 ft. from the back of level; lode showing 6 ft. wide, of good value. No. 1 level west has been continued a further distance of 14 ft.; from raise, 38 ft.; lode showing 4 ft. wide, of fair value. No. 1 level east: Nothing has been done here since my last. I considered it wise to suspend this for the present, and put these miners on the No. 2 raise to make communication to the No. 1 level, which will give good ventilation to continue the work at this point, besides opening out stoping ground. Surface work: I am not able to report the foundation of Cornish pump completed, owing to the holidays aud bad weather, which has detained our work throughout the mine. The gold remittance for December (556 ozs.) has realised 2,159l. 4s.

CHAMPION REEF (5th Jan.)—Fortnightly report.—Mysore section: Carmichael's shaft has been sunk 4 ft.; total depth. 219 ft. 3 ins.; the rock is getting mineralised throughout, but it still continues very hard, and we have great difficulty in sinking through it. The water is very quick, and it retards the sinking considerably. Ribblesdale's shaft has been sunk 5 ft.; total depth, 205 ft. 6 ins.; the ground is a great deal harder than last reported, and the progress is not so good on that account. Garland's shaft: Sinkiug 6 ft. 6 ins.; total depth, 190 ft. 6 ins. We have cut through the lode in the shaft, and the men are now employed sinking a sump, as we hope to take a large proportiou of the water at the bottom of vertical shaft before turning on the underlie. The lode as passed through in the shaft is 2½ ft. wide in the north end, and about 20 ins. in the south end. Samples takeu from across the lode north give au assay value of 3 ozs. 15 dwts., and the south end 2 ozs. of gold per ton. The shoot of ore is dipping north about 45 degs., aud by all appearances the shaft will be in the course of a few feet more sinking south of the shoot. A short drive north, however, from the next level will, it is to be hoped, uubottom the old workings, and open up good stoping ground on the shoot of ore. Dalyell's shaft has been sunk 5 ft.; total depth, 198 ft. There is a slight improvement in the lode; it now carries 1 ft. of strong quartz, assaying from 2 to 4 dwts. per ton. Surrounding rock very hard, and does not require timbering. The 160 ft. drive north has been extended 13 ft.; total length, 41 ft. 6 ins. The ground at this point is very favourable for driving, and good progress has been made; the lode is very regular, and carries from 9 ins. to 1 ft. of quartz. Coromandel section: The cross-cut at the 320-ft. level has been driven 4 ft. 3 ins.; total length, 17 ft. 9 ins.; it is still in hard country rock. Prospect shaft: The cross-cut at the 320-ft. level has been advanced 7 ft. 3 ins.; distance east of the level, 11 ft. 9 ius. In the end there are several branches of quartz, which is no doubt the hanging part of the lode. The 290 end south has been driven 5 ft. 9 ins.; total distance from shaft, 107 ft. 6 ins.; lode in the present end is 1 ft. wide of quartz; assays only give a few grains per ton. In the winze below this level 6 fms. of ground have been worked away iu following the different branches of the lode. The sinking is again resumed on the course of the lode. The 260-ft. level north: The winze below this level and at the bottom of the old workings has been sunk 4 ft., and will in a few feet more communicate with cross-cut from the 320 level. Samples taken from the lode at this point give 14 dwts. 18 grs. per ton. Surface work: At Mysore section the new stack is completed, and the building which is to cover the compressors, boilers and fitting shop is well advanced, and we hope to commence putting on the roof in the course of a day or two. The 4-in. pipes are being laid from the receiver to the different shafts. Excavations for pumping and winding engines, boilers, &c., have been commenced at Garland's shaft, and will be carried on vigorously.

COLAR CENTRAL (7th Jan.)—Eastern section, North division: New shaft has been sunk 6 ft., to a total depth of 175 ft. There is no change to note in the character of the grouud. South division, Main shaft: West cross-cut at 260 ft. has been driven 13 ft., or a total of 43 ft. from shaft. At 30 ft. from shaft we cut a small soft branch about 6 ins. wide. We shall commence to drive north and south on this, as it will probably lead us into a larger body of ore shortly. Drift north at 180 ft. from west cross-cut has beeu advanced 6 ft.; total 12 ft. We have 2½ ft. of good looking quartz in the end between good walls. Drift south at 180 ft. from west cross-cut has been driven 6 ft.; total, 12 ft. The quartz here is about 3 ft. wide, also between good walls, and of the same character as that in the north drift. The quartz in both places shows only a trace of gold. No. 3 winze has been sunk 5 ft.; total, 120 ft. below the 80-ft. level. There is 5½ ft. of quartz in the present bottom, but of no value. Drift north at 170 ft. has been driven 8 ft.; total, 72 ft.; but with nothing to value in the end. Both the winze and drift north at 170 ft. will be suspended, as we can now explore the ground in this direction by the north

drift from the 260 ft. west cross-cut in main shaft. Marden's shaft: Drift north 240 ft. has been driven 14 ft.; total, 83 ft. There is about 10 ins. of quartz in the present end. Drift south 240 ft. has been driven 11 ft.; total, 56 ft.; lode about 10 ins. wide. The ground is hard in both these drifts. The drivages all round are less than usual, owing to our stopping for three days at Christmas to overhaul the air compressing and other machinery, clean boilers, &c., &c. Everything is now working well.—A. S. B. OAKLEY.

COLOMBIAN HYDRAULIC (18th Dec.)—The following are details of Run No. 168, the cable of which was sent to the sharehoiders on 22nd December:—Run No. 168: This run had scarcely begun, when a violent storm carried away our lower Cantarera ditch, and we were, in consequence, 12 days with only half water. After a run of 1,038 hours, partly with full and partly half water supply, we cleaned up on the 17th of December from the main sluice $17,705.07, which, with bought gold worth $1,648.70, has given a total result of $19,353.77 gold, while the costs during the same period have been about $8,466, Colombian currency, which leaves a good profit. Another run will be commenced on the 22nd, probably on Clarke's banks, but this is not certain.—A. E. OAKES.

COLORADO.—The manager's report, dated 15th January, is to hand, and states that the mines are being worked at 21 different points, details of which are given:—Terrible Mine: 8th level west has now been driven a distance of 462 ft. from main shaft, and the lode holds good at 4 ft. wide. 15th level east stopes showing well; lode 4 to 5 ft. wide. Coin lode: Rockwell adit level now driven 445 ft. from the junction with the Brown lode. Brown adit level now driven 489 ft.; lode 4 to 5 ft. wide; mineral vein in breast of drift 2 to 3 ins.; a decided improvement is shown at this point. We soon expect to open a stope similar to that in the level above, which is now producing good ore, rich in silver. Brown tunnel level now driven 220 ft. from Burke cross-cut; lode 4 to 5 ft. wide. Brown lode—Mammoth tunnel level: Stoping in back of drift; lode 4 ft.; good mineral vein; two stopes at work here. North vein: Two stopes also being worked. Silver ore tunnel level: Lode 4 ft. wide; three stopes at work here. Glasgow lode: Drifting and stoping; lode 4 to 5 ft. wide. There is a better market for ore, and we now have a considerable quantity ready for market, which will be sold in the course of a few days.

DAY DAWN BLOCK (22nd Nov.)—No. 1 shaft: No. 9 level west: This level has been extended a further distance of 23 ft. for the past fortnight, making total distance from the eastern boundary 503 ft. The ground is a little easier for driving, the formation being 6 ft. wide, principally diorite. The reef in the stopes maiutains its size, being from 1 ft. to 8 ft. in thickness, of medium quality. No. 7 level west: The reef in the stope will average 2 ft. in thickness, of payable quality. No. 6 level west: Two men are employed on the formation near No. 2 shaft. There is no stone at present, but the course is well defined, aud is composed of diorite intermixed with leaders of quartz. No. 5 level west: The reef both on the foot and hanging-wall is payable. No. 4 level west: The reef on the hanging-wall is pinched a little by a diorite bar, but will make again. No. 2 underlie shaft: The contractors have sunk a further depth of 5 ft., making total depth below No. 8 ft. plat 288 ft., and 1,396 ft. from the surface; the country is hard red granite with quartz leaders. No. 3 shaft (underlie): An opening has been made at the bottom of the shaft on the eastern end, aud a cross-cut started and driven 20 ft. south, or towards the footwall. There is a change of ground in the present end; the cross-cut will be continued.

DICKENS CUSTER (27th Dec.)—Mine report.—Open cut or little or south vein: Here we are still following a small seam, from which we are getting more than average ore. No. 1 tunnel on little or south vein—Stope 30 ft. in tunnel going east: Here we have taken out ore from a streak 2 or 3 ins. wide, which at times assayed over $100 to the tou. We followed it overhead to a distance of 20 ft.; it then played out. We have since then sunk a winze immediately under it, on the floor of the tunnel, and find the vein widening out considerably, and showing signs of giving us quite a quantity of ore, providing it continues going down. It is now 20 ins. wide, and of a paying value. The present depth of the winze is about 10 ft. The 300 ft. in tunnel going east: Here we have commenced an under-hand stope on the floor. The ledge is about 15 to 18 ins. wide, and the ore is changeable, being of a pockety nature. To-day it looks like improving. No. 2 tunnel—big or north vein—Stopes 50 and 180 ft. east of shaft house: From these two stopes we are still getting a little pay ore. No. 3 tunnel, little or south vein: (N.B.—This is where Dr. Ball and myself discovered the vein going down). Underhand stope: We have only been at work here for a few days, and have taken out several sacks of rich ore, some of which assayed $300 per ton. I have great confidence in this stope, and look forward to keeping oue or two men at work here for a month or two.—A. H. AXFORD.

EMMA (10th Jan.)—My last report was uuder date of 3rd inst., and I now report progress at the mine for the week ending to-day as under:—On the 8th inst. we made connection with upraise from No. 4 level and wiuze from Cinciunati level. The vein at point of intersection carries some 4 ft. of soft iron, with a little first grade ore intermixed. This ore occurs in small nodules throughout the iron, and in the form of galena and carbonates. The rock on either side of this vein is decomposed limestone, strongly mineralised, but as yet no defined walls. I am now drifting in the vein north about 30 degs. east, and shall also cross-cut both towards hanging and footwalls. I I am strongly impressed with the appearance of the vein, and firmly believe we will soon have a body of paying ore in this northwest part of the mine. Immediately connection was made I advised Judge Bennett by telephone, when he cabled, as follows:—"Salt Lake, January 8th.—Connection made; 4 ft. vein of irou and little first grade mixed; commenced drifting easterly; drift from Emma tunnel shows 3 ft. vein, 1 ft. first grade, 15 ins. second grade, balance milling ore," which I now confirm. The vein iu the eastern part of the mine being worked from Old Emma tunnel continues about the same as per above cable; we have been timbering the ground most of the week, also putting in shoot, consequently but little stoping done. The ground here is very loose, and requires careful handling and much timbering. I have arranged to make another shipment, having secured teams to haul the ore to Wasatch, distance from mine 8 miles, when it can be delivered to sampling mill per railway. I expect teams here the first of next week, and hope to get from 35 to 40 tons of ore to market next week, weather permitting. The outlook at the mine is certainly most encouraging.—H. C. WALLACE.

ETHERIDGE UNITED (3rd Dec.)—Fortnightly report.—My last report was dated 19th November. Caledonian No. 1 South Mine: During the past fortnight the miners have been working in No. 2 shaft. Stoping has been done 20 ft. by 10 ft. The reef still keeps large, averaging 5 ft. in thickness. We are just cleauing up a crushing from this shaft, and I shall cable you the results. It will probably yield about 1 oz. per ton, which would warrant my putting on a few more men, as there is a considerable amount of ore in sight, which appears to be of the same quality. Iu No. 1 shaft, the deeper one, we have erected an engine and pump, and have to-day succeeded in gettiug to the bottom for the first time since we struck the heavy water on 29th October. The water continues very heavy, but I think the pump will keep it down. The indications at present go to confirm my opinion, already expressed, that we have tapped the reef here, but I hope to be in a positiou to give you more definite informatiou next week. North Star Mine: The water is still very heavy. There are about 20 tons of ore at grass which we shall cart to the battery next week. The reef at present averages 1 ft. in thickness. We had a heavy thunderstorm at Goldsmith's creek yesterday, and there are indications of the wet season setting in; the mails may possibly be delayed, but anything of importance will be cabled to you.—M. FERGUSON.

FLAGSTAFF (10th Jan.)—I have the pleasure of again reporting fair progress both in the number of feet driven, and number of tons of ore mined. The mine is looking splendid, especially the new stope which is turning out a fair quantity of first-class ore; there are four separate pipes of ore running up here towards the sixth level. They average from 18 ins. up to 3 ft. The quality of this ore is very rich both in silver and lead, carrying yellow crystallised carbonates with silver-lead which makes it very rich. Drift runniug south-east from rise has been driven 37 ft.; the ore here is from 6 ins. to 4 ft. wide, mostly all second-class with now and then crystallised carbonates mixed throughout it. I think that this seam will lead us to a good body of ore as it is running towards the hanging-wall. Sixth level: I have extended this 68 ft. I have stopped work here as it is going into the footwall. I shall start a drift in from the new cross-cut, and drive it for the hanging-wall. This ground has got to be well cut up. I send you a rough sketch of the work that I have done. Number of tons of ore mined the past week, 87; being 52 tons first-class, and 35 second.—A. L. SWOPE.

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending 5th January.—The mining operations for the fortnight ending 5th January have been confined to the sinking of a winze below the cross-cut at the 206-ft. level south shaft. Twelve coolies have beeu employed, and have sunk 7 ft. 3 ins.; total depth below the level, 22 ft. 3 ins. The underlie of the lode now continues very regular and more settled. The quartz ou the footwall contains a large amount of pyrites, and is the most productive part of the lode in the winze. In the course of a few feet more sinking we hope to cut through to the hanging-wall, and also intersect the lode that was met with in the driving of the 206-ft. cross-cut near the shaft. At the junctiou of these lodes we might reasonably expect an improvement in the quality of the ore. Samples taken from across 4 ft. of lode in winze assay 5 dwts. 5 grs. per ton.

GRAVEL GOLD (20th Dec.)—Works: During the month of November the average number of men was 454, 274 of which were employed on the Agna de Dios and Guali sections; 97 on blasting rock on the San José section; 58 in finishing and securing lower portion of the ditch; and 25 on work at the mine. From San José to Rica the work done has consisted principally of blasting rock, and clearing and strengthening the ditch, and putting in flumes and overflows. At Rica laying No. 2 syphon, preparing for putting in sluice, and making manager's house and office. Enclosed, I beg to hand the board Mr. Welton, jun.'s, detailed report on the work done from San José to Rica.—W. S. WELTON.

INDIAN CONSOLIDATED (6th Jan.) — Phœnix section: No. 1 level advanced 11 ft. 6 ins. Ground much better for speed; the last few feet of driving show an improved appearance in the lode stuff, several veins of quartz runniug parallel with the drive, carryiug mineral, and letting out water, having made. Both the foot and hanging-walls are clean and well-defined, and on the whole the end looks promising. Tramway drive advanced 10 ft. for the fortnight; quartz, 3 ft. wide, shows at present in the end, but I do not attach much importance to it, as it is very irregular and white; the true vein which runs alongside the hanging-wall is making more solid, and better looking; samples of this have gone for assay. We are keeping a full force of coolies in both these drivcs, and shall let nothing interfere with pushing them ahead with all the speed we cau. Stoping: We have resumed work in back of No. 2 level at stope J.; lode somewhat smaller, and of medium quality. The underhand stope G in bottom of No. 1 level shows a lode fully 5 ft. wide at the south end, but I am sorry to say between this point and the winze, which we must command, the lode is pinched and poor; this will hinder us from breaking the quantity of stone for milling we should otherwise be able to get from here. The points at work between No. 1 and tramway levels call for no special mention, as we are doing all that can be done towards breaking quartz in the small lode at north end of these workings, which, although very slow and tight for getting, is well worth taking out. The work of securiug stope E is finished, and breaking quartz from there is in full swing. Tramway stopes still continue to yield their usual quantities of milling stuff, which our crushing of last month shows to be of about the same value as for some time past. Surface works in their usual fair working order. Fuel is being delivered satisfactorily, and battery of 20 stamps is workiug well. We stopped a day before our usual time for clean-up, which resulted in 92½ ozs. for the month, and took New Year's day as a holiday, since which we have made some slight repairs, aud started crushing again yesterday.—J. FRY.

— (7th Jan.)—Colar section: No. 1 new shaft has been sunk 10 ft., making the total depth 188 ft. 9 ins. We have now reached the same formation that we had at a similar depth in No. 2 shaft, and hope before long to strike the lode. The grouud is good for siuking iu, but the water has increased cousiderably, which hinders us. No. 2 new shaft: 210 ft. north has been driven 20 ft. 6 ins.; total, 46 ft. 9 ins. The end is full of large heads of ground, and is letting out a good deal of water. The 210 south has been driven 15 ft. 6 ins., or a total from shaft of 57 ft. 3 ins. There is not much to value in the end, what little quartz there is being broken up into stringers. The ground is hardeuiug up,

which we regard as a more favourable sign. Main shaft: 240 ft. north drive has been advanced 9 ft. 6 ins.; total from cross-cut, 57 ft. We cannot work full time here owing to shortness of compressed air. The water is hardly so quick as formerly. No. 5 shaft—156 ft. north-east cross-cut: No. 1 has been driven 6 ft. by hand labour, full distauce, 70 ft. 6 ins. The end is much harder, and we appear to be getting to the footwall of the formation. East cross-cut: No. 2 has been driven 12 ft. 9 ins.; total, 33 ft. The rock here is extremely hard, but looks like coming in more favourably. The 156-ft. level north has also been advanced 2 ft. 6 ins. by hand labour, or a total length of 174 ft. The 425-ft. winze: Drift south has been driven 5 ft. 6 ins.; total, 20 ft. 3 ins., with a lode the full size of the drive worth 2 dwts. Drift north has been driven 3 ft. 6 ins.; full length, 13 ft. 3 ins., and is now through the quartz. The 450 ft. drive: We are sinking at this point to try and follow the quartz down; 5 ft. have been sunk; the quartz, however, is worth only 1 dwt. 14 grs. The 450 back stopes: The lode is 2 ft. wide; worth 6 dwts. 12 grs. We are now shaping this stope, so as to carry in a drive by hand-labour. No. 2 new shaft, 210 ft. south: Since writing the report I am pleased to say the quartz has come in stronger again, being from 9 ins. to 1 ft. wide; it, however, only carries about 2 dwts. of gold per ton. Machiuery: I am extremely pleased to hear that the new air-compressiug plant has been shipped from England. No time will be lost iu erecting it after arrival in this couutry. The necessary loading for the engine will be completed before the machinery arrives. The main tank is practically finished.—A. S. B. OAKLEY.

KETCHAU (PAHANG).—In the early part of November last, as soon as the news of the important discovery on the Bukit Siam lode reached Singapore, Mr. Becher despatched Mr. Hone, an experienced Australian miner, and one of the members of his staff, to the property, with instructions to take charge of and develop the lode. Mr. Hone, writing, says: "Of course I have not seen any other part of the concession yet, but the one reef (Bukit Siam) is good enough for anything. The rich gold, as I expected, is patchy, but where no gold shows in the rock it is obtaiuable by crushing and panning." On receipt of this, Mr. Becher himself visited the property, and then cabled to London, as advised in the last circular, as follows:—"Can confirm statements; a streak of the vein very rich in free gold; above this level a stope has been started."

MONTE DEL ORO (20th Jan.)—Fortnightly report of mine agent.—Taylor's engiue shaft: The total depth of this shaft below the 244-ft. level is now 29½ ft., showing that very satisfactory progress has been made in the past fortnight, since 11 ft. have been sunk and the shaft securely timbered, in addition to fixing the cistern in the plat and dropping the lift into it. As previously reported, the lode, which is from 3 ft. to 4 ft. wide, is composed mostly of slate, intermixed with a little quartz, and the sample taken from it assayed 1 dwt. 7 grs. of gold per ton. Shaft No. 6: In the 244-ft. level north of this shaft the lode for the first week was principally slate, but during the last few days we have cut into quartz, which has an average width of about 2 ft. Two samples were taken, oue giving a result of a trace, and the second 15 grs. of gold per ton. From the shaft the level has been extended 366 ft., the advance for the fortnight being 17 ft. The ground in the west cross-cut is a fairly hard country rock, aud in the present end the water is oozing freely. Since the last report 15 ft. have been driven, making its total length 135 ft. A change has also occurred in the lode in the intermediate level north of winze No. 8, and just now it carries a stringer of quartz from 6 ins. to 12 ins. wide. The samples taken yielded respectively *nil* and 2 dwts. 14 grs. of gold per ton. Duriug the fortnight 14 ft. were driven, and the level is now 38 ft. loug. Throughout the two weeks the quartz in the 186-ft. level north of the shaft has averaged 3 ft. in width, and the results of the assays of the two samples obtained are 10 dwts. 10 grs. aud 13 dwts. 1 gr. of gold per ton. Considering the hardness of the quartz excellent speed is made in driving this level, 18 ft. being driven, making its total length 508½ ft.

MOUNT ZEEHAN (15th Dec.)—Our Montana open-cast is still lookiug well, and we have, with the last week or two of fine weather, been able to get out a goodly quantity of ore. We have shipped about 80 tons, and we have about 10 tons at surface awaiting bags to get it away, and I hope, before Christmas, to complete the 100 tons. The last 25 tons sent out averages 68 per cent. of lead, and 118 ozs. of silver per ton. In the south drive from the west cross-cut the ore pinched out; but I have returned, and am sinking a winze to ascertain the strength of the lode, and if there is sufficient ore, I will take a stope on this ore. No mining is being done at the Queen Extended this week, as most of the men are away for Christmas holidays, and the few remaining are effecting such repairs on the works as are necessary. The following telegram has also been received from the manager, viz.:—"We have cut lode, which is likely to prove very valuable."

MYSORE (7th Jan.)—Mining operations for the month ending 31st December.—All the operations during the past month have progressed in a very satisfactory manner, and the rock-drills continue to give good results. The 770-ft. level north of incline shaft has been driven 19 ft. 10 ins. in a lode 3 ft. wide, and estimated to be worth 1 oz. The 700 north of Rowse's shaft has been driven 53 ft. 8 ins.; total distance from shaft, 186 ft. 8 ins.; the lode is 2 ft. wide, and assaying 2 ozs. 10 dwts. The 620 north of Rowse's shaft has been driven 9 ft. 9 ins.; total distance, 271 ft. 6 ins.; the lode is very small, and is now very near the north band of unproductive rock. The 466 cross-cut north-west of Rowse's shaft has been driven 41 ft. 6 ins.; total distance, 309 ft. 10 ins.; the rock is very hard and spare for driving. The 236 north of Rowse's shaft has been driven on No. 3 fold 4 ft.; total distance, 22 ft. 10 ins.; the lode is 3 ft. wide, and assaying 3 dwts. 2 grs. Schaw's shaft: The 450 north of this shaft has been driven 47 ft. 6 ins.; total distance, 135 ft. 6 ins.; the lode is 1 ft. wide, and yielding quartz of low quality, but we are at present engaged in cross-cutting east to prove if there is any part of the lode standing in that side of the level. The 450 south of shaft has been driven 10 ft.; total distance, 46 ft. 3 ins.; the lode is 1 ft. 4 ins. wide, and assaying 3 dwts. The 320 north of shaft has been driven 9 ft. 6 ins.; total distance, 126 ft. 9 ins.; the lode is 6 ins. wide, and yielding quartz of low quality. The 320 south of shaft has been driven 12 ft. 9 ins.; total distance, 166 ft. 6 ins.; the lode is 8 ins. wide, and estimated to be worth 10 dwts. Tennant's shaft: The 360 north of shaft has been driven 60 ft. 3 ins.; total distance, 185 ft. 3 ins.; the lode is 1 ft. 3 ins. wide, and yielding some saving work, and getting better defined and looking more promising. The 290 south of shaft has been driven 48 ft. 6 ins.; total distance, 138 ft. 6 ins.; the lode is 1 ft. wide, composed of quartz and schist, but nothing to value. The 290 north of shaft has been driven 62 ft.; total distance, 462 ft. 6 ins.; the lode is 3 ft. 6 ins. wide, and assaying 15 dwts., but I think the lode will improve again very soon. The 160 north of shaft has beeu driven 57 ft. 2 ins.; total distance, 624 ft.; the lode is 1 ft. 6 ins. wide, composed of quartz and schist, and letting out water, which, I think, must be draiuing from old workings still further ahead. Stopes: The lodc in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 3 dwts. 12 grs. The lode in back of the 700 south of iucline shaft (on the wide lode) is 5 ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 700 north of Rowse's shaft (on the fold) is 3 ft. wide, and assaying 5 ozs. 5 dwts. 8 grs. The lodc in No. 1 stope in back of the 620 north of cross-cut from the incline shaft is 4 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 620 south of the incline shaft is 2½ ft. wide, and assaying 4 ozs. 1 dwt. The lode in No. 1 stope in back of the 620 north of Rowse's shaft is 1 ft. wide, and assaying 1 oz. 5 dwts. 8 grs.: the lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in No. 3 stope in back of this level is 2½ ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 600 south of Rowse's shaft is 4½ ft. wide, and assaying 1 oz. 9 dwts. 4 grs. The lode in stope in back of the 550 north of Rowse's shaft is 1 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of 550 south of Rowse's (north winze) is 3 ft. wide, and assaying 19 dwts. 15 grs. The lode in stope in back of the 550 south of winze is 4 ft. wide, and assaying 1 oz. 9 dwts. 4 grs. The lode iu No. 2 stope north of winze, in back of the 550, is 3 ft. wide, and assaying 1 oz. 15 dwts. The lodc in stope in bottom of the 466, north of Rowse's, is 4 ft. wide, and assaying 3 ozs. 12 dwts. 16 grs. The lode iu stope in back of the 400, north of Rowse's, is 3 ft. wide, and assaying 19 dwts. 8 grs. The lode iu stope in back of the 400, south of Taylor's, is 5 ft. wide, and assaying 6 dwts. The lode in stope in back of the 400, south of Plummer's, is 3 ft. wide, and estimated to be worth 10 dwts. The lode in No. 2 stope in back of the 400, south of Taylor's shaft, is 2 ft. 6 ins. wide, and estimated to be worth 10 dwts. The lode iu stope in back of the 296, north of Plummer's, is 1 ft. 6 ins. wide, and assaying 12 dwts. The lode in stope in back of the 296, north of Rowse's shaft, is 2 ft. 6 ins. wide, and assaying 17 dwts. 1 gr. Rising: The rise in back of the 236, south of Plummer's, has been put up 9 ft. 10 ins.; the lode is 3 ft. wide, and assayiug 2 dwts. The rise in back of the 290, north of Tennant's shaft, has been put up 5 ft. 6 ins. in a lode 2 ft. 6 ins. wide, and assaying 11 dwts. 6 grs. The rise in back of the 180, north of Tennaut's shaft, has been put up 7 ft. in a lode 5 ft. wide, and assayiug 2 ozs. 12 dwts. The rise in back of the 180 south of shaft has been put up 7 ft. 4 ins. in a lode 15 ins. wide, and assaying 5 dwts. Sinking: Rowse's shaft has been sunk 35 ft. 3 ins.; total distance 80 ft. 3 ius.; and we have commenced to drive the 780-ft. level north of shaft, which is at present in the country rock, but we hope to meet with the lode very soon. Glen's shaft has been sunk 20 ft. 4 ins.; total distance, 250 ft. 1 in. The ground is a little more favourable for sinking, otherwise there is no change in the appearance or character of the rock. The winze in bottom of the 320 south of Schaw's has been sunk 9 ft.; total distance, 97 ft. 6 ins.; the lode is 10 ins. wide, and yielding saving work for quartz. All our surface operations are going on as usual, and the mills and tailings machinery have been repaired during the monthly clean up, and have beeu started to work again. Mill samples: New mill quartz, 3 ozs.; old mill quartz: Taylor's shaft, 1 oz. 10 dwts.; Plummer's shaft, 9 dwts. 2 grs.; Tennant's, 1 oz. 2 dwts. New mill tailings, 7 dwts. 19 grs.; old mill tailings, 6 dwts. 12 grs.—J. GILBERT.

NEW DEVALA-MOYAR (6th Jan).—116-ft. level, drive east: We have driven during the week 7 ft. at this point; total distance, 65 ft. There is uo alteration in the end. Drive west: Here we have driven 5 ft.; total length, 99 ft. Reef hard and poor. In panuing the stone we get a colour of gold. Our work has been interfered with by the Christmas holidays. We have cleared up for December, and have obtained from 350 tons quartz 70 ozs. free gold, and 170 tons concentrates (value not reported). I shall get crushing started again to-morrow, as we had some slight repairs to do when we stopped.—R. B. JOHNSTON.

— The directors desire to add to the above information that the capital of the company has now been fully subscribed, and all the shares allotted.

NEW EBERHARDT.—The mine manager reports under date January 11th:—Total weight of ore mined and placed on the ore dump ready for shipment to the mill, 24 tons. Assay value of same, as per mine samples, $44 per ton. The general prospect of the mine has not changed since my letter to you of the 4th inst. The direction of the ore is still easterly and pitching slightly to the north, whilst our prospects are very favourable for getting several hundred tons of ore yet. I do not expect to uncover any large bodies unless the general course of the ore seam we are followiug should change and swing back more to the south, then we should be running into new ground, but our present course in about 25 ft. will, I think, strike the old spar chamber, which lies to the east, and above our old south chamber.

NEW HOOVER HILL (10th Jan.)—Provost shaft: We are still cross-cutting east, and are cutting through a large quantity of quartz, which pans about $1 per ton. Sinking on the ore below this, the 50-ft. level, the vein is 8 ins. wide, and pans $6 per tou. We are breaking a quantity of low-grade ore around these old workings.

NINE REEFS (7th Jan.)—Report for fortnight ending January 5th:—Vyvyan shaft: This shaft has been sunk during the fortnight under report 7 ft. 3 ins. by hand labour, making a total depth of 84 ft. 9 ius. below the 145 level. The lode is very small in the bottom, but what quartz there is is very rich, the average assays for the past two weeks being 8 ozs. 9 dwts. 20 grs. We are anxiously hoping for the lode to open out, as even a small lode of such high grade ore as we are getting would be of considerable value. Prospect pit: The cross-cut east from the bottom of the pit has been extended 10 ft. 3 ins., making a total of 23 ft. 3 ins. We have just passed through a stringer of quartz about 2 ins. in width. We are still continuing the cross-cut. The machinery on the mine is working well.—H. P. HODGSON.

NORTH MEXICAN MILLING (6th Jan.)—To put the pump in the mine took a much longer time than I thought it would, but we are now so far that we will start her soon.

— (9th Jan.)—I started the mill. So far all the machinery runs

very satisfactorily and smoothly. The first few days I can run only in the daytime, as I have to break in the entire crew.—HOFMANN.

— A cablegram has been received as follows :—"The pumps are now working satisfactorily."

NORTH TOLIMA.—Report on work done for November :—Esperanza Mine—cost and returns :—Returns : Value of invoice No. 45, 30 tons, containing 3,895.46 ozs. fine silver, at $1 10c. per oz., $4,285.00 ; containing 46 ozs. pure gold, at $21 per oz., $967.05 ; total, equal to 1,050*l*. 8s. 2½d. ; cost, as per statement, 977*l*. 5s. 1d. ; excess of returns, 73*l*. 3s. 1½d.

NUNDYDROOG (7th Jan.)—Report of the work done for the month of December. The 450 north : Distance driven 26 ft., and stoped in back 6 fms. 3 ft., by two Englishmen with a rock-drill ; present length of level 384 ft. 6 ins.; the lode in the end is small, not more than 6 ins. wide. and the assay value 1 oz. 5 dwts. The 450 rise in back : Rose 7 ft., and stoped 4 fms. 4 ft., by two natives with a rock-drill ; present height of rise 38 ft. The quartz is rather white in colour and assays about 1 oz. per ton ; it is a fine lode, 4 ft. in width, and I expect will soon improve in quality, as it was richer in the level above. The 450 south winze and stope in bottom : Stoped by 12 coolies 7 ft. 3 ins., and by one Englishman with a machine 4 fms. 2 ft. 8 ins.; the lode is a fine one, 3 ft. wide, and the quartz of good quality, assaying 3½ ozs. per ton. The 370 south stope in bottom : Ground stoped 10 fms., by one Italian with a rock-drill ; the lode is 3 ft. 6 ins. wide and worth 2 ozs. 7 dwts. per ton. The 370 north stope in back : Ground stoped 16 ft. 6 ins. by 12 natives ; the lode is rather small here, about 18 ins. wide, and worth 1 oz. 5 dwts. 6 grs. per ton. The 370 north : Driven for the month 36 ft. 6 ins., by two Italians with a rock-drill; total length of the level is 368 ft., and there is no change since last report. We shall commence a cross-cut east here in a few days. The 300 north stope in bottom : Ground stoped 3 fms. 3 ft. by 12 coolies, and 2 fms. by one Italian with a rock-drill ; the lode is 18 ins. wide and worth nearly 2 ozs. per ton. The 300 north, No. 2 north stope in bottom : Ground stoped in a fortnight 7 fms. by an Englishman with a rock drill ; the lode is 2 ft. wide, and worth 2 ozs. 8 dwts. 18 grs. per ton. Intermediate level : Distance driven, 14 ft., by two natives with a rock-drill, and ground stoped 4 fms. 4 ft. 2 ins. ; the lode is about 18 ins. wide, and worth 2¼ ozs. per ton. The 230 south stope in back : Ground stoped 10 ft. by 12 coolies ; the lode is 2 ft. wide, and the assays 1 oz. 11 dwts. 12 grs. per ton. Taylor's shaft sunk for the month 32 ft. by three Italians with a rock drill, making a total depth of 491 ft. 6 ins. This is a very good piece of sinking, and we shall push the shaft all we can so as to get down to the 520 as quickly as possible. We purpose commencing a winze in the bottom of the 450 this week. North shaft north drive winze : Sunk for the month 29 ft., by one Italian with a rock-drill, making a total depth of 61 ft. below the level ; the lode is still rather small, about 1 ft. in width, but the quartz looks better and assays nearly 1½ ozs. per ton. The mill : We have cleaned up with a result of 1,406 ozs. from 975 tons of quartz. There was a slight fall off in quality, but the number of tons crushed was larger. The quartz at present going through the mill is of better quality. Health : All well and at work. Weekly samples : Rough quartz, through stonebreaker, 2 ozs. 2 dwts. 6 grs. ; smalls, 1 oz. 13 dwts. 18 grs.—F. W. GREY.

OOREGUM (7th Jan.)—Fortnightly report of superintendent.—I beg to hand you the following report for fortnight ending yesterday :—Since the completion of the skip-roads in Wallroth's shaft, this will be the principal and most convenient shaft in this part of the mine, and all stuff will be hauled through it instead of through main shaft as heretofore, using main shaft only as pumping shaft above the 250-ft. levels from the 1st January. We have changed the names of the workings as follows :—What was previously reported as the intermediate levels, main shaft, will now be known as 215-ft. levels, Wallroth's shaft, and that previously reported as 250-ft. levels, main shaft, will be designated 280-ft. levels, Wallroth's shaft. Wallroth's shaft sunk 3 ft. ; total below 280-ft. level, 24 ft. 8 ins. ; lode 2 ft. wide ; value, 5 ozs. 17 dwts. 8 grs. per ton. The 280-ft. level north advanced 8 ft. 6 ins. ; total from cross-cut, 52 ft. ; lode 3 ft. wide ; value, 6 dwts. 12 grs. No. 1 winze bottom 280-ft. level north sunk 6 ft. ; total, 61 ft. ; lode 2 ft. wide ; value, 1 oz. 5 dwts. 10 grs. per ton. No. 2 winze sunk 3 ft. 11 ins. ; total, 18 ft. 10 ins. ; lode 6 ins. wide, assaying 3 ozs. 16 dwts. 5 grs. per ton. No. 3 winze sunk 5 ft. 1 in. ; total, 30 ft. 4 ins. ; lode 6 ins. wide ; value 15 dwts. 6 grs. per ton. If, as we anticipate, the shoot of ore further south is dipping north ; the lode in both these latter winzes should soon improve in size. No. 1 winze, in bottom of 280-ft. level south, sunk 3 ft. ; total, 42 ft. ; lode 2 ft. wide ; value, 4 ozs. 18 dwts. per ton. No. 2 winze sunk 6 ft. ; total, 55 ft. ; lode 2 ft. 6 ins. wide ; assaying 4 ozs. 14 dwts. 5 grs. per ton. We shall resume the driving of the 280-ft. level south in a few days. The 215-ft. level north advanced 3 ft. 3 ins. ; total, 63 ft. ; lode 1 ft. 6 ins. wide ; value, 5 ozs. 8 dwts. 21 grs. per ton. The 215-ft. level south advanced 8 ft. ; total, 254 ft. 2 ins. ; lode 1 ft. wide ; value, 10 dwts. 21 grs. per ton. Low's shaft : Sinking has been resumed below the 350-ft. level with rock-drill. The 350-ft. cross-cut west advanced 8 ft. 6 ins. ; total, 43 ft. We cut the lode this morning, but do not yet know the size ; a wash from a sample taken gave a good show of gold. The 270-ft. level south advanced 3 ft. 6 ins. ; total, 239 ft. 8 ins. ; no lode. Winze in bottom of 270-ft. level south sunk 2 ft. 6 ins. ; total, 21 ft. ; lode 3 ft. wide ; value, 3 ozs. 5 dwts. 8 grs. per ton. Winze bottom 270-ft. level north-west of shaft sunk 6 ft. 2 ins. ; total, 79 ft. 4 ins. ; lode 2 ft. 6 ins. wide ; value, 5 ozs. 8 dwts. 21 grs. per ton. Winze in bottom 270-ft. level north suuk 3 ft. ; total, 39 ft. 6 ins. ; lode 1 ft. wide ; value, 2 ozs. 14 dwts. 10 grs. per ton. The 200-ft. level south from cross-cut east advanced 8 ft. ; total, 17 ft. ; no lode. Probyn's shaft : Sinking has been resumed with rock-drills. The 450-ft. level south advanced 13 ft. ; total, 52 ft. 6 ins. ; lode 2 ft. wide ; value, 3 ozs. 16 dwts. 5 grs. per ton. The 366-ft. level south advanced 13 ft. 8 ins. ; total, 372 ft. 6 ins. ; lode 2 ft. wide, assaying 4 ozs. 1 dwt. 15 grs. per ton. Rise in back 366-ft. level south, 5 ft. risen ; total, 13 ft. ; lode 1 ft. 3 ins. ; value, 1 oz. 12 dwts. 16 grs. per ton. Winze bottom 366-ft. level south sunk 3 ft. 5 ins. ; total, 17 ft. 8 ins. ; no lode. The 300-ft. level south advanced 21 ft. ; total, 360 ft. 10 ins. The branch reported in the last has made the lode, which is now 1 ft. wide, assaying 1 oz. 14 dwts. 20 grs. per ton. Intermediate level north above 166-ft. level south advanced 7 ft. 4 ins. ; total, 13 ft. 8 ins. ; lode 1 ft. 6 ins. ; value, 10 dwts. 21 grs. per ton. Stopes—Wallroth's shaft : Back 215-ft. level north, cut 3 fms. ; lode standing 1 ft. 6 ins. ; value, 6 ozs. 1 dwt. 7 grs. per ton. Stopes back 215-ft. level south, cut 12 fms. ; average size of lode standing 2 ft. ; average value, 2 ozs. 14 dwts. 3 grs. per ton. Stopes bottom 215-ft. level south, 6 fms. cut ; average size of lode standing 1 ft. 9 ins. ; average value, 2 ozs. 12 dwts. 22 grs. per ton. Probyn's shaft : Back 166-ft. level south, cut 16 fms. ; average size of lode standing, 3 ft. 9 ins. ; average value, 2 ozs. 8 dwts. 9 grs. per ton. Stopes bottom 166-ft. level south, cut 26 fms.; lode standing averages 3 ft. wide ; average value, 1 oz. 17 dwts. 12 grs. per ton. Stope bottom 230-ft. level south, cut 14 fms. ; average size lode standing 1 ft. 6 ins. ; average value, 14 dwts. 8 grs. per ton. Stope back 300-ft. level south, cut 7 fms. ; lode standing 4 ft. ; value, 1 oz. 1 dwt. 19 grs. per ton. Bottom 366-ft. level north, cut 5 fms. ; lode standing 4 ft. wide ; value, 5 ozs. 12 dwts. per ton. We crushed in December 1,313 tons of quartz, and obtained 2,847 ozs. of gold.

OSCAR (24th Jan.)—Hodgkinson's lode : The shaft has been sunk 2 metres since date of last report, and during the last few days a marked improvement has shown itself in the lode. The quartz is of a striped bluish character, and assays have shown increasing value for gold from 2 dwts. 14 grs. to 2 ozs. 12 dwts. 6 grs. The lode in the 200-ft. level north is 4 ft. wide, about 3 ft. of which is mill quartz, assaying 9 dwts. 20 grs. In the same level south, we have 4 ft. of quartz, which, however, at present is low grade, assaying less than 2 dwts. In the 150-ft. level south the lode has improved, and now carries 3 ft. of mixed quartz and schist, which by assay shows value for gold 20 dwts. 21 grs. A winze sinking in bottom of this level is showing quartz nearly 3 ft. in width, of a very promising character. A general sample taken from this working assayed 1 oz. 6 dwts. 3 grs. A stope working in back of same level is breaking good stuff. The quartz is 2½ ft. wide, and has assayed quartz containing copper and galena, 7 ozs. 6 dwts. 8 grs. ; quartz free of mineral, 11 dwts. 8 grs. The stope working in bottom of 100-ft. level north, and the stope in back of 150 north are each producing good stuff. The lode in each case is about 30 ins. wide, and within the last few days have assayed respectiv ly, 10 dwts. 10 grs., and 1 oz. 10 dwts. 1 gr. gold per ton. We have cut a small vein of quartz in the cross-cut towards Hewlett's lode, which showed both copper pyrites and galena. An average sample of vein assayed 5 dwts. 5 grs. From indications, we anticipate cutting the main lode during coming week.

PITTSBURGH CONSOLIDATED (10th Jan.)—Report from the superintendent : Since January 1st No. 7 tunnel has been extended 30 ft. We are following the same wall, which continues in the right direction, but we have no quartz in the face. It is quite possible that we are running parallel with the vein, but will not change our plan until we have run our distance out, so long as our present course and work seem so favourable. Rise A has been advanced 4 ft. 9 ins. outside of the vein, which is now 2½ ft. thick. At the bottom of this raise we have started to stope ; have taken down 12¼ tons of ore, assaying $3.31 per ton average. There is good ore above. Rise B has been advanced 8 ft. 4 ins., also outside of ore, which is still low grade but improving as we advance. We also find the ore continuing west of better class than in the raise ; vein is nearly as thick. Rise C has been advanced 10 ft. ; the vein is from 3½ to 5 ft. thick. We have taken down from this point during past week 16¾ tons, the average assay of which is $49.03 in gold per ton. The shoots of old stopes above No. 5 tuunel are full ; are now gouging. 4 tons from this stope assay $15.43 in gold. On the 7th inst. we started a new rise, which we call Prospect rise ; it is located 80 ft. east of old stope ore shoot in No. 5 tunnel ; ore assays at starting point $9.92 ; there is room here for a large lot of ore. I started the mill on the 3rd of January, and have run on the low-grade stuff that was in the dumps at the mill. There is still enough for two days run, when we will start tramway on ore. Will clean up to-morrow and report result.

RUBY.—Report upon the mines for the week ending January 10th.—Dunderberg : We have seven men on day's pay, and eight tributers at work here. We have drifted about 4 ft. on the quartz in the 500 level, which shows some very nice lead ore, but it is so badly mixed with poor quartz that we cannot make much out of it so far. This body of ore is now about 6 ft. wide, and about 10 ft. long, and shows no signs of weakening either above or below, and if it does not improve by drifting we will sink on it. In the upraise above the 700 level I have put a man to work on the fault where the streak of ore was lost, and this afternoon I believe we have found it again. We will follow it wherever it leads, and from the looks of the ground above it in the raise, which is all full of seams of ochre and stained ground, I have great hopes of its leading to something good. The 700 incliue has been sunk 8 ft. ; total, 66 ft. The ground is much harder than at the date of last report. We are using power drills every other day, and they work well, and we will be able to make good progress when we start a drift. Lord Byron : We have two men at work on day's pay and 13 tributers ; have been sinking through the *débris* mentioned in my last report, and we are now finding some nice ore mixed through it ; it is getting larger, and is the best looking prospect I have yet seen in the Lord Byron. Bullwhacker : We have six men at work here. I visited the property (about 6 miles from the Dunderberg) and find it looking fairly well. Tacoma : The men have given up work as the ground is hard, and they have a considerable distance to walk. Perhaps this is just as well, as in another 100 ft. we can expect to get something, and the company may continue the work in the spring.

— Telegram received to-day (27th January) from Eureka : "13 tons shipped on company's account to Salt Lake."

TOLIMA.—Advices by the mail of the 26th January from their mines state :—Frias November returns, 12,650*l*. 13s. 11d. ; Frias November cost, 3,784*l*. 14s. 11d. ; Frias November profit, 8,865*l*. 19s. The undergrouud agent reports 61 fms. 1 ft. 10 ins. of ground expended, of which 50 fms. 1 ft. 11 ins. were productive, leaving 10 fms. 5 ft. 11 ins. unproductive.

VICTORY.—Up to time of writing we have not cut the La Cruz lode, but there is a change in the rock, which shows many quartz stringers, a strong indication that we are close on to a large body of quartz. The plan sent out will be ready for next mail, showing the different works done on the mine.—Capt. NICHOLLS.

DEATH OF MR. HENRY CATTLEY STEWART.—We have to record with regret the decease of Mr. Henry Cattley Stewart, who expired on the 23rd inst., after a very short illness. The deceased gentleman was well-known in mining circles, as he usually attended the general meetings of several companies, from which his presence will be greatly missed. In private life the deceased gentleman was greatly esteemed.

THE YURUARI CO., LIMITED.

LATEST NEWS FROM THE MINE.

THE secretary advises receipt of mail letters from the mines dated 5th January :—

In recent letters the manager has been urging strongly the course which he suggested early in last year, viz., the opening up of two or three levels east and west in the water shaft, so that he might have eight or 10 stopes and levels available for keeping the mill running with good quartz, predicting that in such a case he had no doubt the results obtained would be very satisfactory. He now points out, as he predicted, that the quartz in Nos. 4 and 5 levels east, water shaft, has for some time been poor, and that the two lodes have not been sufficient to keep the mill running with paying quartz. For one or two months past returns have accordingly been for only a limited number of days per month. He also reports with regard to the Cenicero shaft that the levels 8, 9 and 10 having now been advanced 800 ft. or 900 ft. it is very expensive to work them until he can do so from the water shaft, the transit underground and raising quartz nearly doubling the expense of winning it. In his last letter he points out that, now having obtained the Ingersoll drills, one of which he has put to work in the No. 9 level Cenicero, and the other in the No. 5 level water-shaft, he is in a position to undertake extending the levels and sinking the water-shaft upon the most economical basis, and as miners are still scarce, strongly presses the directors to allow him to proceed with the necessary work, so as thoroughly to open up the water-shaft, when he feels satisfied the returns will be as satisfactory as they were when a similar course was pursued by one of his predecessors in the Cenicero shaft.

Annexed is mine report just to hand, from which it will be seen a considerable amount of development work has been carried out in December. Cenicero shaft : The stope in back of No. 8 level has been advanced during the month 10 ft., the lode varying from 2 to 15 ft., only a small portion of which can be worked, as the quartz is poor towards the hanging-wall. In No. 9 level, 20 ft. has been driven by a rock-drill, this lode being now about 920 ft. from the shaft. The lode here shows some improvement. No. 11 level has been stoped in bottom for 5 ft., the lode being similar. We have commenced cutting north in this level, with the object of finding the main, east and west lode, which has become dislocated. It is now in 5 ft., and so far shows no indication of nearing the lode. Water shaft : No. 5 level is about 90 ft., making the progress for month 35 ft., 8 ft. of which has been driven by hand labour. Pumping engines are in good order, and the mine comparatively dry.

THE COPPER SYNDICATE.—Messrs. Strauss and Co., of London, the well-known metal brokers, are trying, it is said, to recover 500,000*l.*—half a million sterling—from the Copper Syndicate.

PALMAREJO AFFAIRS.

SHAREHOLDERS ISSUE A LETTER OF ADVICE TO THEIR FELLOW SHAREHOLDERS, WHO ARE URGED TO TAKE UP DEBENTURES.

26th January.—The undersigned are largely interested in the Palmarejo Mining Company, Limited, and after carefully considering the quarterly report and financial statement which we in common with the other shareholders have just received, we have come to the conclusion that it is all important to the interests of the shareholders that there should be no delay in completing the mill and other works. This object can—in our opinion—be best secured in the manner adopted by the board, viz., by the issue of debentures of sufficient amount to clear the company of all liabilities and provide working capital, and we cannot too strongly recommend all our fellow shareholders to join us in subscribing for these debentures. There is no doubt that the completion of the works will at once place the company in a most favourable position, and that the security afforded for the debentures by the value of the property is ample. The additional security of the guarantee of both principal and interest by the Mexican Explorations, Limited, is, moreover, of great value, and renders these debentures a perfectly safe and first-class investment. We understand that negotiations are on foot for the absorption of a portion, if not the whole, of the issue, by persons not connected with the company ; but whether such negotiations are carried through or not, it is clearly desirable that the shareholders themselves should show that it is their intention to complete the works in hand, and realise for their own advantage the profits which they may fairly look for, but which can certainly not be enjoyed until the mill is at work.—Sir R. W. CARDEN AND CO., M. I. BROWNE, J. A. MAYS, C. J. GOLD, MOCATTA and BROWNE (Liverpool), CARR BROS. and SMITH, S. WOOD, J. P. HARRIS A. W. LATHAM.

THE TESORO GOLD MINES, LIMITED.

THE MANAGER TAKES UP HIS RESIDENCE ON THE MINE.

THE secretary of the Tesoro Gold Mines notifies that he has by this mail received a letter from Mr. T. P. Sharman, late assistant-manager at the Colombian Hydraulic Mines, who has accepted the post of superintendent of this company, saying that he was taking up his residence on the company's mines. Advices from the mines state that the work of development was progressing satisfactorily, and the water supply will now be pushed on with all despatch.

THE registered office of the Parcocha Iron, Ore, and Railway Company, Limited, has been removed to Copthall House, Copthall Avenue, E.C.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

BOARD.

Sir CHARLES METCALFE, Bart., Chairman.
B. B. TRENCH, Esq., Deputy-Chairman.
L. Balfour Burns, Esq. | Major J. W. M. Cotton.
Sir Stuart S. Hogg. | Richard Smith, Esq.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.
NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South Africau ventures.

To act as agents ou behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The purchase and sale of properties, and all classes of South Africau securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

S. H.—We advise you to have nothing to do with Nos. 1, 2, and 3, who are all but unknown on the market. There are many well known and highly respectable brokers, whose names appear on our front page, with whom you had far better deal.

Cambridgeshire (S. S.)—Hold those named, and, if possible, buy a few more of the low priced ones. There is very little risk.

H. W. Rowle.—We have already done so in our previous issues.

Spaniard.—Take a fair profit by all means. By holding we think you do well.

Calls.—They are not worth even 3d. per share, and should be sold.

Enquirer (Brentwood.)—It has been confirmed. See our columns.

Clarkson.—It is generally thought that a rise is imminent. Purchase a few is our advice at the present low price.

Expectant.—No. 3 and 7 cannot go lower. Hold 1, 4, and 5. Unlikely to pay dividends, but as a speculation fairly good, 2, 6, 8, 9, and 10 sell.

M. M. (Stanford-le-Hope.)—The last return was decidedly good. A cable is daily expected from the mine.

Bristol Sub.—We think them a good investment, and, of course, advise you to hold.

H. B. B. (Aberdeen).—The dividend has just been paid, and another is expected very soon. Shares worth buying, in our opinion.

Visitor.—Only a "rig," and we advise you to take the profit shown.

B. R. Witney.—Sell A, C, and F. Others likely to go better.

E. G.—Thanks for your information. The list is now in order.

John Pitt.—Yes. Lomas, Yuruaris, and West Indians we consider a fair speculation, but cannot recommend Great Kruger.

The Mining World.

LONDON: SATURDAY, JANUARY 31ST, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE MOVEMENT IN INDIAN SHARES.

The strong buying of Indian shares this week both preceded and followed the Goldfields of Mysore meeting. The Indian market has been in a sensitive state for some time past, and has, to a considerable extent, monopolised public attention. The strong position which these mines are assuming is at last beginning to impress a public, too much given to random speculation in the time of a boom, and too little to calm reflection at a period like the present. If the Indian goldfield be surveyed, there is every ground for encouragement, and absolutely no room for any other feeling. The mines are in a country under the control of the British Government; they have passed through their earlier trials, and experimental stages. The labour question, which was a difficulty at the outset, has been practically got over; development is proceeding with commendable rapidity; and, as for the results, they can only be described as brilliant to a degree. All these facts, and many others which we have set forth iu tabular statements, in plans, in maps, and in charts—in fact, by every conceivable means by which the truo position of affairs could be brought home to the public mind, are at

last calling forth the dormant spirit of the investor and the speculator, and the first results are seen in the activity in the shares that has characterised the market for some time past.

The striking event of the week has, of course, been the Goldfields of Mysore meeting, at which Mr. John Taylor delivered a speech of unusual importance, and to this may be added the dealings in the company's shares, which last week we quoted at 15s. This week they have been as high as 22s. 6d., and close at 22s. 3d. Obviously there is a scarcity of them in the market, and every indication that they will see better price possibly within the next few days. In fact, since the meeting, an important telegram has come to hand which announces the striking of a pocket of very rich ore in the south shaft. Still, as we have said, the most striking event of the Indian week has been the meeting, made so by the speech of Mr. John Taylor, and the declared policy of the board that they will deal with Goldfields affairs as with those af a land company. Both Lord Ribblesdale (the chairman) and Mr. John Taylor showed that Goldfields of Mysore, instead of going out into the highways and hedges to find customers, has several applicants for portions of the extensive property, of which it is in happy possession. Of these, Mysore is one ; Balaghat another ; Nine Reefs a third ; and there is also a nameless fourth. In regard to Mysore, the position is a little singular that this company, which, less than two years ago had property which it could sell to Champion Reef is now a customer for land which it wishes to buy from Goldfields of Mysore. The speech of Mr. Taylor was, however, conclusive as to the necessity that exists for acquiring this land, and the assurance of Sir Charles Tennant, the Mysore chairman, was welcome and emphatic, that so far from Mysore property being diminished in value by this acquisition it will be increased. In another 900 ft., Mr. Taylor stated, the Mysore workings will enter Goldfields territory, and, seeing that the value of the latter is increasing day by day, the sooner the Mysore directors make up their minds as to what they will do, the better will be the bargain they will make. Without expressing any decided opinion upon the course that may be followed until the full proposals of the Mysore directors are published, we are bound to own to a feeling of admiration of the policy enunciated by the Goldfields directors, and to congratulate them on a success which their prudent management has now apparently brought within reach. We quite agree with Mr. Taylor, the moderation of whose perorations is one of the features of his far-sighted and businesslike addresses, that Goldfields shareholders are about to reap a harvest from what, in the natural condition of things, must be ever advancing prices for their property. At the beginning of the month who could have foretold the striking improvement in Goldfields affairs that its close has witnessed ?

MR. GOSCHEN ON THE MONETARY CRISIS.

IT was only natural that the Chancellor of the Exchequer should have taken the earliest opportunity at his disposal of referring to the financial crisis through which the country has recently passed. We use the word country advisedly, for though the failure of Messrs. Baring Brothers and Company would have had its first and most disastrous effects in the metropolis, it is unquestionable that the whole of the commercial and monetary interests of the United Kingdom would have been well nigh paralysed by such a catastrophe. That an absolute collapse was averted is of course mainly due to the promptitude and loyalty with which the Bank of England and the other great banking institutions of the country came to the rescue of the Barings ; but it is a matter of common knowledge that in the arrangements which were made to prevent a panic, Mr. Goschen played an important part, and the compliments which he passed upon Mr. Lidderdale and his colleagues might to some extent have been applied to Mr. Goschen himself. Excellent a financier as the Chancellor of the Exchequer is, he has not only recognised the grave dangers through which the business world has passed, but he has set about raising safeguards for the prevention of similar dangers in the future. All business men will hail with satisfaction the announcement which Mr. Goschen made at Leeds on Wednesday evening, that he is in consultation with the directors of the Bank of England, with a view of ascertaining what steps are possible and necessary for remedying the shortcomings of our existing currency system. Without committing himself to any hard and fast programme, Mr. Goschen dwelt upon the desirability of establishing a second gold reserve which should only be used in cases of grave emergency. He pointed out that the ultimate banking reserve of the country, allowing for the three millions borrowed from the Bank of France, amounts to only about 14½ million pounds, or considerably less than the amount represented by the cheques which frequently pass through the Bankers' Clearing House in a single day. And yet the banks go on employing their resources up to the hilt, knowing that if the need arises they can always go to the Bank of England. It is clearly undesirable that such a state of things should exist, and if the establishment of a secondary reserve would give greater stability to our banking system, the sooner it is provided the better it will be for all concerned. Mr. Goschen also appears to be in favour of 1*l.* notes under certain conditions, hoping by such an issue to attract into the Bank of England a considerable amount of the gold coin which is now carried about in our pockets. It is clear that our stock of gold might be very easily economised, and as gold is of the essence of our monetary system, any measure which enables the country to husband its resources, and to prevent the recurrence of financial panics, must prove to be a step in the right direction. The business community will watch with keen interest the development of the plans that were briefly, but very ably sketched by Mr. Goschen the other evening.

CORNISH TIN SHARES.

IT is curious to notice that while the stock markets generally, and the mining department in particular, have been pulling themselves together, and putting on a more cheerful appearance than they have worn since the Baring collapse in November, Cornish tin shares have not only shown no recovery, but have actually continued to droop in a manner anything but comfortable to holders. With very few exceptions cost-book shares are very little dealt in out of Cornwall. The reason, no doubt, is that, in such an essentially adventurous enterprise as mining, investors are strongly disinclined to go in for unlimited liability, whether the liability be nominal, as it is in many cases, or real, as it is in a considerable proportion of the Cornish mines. People on the spot who appreciate the value of the cost-book system, and have the means of seeing that it is properly carried out, have in the past held different views ; though it would seem that even in the Duchy there is a tendency towards the adoption of more ordinary joint-stock principles. Even such an ardent apologist for the Cornish system as Mr. "no credit" Reynolds, appears to be undergoing a process of conversion, though it is questionable whether the limited liability system will prove as remunerative in Walbrook as cost-bookism has done. However that may be, there is, as we have said, a tendency against the Cornish method, so that even in Redruth dealings in shares have become very scarce, and as the local smelters have been busy knocking down the price of the commodity in connection with which they act both as buyers and sellers, the share quotations have, with scarcely an exception, fallen heavily during the past month. This will be seen from the following table :—

	Jan. 2.	Jan. 29.	Change.
Carn Brea	61¼	55¾	—5½
Cook's Kitchen	17¼	12¾	—4½
Dolcoath	77¼	68¾	—8½
East Pool	23	20¼	—2¾
South Frances	11½	9¾	—1¾
Tincroft	34¾	32½	—2¼
West Basset	2¼	1¼	—1
West Kitty	9¾	8¼	—1½
Wheal Agar	13⅛	10⅞	—2⅜
Wheal Grenville	11¾	13¾	+2

From this it will be seen that the only exception to the downward movement has been Wheal Grenville, but even in that case the current price includes the call which was made a few weeks ago. We have not selected January 2nd as a date which would furnish a violent contrast with current prices, but simply to show how great the fall has been during a short period, and one in which the market for tin, from the point of view of consumers, has varied but little. The present price of the metal is indeed just about the same as it was a month ago. It is obvious, therefore, that while the mining companies are suffering from the diminished price of their produce, the Cornish smelters are having an exceedingly good time. This is one of the disadvantages of a system which tolerates the practical control of mining undertakings by a comparatively few wealthy smelters, bankers, and merchants. Is it to be wondered at, under the circumstances, that investors as a rule fight shy of cost-book mining shares ?

ELMORE'S PATENT COPPER DEPOSITING CO., LIMITED.

VISIT TO THE WORKS AT LEEDS.

ON Tuesday last, a party of gentlemen, largely connected with the copper industry and the Press, left St. Pancras Station, by Pullman car, at 9 a.m., arriving at Leeds at 1.30 p.m., for the purpose of inspecting the works of the Elmore Patent Copper Depositing Company. From the station carriages conveyed the party to the works at Haigh Park, Hunslet. The visitors were conducted over the works by Mr. F. L. Rawson (director), Mr. Stepney Rawson, Mr. Frank Elmore and Mr. Stanley Elmore, Mr. Sanders, (the manager), and Mr. Shurmer (the secretary), who, with great readiness and ability, gave all the explanations that were required.

ELMORE'S PATENT COPPER DEPOSITING PROCESS DESCRIBED.

The electro-deposition of copper on a large scale for the purpose of producing pure copper, which process was introduced by the Messrs. Elmore into several of the leading copper works some years ago, is now well known and extensively used. By the old processes the copper so produced is again cast and used where articles of high quality and for special purposes are required. The later discovery of the Messrs. Elmore, the result of many years' hard work, is the automatic production of *finished articles direct* during the process of this electro-depositing. The Elmore process is distinguished for the purely automatic character of the working, the low cost of produc-

tion, and the vastly improved physical character of the finished product. The copper is electrolytically deposited from rough bars upon a revolving mandrel, upon the face of which the burnisher moves continuously from start to finish for the purpose of condensing the particles as they are deposited, thus rendering the material dense, fibrous and cohesive, possessing strength, ductility and uniformity hitherto unobtainable, the finished article being produced automatically during the single process of refining the copper. This burnishing operation is carried on continuously from the first moment the deposition commences, with the result that the metal leaves the bath not only perfectly pure, but of a physical character quite different from copper produced by any other process, whilst the gold or silver and the various impurities are collected at the bottom of the tank and turned to account. The works of the Elmore Company are at present laid out for the production of copper articles only in the form of seamless cylinders, rollers, wire and sheet or coverings for rams and shafts, autoclaves, &c. By the old process of manufacturing solid drawn tubes and similar articles the metal must be first of all cast into a block, then bored out truly and have a steel core inserted, and then be well hammered by a steam hammer and turned on the outside before it goes to the drawing bench, where it has gradually to be drawn down to the necessary size, requiring frequent annealings. Even when the metal has gone through all these processes, it is not to be compared in quality to the cylinders made by the Elmore process, which are seamless, of true circular section, perfectly homogeneous, and can be produced practically in any length, and of any diameter required. In the case of ordinary copper, the average tensile strength is not over 12 to 14 tons per square inch, as compared with 20 to 30 tons, and even 40 tons, in the case of Elmore's copper; and in the case of wire the average conductivity of copper wire as now sold in the market is about 98 to 99 per cent. of Matheson's standard, whereas wire produced by the Elmore process, being drawn directly from the electrolytically-deposited copper without melting, thereby ensuring the maximum purity and the maximum conductivity obtainable in copper, possesses a uniform conductivity, as certified by Messrs. Clark, Forde and Taylor, of over 102 per cent., and can be drawn down to the very finest wire without any annealing at all; whilst with a breaking strain of 29 tons per square inch the elougation is only ⅔ per cent. The method of manufacturing wire by the Elmore patents also elimiuates the necessity of many of the steps involved in the production of this article by the older processes. The "essential and indisputable" facts connected with the process are as follows:—1. That it produces an article of commandiug superiority over anything in competition with it. 2. The cost of mauufacture is far less than that of any other prooess hitherto in use

THE WORKS AS THE VISITORS SAW THEM.

THE MELTING SHED.

The visitors were here first shown Chili bars as received from the smelters, containing about 97 per cent. of copper and considerable impurities—silver and gold being reckoned auongst the latter. The operation was shown of melting rough Chili bars into a form most serviceable for introduction into the tanks. By dropping the molten copper into water it became granulated. It is thus treated in order to be more easily handled and put into the tanks. This is the only part of the Elmore process that requires an actual melting. The ordinary process requires it to be melted first of all when cast into the plates, which are put into the tanks; and again when the copper has been deposited and becomes pure, it is re-melted in the furnace, where great care has to be taken to cleanse it from all impurities. The copper is then taken and re-cast into slabs, which are cut into square pieces, and drawn out into wire. When making the wire in the ordinary way the furnace has to be perfectly clean, and when the copper is cast it is impure, because it has taken in impurities from the furnace. Therefore, by the ordinary process, there have to be several meltings, which remove these impurities, but by the Elmore not more than one melting is needed, and even this may be dispensed with. When copper is turned into wire the ordinary rate of conductivity is 98 per cent.—a great quantity comes out between 96 and 98. Mr. Crookes, in fact, has tested a large number of samples, and found every one of them under 96. Surprise was created when one firm guaranteed 99 per cent., but Elmore wire comes out regularly at 102½ per cent., or 3½ higher than Matheson calculated when he made his experiments on what he considered to be the conductivity of absolutely pure copper.

THE GENERATING ROOM.

In this chamber the current is generated for the depositing shed adjoining. There are two boilers made by the Messrs. Heaton, capable of working up to 250 h.-p. each. There is one other low-speed engiue, altogether three, with three dynamos and spare machinery for generating the electric current for an output of 20 tons per week. A new engine is in course of delivery. There will be 60 tanks, which will take about 60 electrical h.-p. There are three dynamos, with a machine of 450 revolutions. The engine and dynamo at the furthest end of the chamber had just stopped after a seven months' continuous run. The boiler pressure is 120, but at the moment was giving off 50 h.-p., but is capable of working up to 250.

DEPOSITING SHEDS.

Perhaps this was the most interesting part of the whole exhibit. From these sheds there can be turned out 6 tons per week of tubes, various sizes of which were exhibited, as made to meet the special requirements of customers. The following was the order of exhibit in this section:—Empty tanks showing method of rendering same acid-proof; tauks ready for insertion of mandrels; tanks with mandrel in, ready for solution; tanks complete, ready to start; and tanks at work. The copper in the tanks lies at the bottom in grauules; the current is conveyed to the copper plate, upon which it rests, and the granules are gradually dissolved. The copper is not absolutely pure, for combined with it is gold, silver and dross. All impurities are passed down to a woodeu tray, and as soou as the copper is absorbed by the revolving tube the tray is taken out, and its coutents dealt with in accordance with their commercial value. There is enough copper iu each tank to last for months. The tank is filled with a solutiou of sulphate of copper, and a certain amount of crystals, and free acids, roughly speaking 5 per cent. The liquid is pumped into the tank, and there is an ingenious arrangemeut by which, without the use of the ordinary taps, the liquid can be taken away by means of another rubber tube, suitably placed. In the Elmore process the word "mandrel" ofteu occurs, by which is meant the cylinder upon which the copper is deposited electrolytically from the rough bars. The mandrel is closed hermetically at the end, and when the liquid is put into the tank its tendency is to float, and its thickness is so calculated beforehand, that when the liquid is present the weight amounts only to a few pounds, so that there is no damage done by the weight. All the tanks of the series are conuected with the master tank at the end, and having worked one way, the burnishing process can be reversed by the gear employed for the purpose. The plates beforc referred to are those upon which the granulated copper is laid. They are perforated and are placed horizontally, which arrangement allows the mud and dross to go away, and this in the old processes was always a trouble. The heavy acid falls down and mechanically carries the mud with it, which latter is kept for the sake of its metallic contents. The gold is often found to run from a few pennyweights to a couple of ounces, and the silver varies from ½ oz. up to as much as 100 ozs. per ton of copper. We have already said that to meet the requirements of customers tubes have to be made in special sizes. It is obviously important to have these tubes of the required thickness and free from flaws. A curious example was shown of a flaw in a tube. This evidently occurred in the original surface, and became exaggerated as time went on. Consequently there was produced an imperfect tube, which would undoubtedly be condemned. Now this brings out a special feature in connection with the process. If a tube at the end of the work is to be perfect, then the surface must be perfect throughout and its thickness uniform. Now if a flaw should occur, it becomes by this process more and more apparent every day as the mandrel revolves in the tank, and hence the condemnation of the tube is inevitable. It is not one tube in 500 in which a flaw ever occurs. Interesting examples were also shown of nodules formed on the tube—in other words, malformations, which in their earlier stages are almost infinitesimal, and it is for this purpose that the burnishers, which are of agate, and are kept continuously in motion, are used to remove them. It is the motion and pressure of the burnishers which rub out these nodules at the moment they are made, thus preventing after difficulties. Of course, there must be a definite degree of hardness for these burnishers to have an influence on the copper, and agate has been found the most suitable substance. Between the burnisher and the surface there is perfect mechanical action. The pressure of the burnishers is 10 lbs. on the 9 square milometres. In regard to the composition of the tanks, they are so constructed as to possess a certain amount of elasticity. They are light and cheap—in fact, the old and more expensive kind of tank is not required. The tanks are water proof, acid proof, and we may add, "electricity proof."

ROOM FOR ROLLING OFF THE TUBES.

This room is immediately adjacent to the one we have been describing. Here the process was iu operation of removing the tubes from the mandrels, and a most interestiug operation it is. Here there was no electrical work going on, but simply the separation was effected by dilatation and compression of the tubes. It may be useful to mention that tubes up to 6 ins. are used for a variety of machine work, and specially for the marine engines, whilst the larger sizes are usually employed in chambers, in which big containing vessels have to be made for copper. We understand that one firm alone is desirous of making a contract with the company for 50 tons of tubing a week, and probably this contract will be accepted when the necessary accommodation at the works is provided. What is called an autoclave, 3 ft. 4 in. and 14 ft. long, was shown, and the mandrel upon which the tube had had to be deposited was also shown. It had to resist very considerable pressure. The proposed extension of the works to be used for the heavy ram, depositing sheds, and work of a heavy kiud with the overhead crane was next shown.

THE TESTING ROOM.

In this room experiments were made showing the great strength and high qualities of samples cut from the articles manufactured. The judges of the test nomiuated were Mr. Stoker and Mr. Nursey, President of the Institute of Mechanical Engineers. In passing, we may say that at the present time we understand the company has orders for as many tubes as it can make for delivery into France. It was pointed out that the tests now to be made would be of a character that no copper manufactured by auy other process had yet been able to withstand. In fact, every tube sent out from Haigh Works is first tested, and a record of that test preserved iu the books. In making vats, pans, &c., the amount of stretching the copper will stand is remarkable. Copper that is very strong is wanted with good elongation. Although the process shows very little elongation the copper is very soft and ductile. When the process was being tested on behalf of the Société des Metaux, a tube taken and tested by a French workman not only very much surprised him but all beholders. Although of immense strength it could be turned and twisted in every direction. It was arrauged that the first should be a test whether the flange could be hammered at the end of the tube without annealing. The Frenchman before referred to said it was impossible as it would break it, but he found practically he could not do this, and so he hammered it out quite cold. Then it was suggested that the flange, should be further enlarged by hammering, and by being expanded in the direction of the flange, and this was done three times successfully. The workmen proceeded to hammer out a second flange in a lateral direction, about 3 inches, aud after being reduced to the thickness of a knife's edge he turned it over and flattened it out again, without showing a single sign of a crack. That piece was taken to a well-known expert in Frauce, who said "I am confident the world has never yet seen a piece of copper like that." The workman, in fact, was so astonished that he declared he did not think it copper at all but lead! Annealed Elmore wire in the hand feels more like silk thread than anythiug else, and yet this same wire when

tested in machinery gives a strength of over 20 tons. In the presence of the representatives of the Société des Metaux there were also experiments of drawing wire, and it was made quite certain that this wire can be drawn out without annealing practically without limit. 70 lbs. drawn out in wire in this way could be made to reach from the works of the company to New York. Now as regards the test. This was made of the strength and quality of samples cut from the articles manufactured and was pronounced by the judges to be over 20 tons to the square inch. Considerable admiration was excited by the quality of the copper fracture which the experiments showed. An interesting case of samples of tubes, worked in different ways, all without the ordinary process of annealing, having been shown in the Counting House, the company proceeded to

THE WIRE WORKS.

The ground covered by these is 12½ acres, and a special company, we understand, is formed to carry out the work of this department. Buildings, of which the outer walls and columns have already for the most part been put up, cover between 8 and 9 acres of this land. We are informed there are to be 720 tanks, and the engine power will go up to 2,600 h.-p. In about six months' time the buildings are expected to be completed, and the works brought within measurable distance of completion. It is believed that 100 tons of wire per week can be made when the works are in full progress. It is said that some wire drawers have offered to take up from the company as much as 400 tons per week ; but the contract has been limited for the present to 200 tons per week. To this building, on the remaining ground, there will be added another one of the same size.

CONCLUSION.

We have only to add that the works themselves are situate at Hunslet, about 3 miles from the Leeds railway station, and are approached by a level road nearly all the way. There is direct railway communication from the works to a siding on the Midland Railway, from whence goods can be despatched to all parts of the world, and the Aire and Calder Canal touches the works at another point. The buildings, one and all, are substantial in erection and of suitable design. It was made evident to the visitors that all the details of the vast establishment have been thought out and carried into execution by master minds. The general impression left upon the minds of the visitors by what had been seen was of a most reassuring character. It was, in truth, not unlike that which led the company, of which M. Sécretan is the presiding genius, to purchase the Elmore patents for France alone at the large sum we all know to have been given for them.

VAN AFFAIRS.

THE title which heads these remarks has become almost stereotyped. The reader must be almost tired of seeing it, but the importance of the subject to the actual shareholders is both deep and real. At the three meetings held within the past few weeks, the management of Captain Williams at the mine, and of the directors in London, has been fully, might we not say, fiercely, criticised. Rightly or wrongly the shareholders seem unanimously to have come to the conclusion that the former must be totally altered, and that the latter must be improved by the infusion of fresh blood. We have endeavoured as evenly as possible during the severity of the conflict to preserve a judicial mind, and, whilst not ignoring patent facts, yet to give counsels of prudence to shareholders who have been somewhat heated, if we may judge by their speeches at the meetings, and their letters in the Press. We think on the whole the decision they finally came to at Monday's meeting was wise, and that it will tend hereafter to the decided benefit of the company. Seven gentlemen were appointed signatories to the articles of association, and from these a strong working board can easily be formed. Of this board it is clear that Mr. Chas. Clark must be one member, Mr. McIlquahan, a gentleman resident in the district, a second, and Mr. Hamilton, a member of the committee, a possible third, whilst the two other vacancies may be filled up as the circumstances may require. The shareholders would have been ill-advised indeed had they dispensed with the business experience and knowledge of Van affairs possessed by Mr. Charles Clark, and equally unwise would they have been not to have availed themselves of the proffered services of Mr. McIlquahan. Again Mr. Hamilton's services on the committee have been so conspicuous that his adhesion to the Board will give it strength. A strong board is specially needed at the present time for the reason that Van mine, if it is to be worked at all, must be supplied with fresh capital. A weak board could not be expected to obtain the requisite funds ; a strong board may make an appeal with every expectation of success. As to the madness of throwing up the concern at the present stage, the last word has been said, and we do not wish to add another. No shareholder ought to be so unwise as to refuse to join the re-construction. Many of the Flagstaff shareholders refused a similar appeal some time ago, and this week they have had the mortification of seeing the shares of that company go up to 11s. What Van shares have been, Van shares may be. and the striking facts we published in our Mining Market last week cannot have faded from the memory of those who read them. We do not press the joining of this re-construction upon the shareholders as a duty, but as a matter of self-interest. If they allow the opportunity to pass by they will metaphorically one of these days regret their folly in the sackcloth and ashes of a financial repentance, for the present attempt is to be a determined and vigorous one to restore the lost prestige of Van, and to place its returns and shares in a proper light before the public. We anticipate for that attempt a success that we most earnestly trust may be achieved.

THE KAFFIR REVIVAL.

IN the first half of the past week, the market for South African gold shares was decidedly brisker and the tendency stronger than it had been for many months previously. The leading Randt shares, such as City and Suburban, Jubilee, Stanhope, Crown Reef, Durban Roodepoort, Main Reef, and Langlaagte, and Robinson were vigorously bid for, and there was an especially strong demand for Geldenhuis. Brokers here were in receipt of large buying orders from Johannesburg and Kimberley, and the upward movement which took place on Monday, the first day of the settlement, had the effect of inducing purchases by home investors. Since "pay day" there has been a slight reaction, caused by the taking of profits by a few speculators of the weak-kneed order ; but if the crushings for the current month are fairly satisfactory, we may expect to see a further enhancement in market values. The floods which took place in the Transvaal a few weeks ago did a considerable amount of damage, and it is not unlikely that the crushings of some of the companies will suffer in consequence ; but as the Ferreira stamps are now at work, and as larger amounts of quartz are being treated by a few of the prominent undertakings, it seems reasonable to anticipate that the total production for the month will not be less than 55.000 ozs. of gold, or 5,000 ozs. in excess of the December yield, which in its turn showed an increase of about 4,000 ozs. over the previous best on record. The Geldenhuis Company is attracting a good deal of attention by those who are usually well informed on the progress of events in the Transvaal. A little while ago the shares were obtainable at about ½, or even less, representing as the value of the property about 60,000*l*. The position of the mine, in close proximity to Stanhope and Jumpers, is such as to give every promise of successful working. It is true that the Jumpers' results have not been invariably satisfactory ; but the fact is due rather to the lack of good management than to any fault of the property itself. We understand that the development of the Geldenhuis Mine has been conducted in an excellent manner, and that, pending the completion of its own milling arrangements, the stamps of a neighbouring property are to be brought into requisition for the milling of Geldenhuis ore. Another company whose shares have been bought by people who are believed to be "in the know" is Charlton and Meyer. This company was started in 1888, and has a capital of 43,000*l*. It has paid very good dividends, and at the end of last year it had a large cash balance in hand after giving the shareholders 10 per cent. The shares have been bid for up to 3½ ; but the supply of them, as well as of many of the more respectable Randt shares is very small. If it were not for this fact the advance in prices would have been greater. Speaking generally, the prospect is that the Kaffir revival will continue. We would, however, urge caution in buying, because many of the quotations are still greatly in excess of the value to be placed upon them on the basis either of past results or present conditions. The quotations are largely calculated upon prospective yields which may or may not be obtained.

SHEBA AFFAIRS.

THE pressure upon our space this week prevents us from doing full justice to the important meeting of the Sheba Gold Mining Company, over which Mr. Soper so ably presided on Monday last. Under the direction of this gentleman and his colleagues, the mine during the last twelve months has made rapid strides towards regular crushings, and it almost naturally follows towards dividends for the shareholders. The company appears to possess in Mr. Hill a manager of no ordinary calibre, and from March onwards he may be expected to give a good account of the large quantities of quartz at his disposal. Those who are buying Sheba shares at the present moment, decidedly seem to be wiser than those who are selling them.

UPPER ROODEPOORT—A NEW POLICY.

THE directors of the Upper Roodepoort Company appeared yesterday before the shareholders with a frank confession of failure. The reports upon which they were led to accept office, and by which the proprietors were beguiled into taking shares, have (*vide* the blunt and plain spoken letter of Mr. Ollerenshaw) proved fallacious, not to say fictitious. The board then found themselves face to face with the proverbial three courses, along with an additional one thrown in. They could (1) go on working the present company's dubious reefs ; they could (2) liquidate voluntarily, and re-construct ; they could (3) liquidate compulsorily ; or (4) they could apply the remaining 5s. uncalled upon the shares, to the working of a proved property that might be willing to make terms with them, because of temporarily being in want of working capital. The nature of the reports of Mr. Ollerenshaw and Capt. Williams, the manager, put out of the question course No. 1 ; No. 2 was not feasible in view of the capital account ; No. 3 would be positively ruinous, and, therefore, No. 4, as recommended by the directors, has been adopted by the shareholders. The required company "with a property of proved value," has been found in Moss Rose, and its financial difficulties has afforded Upper Roodepoort shareholders, with their 5s. uncalled, to join it upon what seems a highly

advantageous basis. The mine is well equipped with stamps, machinery, buildings, &c., whilst the development work has been of an extensive and promising character. Under all the circumstances we think that Mr. Shaw Kennedy and his colleagues have not only made the best of what originally was a bad bargain, but have shadowed forth a policy which is likely to result in what one speaker predicted "a return of the shareholders' capital, with possibly more to follow."

NATIONAL FINANCE.

AFTER all the references to the recent crisis at the meetings of the Joint Stock Banks, the remarkable speech of the Chancellor of the Exchequer at Leeds, wherein he referred to the Bank Act and reforms in the currency, emphasises in forcible language the dire straits to which London might have been reduced had not the Bank of England promptly intervened, and, jointly with the leading representatives of the Money Market, saved the City from the consequences of an actual failure of the great house of Baring Brothers and Co. As a result of their action all is now going on smoothly in regard to the liquidation, and should the rescinding of the Buenos Ayres Waterworks contract be agreed to, it may be brought to a close much earlier than anticipated in the provisions for the guarantee fund, and the guarantors be freed from any loss. Although his remarks were indefinite in regard to what he will propose to mitigate the difficulties in which the Bank at times finds itself placed for want of a sufficient bullion reserve, and the necessity for controlling a market in the aggregate much stronger than itself, it is clear that Mr. Goschen is opposed to any attempt at inflation, and will only grant the facilities of 1*l.* and 10s. notes if the coin which will take their place be allowed to rank at the Bank as a "second" reserve, which would be free of the liabilities of the present reserve.

A FARCE—DURHAM AND LORD BYRON AMALGAMATED.

THE farce that is now being played by the directors of the Durham and Lord Byron Amalgamated Mining Company may have been extremely amusing to them, but it can scarcely have proved entertaining to the shareholders whose time it has wasted. For the second time within the last few weeks the shareholders of this company have been called together, only to be told that nothing could be done, and that no information could be imparted, and then has followed a not over exhilaratiug entertainment of gazing at each other for half an hour. (*vide* the articles of association), until there was liberty to adjourn. This, we say, may be extremely divertiug to the directors, but it is not agreeable to the shareholders, who have little reason to thank their board for past success. Here is a company holding a mine admitted to be one of the best in Queensland, that has produced gold to a large amount, but that is now practically hung up for the want of effective management on the spot. If such a concern were placed under the direction of a good firm of mining engineers steps would be taken to realise for the shareholders those dividends of which they have long been destitute. As it is, a really good mine seems to be drifting towards a condition in which, if the shareholders do not mind what they are about, it will pass from them to the debenture-holders. A scheme of re-constructlon is in the air, but before subscribing the requisite funds the shareholders ought to know under whose direction the money will be spent. This knowledge will probably largely influeuce their subscriptions.

NEW RUSSELL GOLD MINING CO., LIMITED.

THE shareholders who attended the meeting of this company on Monday, will, no doubt, have come to the couclusion that the prospects are now better than they have ever been. In the first place, the reconstruction of the company has been successful, and, in the next place, the treatment of 5 tons of ore by the Gold Ores Reduction Company has resulted in their being able to save 87½ per cent. of the assay value. This is eminently satisfactory, and bids fair to be the salvation of the company. It is well known that the difficulty in connection with the Russell Mines has not been that of obtaining ore in sufficient quantity, but of finding a satisfactory process for treating it, and it looks very much as if the directors had now discovered that process. If so, the shareholders may well congratulate themselves. The engineer of the Gold Ores Reduction Compauy is now on the spot erecting the furnace, which, it is expected, will be completed about the middle of February. We await the development of this company's affairs with considerable interest.

ELMORE GOLD CO., LIMITED.

FURTHER FUNDS REQUIRED.

A CIRCULAR has been issued describing the operations of the company since the news sent on the 24th September last. From that date the sinking of the shaft has been proceeded with and a depth reached of 530 ft. At that depth the manager suggested that a cross-cut should be driven to intersect the Elmore-Alturas lodes, iustead of continuing sinking the shaft, and that work is now being pushed on. The flow of water from the lode intersected in the north cross-cut at 660 ft., was so great, that it was deemed advisable to discontinue operations at this point. As soon as the permanent pumps are fixed at the bottom of the shaft it is intended to again attack this lode. The west drift, 430 ft. from tho shaft, having reached a point where communications could be made to the old Confederate Star tunnel, a rise has been put up. There is every reason to anticipate that these operations will lay open pay-ore. The stores on hand at the mine are valued at about 5,000*l.* Fifty tons of ore have been crushed, which yielded $900. The expenses have been reduced to the lowest point, but it is necessary to have further funds if the operations are to be carried on. With this object in view, the directors have decided to call a shareholders' meeting for the 10th February, to consult with them and to ascertain their wishes. The board consider it would be most unwise to abaudon operations at this juncture, and they therefore suggest that the company should be reconstructed on a basis of 300-000 shares of 5s. each, credited with 3s. 6d. paid, leaving a liability of 1s. 6d. per share.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FURTHER REDUCTION OF THE BANK RATE.

FOLLOWING their movement of last week from 4 to 3½ per cent., the Bank directors have this week made the official rate 3 per cent. This is the lowest poiut touched last year, and should the contraction of trade continue. a yet lower point may be witnessed as the summer approaches. But bullion considerations may intervene to prevent it. In the open market, the discount rate which had fallen has not been affected by the change, being still quoted 1⅝, ¾ per cent; while money which slightly improved iu counectiou with the settlement has relapsed again to about 1 per cent. The joint-stock banks have reduced their allowance for deposits to 1½ per cent., and the discount houses to 1¼ and 1½ per cent. respectively for money at call and notice. The Bank return proved, as expected, very favourable, as, in spite of the efflux of 350,000*l.* for abroad, this reflux of both coin and notes from circulation has increased the reserve by 544,000*l.* to 17,690,000*l.*, or 45½ per cent. of the liabilities, being an improvement of 1¾ per cent. The public deposits have increased 1,683,000*l.* through tax collections, and the private deposits have been depleted 1,917,000*l.*, while the private securities have reversed the movement of last week. The value of money has fallen on the Contiuent, and the exchanges have ruled adverse.

With the recurrence of the settlement business at the Stcok Exchange during the past week has been very quiet, and although somewhat livelier towards the end, it was even then not what could be called active; prices have, however, presented a chequered appearance day by day, the gains of one being almost balauced by the losses of others. The Scotch strike still continues, but from the reports received it is evident the companies are gaining ground, for if the men felt themselves on the winning side they would not want to add outrages of various kinds to argumeuts, and thus still further estrange public sympathy. The dock troubles still keep "simmering," with occasional outbursts. The Funds have been well maintained, but Colonial stocks were hardly so good, and South Australian fell on the issue of the new loan for 1,200,000*l.* Foreign Government bonds were supported by Continental purchases, and the upward movement reported on the Bourses. Chilian bonds were particularly strong, it being considered that the President will be forced to resign by the pressure of public opiniou, The premium on gold at Buenos Ayres has steadily advanced until it has again reached 226 per cent., thus showing plainly the financial situation at the River Plate, and the series of Cedulas have uow touched the lowest on record. The statements at the Brighton meeting were more favourable than anticipated, and the price rose 1 as compared with the fall of 1¾ on the previous day in anticipatiou of an unfavourable statement. The Chatham board have, with their report, published the correspondence between them aud the South-Eastern company with regard to the amalgamation scheme. The "heavy" lines in the Home Railway market have risen ½ to 1½, but Brighton "A" and North British have fallen 1 to 1½. In American Railways the most important movements were a rise, 1 to 1¾, in Northern Pacific and a fall of 1 to 1½ in Erie Preference and Union Pacific shares. Grand Trunk stocks show a gaiu of ½ to ¾, but Mexican were ¾ lower. Breweries were active, and Guinness's Ordinary has risen 5, and several others 10s. to 20s. per share. Bell's Asbestos and Eastman's Meat, Hansard's Union and Gas Light and Coke "A" stocks have all found lower levels.

Discount has been firmer to-day, but the quotation was only 1¾ per cent. for the usual three months' bills, while money was in better request at 1 to 1½ per cent., partly owing to the Bank broker borrowing money on Consols at 2 per cent. until the 2nd March.

More gold was taken for Hamburg to-day, but an influx from Lisbon has left a balance in of 5,000*l.* Bar silver has fallen ⅛d. per oz. to 46⅞d., on the death of Mr. Secretary Windom, and the belief that the Free Coinage Bill will uot pass. Eastern exchanges were weak, and Rupee Paper has fallen nearly 1 per cent., the Four and a-half per Cent. being quoted, 81¼, ¾.

A fairly firm tendency has prevailed at the Stock Exchange to-day, but business continues very quiet. New Consols receded to 97⅛, 97¼ for cash. Iudian stocks were firm, but Rupee Paper fell ¾ in sympathy with the fall in the Silver market. Foreigu Government Bonds were steady without fractional alterations in the International section, but South American again relapsed. Home Railways were very good, being favourably affected by the finer weather, and the collapse of the Scotch strike, which has led to a considerable amount of buying. The Great Northern Company announce a dividend at the rate of 6 per cent. on the original Ordiuary and "A" Stocks. The underground lines improved on the prospects of a Naval and also Germau Exhibition. American Railroad securities left off at a general advance of ¼ to ½, with an exceptional advance of 1¼ in Northern Pacific. South American Railroad stocks were good, and from 1 to 2 points higher, and Grand Trunk stocks improved ¼, but Mexican closed flat, and 1½ lower on the closing of some "bull" accounts, the flatuess in silver, and the growing opinion

that no Free Coinage Bill will be passed. Nitrates have recede portion. The blockade of the Chilian ports must restrict the exp of nitrate, and will act for a time as if the various companies h agreed to curtail the output. Miscellaneous Securities were quiet.

Annexed are the final quotations to-day:—Consols Account, 97⅛, 97¼; Egyptian Three-and-a-Half per Cent., 94, 94½; Egyptian Unified, 97⅛, 97⅛; French Four-and-Half per Cents., 104½, 104⅜; Hungarian, 92, 92¼; Italian, 92, 92¼; Mexican, 1888, 92, 92½; Peru Five per Cents., 10¼, 10¾; Peru Six per Cents., 27¾, 28¼; Russian, 1873, 98¾, 99¼; Portuguese, 56, 56⅛; Spanish, 76⅛, 76¼; Turkish, 1871, 98¾, 99¼; Turkish Defence, 102, 102½; Caledonian Railway, 119⅝, 119⅞; Great Eastern, 91¾, 92; Great Western, 163, 163¼; Brighton "A," 160¼, 160½; North Western, 178¾, 179; Metropolitan, 78¾, 79¼; Metropolitan District, 30½, 31; Midland, 149⅜, 149⅝; North British 52, 52¼: North Eastern, 165⅝, 165⅞; South Eastern "A," 92, 92¼xd; Mexican Railway Ordinary, 45, 45¼; Grand Trunk 9⅜, 9¾; Grand Trunk First Preference, 62⅞, 63⅛; Grand Trunk Second, 42⅛, 42⅞; GrandTrunk Third, 22¾, 23; Canadian Pacific, 77¼, 75½ xd.; Denver 19⅜, 19⅝; Erie, 20¼, 20½: Milwaukee, 55⅛, 55⅜; Lake Shore, 110¾, 111¼; Louisville, 76½, 76¾ xd.; Atlantic First, 33¼, 33⅜; Ontario, 17½, 17¾; Ohio, 19¼, 19¾; Norfolk and Western, 57⅛, 57⅜; Reading, 16½, 16¾; Readiug 5 per Cent. Bonds, 55½, 56½; Union Pacific. 45⅜, 45⅝; Wabash Preference, 19½, 20; Ottoman Bank, 14⅝, 14⅞; Anglo-Telegraph Ordinary, 48¾, 49¼; National Telephone, 4⅝, 4⅞; Hndson's Bay, 18¾, 19¼; Suez Canal, 96¼, 96¾; Guinness, 318, 321; Allsopp's, 43, 45; Bryant and May, 14, 14¼; Eastmans, 13⅜, 13⅝; Bell's Asbestos, 12⅜, 12⅝; Primitiva Nitrate, 7¾, 8.

THE CYCLONE PULVERISER.

THE Cyclone Pulveriser, Limited, whose registered offices are at 134, Palmerston Buildings, E.C., have now completed their experimental work, and are quite prepared to advance the interests of their machiues.

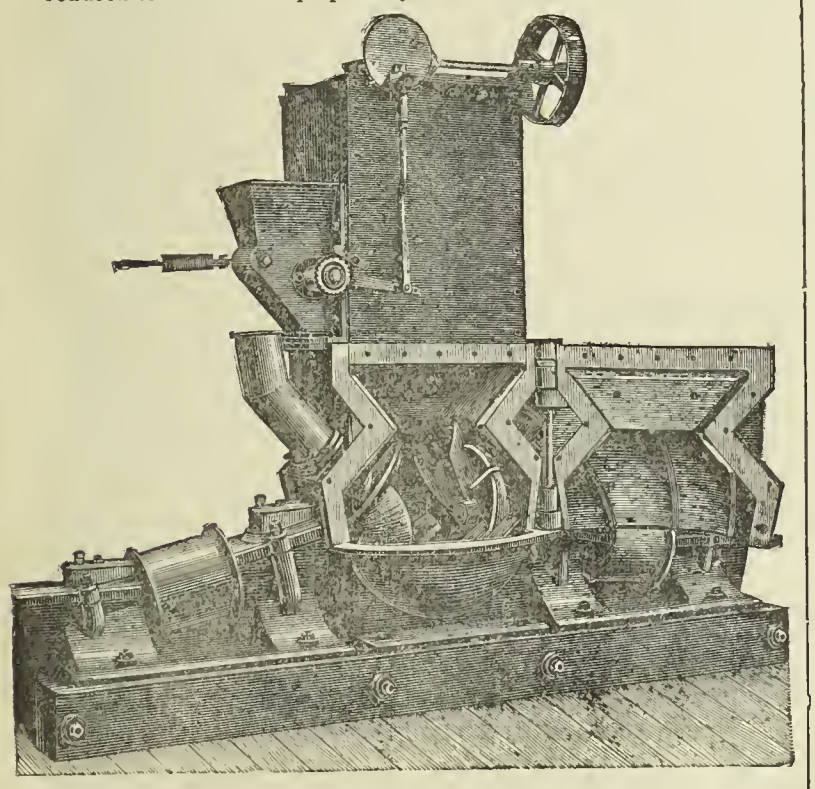
The invention is of American origin, and across the Atlantic much success has attended its introduction. In construction the Cycloue is simplicity itself. It consists merely of an iron chamber in the base, of which are contained two iron fans, or beaters. resembling propeller screws, which, by being propelled in contrary directions with great velocity, generate sufficiently strong counter currents, above the fans, to tear to pieces by impact, concussion and otherwise the material with which the machiue is fed.

All articles agitated by these counter currents become so finely pulverised that gravity no longer holds them in suspense, and they are drawn off by means of au exhaust fan into hoppers prepared for their reception.

The continued contact of the reduced particles is carried on until the requisite pulverisation sought is accomplished, then, as previously stated, the material is drawn off into the collectiug chambers.

It is claimed that no part of the mechanism actually comes into contact with the material reduced, thus there is but slight wear and tear.

If one may judge from the collection of samples on view at the company's showrooms at 34, Snow Hill, one of the machine's chief characteristics is its wide adaptability, nothing seeming to come amiss to the Cyclone, hard, light soft, or moist materials being readily reduced to a state of impalpability.



The machine is admirably adapted to the reduction of cement, phosphates, China clay, basic slag, &c., &c., samples of which, with numerous others, were on view.

An experiment of considerable interest was performed a few days since on a No. 2 size Cyclone, recently erected in Graham Street, City Road, E.C., when 3 tons of auriferous quartz were pulverised. The object of this test was to ascertain the suitability of the machine as a dry concentrator, and the result was most satisfactory, the concentrates being equal to one in seven. This was consummated by forcing the pulverised quartz to travel through two collecting chambers suitably fitted with plates. The metallic parts (being of higher specific gravity) fall into the first chamber, and the gangue, or non-metallic parts, pass into the second chamber.

The separation, or concentration, is, therefore, entirely due to the natural cause of heavier bodies falling first, and is absolutely exempt of any mechanical aid whatsoever.

A number of these machines have already been sold, and they are giving the utmost satisfaction. It would indeed be difficult to discover a more economical, and at the same time, rapid and efficient method of reduction than that of the Cycloue Pulveriser.

There need, therefore, be no hesitation in predicting the early adoption of the machine, which has thus at its inception demonstrated its universal adaptability.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

DEEP SINKING.

SIR,—At the Goldfields of Mysore meeting which I attended, I heard Mr. John Taylor refer to the remarkable sinking of some mines in Bohemia, not *Bombay*, as one of your contemporaries has it. He spoke of one of those mines being 3,000 ft. deep. Possibly he has forgotten the Lambert Coal Mine in Belgium, which is over 3,400 ft. deep.—I am, &c.,

MINER.

Jan. 30th.

OOREGUM ORDINARY AND PREFERENCE SHARES.

SIR,—"Ordinary Shareholder" wants to know why I think "it is hard to see wherein the ordinary shares of this company will benefit by whatever decision the House of Lords may give *re* the preference shares."

If it is ruled the issue of preference shares at a discount is legal, the ordinary can only receive half the profits available for dividends after 10 per cent. has been paid to the former, who share *pro rata* with the ordinary in everything over 10 per cent.

If the issue be found illegal, what can the board do? To call up the 15s. from the original allottees, many of whom are no longer shareholders, would be most inequitable. To call the preferences 5s. shares would make them only 2½ per cent. priorities, and would not be agreed to by present holders, whose certificates describe them as 1*l*. shares fully paid up. To call them 5s. paid, and yet entitled to all the preferential advantages, as though fully paid, would be illegal.

Nothing, therefore, but a re-construction could put thiugs on a fresh basis, and such a settlement, if equitable, could in no way benefit the ordinary at the expense of the preference shares.

Does "Ordinary Shareholder" now see my point?—I am, &c.,

THE COMPILER OF THE CHARTS.

London, Jan. 28th, 1891.

PALMAREJO—WITH A WORD ABOUT EAST AREVALO.

SIR,—The circular issued by the directors of this miniug company, stating that it is their intention to issue 75,000*l*. 7 per cent. debentures, must have come as a surprise to a good many shareholders besides myself. Perhaps, as the directors naively put it, they "preferred to obtain funds from time to time, as they were required, instead of running the risk of causing annoyance to the shareholders by repeated appeals to them," may be the best way to administer this nauseous dose all at once, and not in homœopathic quantities froui time to time, but it is a serious dose, take it as you will. It reads "rashish" to see "until the total cost of the constructiou and development works at Palmarejo and Zapoté *could be ascertained*, "the directors preferred, &c." Where were the accounts as to cost of construction, or the construction contracts? Again, what has become of the 400,000*l*. paid-up capital of this mine? It appears to have sadly and silently vanished away. It must be borne in mind this Palmarejo Mine has been in travail these last *five years!* and it is a sell, and a big one, for it now to bring forth not a 25 per cent. dividend at least, but instead 7 per cent. debentures to the tune of 75,000*l*.! which means an annual payment for debenture interest of 5,250*l*. out of the "expected" mining profits before the shareholders can get anything. This is not encouraging, with a balance of 125,000*l*. 7 per cent. debentures to be launched in the future. Regarding the East Arevalo Mine, my "plea for intelligibility," that you published, appears to have stopped all reports from the mine. Those Spanish words appear no more; their space is filled with silence! Let us hope 'tis golden.—I am, &c.,

A SHAREHOLDER IN THE PALMAREJO AND EAST AREVALO MINES.

"EAST AND WEST."—This is the title of a new review, published by Woodford, Fawcett and Co., of the Dorset Works, Salisbury Square. The first number is replete with interesting and instructive matter.

ORITA (16th Dec.)—Run No. 52: I cleaned up on the 2nd instant the main sluice as far as junction with branch, which gave $2,861.95. Although not a good result, it is as much as could be expected, considering the amount of ground moved. Run No. 53: We are making in the branch where we are at present washing. Deep cut: While we are washing at branch we are preparing to get in more sluice here, and to blast in some overhanging rock that is dangerous when cleaning down. Mondeco: We have had to use the monitor here to wash away soft bedrock iu line of sluice. We are now setting frames for 72 ft. more sluice; there has been a lot of porphyry rocks met here, which the clearing of them out caused delay. Mine face: There is no change in the gravel since last writing. In the channel it is not so hard, but the amount of sandstone and pipeclay show no decrease.

— Cablegram: "I cabled you on the 3rd instant: 'Clean up, 500*l*.' This is well under the value of clean up, and was caused by the amalgam giving a better percentage than usual; it gave nearly 35 per cent., and the gold is worth 570*l*."—H. J. PRENDER.

REPORTS OF MEETINGS.

ELMORE'S FOREIGN AND COLONIAL PATENT COPPER DEPOSITING CO., LIMITED.

BIG DIVIDENDS PAID, AND IN PROSPECT—SALE OF THE PATENTS IN FRANCE, GERMANY, AUSTRIA AND HUNGARY—FULL REPORT OF THE MEETING.

THE second annual ordinary general meeting was held on Thursday at the Canuon Street Hotel, "to transact the ordinary business of the company, and to confirm, as a special resolution, the following resolution which was passed by the shareholders in general meeting on December 29th, 1890" :—

"That ouce at least in every year the board of directors shall lay before the company in general meeting a statement of the income and expenditure for the past year, made up to the 31st December, then last past, instead of to the 31st of March, as provided in clause 113 of the company's articles of association."

Sir John H. Morris, K.C.S.I. (chairman of the company), presided. J. SHURMER, Esq. (secretary), read the notice of meeting, and the report of the directors was taken as read.

The CHAIRMAN: The condition and prospects of the company, as they stood on December 31st last, are set forth at such leugth in the report and accounts, which have beeu circulated, that there is not much for me to say on the present occasion. I must, however, congratulate the shareholders on the realisation of the hopes which were held out by me at the first general meeting of this company, held, I think, in October, 1889, when I stated that the directors had the

FULLEST CONFIDENCE IN THE VALUE OF THE ELMORE INVENTIONS,

and that by declining to negotiate the sale of the foreign patents uutil the success of the company had been proved in this country, we should be able to obtain much better prices than if we disposed of them at once. This has been proved to be the case. The success of the Elmore process has, I think, been clearly shown by the English company iu this country, and we are now in a position to calculate and estimate pretty clearly the value of our purchase to the various countries in which we are anxious to dispose of them. We have already disposed of the patents for France, Austro-Hungary, and Austro-Germauy, and thereby acquired a considerable sum, out of which we have alreadv paid 4*l*. per share to the priority shareholders, and propose to pay now another 1*l*. We also expect during the course of the present year to dispose of patents in two or three other countries, and if our hopes are realised we anticipate obtaining thereby a further sum, which we trust will enable us to pay another 5*l*. to the holders of priority shares, and also leave sufficient to pay a considerable sum, or a fair sum, by way of dividend to the holders of the founders' shares.

FRENCH ELMORE DEBENTURES.

Before proceeding to notice in some little detail the balance-sheet and profit and loss account, I would say a few words ou the issue of the 50,000*l*. debeuture stock by the French Elmore Company, which we have agreed to take from that company. It has been remarked to me by more than one shareholder that there was no reason why we should have agreed to advance this large sum, or to take this large amount of debenture stock from the French company ; and that it would have beeu much better to have left that company to get any further working capital they might have required either from their shareholders or from the investing public. I wish to say a few words as to the reasons which actuated us. On the formation of the French company it was found to be of the great importance, not only in the interest of that company, but also indirectly of this, to

SECURE THE SERVICES OF M. SECRETAN

as the manager of that company. (Cheers.) It was also found that his services could not be secured without at least 50,000*l*. more working capital being raised, and it was soon found that in the existing unsatisfactory state of the mouey market it was not possible to obtain this sum either from the investing public or the shareholders of the French company. There was nothing, therefore, left but to fall in with the application of the French company to agree to advance this sum, provided we were satisfied with the nature of the security they would offer. The security offered was that the debentures should be secured as a first floating charge on the whole of the assets of the French company ; that they should pay interest at the rate of 6 per cent. ; that the amount so advanced (50,000*l*.) should be paid within three years from the 1st January of the present year, that is to say, by the 1st January, 1894, or within any shorter period at the option of the French company, and that they should be paid off at the rate of 105*l*. for every 100*l*. stock. We considered these terms favourable, and we were of opinion that the security was good, and it was very much to our interest to promote the welfare of the French company, especially as we held 33,000 of its shares. We agreed to these terms, and the directors are of opinion that the security offered by these debentures is good, and that the debentures themselves are a good and are a safe investment—so much so that applications have already beeu made to us by shareholders of the French compauy aud our own company to take up a portion or the whole of those debentures.

A CIRCULAR WILL GO OUT.

We propose, therefore, to issue a circular to our own shareholders and also to those of the French company, offering them these debentures on the same terms as we have accepted them ourselves. In the event of any considerable portion being thus subscribed we shall be in possession of further funds, which would enable us to pay an additional cash dividend to the holders of the priority shares. I trust, therefore, gentlemen, that the action of the board in offering to take up these 50,000*l*. debentures from the French company will meet with your approval. (Cheers.)

SALE OF PATENTS AND THEIR CASH PROCEEDS.

I will now proceed to notice briefly the balance-sheet and profit and loss account appended to the report. First, we will take the profit and loss account on the credit side, and the opening item is the net amount received by the company from the sale of its French, Austro-Hungariau patents, and German patents, 257,750*l*., which is the net and not the gross amount. From this amount we have deducted 30,000*l*. to represent the original capital value of the patents sold, leaving a net amount, after adding the items of interest and transfer fees, of 228,341*l*. 19s. Upon the debit side of the same account the balance brought forward is 1,879*l*. 1s. 10d., which is the amount of the deficit in respect of the first niue months' working of the company, during which, for reasons well known to you, we disposed of no patents whatever. The next item is that of directors' fees, which is in accordance with the articles of association. The following item is maintenance of patents and legal charges, 1,270*l*. 10s. 3d. This, owing to the large number of patents we have, amount is considerable. After allowing sundry working expenses, there is a balance carried down of 222,772*l*. 19s. 11d. Out of this amouut, as you are aware, we have already paid an interim dividend of 4*l*. per priority share, which has absorbed 60,000*l*., and under clause 72 of the articles the directors are entitled to 5 per cent. on a payment of 10 per cent. on the priority shares, which works out at 10,605*l*. 19s. The amount may appear very large, and no doubt we shall be questioned regarding it. At the same time, it is the amount fixed by the articles of association, which I need hardly say we have scarcely any option in regard to it, unless you call upon us to forego it, but it is for work done. Some of the gentlemen present may consider the work inadequate, but still if mauy of you knew the amount of trouble and anxiety which this company has caused your directors, you would think otherwise. Speaking for myself, I have passed many sleepless nights thinking over this matter, so that I do not thiuk our remuneration is altogether unearned.

A SHAREHOLDER : We hope it will be larger next year. (Laughter.)

BOARD WILL BE ACCOMMODATING.

The CHAIRMAN : Strictly speakiug, we are entitled to receive this amount in cash, but I need hardly say we do not intend to insist upon this. It may be distributed to us partly in cash and partly in shares and debentures, as may hereafter be thought most convenient to the company as well as conducive to its interest. We shall be prepared to take this amount in any way the shareholders wish. We will now take the balance-sheet ou the credit side. We find that the purchase of patents is credited with 110,000*l*., which we have reduced to 80,000*l* by writing off 30,000*l*., which would represent the original capital value of the patents sold. Sundry debtors amount to 22,722*l*., but as these accounts are made up only to 31st December last the amounts have since been paid to us in full. They chiefly represent, at the date of the balance-sheet, a certain proportion of cash and shares which were due to the company from the Austro-Hungarian Company. We have received the amount due in full, and that item may be considered wiped out.

PROGRESS OF THE SUB-COMMITTEE.

The securities next shown are those of the Austro-Hungarian and French Elmore Companies, and the debentures represent part of the purchase-money for sale of patents to these countries. These shares are valued at the nominal price of 2*l*., and the debentures at par, whereas the shares stand now at a considerably higher price iu the market, and as the work of the subsidiary eompanies advances their value will increase. The French company's works are being rapidly pushed forward, and the contractors are under a penalty to complete them by the end of May. The Austrian company (of which I am at present the chairman) has also selected works ready built in Germany, and should these be secured, of which we have every hope, and the installation of the company's plant and machinery should take place as soon as anticipated, I can only say that we have every expectation of this company getting to work very shortly after the French company. The cash in hand at the bankers at the date of making up the accounts amounted to 37,691*l*., and the office furniture and fixtures are valued at 128*l*., making a total of 319,192*l*. 13s. 3d. We come now to the debtor side, where you will find the share capital amounting to 120,000*l*., and a sum due to various creditors at the date of making up the account of 47,025*l*. This item may, perhaps, require a little explanation. It in reality consists of three items. In the first place, there is a certain amount, which was theu due (but which I may explain has since been fully paid up) on account of the expenses of promoting, underwriting, and bringing out the French and Austrian companies ; secondly, the percentage of profits due to the directors under clause 72 of the articles of association, as is shown in the profit and loss account ; and, thirdly, the item of income tax due to the Commissioners of Inland Revenue, and which, upon the total profits of our company, will come to a very considerable sum. These, I think, gentlemeu, are the only remarks I have to make with reference to the profit and loss account and the balance-sheet ; at the same time I shall be very glad to answer to the best of my ability such questions as any of you may put to me.

THE QUESTION OF REALISING THE SECURITIES.

There is only one other point on which I wish to say a few words. It is the question—a very important oue for us—and one upon which I shall be very glad indeed, either now or at some future time to be favoured with the views, and, if necessary, the advice of the shareholders — the question of the realisation of the securities held by this company. You will recollect that the matter was referred to at length iu the circular issued to you on 14th November last. In the last three or four paragraphs of that circular this matter was specially dealt with, and it was there stated that the provisions of the articles of association rendered it difficult to distribute the assets of the company. As a matter of fact, until those articles are altered it will not be possible to distribute the shares and debentures iu the same way that we could distribute cash to every holder of the priority shares or founders' shares. In that circular you were informed that the directors had received a suggestion from several large holders of priority and founders' shares

for the formation of a Trust Company to which these shares could be sold, and who would pay us back either in cash or in shares of that company. At the end of the circular I refer to it was stated that in the event of the necessary arrangements being satisfactorily made the prospectus of the proposed company would be sent out. Very shortly after that, in consequeuce of the

DISORGANISATION OF THE MONEY MARKET,

and for other reasons, it was found impossible to bring out the Trust Company, and the matter still remains in abeyance. The question we have to consider is one in which there are three courses open to us. The first is, the formation of the Elmore Trust Company; the second is that we should hold these shares ourselves, realise the profits from them, and distribute those profits to the shareholders; the third is that we should call a special meeting, and alter the articles of association so that we may have power to distribute the shares and debentures to the shareholders in the same way as we would do if it were cash. (Cheers.) It is a matter, gentlemen, that will require very careful consideration on your part as well as on that of the board. and it is a matter in the consideration of which I shall be very glad to be strengthened by your advice. I would remind you that it is not a question which is capable of easy solution; it is

AN EXCEEDINGLY DIFFICULT MATTER.

At the same time if the bulk of the shareholders are in favour of the articles of association being altered, and of our being empowered to distribute these shares and debentures to the various shareholders, the board will be quite willing to call a special meeting for that purpose, or we shall be prepared to meet the principal shareholders aud discuss the matter with them before comiug to any final decision, At any rate we will take you fully into our confideuce before deciding upon anything, and as far as I personally am concerued, I shall be only too glad too be guided by your advice and wishes. (Cheers.) I now beg to move the following resolution: "That the directors' report aud accounts for the nine months ended 31st December, 1890, be approved and passed; and that a dividend of 20 per cent., or 1*l*. per share, less income tax, be paid on the 4th February next, upon the priority share capital, making, with the interim dividend of 4*l*. per share paid on the 8th December, a total dividend of 100 per cent. for the nine months ending 31st December last. (Applause.)

Mr. JOHN MACFARLAN (director): I beg to second that.

CRITICISM.

Mr. HOSTER: Gentlemen, I am sure we are all satisfied with the very excellent way in which our chairman has put these matters before us. The directors have certainly so far taken us into their confidence. (Hear, hear.) I this morning had an iuterview with the board with refereuce to the matters we are now discussing, and I would just answer one point which our chairman has touched upon —I refer to the question of fees. I do not think anyone in this room can be otherwise than pleased to see the directors getting these fees, aud even more if the work is doue, aud certainly they have done a great deal of work; but there is some little doubt in the mind of our chairman as to the opinion of the shareholders in that matter. All I can say is that, as far as I am concerned, and the friends around me, we have not the slightest objection to the directors being amply remunerated. (Cheers.) In your remarks, Mr. Chairman, you have said that out of the 257,000*l*. in the profit and loss account 30,000*l*. was deducted from the patents. I may be wrong, but I think the 30,000*l*. was taken off our capital and not off profits.

The CHAIRMAN: You will find in the balance-sheet that it has been taken off the capital: "Amount reserved from sales of patents, 30,000*l*."

Mr. HOSTER: I understood you to say that it was taken from the profits. However, our capital has been reduced by 30,000*l*., aud it now stands at 80,000*l*., which represents the value of the patents. The next thing I wish to refer to is as to the status of the company. I do not think I am going too far iu sayiug that such a property as ours has not been put upon the London market for a good many years. This is the

MOST MAGNIFICENT PROPERTY I EVER SAW,

or touched or heard of; and I believe those gentlemen who know me will admit that I am in a position to speak with some authority. When this Elmore process was first brought to the notice of the company, of which I was managing director for the foreign busiuess, there was considerable doubt about it. Mr. Elmore, the veudor, took a great deal of trouble in the matter, and even when the Euglish compauy was brought out there was some doubt as to the company going through.

RESULTS OF A VISIT TO FRANCE.

I suggested that I should go over to France aud see my friends there, who are engaged in the copper industry, and ascertain what the value of the Elmore process was. As many of you are aware I came back to this couutry within 36 hours from the time I left, and I brought 80,000*l*. subscription for the English company. I brought a contract with me for the sale of all the foreign pateuts, the money for which was ready withiu a week of the unfortunate smash of the Société des Metaux. I was very glad to be able to preserve for us the property, which otherwise would have gone into that liquidatiou. However, I only make these remarks to show you what an euormous aud magnificent property you have. I think we ought all to be very pleased as far as that goes. With regard to the question of dividing the profits, I wish to say a few words. Many of my friends have invested iu the Elmore Company upon my recommendation, and I have done so myself to a large extent. I have never speculated except ou oue occasion, when I did so for a friend, and lost 400*l*. I wish to assure my friends publicly that this is a property which is

INTRINSICALLY WORTH MORE THAN THEY HAVE PAID FOR IT,

and some have paid even 18*l*. for their shares. We are here uot as a trading company but as a promoting aud a selling company, and I maintain that the intrinsic value of our founders' shares is at least 30*l*. each. As I have already told you, I, and some of my friends, met the board this morning, and we proposed that the surplus profits, amounting to

150,000*l*., SHOULD BE DIVIDED AMONGST THE SHAREHOLDERS,

and it was practically agreed that a resolution should be submitted to this meeting, which I have great pleasure in moving. It is—"That the directors be requested to take such steps as may enable them to make the above distribution in cash or securities of any company the proceeds of properties sold at their par value." The sum of 1*l*. per share, which is proposed by the board, would be paid. absorbing 15,000*l*.; then we have 75,000*l*. in payment to the second priority shareholders; and, next, we would have 10,000*l*., which would be retained by the board as workiug capital. Another 50,000*l*. can be divided, as to three-fourths amongst the priority, and one-fourth to the second priority shareholders. There will still be a balance after that, and I think, as we are all iuterested, we may just as well have the property ourselves. If we leave these shares in the hands of the company we will be unable to sell our ordinary shares, and I maintain we ought to be able to realise these shares if we wish to do so. The chairman has stated that the nett proceeds of the sales of patents amount to 257,000*l*. Now, gentlemen, you have all had prospectuses of the subsidiary companies—the French and Austrian companies, and you have also been told that the German patents have been sold for 50,000*l*.—that makes a figure of 307,000*l*. odd. I am iuformed by the board that it is something like 20,000*l*. less than that—say, 350,000*l*. The return shown in the balance-sheet is 257,000*l*., so that there is betweeu 90,000*l*. aud 100,000*l*. difference. Perhaps the directors can give us some explanation as to that. This company, as I said before, is a selling company, and we ought to get what we can for it as quickly as possible. We are very fortunate to be in it. (Applause.)

A SHAREHOLDER agreed with the last speaker, and seconded the amendmeut.

AVOID LITIGATION.

Mr. HAYS (solicitor): Gentlemen, hitherto this company has strictly avoided litigation. The amendmeut proposed by Mr. Hoster really amounts to distributing the assets of the company, and under article 109 you have no power whatever to do it. Any individual shareholder can go to the Court of Chancery and obtaiu an injunction, which might involve you in a law suit, and instead of dividing the profits among yourselves, I am afraid the bulk of them would go to members of my own profession. (Laughter.) The amendmeut is quite out of order. If you are going to divide this magnificent property, do it legally and properly. I would suggest that you adopt these accounts, aud then have a small committee of shareholders to confer with the directors as to the best way of distributing these assets, and then let it be brought before a general meeting. (Hear, hear.)

A SHAREHOLDER said that it would be advisable if the chairman would explain the difference of 100,000*l*. referred to by Mr. Hoster.

AN EXPLANATION.

The CHAIRMAN: The real explanation is this, gentlemen: This is the money which has been expended in the formation, the uuderwriting and the promotion of these two companies. I state it openly, and have not the slightest wish to keep anything from you. We have done our best as directors. We did our best to promote the company ourselves. We went to certain parties and laid ourselves open to receive offers. We received no specific offer in writing, and it was only after several letters were received from shareholders complaining that we were selling no patents, and therefore not doing our duty, that we were obliged to make the arrangements we did; and I think, considering the very large profits that we are able to show you, it is a little

HARD UPON THE DIRECTORS

that they should be taken to account for it. If you think the amount is too large, I can only express my regret; but the thing has been done aud cannot be undone. To meet your wishes I propose to modify the resolution, and move simply: "That the report and accouuts, as submitted to the shareholders, be approved and adopted."

Mr. RENDELL: I beg to propose an amendment: "That the directors be requested to consider, and, if necessary, to take advice as to the practicability of making the following distribution amongst the priority and founders' shareholders; and that, in the meantime, pending a further meeting being called to consider the matter. the adoption of the report and accounts, now submitted, be deferred."

Mr. CHANCE seconded the amendmeut.

Mr. RENDELL: I think if we have a few weeks to consider the matter we shall satisfy ourselves that this 100,000*l*. has been applied in a way which has resulted to our interests. (Hear, hear.)

MR. RAWSON'S SPEECH.

Mr. F. L. RAWSON (director): I think, gentlemen, I am qualified to speak on a subject of this sort, and especially at an Elmore meeting. As most of you are aware I am the managiug director of Woodhouse aud Rawson United, Limited, who formed the Elmore Company. My brother and I went into the patents and the process carefully, and I wish to call atteution to some few facts in counection with our business in the future. I may say that my own business for the last six or seven years has been largely that of buying and selling patents to people for the formation of companies and advising people in the formation of companies for this particuiar class of work—namely, industrial patents. I, therefore, wish you to follow carefully what I am going to say. Up to the preseut time we have sold three patents, and we have something like 30 to sell. As a director of this company ever since its formation, I have been doing my very best to sell these patents. I have given my time, money, and influence with that object.

NECESSITY FOR CAUTIOUS STATEMENTS IN PUBLIC.

One of the first things you are asked when you are selling a patent is, "What have you got for your previous patents?" and this is one of the things that I hoped we might have been able to avoid giving here publicly, because, unfortunately, all those with whom we are dealing now for the sale of the patents abroad wish to know the net sum that we have received from others. One of the first things that I have been taunted with iu my negotiations is this: "Oh, you don't get that net sum; such and such a company paid you so much, and we will only give you a relative amount." As to the difference pointed out by Mr. Hoster, the real sum is uuder 100,000*l*. Out of

that we have had to pay all expenses—not merely in the promotion of these companies, for I may tell you that there were heavy expenses in connection with trying to sell the American and various other patents. Then there were the expenses of under-writing, and other expenses apart from the actual outlay incurred in connection with the sales. Now, if we are going to let everyone outside know exactly the amount we have received for those previous patents, it will make it much more difficult for us to get what we consider their proper worth in the future. (Cheers.) The Foreign Elmore Company have, as the chairman has told you,

TRIED TO SELL PATENTS IN MANY WAYS.

Directly it was known that a contract had been made with regard to the sale of these patents—and, mind you, that contract was based on the sum that we were then asking for the patents—it was provided that if anything was obtained over and above that sum it should be divided in fair proportions—a business-like way, I think you will admit, of drawing up a contract. At that time, directly the contract was made, some people with whom we had been in negotiation came forward and said, "We are prepared to underwrite the company, and will give you more." The contract had been made with Woodhouse and Rawson United, but they said, "Well, gentlemen, we are very glad indeed you have got the better offer, and we will cancel the contract at once." We then negotiated with the other people to try and bring them up to the scratch, but they put it off from time to time, first wanting this and then that, and ultimately we could not get their offer in writing at all. I then said, "I will help them, for I want to see the Elmore Company a great success." We promised to underwrite half the capital, but it fell through, and we repeated the offer to Woodhouse and Rawson. We made comparatively a very small amount out of it ourselves, because the expenses in connection with the whole thing had been exceedingly large, and it is surprising that so much profit has been made. The work, however, that has been done in connection with the patents has got the business into such a position that I think we shall make more profit from our shares than we have originally made as vendors. (Applause.)

The Chairman then put the amendment as moved by Mr. Rendell, when 17 voted in its favour, and 21 against. The chairman declared it lost.

A Shareholder: Lost by the directors' votes.

DIRECTORS HOLD NEARLY A QUARTER OF THE CAPITAL.

Mr. Rawson: The directors hold a quarter of the capital very nearly, and they would not have had made this arrangement unless they considered it best for the shareholders.

The resolution for the adoption of the report and accounts was then put to the vote and carried; 23 voting in its favour and five against.

The Chairman: The second resolution is as follows:—"That a dividend of 20 per cent., or 1*l*. per share, less income tax, be paid on the 4th February next upon the priority share capital, making, with the interim dividend of 4*l*. per share paid on the 8th December, a total dividend of 100 per cent. for the nine months ended 31st December last."

Mr. E. J. Carson seconded the motion, which was carried.

THE QUESTION OF DISTRIBUTING THE ASSETS.

The Chairman: Now we come to the third resolution which Mr. Hoster has proposed—by which a special arrangement is desired to be made for the realisation of these securities. It is the wish of the directors, and my particular wish, that the desires of the shareholders should be met in every possible way, and, therefore, I am quite ready either to call a special meeting to consider this question, or, if you wish it, and will name a committee of the shareholders to meet and discuss the matter with the board, we will arrange for a meeting between the committee and ourselves. This is a very intricate matter, and I do not think it can be properly discussed in a public meeting.

Mr. Hoster: As the shareholders are here there is no necessity for a committee to meet you. All that is necessary is that an extraordinary meeting should be called to alter the articles of association.

The Chairman: Some of the shareholders are still in favour of an Elmore Trust. I am not. I think, however, the matter should be decided in conference.

Mr. Hays: I think it would be better not to appoint a committee, but allow the board to consider the matter further, and then let them call a special meeting and make a proposal to the general body of shareholders.

Several Shareholders: We prefer a committee.

Mr. Hays: Leave it in the hands of the board to call a special meeting, and submit their plans to that meeting.

Mr. Hoster: It is not the plans that we find fault with—the feeling of all the shareholders, as far as I can see, is that there should be a distribution of the profits. (Cheers.)

The Chairman: I had better put it to the meeting whether there should be a consultative committee appointed.

Upon a show of hands it was decided by a large majority not to appoint the committee, but to leave the matter in the hands of the board.

The Chairman: You may be quite sure, gentlemen, that I, for one, will look after the interests of the shareholders. You can surely trust me to do that.

Mr. Hoster: Certainly, Sir John. (Cheers.)

The Chairman: I think the shareholders are not aware that it is

A VERY THORNY QUESTION,

and one that will give us no little trouble.

The retiring directors, Messrs. William Elmore, George Holmes, and John MacFarlan, were then re-elected.

Genl. Fyfe proposed the re-election of the auditors, Messrs. Pixley and Co., and that a sum of 26*l*. 5s. be paid them for their services for the nine months ending 31st December, 1890.

Mr. Bolton seconded the motion, which was carried unanimously.

The Chairman: It now only remains for me to put for confirmation the following resolution, which was passed at the general meeting on 29th December:—"That once at least in every year the board of directors shall lay before the company in general meeting a statement of the income and expenditure for the past year, made up to the 31st December, then last past, instead of to the 31st of March, as provided in clause 113 of the company's articles of association."

The resolution was duly confirmed.

THANKS TO DIRECTORS.

Mr. Hoster: I rise to propose a vote of thanks to the chairman and directors. I am sure we all feel that you have done your best. Directors may, however, sometimes go upon one line when the shareholders take another line, but I hope you will not take our remarks unkindly. You have allowed us to freely express our opinions to-day, and I thank you most heartily. (Cheers.)

Mr. Hays: I beg to second the motion, for I do not believe any shareholder in this room knows, as I do, what an amount of work has been performed by these gentlemen for this company. My experience of boards is very large, and I say, without hesitation, that I have never met directors in my life who have devoted so much time and attention to the business of the company with which they were connected as your directors have. Their remuneration is fixed by the articles of association, and though it seems a large sum of money, they have earned it. (Hear, hear.)

The Chairman: I thank you very much, gentlemen, and can only say I wish we were more deserving of your praise. We are very anxious to promote the interests of this company and of the shareholders.

WHAT CRITICS SAY AS TO THE ELMORE PROCESS.

Mr. Rawson: Before you leave, I should like to give you one piece of information. The day before yesterday a number of representatives of the Press and technical men went by invitation to Leeds and saw the whole process. The result was thoroughly satisfactory, and almost everybody was satisfied and pleased with the inspection. One of our principal critics who went came back and had not a word to say except in praise of this process. (Applause.)

The meeting then separated.

ELMORE'S FRENCH PATENT COPPER DEPOSITING CO., LIMITED.

RESOLUTIONS CONFIRMED.

An extraordinary general meeting was held at the Offices of the Company, 64, Cannon Street, yesterday.

Major Charles Jones presided.

At this meeting, the resolutions, which were passed by the shareholders in general meeting on the 9th inst., were proposed for confirmation.

RESOLUTIONS.

1. "That the following words be added to Article 15 at the end thereof: 'Provided that 21 days' notice at least shall be given of each call, and that no call shall exceed one-fourth of the nominal amount of a share, or be made payable within two months after the last preceding call was payable." 2. "That the following words be added to article 44 at the end thereof. 'Provided that the directors shall not, without the sanction of a general meeting of the company, raise or borrow any sum of money which will make the amount raised or borrowed by the company and then outstanding exceed one-half of the subscribed capital of the company, and so that every debenture, debenture stock, certificate, mortgage, or other charge shall be under the common seal of the company.'" 3. "That the following words be added to article 116 at the end thereof: 'A printed copy of such balance-sheet shall seven days previously to the meeting be sent to the members in the manner in which notices are hereinafter directed to be served.'"

Mr. J. Shurmer (secretary) read the notice of meeting.

The Chairman proposed, and Mr. F. L. Lawson seconded, the confirmation of resolution No. 1, which was carried unanimously.

The Chairman proposed, and Sir Jas. McKenzie seconded, resolution No. 2, which was carried.

The Chairman proposed, and Mr. E. J. Carson seconded, resolution No. 3, which was carried.

The meeting then ended.

ROBERT CAMPBELL AND CO., LIMITED.

A DIVIDEND OF 4s. PER SHARE.

The annual general meeting of the shareholders of this company was held on Thursday, at Winchester House, Old Broad Street.

Sir Charles Clifford (chairman of the company) presided.

Mr. David Reid (secretary) having read the notice convening the meeting,

STRIKES *v.* TRADE.

The Chairman, in moving the adoption of the report and accounts, congratulated shareholders on the fact that they were doing very well, despite strikes, which had to some extent interfered with the progress of trade. Last year was a year of considerable promise, as they had very nearly 700 bales of wool more than in the preceding year; but owing to the decline in the price of wool, the profits only showed a slight increase. They might congratulate themselves on the fact of their having a very able general manager in Mr. Begg, and as the board were always kept *au courant* with matters on the other side, they knew exactly how to deal with them. (Hear, hear.)

Mr. Barr (shareholder) seconded the resolution, which was carried unanimously.

The Chairman, in answer to a shareholder, explained that their expenses had been necessarily higher, owing to the strikes, increased cost of labour and increased rates and taxes. There was now a new Ministry and a new Parliament in the colony, which he hoped would bring about a diminution in the taxes.

Mr. Robert Stewart proposed a dividend at the rate of 4s. per share, making, with the interim dividend of 3s. per share already paid, 5 per cent. for the year, which was seconded and carried.

Messrs. W. H. Campbell and Robert Stewart were then re-elected as directors, and Messrs. Kemp, Ford and Co., auditors of the company for the ensuing year.

Mr. Hughes moved a vote of thanks to the general manager in

New Zealand, and also to the station managers. He said he had had the pleasure of meeting the general manager, and was very much struck with his energy and zeal.

Mr. LARNOCH seconded the motion, which was also carried unanimously.

A vote of thanks to the chairman and directors then closed the proceedings.

NEW RUSSELL GOLD MINING CO., LIMITED.

SUCCESSFUL RE-CONSTRUCTION—A BETTER OUTLOOK THAN THE COMPANY HAS EVER HAD BEFORE — A NEW PROCESS FOR TREATING THE ORE.

THE first ordinary general meeting of this company was held at the Cannon Street Hotel, on Monday.

H. T. Walker, Esq. (chairman of the company), presided.

Mr. F. H. E. FERRIS (secretary) read the notice calling the meeting.

EVERYTHING GOING SMOOTHLY.

The CHAIRMAN: Gentlemen, as you are aware, this meeting is called in accordance with the Companies' Acts, and is what we call the statutory meeting of our re-organised company. Since we re-constructed the company everything has gone smoothly, and the new share certificates are being prepared as fast as we possibly can. The list of shareholders in this company is unusually large, and being anxious to keep expenses down we have not a large staff, and consequently there has been some delay. They will, however, all be issued in a few days. In the re-constructed company Mr. Levesley has joined the board, and so also has Mr. Chas. Stuart Bailey, the chairman of the Gold Ores Reduction Company. The applications for the new shares were satisfactory, inasmuch as they enabled the directors to make arrangements with the creditors on the other side of the water, and the manager to continue operations to the extent of keeping the water out of the shaft during the time the company was in course of re-construction. There is, however, one question which the directors will certainly have to cope with at an early date—I refer to the question of development on a large scale, and those of you who know anything of mining matters are aware that a large sum must be spent in that direction. We have not been doing any work in that way lately, as we were awaiting the erection of the furnace which the Gold Ores Reduction Company are putting up.

IMPORTANT LETTER FROM THE MANAGER.

With regard to the matter of development, I think the best thing I can do is to read the remarks of our manager, Mr. Wood, in a letter dated the 9th of this month :—

"In view of the prospect of early resumption of work in your mine, I would beg to place before you in as concise a manner as possible the state of the various workings as they now are, and as the plans already in your hands represent them.

"Referring first to Riggon Hill lode as being the one from which our ore supply has mainly been in the past, we are met by the urgent need for development. As will be seen from the stopes shown in the longitudinal section, a defined ore chute has been operated from the No. 1 to No. 4 level, starting on the south side of the shaft, and (owing to its dipping north in the course of the vein) crossing the shaft till at the bottom of No. 4 north stope, it is several feet north of shaft. At this depth it apparently undergoes change, either in direction or strength a body of slate coming in from the west side of the vein, causing the abandonment of stoping. As I have pointed out, however, in previous reports the ore body appears to be in a state of change in all parts at this level, irregularities having been met with at the shaft as well as the stopes. As you will doubtless recollect, the sinking of the shaft below No. 4 level disclosed no ore of practical value, and about fifty feet below the No. 4 we commenced to drive No. 5 level north. Although this had not progressed far enough at the time of suspension of work to undercut the course of the main ore chute mentioned above, you will recollect that strings of ore were intersected, and although no absolute proof, I submit that a decided inference follows that the slate met with below No. 4 stope is not of a permanent nature, but more in the nature of a bar or 'horse.' I would here mention that, should the bar be of only slight thickness and the ore make again below you will, on opening up the same by a level and winze, have the largest stope we have ever had in the mine—one that should produce 4,000 tons of ore at the least.

"I have dwelt on this matter somewhat fully, as it is in my opinion the part of your property which claims and deserves as early and vigorous development as possible.

"In the Big lode the present position is more simple and clearly defined. We have a good stope between levels 1 and 2 practically ready for working. This is the first stope that has been opened below the level of the open cutting, and I am consequently unable to compare the value with anything gone before; but I am decidedly of opinion that it should furnish 2,000 to 2,500 tons of fair milling ore—ore which will, I believe, prove of better grade than any milled here for the last few months the mill ran.

"In addition to this stope reference must also be made to the fact that the No. 28 level in Big lode is now within a few feet of undercutting the pillar in the Big cut, which contained the richest ore ever met with in the open cutting; ore which is a byword amongst the older inhabitants of the neighbourhood, it having been mainly worked many years ago.

"This completes reference to your two main lodes, but I consider the prospect work in New lode, and the development of Laurel Hill lode, of no slight significance, as your milling capacity must emphatically be considered as requiring the maintenance of vigorous underground work.

"From both these workings it must be borne in mind that we have obtained good milling ore, and, in the case of New lode especially, that only very limited work has been done in following the ore. Although I do not place work in either of these lodes in as prominent a position as in Riggon Hill or Big lode, I submit that it would be politic and economic to resume operations here at as early a date as seems good to you."

Well, gentlemen, those are the remarks of our manager at the present time with regard to the development of the mine, and if we are to give the Gold Ores Reduction Company the opportunity of proving their process, and saving the Russell Gold Mine, it is absolutely necessary that we should

DEVELOP ON A LARGE SCALE.

Undoubtedly the most important question that we have before us is the success which it is hoped and believed will attend the Gold Ores Reduction Company's process. The process is very simple, and it is not costly, and when I tell you that the ore that was treated by them was taken from the very poorest part of the Russell Mine, you will, I think, agree with me that we have very fair prospects. They treated as much as 5 tons of ore, and every miner will admit that that is a fair working test; and the directors of the Gold Ores Reduction Company say that if they can treat 5 tons they can treat 5,000—it is simply a question of putting up their plant, and extracting the gold. If there is one thing we know with regard to the Russell Mine, it is the maximum expenditure per month. During the period that we were crushing 2,000 tons a month, and doing a fair amount of development besides, our expenditure amounted to some $3,200; or let us say, for argument sake, $4,000 per month. Now, the Gold Ores Reduction Company, in treating the 5 tons to which I have referred, saved 87½ per cent. of the assay value of our ore, but, to be on the safe side, let us take it that they will only save 75 per cent.

AN INTERESTING CALCULATION.

Therefore, if they save 75 per cent., and we have $5 ore, we shall naturally get $4 per ton. That will give us for the month—crushing 2,000 tons—$8,000 from this low-grade ore, sufficient to pay a dividend of about 20 per cent. upon the capital as it now stands. But, gentlemen, that is not the exact position of the Russell Mine. All the ore that comes from the Riggon Hill and the New lode—and possibly from the Laurel Hill, but hitherto that has only been prospected—is of the value of $8 or $10; so that you will see that if we can only have the opportuuity of developing on a large scale, we can send ore to the mill which will certainly double the income that I have just spoken of. You will say that these are all problematical results, but the absolute fact is this—that the Gold Ores Reduction Company have treated some 25 different kinds of ore from all parts of the world, and have saved on the average no less than 90 per cent. of the assay values, and they were all refractory ores. I have had an opportunity of going carefully into the process, and I am perfectly satisfied that we have only to give it a fair chance, and we shall see the Russell Mine in the position that we have long hoped for. (Hear, hear.) I, for one, have hoped on and hoped on, but our difficulty has always been to

SAVE THE GOLD CONTAINED IN THE ORE.

This, however, seems to me to be the proper process, and at the present moment the engineer of the Gold Ores Reduction Company is on the spot erecting the furnace. We thought it would have been in operation by this time, but, unfortunately, they have been suffering from inclement weather even more than we have here in England, and this, you can readily understand, has caused some delay. I believe that the directors of the Gold Ores Reduction Company received a telegram from their manager a few days since, in which he stated that the furnace would be completed about the middle of February. I have now given you the result of our labours from the time that we re-constructed the company, and I think altogether that we have a better outlook than we have ever had before. I hope that at no distant date we shall be able to report to you that the Gold Ores Reduction Company are saving us certainly 75 per cent., and that we are carrying on the operations of the company in the manner that I have indicated. I have nothing further to add, but I shall be pleased to answer any questions. (Applause.)

QUESTIONS.

Mr. ROBERTSON: What is the percentage of gold that the Gold Ores Reduction Company are able to extract per ton?

The CHAIRMAN: The actual percentage saved of the assay value of the 5 tons we sent them was 87½ per cent.

Mr. ROBERTSON: How many pennyweights or ounces per ton?

The CHAIRMAN: The assay value is 5 dwts.

Mr. ROBERTSON: How far have you to forward your ore from the mine to the place where it is treated?

The CHAIRMAN: The furnace is being erected close to our mill, and our mill is in close touch with the shaft on the Riggon Hill and Big lode. I do not suppose that the shaft of the Big lode is 100 ft. away from the mill, and the Riggon Hill probably is not so far as that. The whole of them are in a small compass, because the hills run parallel together, and our mill is located in between the Riggon Hill and the Big Lode, where all the work has been done in the past, and the cost of production is very low indeed.

WE HAVE EVERYTHING IN OUR FAVOUR.

First of all, we have cheap labour; secondly, we have cheap fuel, and thirdly, we have as much water as we want. I am, therefore, quite within the mark when I say that if the Gold Ores Reduction Company can carry out their process in North Carolina, and give us the same result as they gave us with the 5 tons, the figures I have mentioned to you cannot be altered. (Hear, hear.)

Mr. ROBERTSON: If you can make 4 dwts., that ought to pay.

The CHAIRMAN: When we telegraphed to North Carolina for ores to be sent over for the Gold Ores Reduction Company to treat, we asked for the very worst class of ore that we had, and the assay value of it was 5 dwts. per ton. They succeeded in extracting 87½ per cent. of the 5 dwts., which is considerably over 4 dwts., but I took the 4 dwts. simply as a guide, allowing a large margin for any mishap that might take place.

Mr. READ: Have we money to go on with this process?

The CHAIRMAN: Certainly.

A PRACTICAL MANIFESTATION OF CONFIDENCE IN THE PROPERTY.

A SHAREHOLDER: I should like to know whether our directors have shown confidence in the property by taking up their full proportions of the new shares.

The CHAIRMAN: So far as I can remember the directors did apply for shares according to their holdings. I myself applied for over 2,300 shares—(cheers)—and I think I have shown my confidence in the property by doing that. I am also a large debenture-holder. I have not sold my shares, nor will I part with them until such time as I see that the Russell Company is on the verge of paying a dividend. I am

the only member of the board at the present moment who was an original director, and I therefore feel that I have a special duty towards the shareholders, and so long as my health permits me I will endeavour to discharge that duty to the best of my ability. (Applause.)

A vote of thanks to the chairman was then unanimously passed, and the proceedings terminated.

THE UPPER ROODEPOORT GOLD MINING CO., LIMITED.

A SHARP DISCUSSION RESULTS IN THE ADOPTION OF THE REPORT, AND OF RE-CONSTRUCTION RESOLUTIONS—AMALGAMATION WITH THE MOSS ROSE MAIN REEF MINE—A NEW DEPARTURE MADE, WITH EVERY PROSPECT OF SUCCESS.

A GENERAL MEETING was held at Winchester House, yesterday, for the purpose of transacting the ordinary business of the company. Notice was also given of the following re-construction resolutions:—(I.) "That it is desirable to re-construct the company, and that with a view thereto the company be wound up voluntarily, and that Henry Goodier Turner, solicitor, of "The Goodiers," Newton, near Hyde, Manchester, Arthur Hibbert, gentleman, of the Stock Exchange, London, E.C., and Abraham Levy, of 152, Sutherland Avenue, W., be and they are hereby appointed liquidators for the purposes of such winding up." (2.) "That the said liquidators be and they are hereby authorised to consent to the registration of a new company, to be named the 'Upper Roodepoort Gold Mining Company, Limited,' or some other name approved by the said liquidators, and with a memorandum and articles of association which have already been prepared with the privity and approval of the directors." 3. "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidators of the one part, and such new company of the other part, be and the same is hereby approved, and that the said liquidators be and they are hereby authorised, pursuant to section 161 of 'The Companies Act, 1862,' to enter into arrangement with such new company (when incorporated) in the terms of the said draft, and to carry the same into effect, with such modifications (if any) as such liquidators should think fit to sanction."

J. Shaw Kennedy, Esq. (chairman of the company), presided.

Mr. JAMES J. NOLAN (secretary) read the notice of meeting, and the report of the board was taken as read.

MR. OLLERENSHAW'S REPORT.

The CHAIRMAN: Gentlemen, at the last meeting over which I had the honour to preside, before the shareholders despersed there was a strong, unanimous, and simultaneous, request from the body of shareholders that we should try and get Mr. Ollerenshaw to go out to this mine to take charge of it, and to report to us as soon as he could after his arrival, of course allowing due time for examination. After some time we persuaded Mr. Ollerenshaw to go out, and he sent us back an unfavourable report, which the secretary will read.

The SECRETARY here read Mr. Ollerenshaw's report, dated April 24th, 1890, which stated that there had been a great deal of work done correctly described in Mr. Wrey's report. He (Mr. Ollerenshaw) had carefully inspected and tested all the reefs. He had broken samples in the presence of Capt. Williams, the manager, and could not get anything like what had been previously reported. The best prospect was in Wood's reef, 6 or 8 dwts., but the other reefs were poorer. He did not think the property could pay under any circumstance. The conclusions he came to were—stop all work and spend no more money. Sell all the plant, buildings, claims and water rights. He would reside on the property until he heard what he was to do. He had also taken the opinion of Mr. Williams, which was dated 24th April, 1890, and was as follows:—"I have tried many hundred prospects since I have been in the company's employ, and quite agree with Mr. Ollerenshaw's conclusions, with whom I worked 30 years ago in Australia.

ACTION OF THE BOARD.

The CHAIRMAN (proceeding): On receipt of that report we called the large shareholders together to take their advice, and came to the unanimous conclusion that we should reduce all possible expenses to the lowest ebb, both in Africa and here, and this was done. The shareholders appointed a committee to co-operate with the directors, and this committee has rendered essential service, and to them you owe a debt of gratitude. We have worked most harmoniously with them, and they have given a great deal of their valuable time to your service. (Hear, hear.) We know this is a shareholders' question, and it is for you to decide what we should do. There are four courses—first, voluntary liquidation, without reconstruction. This would entail paying up the 5s. per 1*l*. share still uncalled, and if you did I do not think you would get back more than 2s. each—that is, you would get 2s. besides the 5s.—7s. in all. The committee and directors did not consider that good enough, and they went into the second idea of voluntary liquidation with re-construction, and it is upon those lines that we have been dealing. Knowing the bad state that properties are in in South Africa, knowing that many of them are devoid of working capital, we thought it our wisest course to try and amalgamate with a good property in that condition, which was already making returns. Mr. Ollerenshaw tried in South Africa and Johannesburg to find such a property, and at last was brought into connection with Moss Rose. The outline of the arrangement projected was that a new company should be formed, with a capital of 200,000*l*.; the Upper Roodepoort should get 60,000 fully-paid shares; the Moss Rose 100,000, and 40,000 to be held. The liabilities of the Moss Rose were to be paid off. The two deep levels, the Moss Rose and the Primrose, to be purchased for 25,000 fully-paid shares, and the remainder of the capital, 15,000*l*., to be held in reserve. Now the new company will have a proved property into which the levels extend: and with 60 stamps to work a block of over 50 claims. That is what you would acquire, and a very good property we consider it to be. It is for you to decide now that you have the case before you. You can do as you please, but that is what we advise, after much consideration and trouble in the matter.

Mr. BAILY: What is the name of the company?

The CHAIRMAN: The Moss Rose Main Reef Mining Co., Limited, and the shares to-day are about 8s. We shall go into this much more extensively at the special meeting, but in the meantime I propose you pass the report.

OTHER ALTERNATIVES.

A SHAREHOLDER: What are the other two courses?

The CHAIRMAN: Compulsory liquidation by the Court, or the continuation of work on the present reefs.

Mr. PRICE: Has not this company spent all its money?

The CHAIRMAN: No, we have 6,600*l*. in the bank, but the Moss Rose has spent all its money, though they have paid a dividend.

Mr. PRICE: What is the total capital of the Moss Rose?

The SOLICITOR: The Moss Rose capital was 60,000*l*., and they owe nearly 15,000*l*. The mine is now being worked on tribute.

The CHAIRMAN: I propose the adoption of the report and accounts.

Mr. WOODMAN: I second it.

CRITICISM.

Mr. EVANS: I should like, as a shareholder not much acquainted with the ways that prevail in the city, to offer one or two remarks and move an amendment as follows:—"That a committee of investigation be appointed to make a full enquiry into the proceedings of the company from the commencement, and to report to a special general meeting to be convened hereafter." At the meeting I attended in November, 1889, in this room, you were all rather in doubt as to the position and prospects of the property, until a gentleman present—Mr. Wrey I think it was—told us that he was quite acquainted with the condition of things in the Transvaal, and he drew a picture which greatly comforted the minds of the shareholders, and we went away happier than we came. We have waited long, and at last this report has come, respecting which, we do not want more than the first paragraph to show an absolute confession of failure. Mr. Ollerenshaw was asked to go out in November, but took three or four months to pack up his carpet bag, and started in March. His report is extraordinary. He finds nothing.

A "GROSS" TOTAL.

The statement of accounts goes down to May 31st, 1890, but you might have given us a later date to London, say January 31st. What is the obvious conclusion?—that there are items of expenditure that, to say the least, are inconvenient to place before the meeting to-day. The balance-sheet shows 32,000*l*. for purchase. You have spent 2,958*l*. here, and in Africa 5,478*l*., making a gross—a very gross—total of 40,436*l*. (Laughter.) It seems to disclose such an aspect of things as to demand a committee of investigation. Being in this mess, what was the proper thing to do? To call a special meeting of the whole body of shareholders. But what do the directors do? They call a selected body of the shareholders and appoint a committee, which, I maintain, is in no sense elected by the shareholders. The report says, "Your board considered it advisable to consult a representative body of the shareholders." But how can you get that without calling all the shareholders together. The directors ask a committee from this body to confer with and co-operate with them. I hope to-day you will elect an independent committee of investigation such as does not exist now. What is the conclusion of this committee whom they call "your committee"? They recommend that, with the example they have given you of their business capacity and judgment, you should authorise them to join a broken down bankrupt mine, which they say "with proper management (that is the point) will, it is believed, soon become dividend paying." After further severe criticisms, Mr. Evans concluded thus: The conclusions I come to are obvious to anybody, and I feel sure there will scarcely be a hand held up against my amendment. (Cheers and cries of "Oh.")

Mr. BAILEY seconded the amendment.

UNPAID DIRECTORS.

Mr. TURNER (director): I have 1,200 shares, for which I have paid 15s. like all the other shareholders. (Cheers.) I had nothing to do with vendors' shares. Mr. Evans has spoken of directors receiving fees, but when Mr. Wood resigned his directorate I was requested to take his place, as one of the largest shareholders, and have not had a penny for my time and my trouble. (Cheers.) I have made twelve or fourteen visits here out of my own pocket from Manchester, and have never had a farthing, and have never dreamt of asking for one. (Cheers.) I have come here to see that justice is done to my interest and your interest, and that is the sole reason why you find me to day behind this table. (Loud cheers.)

The CHAIRMAN: No fees have been drawn by directors since May.

Mr. PRICE: In view of the report as regards the valuelessness of this villainous reef, I think it necessary Mr. Wood should give an explanation of it. (Cheers.) There is such an enormous difference between his statements and those of Mr. Ollerenshaw and Mr. Williams that it requires explanation. If we have this affair wound up by the Court of Chancery we shall get at the parties who have had the money, and instead of paying 5s. and getting 7s. back, we shall, perhaps, get 10s. back.

Mr. VON LIMBERG: You spoke of 5,000*l*. returned at the last meeting—where is it? You got a report dated 24th April, but why did you not call a meeting before January? I should like to know whether the shareholders you consulted hold vendors' shares.

The CHAIRMAN: Not one of them does so. (Hear, hear.)

Mr. PRICE: I think Mr. Wood should give an explanation. It is due from him—either he or Mr. Ollerenshaw is wrong—but I should be inclined to back the latter as a practical miner.

Mr. WOOD: I have given all the information I can to the board and committee, but I will be glad to meet a sub-committee.

VENDOR MAKES A RETURN.

A SHAREHOLDER: At whose instigation was the return of 6,000*l*. made? Was it due to the initiation of the board, or the compunctions of the vendor?

The SOLICITOR: An action was brought, and it was in consequence of that that terms of settlement were proposed.

The SHAREHOLER: On what grounds was the action brought?

The SOLICITOR: We thought if we could get the money reduced that would be a proper thing to do.

The SHAREHOLDER: Is that considered a condonation of any offence that may have been committed?

The SOLICITOR: I do not think it advisable to go into the point. I have my reasons for saying so. In my opinion it was very difficult

to get any portion of that back. We were advised by eminent counsel in the matter, and from the first, notwithstanding the somewhat jocose remarks of Mr. Evans, we have studied as much as any one could do the interests of the shareholders who have paid 15s. per share, and who are liable for the remaining 5s.

The SHAREHOLDER: In the proceedings did you allege fraud?

The SOLICITOR: We were defendants.

The amendment was then voted upon. After a false count it was agreed to take the voting again, when there were for the amendment 21; against, 23. The amendment was therefore declared lost.

The SOLICITOR intimated that if matters were pressed to a poll the chairman held 65 proxies for over 5,000 votes (over 20,000 shares), which would defeat the amendment.

The CHAIRMAN: How many shares do you hold, Mr. Evans?

Mr. EVANS: Fifty. (Oh!)

VOICE OF THE COMMITTEE.

Mr. WOODMAN: With reference to the committee—I, as a large shareholder (1,000 shares), received an intimation from the secretary asking me to attend a meeting. That meeting was numerously attended. I may tell enquirers that I have, so far, paid 15s. each for my shares, and am liable for the remaining call. Several gentlemen, to the number of five, agree to act as a committee, and they have, indeed, taken a great deal of trouble. Personally, I have attended about 20 or 30 times altogether. The committee have gone into the company's position fully, and the board were very frank. We saw that the best thing to be done was not to wind up the company and incur the waste and expense that would be caused thereby, but that it would be very much better to ally ourselves with a going concern, and the condition of thiugs in South Africa reudered this practicable. I think that is the wisest course to pursue; and let us spend the remainder of our money in working a mine that is proved to have payable ore. I am not a vendor, and am not connected with the vendor, but subscribed for my shares in the way I have told you. (Cheers.)

The report was then adopted by 24 to 17 votes.

SPECIAL MEETING.

The notice of the special meeting having been read by Mr. NOLAN as above.

The SOLICITOR read the agreement by which the new company is to acquire the 14 mining claims of the Moss Rose Consolidated, the 7 claims of the Moss Rose Deep Level, and the 29 claims of the South Primrose Deep Level—these three properties being contiguous to the main reef immediately between the May Consolidated and the Primrose. The consent of the shareholders of the Moss Rose (he explained) had not been obtained. A large number live here, but the secretary this morning informed him that holders of upwards of half the capital had consented to the terms of purchase and sale which would have to be carried out in the Transvaal, and he (the secretary) proposed to leave England early in February for the purpose of carrying the matter through, provided that the resolutions now submitted were passed. The delay in calling the meeting was caused by the strong feeling on the part of the board and committee that something ought to be done to obtain the paid up shares which were handed over to the vendor, so that they should not participate in the benefits of the assets of the company, or of the calls to be made. At the present moment they had 14,000 fully-paid shares, and 46,000 shares, on which 15s. has been paid. The first thing to be done would be to write down the fully-paid shares to 15s. paid, and to make the vendors subscribe the same as the shareholders. He had seen a letter in which Mr. Wrey promised to give up his shares. (A VOICE: He refused to give them up.) I have seen the letter. At the present time there are between 5,000 and 6,000 to be given up, and he urged that the matter should be dealt with promptly, for the longer it remained open the less would the assets become.

POSITION OF MOSS ROSE.

In reply to questions,

The SOLICITOR further stated that the capital of the Moss Rose Company, 60,000*l.*, had been expended in the purchase of machinery. They had 50 heads of stamps and other machinery, and had performed a large amount of development work. Their collapse was mainly caused by a dispute about the water rights. Provision had to be made to discharge all their liabilities, and to give the Moss Rose shareholders 100,000 shares. The two deep level properties after hard bargaining had consented to take 25,000 shares. We have received information that the property is valuable, and last month the output was 500 ozs.

The CHAIRMAN explained that practically there were no expenses being incurred just now, save a trifle in London.

A SHAREHOLDER: What is the cost of working Moss Ross quartz per ton, including everything?

The CHAIRMAN: The average is 25s. to 30s., and the yield has been about 12 dwts., showing a profit of 12s. per ton.

Mr. WOODMAN seconded the first resolution, which was carried by a large majority.

The CHAIRMAN proposed, and Mr. HIBBERT seconded, the next resolution, which was carried by the requisite majority.

VENDORS' SHARES.

Mr. TURNER (director) said he would like an expression of opinion as to what should be done in the re-construction with the vendors' shares. Personally he was not prepared to recognise them in any shape or form. He thought in the new scheme no one should take any benefit for which he had not paid. Of course, in dealing with the vendors' shares they would take legal advice. As regards the cash in the bank they had 6,600*l.*

A SHAREHOLDER: Have any of the vendors' shares been transferred.

The SECRETARY: 150 was transferred from one vendor to the other, and that is the only transfer that has taken place.

A SHAREHOLDER: They could not sell them, or else you would have seen some transfers.

The resolution was carried by a large majority.

Mr. HIBBERT moved "That the sanction of the meeting be given to legal advice being taken as the vendor's shares."

The motion was carried unanimously, Mr. TURNER saying that in this case the company would occupy the position of the defendants, and let the vendors take the other. (Cheers.)

VIEWS OF AN EXPERT.

Mr. OLLERENSHAW: At our last meeting it was desired I should visit the property to tell the shareholders what I thought of it. I did not go out until Mr. Wood returned from South Africa, and then I undertook to be managing director. I thoroughly examined the property as an old gold digger of 30 years' experience, and you have heard my report, which is without prejudice or favour to any person. The mine is patchy. I can get out with a sharp-pointed pick wonderful little prospects, but you must take the ore in the bulk, and then the return of gold dwindles down to what will not pay. I have come to the conclusion that to spend any more money on your present property would be to act like Mr. Micawber, who, we all know, was always waiting for something to turn up. Let us spend the balance of our capital on Moss Rose which I know. I have not been underground, but I know it is a main reef property and it bears a respectable reputation in the neighbourhood and in Johannesburg. The chances are, I think, that we shall get our money back.

A SHAREHOLDER: Would Mr. Ollerenshaw go out again?

Mr. OLLERENSHAW: I will consider the matter of going out again. I have been out there eight or nine months, and received remuneration for only four months, but I do not care whether I get the money owing to me or not. If there is anyone who has lost by this mine it is the person who is speaking to you.

A vote of thanks to Mr. Shaw Kennedy for presiding closed the meeting.

LE CHAMP D'OR FRENCH MISGUND GOLD MINING CO., LIMITED.

THE MISGUND PROPERTY TO BE ABANDONED, AND SOME TRANSVAAL PROPERTY ACQUIRED.

AN extraordinary general meeting of this company was held on Wednesday, at the Offices, 8, Old Jewry.

Mons. Gueyrand presided.

Mr. A. LIGHTOLLER (the secretary) read the notice calling the meeting, which stated its object to be the consideration of the proposed acquisition of certain mines and property in the Witwatersrandt district of the Transvaal, in lieu of the Misgund property, the purchase of which the directors had decided, under advice, to abandon, and also for the purpose of passing a special resolution, to be confirmed at a subsequent meeting, for the alteration of the name of the company by the omission of "Misgund" from the title, and for altering the articles of association.

The CHAIRMAN moved the various resolutions *seriatim*, and they were all agreed to.

The usual vote of thanks closed the proceedings.

DOLCOATH MINE.

DIVIDEND OF 12s. 6D. A SHARE.

A THREE-MONTHLY MEETING of the adventurers in Dolcoath was held on the mine on Monday.

Mr. W. Rabling presided.

The accounts showed:—Labour costs, 12,073*l.*; tribute, 1,691*l.*; merchants' bills, 5,786*l.*; Camborne parish rates, 281*l.*; Stannary dues (three months). 28*l.*; South Devon Hospital, 10*l.* 10s.; bank charges, 153*l.*; total debits, 20,024*l.* On the other side, 467 tons of tin, at an average price of 53*l.* 5s. 4d. per ton, realised 24,879*l.*—less dues, 1-15th, 1,658*l.*—23,220*l.*; extra carriage, 63*l.*; discount on merchants' bills. 31*l.*; total credits, 23,315*l.* This left a profit on the three months' working of 3,290*l.*, and a balance in favour of the mine of 13,419*l.*

The committee greatly regretted the death of Mr. George Williams, of Scorrier House, the chairman of the committee. He had been very rarely absent from a committee meeting, and his counsel and advice were much appreciated. They had elected Mr. Michael Henry Williams to be chairman of the committee in the place of his deceased brother. At the committee meeting held that day a profit was shown on the 12 weeks' working of 3,290*l.*, and an available balance of 8,719*l.* The committee recommended a dividend of 12s. 6d. per share, which would allow the sum of 353*l.* to be added to the balance in hand.

The committee's recommendations were adopted.

Afterwards an interesting address on the position of the mine was delivered by Capt. JOSIAH THOMAS, at the close of which he said: Considering the great improvement on the south lode westward, I think the mine is looking a good deal better than it was at the last account.

THE COLON GOLD MINES, LIMITED.

CALL MADE WHICH WILL EXTINGUISH LIABILITIES, AND LEAVE A SUBSTANTIAL BALANCE.

IN accordance with the intimation made at the general annual meeting held on the 7th instant the directors have considered it to be the interest of the company that the shares should be fully paid, and I now send you the accompanying formal notice of call. The money will be applied to extinguish all the company's liabilities, after which there will remain a consid-rable balance in hand for working capital.—F. E. LAMBERT, Secretary.

REVIEWS.

PUBLIC APPEALS FOR CAPITAL IN 1890. London: Frederic C. Mathieson and Sons, 10, Old Broad Street.

This is a chronological list of particulars of appeals to the public by prospectuses and advertisements for capital for new companies and loans; for additions to the capital of undertakings already established; and for increasing indebtedness. The work meets an acknowledged want, and has evidently been compiled with great care. Its value is enhanced by a copious index.

REPORTS OF MEETINGS.

THE GOLDFIELDS OF MYSORE, LIMITED.

BRILLIANT PROSPECTS OF THE COMPANY — MYSORE AND BALAGHAT IN TREATY FOR BLOCKS OF LAND — IMPORTANT DISCOVERIES.

THE fourth ordinary general meetiug of this company was held at the Cannon Street Hotel, on Thursday, to receive the report and balance-sheet; to elect directors and auditors in place of those retiring; and for other general business.

Notice was further given, "that after the transactlon of such general business as aforesaid, the meeting will be made extraordinary for the purpose of considering and passing a resolution to the following effect:—

"'That articles 77 and 78 of the artieles of association of the company be repealed, and that in lieu thereof the following be articles 77 and 78 :—77. The company shall employ Messrs. John Taylor, Frank Taylor, and Robert Taylor, now carrying on business in co-partnership as civil engineers at No. 6, Queen Street Place, London, under the style or firm of "John Taylor and Sons," as the managers of the company, upon the terms of an agreement dated the 22nd of July, 1886, and made between John Taylor and Sons of the one part, and John Garland, on behalf of the company, of the other part (and which agreement was adopted by the company by a further agreement endorsed thereon, and dated 3rd August, 1886), and in all respects as if the said John Taylor, Frank Taylor, and Robert Taylor had been included under the description of "John Taylor and Sons" in such agreements. 78. Any manager may resign his office, but in that case, or in the event of the death of any manager, the continuing managers or manager shall be deemed to be the managers or manager for the purposes of these articles.'

"With the intent that the resolution so passed may be confirmed at a subsequent meeting, and become a special resolution of the company."

The Right Hon. Lord Ribblesdale (chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting, and the report of the board was taken as read.

The CHAIRMAN: Gentlemen, as the report has been in your hands for some days I do not propose to trouble you with reading it. Neither do I propose to weary you with very many remarks upon that document. Our superintendent, Mr. Jones, has gone very fully into the mining operations which have been carried on since he has been there, and I think every shareholder will be able to judge for himself as to the nature of those operations and what has been done. More especially I do not wish to go very much into the mining part of the report as we have so far reversed our policy as to discontinue mining to a very great extent. Where we have left off we had done so with exceedingly good prospects in nearly every place, and now, as you know, we are devoting ourselves more especially to

OUR BUSINESS AS A LAND COMPANY,

and also to prospecting in various other places on the large area of which we are possessed. The prospecting has been pushed on by costeaning trenches in many places. That system of prospecting has been so far successful that we intend to push it on still more vigorously in the future on the Golconda and Oriental blocks, where a run of quite a new lode has been traced for 1,500 ft. Samples taken from that lode, at a depth of only 30 ft. at the surface, taken most impartially and so treated, have given an average of 8½ dwts. per ton. But I must say, although that average is only 8½ dwts., in some places it is as much as 14 dwts., and in one place 16 dwts.—that is at a point we call No. 4 trial shaft, and this lode has every indication of permanence. Selected samples, also at only 30 ft., went as high as nearly 3 and 4 ozs. to the ton. Now, as to finance, I must admit that we are a little short of actual money, but

OUR FINANCIAL POSITION IS PERFECTLY SOUND,

and I believe I shall be able to unfold to you prospects later on which will help you to piece out the imperfections of a balance-sheet with your thoughts. (Cheers.) Moveover, I may say our actual financial position is sound in that we have reduced expenditure both in England and India to a minimum. I do not think a shilling is being spent for which we are not getting full value.

SELF-DENIAL OF THE MANAGEMENT.

The directors and the managers had decided to cut off their emoluments in every way. (Cheers.) We have a balance at the bank sufficient to continue the prospecting on which we are now engaged for some considerable time, but above that we have a very valuable asset, upon which I lay great stress, namely, the

22,000*l.* FULLY-PAID SHARES WE HOLD IN THE CHAMPION REEF

Company, which is now working on the Great Champion lode, that is giving such magnificent results in Mysore, Ooregum, and Nundydroog. I do not think the value of that asset can be gauged, and you may be sure that your board will guard it very jealously in the iuterests of the shareholders. I myself am not a very daring speculator, but I have considerably increased my own holding in the Champion Reef Company, and although very full information was given at the general meeting of that company as to the prospects —since then we have had a telegram from India which was published in the papers, giving us news that the Champion Reef Company has struck a good strong lode, with visible gold throughout, at Dalyell shaft. Therefore we have now this Champion lode in fine quantity and appearance at two places in the Champion Reef. I need hardly say that that discovery sends up the value of your property very much, as the holders of 22,000 shares in that company. (Cheers.) As to the future policy of the company, I have already said that we wish as far as possible to go on as a land company. As has been indicated in this report, we have persons who are desirous of acquiring portions of your property, and it is very certain that in some cases those persons to whom I allude will find it imperative to make some arrangement with this company for acquiring those portions at no distant date. You know that the Great Champion lode of the Mysore, Ooregum, Nundydroog, and Balaghat Companies working on the field has a westerly dip, aud that at certain depths it will pass out of these properties into our land; that is, that given the dip of it now, we can almost speak with certainty as to the degree and depth at which it will strike into our land, and we are the monopolists, as it were, of the rest of the land lying on the Champion lode. This ground is owned by the Goldfields of Mysore Company; so the dip being a rapid one, and the lode in some cases within measurable distance of ground owned by the company in this western ground—the Goldfields of Mysore has a mine, or mines, of very large value.

MYSORE A POSSIBLE BUYER.

I do not think I shall be at all betraying any confidence, as a director of the Mysore Mine, if I say that that company will very shortly have to consider whether it shall not come to the Goldfields Company to acquire a block on its western boundary. You will hear a good deal more on that point from Mr. Taylor. I do not mean at all to say that this contingency has not been present to the directors of the Mysore Mine for some time past. We have constantly discussed it, and it has been tacitly understood that the Mysore Mine would be the best customer, or, at all events, be a customer whose prior rights would be taken into consideration when it came to a question of the acquisition of that property. Without also, I think, any betrayal of trust, I may say that at no later date than our last board meeting, which, I think, took place 10 days ago. it was the subject of informal consideration whether the time had not come for the Mysore Company to approach this board with a view to acquiring this property. Every day, of course, this land is getting much more valuable and prices go up. It might be cheaper for the Mysore Mine to buy now than later on, but matters have been a good deal precipitated since then by an independent party making a definite offer for this very block of land on the western boundary belonging to the Goldfields Company, which is so extremely valuable to the Mysore Mine. Therefore, I think that almost immediately this question of the acquisition of this block will occupy the attention of the Mysore board, and you may be sure, speaking to you as your chairman, that your board have very high ideas of the value of that land. They are perfectly aware that in parting with it they are parting with a bit of land which will be of value in respect to all belonging to us on the run of the Champion lode, but to use a colloquial expression, "we are not at all in a mind to fool that property away." (Cheers.) Mr. Taylor will tell you a great deal more than I can as to your exact position, both in dealing with the Mysore Mine, and in dealiug with any independent person who may come to us as a customer, and I feel certain that his remarks will be listened to with great interest, and will be received with the great authority which always attaches to his large experience. Therefore, my taking up your time any further at this moment would be inconvenient. I think the board would like to express their sorrow, that since we met you last they have lost the valuable assistance of one of their colleagues, Sir Robert Dalyell, and would like at the same time to congratulate you on having acquired

SUCH A GOOD DIRECTOR AS GENL. BERESFORD

in his place. I have now to move the first resolution, which is "That the report and balance-sheet to the 31st August, 1890, be received and adopted." (Cheers.)

Sir CHARLES TENNANT, Bart. (vice-chairman): I second that motion, and will defer anything I may have to say until after Mr. Taylor has spoken and put before you the exact position of the company with reference to the Mysore Mine, of which I happen to be the chairman, and any other point on which you may wish for information.

Mr. JOHN TAYLOR, who was received with loud applause, said: Gentlemen, this report, which doubtless you have all studied, gives you very full particulars of the work carried on upon what is called the Oriental lode at Middle and South shafts, and I do not think that, as there is a much more important question with which I have to deal to-day, I need take up your time further as to that point, but merely offer to answer any questions that you may be subsequently pleased to address to me. Another very interesting bit of history is given in this report. I am sure you must have read with interest

WHAT HAS BEEN DONE BY MR. LAVELLE,

who has struck out a new line altogether, and it must be quite evident to anyone who has read the description he gives of what he has done that the discovery must be looked upon as one of considerable value, and must attach considerable importance to the portion of our property through which the reef passes, and on which this find has been made. I have not the pleasure of the intimate personal acquaintance of Mr. Lavelle, for I have only seen him two or three times, but there is one director (Genl. Beresford) to whom he is known most intimately, and it is evident to us all that he is a man of immense energy and perseverance, one who has had a great deal to do with this field and who is working hard on other parts of our property, with the expectation of finding something equally good, and I have no doubt he hopes very much better. He writes to us very hopefully as to his expectations of sending very favourable news on other points before long. You are all aware that the climate of India at the latter end of the year is very unfavourable for such work as he has been doing. I believe he lives in a tent, and goes about in a bullock waggon, remaining almost all the time at the point at which he is working. I can assure you that during the wet season such work is not carried on to advantage. One portion of the property which he is developing is the Road block which is north of the Nine Reefs ground. Mr. Lavelle has expressed a high opinion, as I have also done myself, of that ground. This view is further strengthened by the news you will have read in the reports published this morning.

GOOD NEWS FROM NINE REEFS.

The report of the Nine Reefs Company, published to-day, tells you that in Vyvyan shaft, which is close to the northern boundary of that company's property, the lode is small, but very rich—the average assay being over 8 ozs. That increases my faith that the Road block is going to be one to which much value will be hereafter attached. The report mentions the value which is now coming to be attached to the shares of the Champion Reef Company. It is not for me to-day to speak much about that company, but I may just confirm what Lord Ribblesdale has said as to the capital discoveries made there during the last few weeks. The mine is looking very well. The reef is rich at both points that are being worked upon, and the prospects of that company are certainly extremely good.

THE IMPORTANT POINT OF ALL.

The important matter that we have before us to-day is one I approach with some diffidence—the projected purchase of portions of property lying to the west of the properties worked by existing companies. The value which attaches to the property we possess west of all these mines that are working is increasing day by day—necessarily increasing—almost by leaps and bounds, with the increasing depth to which the reef is proved in these different shafts. These mines are all at work. They are all sinking as fast as they can, because as they sink they find the reef good, and naturally they will continue their work. The further they go the more the reef dips to the westward towards our property, and on the map on the wall all coloured pink belongs to us. I say the vein is dipping rapidly, and the developments of these companies are day by day increasing the value of our property. The chairman has told us how the company has been approached, that is Goldfields of Mysore, by more than one of those companies, but he did not mention the Balaghat, with which negotiations have been proceeding, and will doubtless continue, with the view also to the purchase of a portion of our property to the west. It will be a necessity to them, and there is also spoken of a purchase by independent persons of the property lying to the west of the Mysore sett. It is quite clear that these companies must before long come to us. They must acquire these properties, and they must secure these lands. It becomes then rather a question of how, and when, and with whom, that should come about, for the reef has a rapid inclination, as we have all known, and it will dip out of the ground of the companies that are already at work at certain depths, but not at depths which would be at all out of the way for an independent person to take in hand. They would not be at so great a depth but that it would be in their province, and within their power to sink a shaft, outside the boundaries of the working companies, and cut the vein at a further depth. The Mysore Company has been specially mentioned, and I think it desirable that we should have the figures before us. I am not going to tell you anything that has not been made public at the general meetings, and in the reports of the companies. The Mysore Company has a shaft down to a depth of 780 ft. upon, of course, the dip of the vein, and supposing that dip to continue the same or at about a similar angle, the boundary would be reached at about a depth of 1,700 ft., leaving about 900 ft. still to sink on the line of the reef. The shaft I speak of—Rowse's—you will have noticed in the report, has recently been sunk at a very rapid rate for that country, especially considering the hardness of the rock. The average has been upwards of 30 ft. a month. The report which many of you read to-day from the Mysore Mine shows you that the sinking during December was 35 ft. 3 ins.; therefore, if you take the 900 ft., though it is not for me to say the vein will continue to dip at the same angle, but considering it probable, at the rate of 30 ft. a month, the Mysore Company could sink their shaft to the boundry in two and a-half years. I am not going to indicate that the Mysore Company will do this. You are aware it has a very large extent of country (1½ miles in length) and has made splendid discoveries, and has a great length of rich ground opened up at above the level of the bottom of the shaft, but I am merely telling you what may be done if that shaft be pursued by that company—it may be sunk to a depth that may bring them into your property within two and a-half years. Therefore, we may be sure

THE MYSORE COMPANY WILL ASK YOU TO MAKE A SALE

to them of a part of that property at a price that you will be called to put upon it. The same thing applies to a great number of other companies. Anyone who looks at the map, now exhibited, will see that to the north is the Balaghat, then the Nundydroog, the Ooregum, Champion Reef, Mysore, Indian Consolidated, Colar Central and Mysore Reefs, with another part of Indian Consolidated further to the south. What I have said applies exactly to these companies, but with of course considerable variations in the depth at which the Great Champion reef will dip out of their respective properties. Our chairman has spoken of independent persons having approached us with a view to the purchase of the property lying to the west of the Mysore Mine. We, as proprietors of the Goldfields property, who look at the question of how the independent person can go to work, have considered that carefully, and my idea is that it is not a serious matter. The dip of the reef is such that any fresh company going to work on a piece of property outside that of the Mysore Company would not have to sink a shaft more than 1,000 ft. (I believe rather less) to cut this Great Champion reef. Now, as far as deep sinking in mines is concerned, that is not by any means a serious matter. There are in Australia the records of numerous shafts sunk upwards of 2,000 ft. deep, and I have spoken of this as probably less than 1,000 ft. In our own country you know by reputation the celebrated Dolcoath Tin Mine, which is 2,500 ft. deep, and their last report shows that they are now sinking their shaft still deeper. Then I have a knowledge of some silver-lead mines in Bohemia, though the recent history of which I have not followed, but they have a shaft considerably over 3,000 ft. deep. I had a few years ago the particulars of that mine, and it was then upwards of 3,300 ft. deep. I mention these facts to show you that it has been demonstrated again and again beyond question, that not only can mines be advantageously worked, but that mineral veins, where you get a well-defined true fissure vein, have maintained their strength and productiveness to these great depths.

A HAPPY FORECAST.

I should like you to understand that this is no new idea, because I have a note before me of part of some remarks I made at the general meeting of this company on the 22nd November, 1886. On that occasion I spoke of this very matter, and told you that the dip of the Great Champion reef was to the west at the very smart angle of from 40 to 45 degs., and that whatever veins there were in the Mysore property, if they continue to a great depth as true fissure veins, must dip into our property. Since then great changes have taken place, and although it was quite evident to me three years ago that the time was not far distant when this must come about, I think that now the time has come when the Goldfields of Mysore Company must commence to reap its harvest by the sale of portions of its property in the direction I have pointed out, and it also appears to me, from the natural condition of things, that they will be able to do so at ever advancing prices. (Loud cheers.)

A WORD WITH MYSORE SHAREHOLDERS.

Sir CHARLES TENNANT: As the chairman of the Mysore Company, I may say that we have had this matter under our consideration, and the question has been, whether this is not the time to buy before prices go up further. I need hardly tell Mysore shareholders that any acquisition of that kind will tend to increase rather than to diminish the value of the Mysore Mine, so that they need have no apprehension on the subject. (Hear, hear.) We have large reserves in the Mysore Mine, which are being daily increased, so that I hope no Mysore shareholder will have any apprehensions, and if he has, that they will be entirely dissipated by what I am saying. What has been said must show you the value of Goldfields property, which is going to realise every expectation, and to fulfil every hope formed concerning it. It only requires those two virtues which I have impressed upon shareholders before—

FAITH AND PATIENCE—

and if exercised, I feel sure they will be rewarded in the case of this company. (Cheers).

The report was carried unanimously, without discussion.

The CHAIRMAN proposed the re-election of Major-Genl. De La Poer Beresford and Mr. John Taylor, which Sir CHARLES TENNANT seconded, and it was carried unanimously.

The latter gentleman invited the gallant general to offer some observations.

PIONEERS OF INDIAN MINING.

Genl. BERESFORD, in returning thanks, said: I have been associated with this business ever since Mr. Lavelle came to me 16 years ago and asked me to help him to develop this field. Mr. Lavelle in all that time has been a thorough believer in it, and has worked for it. I have known him when we were not as well off as we are, when he has lived in a hut and slaved for this industry; but I think he is going to reap his reward at last. (Cheers.)

Mr. JEPPS proposed the re-election of the auditors, Messrs. Cooper Brothers and Co., at a remuneration of 25 guineas.

Mr. HULL seconded the motion, which was carried unanimously.

SPECIAL MEETING.

The meeting was then made special for the purpose mentioned above, the object of which was to appoint Mr. Frank Taylor as joint manager in connection with Mr. John and Mr. Robert Taylor.

The CHAIRMAN moved, and Sir CHARLES TENNANT seconded the motion to this effect.

Mr. PROBYN: We ought to offer a most hearty vote of thanks to the chairman and directors upon the successful position we now hold, and thank them for having foregone their fees entirely. This very much redounds to their credit. It shows their perfect confidence in the property, and hereafter I trust we will pay the directors with the generosity they deserve—that is even more than the fees they have now foregone.

The CHAIRMAN: We will not say anything about the fees, but are happy to have relinquished them. I should like to express our un-

faltering confidence in the value and prospects of this property. (Cheers.)

TELEGRAM SINCE THE MEETING.

The company have received a telegram, dated 30th January, as follows:—"There is a great improvement in lode. Have struck a pocket of very rich ore, winze, south shaft."

THE VAN MINING CO., LIMITED.

AFTER A FREE DISCUSSION, SHAREHOLDERS UNANIMOUSLY DECIDE ON THE SEVEN SIGNATORIES TO THE ARTICLES WITH THE VIEW TO SOME OF THEM BECOMING DIRECTORS—EVERY PROSPECT OF SUCCESS FOR THE RE-CONSTRUCTION SCHEME.

AN extraordinary general meeting of the Van Mining Company, Limited, was held at the Offices of the company, 97, Dashwood House, New Broad Street, on Monday, when the resolutions passed at the extraordinary general meeting of the company held on the 9th day of January, 1891, were submitted for confirmation as a special resolution. The resolution was as follows:—

"That the liquidator be, and he is hereby, authorised to sell and transfer, subject to due provision being made for disseutient shareholders (if any), all the business, property, undertaking and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman, and to enter into all necessary agreements for that purpose."

The scheme of re-construction was printed in our report of the last meeting.

ARTICLES MODIFIED.

Mr. W. J. LAVINGTON: Gentlemen, the company being in liquidation, it is necessary, I am told, that I, as liquidator, should take the chair. The present meeting is called for the confirmation or rejection of certain resolutions passed for a scheme of re-construction on January 9th. The articles were left to be brought before this meeting so as to ascertain whether any important alterations were made in them, and if so, to approve of them or otherwise. The articles are here, but I will briefly state the alterations that have been made. They are an exact copy of the old ones under which the company has worked since the date it was first incorporated. Putting aside the formal alterations in consequence of the difference of capital, the articles go on to provide that the meetings are to be held once in every six months, and that the remuneration of each director is to be 50*l*. with an extra 25*l*. for the chairman. There is also to be a sum of not more than 50*l*. in the hands of the directors, which they shall be at liberty to use in payment of expenses for any directors attending the board meetings, and that the directors shall go out of office at the ordinary meeting in 1893. Those are practically the only alterations that have been made, and if the shareholders are of opinion that they meet their views adequately, then the only thing to be done will be for me to propose the confirmation of the resolutions, after which any questions can be asked by shareholders.

Mr. TREDGOLD: Before the articles are gone into I would ask you to be kind enough to read the minutes of the last meeting.

The CHAIRMAN here read the minutes of the meeting of January 9th.

Mr. TREDGOLD: The minutes as circulated are not accurate.

The CHAIRMAN: You have had circulated amongst you a statement showing what was done.

Mr. TREDGOLD: The minute of the chairman was different from the resolution which appointed the committee.

The CHAIRMAN: That has nothing to do with the present meeting.

Mr. TREDGOLD: It was a question mooted at the last meeting, and the directors decided it. It should have been put to the meeting, and the actual resolution voted upon. A good many shareholders attended the last meeting who are now present, and therefore it is a matter we ought to consider, and if irregular we ought not to confirm these proceedings. It was understood at the meeting of December 12th that a report was to be made to the committee, but no such report has been made. This scheme is, however, pressed upon us with hardly legal notice. I daresay some of the country shareholders have not received the notice. Many distant shareholders would like to have further information, particularly about clause 6 of the scheme as printed, which, I think, is very unjust to shareholders.

The CHAIRMAN: Whatever resolution was passed it was previously put before the shareholders and discussed, and we cannot go back upon what took place on December 12th, and I must, if you please, rule to that effect. You can reject the resolution, but you cannot go back as to whether it was right or wrong. This meeting is purely to confirm or reject them.

DANGER IN DELAY.

Mr. HAMILTON: I was on the committee, and think I tried to put the matter clearly at the last meeting at which the resolutions were passed. There can be no doubt that if we delay, or lose time, we are in danger of sacrificing our whole interest in the mine. I think the scheme before us is perfectly fair and equitable, and I am prepared to support it. With respect to the questions of Mr. Tredgold, I do not think they bear upon the present matter. We have already practically settled the question of the existence of the old mine as we put it in liquidation. We have now to settle whether we are going on with the new mine or not. Granted that you introduce new blood into the management—I think that is the practical and proper thing to do to-day. I represent a large number of shares, and if the mine is put upon a proper footing the holders will not only apply for the number to which they are entitled, but for more if they get them. I happen to live in the country, and had full notice. I think we shall stultify ourselves if we reject these resolutions. Our creditors will probably take the property. We have debts, and the immediate effect of our refusing to go on with the re-construction would be that the creditors, who are now waiting to see the result of this meeting, will take possession. If gentlemen are determined to lose their property there is nothing else to say, but certainly I have not made up my mind in that direction. I should be sorry to see that by our own act we wrecked the whole position. I never thought proxies would be necessary, but I say frankly that if I had imagined there would have been any danger of these resolutions not being confirmed, I would have asked for them, so as to prevent the wreckage of what we did at the last meeting. Get what information and assurance you like, but, granted that the whole thing is going to be begun *de novo* without reference to the past, I think we have all the inducement to go on, and I would seriously urge shareholders that they should not allow this property to fall into the hands of other people. We discussed the whole thing at our last meeting at which Mr. Tredgold was present and so was I, and I think we came to a unanimous conclusion. We left certain questions of management open, but we certainly determined to re-construct the mine.

The CHAIRMAN: The notices were sent out in due time, according to the articles of association, which I can prove, and we called the meeting at the earliest possible moment, for obvious reasons. As to the position of affairs at the mine, there are certain men underground to keep the levels in order, and the pumping engine is keeping the water out to the 120, but nothing else is being done.

BUSINESS.

Mr. HAMILTON: I beg formally to move "That the resolutions passed at the last meeting be confirmed"; and though I do not wish to urge the matter any further than I have done, I still say that between the rejection or confirmation in our own interests there is only one thing to do, namely, to confirm them. It would be perfectly absurd to do anything by which the property would go from us to other people.

Mr. DAWSON seconded the motion, which was carried.

Mr. SCHOFIELD: I think the resolutions are dangerous, and I doubt if they are legally binding. How can you, for example, shut out shareholders who do not reply within seven days?

The SOLICITOR (Mr. Batters): They will be shut out for the simple reason that they do not make the usual application, as regards which every legal notice was sent to them.

THE OLD DIRECTORS.

Mr. SCHOFIELD said he thought the directors had done wrong in running the company into debt to the extent of some 3,000*l*. or 4,000*l*. when they might have sold a lot of shares that were not taken up at the last re-construction. He had given 11s. or 12s. a share for them, and believed they were to be issued at 10s.

The CHAIRMAN: Those shares were all hypothecated to the shareholders, and the directors had no power to issue them. The shareholders did not apply for them, though asked to do so. (Hear, hear.)

Mr. SCHOFIELD went on to say that he was dissatisfied both with the local management and the management here.

Mr. TREDGOLD said that on the last occasion he called attention to the fact that the framing of the articles was left entirely in the hands of the liquidator, and also pointed out what the articles usually provide for, namely, the new directors, and sometimes the subscribers to the articles appointed them. The object of his motion at the last meeting was to give the shareholders

ENTIRE CONTROL OF THE APPOINTMENT OF NEW DIRECTORS,

whose names ought to be submitted to them. He would not take a single share if any of the old directors were on the board. It was for the meeting to decide who the new directors should be.

The CHAIRMAN: That is the very thing I have asked the meeting to decide. Directors can be nominated at this meeting, but not actually appointed, though that will follow in due course. Nominate the signatories to sign the articles, and they will appoint directors in accordance with the wishes of the shareholders expressed to-day.

A LOCAL SHAREHOLDER NOMINATED.

Mr. TREDGOLD: I have very great pleasure in nominating Mr. James McIlquham, who seems to understand mining from what he said at the last meeting. (Hear, hear.) He also lives near the mine, and can visit it occasionally. We want a man on the spot, and one who has a large interest. He holds 500 shares, and evidently understands miners and mining, and would be a valuable acquisition to the board. (Hear, hear.)

Mr. ROBERTSON seconded the motion.

SHAREHOLDERS URGED TO BE CAREFUL.

Mr. MCILQUHAM: It behoves the shareholders to be careful what they do to-day. Upon what they do to-day depends the prosperity or adversity of Van Mine. If I am elected a director I do hope you will elect as my colleagues gentlemen who are in touch and sympathy with my views. Unless you dismiss the present manager I think it is of no use going on. You must restore the confidence which has been lost in the manager and in the late directorate.

Mr. HAMILTON: I am at one with the last speaker as to the local management, but am not prepared to make a clean sweep of the whole board. I have always received from them the utmost courtesy, and if they have erred at all it is in placing too much confidence in the reports that have been made to them by which, probably, they are as heavy sufferers as any of the shareholders. (Hear, hear.) Assuming that the local management must be changed, I think the directors who take office should

INCLUDE MR. CLARK, THE LATE CHAIRMAN.

(Hear, hear.) If you have entirely new direction and a new manager you are placing the new board in a great difficulty to start with, because they will have to learn their duties from the commencement, and, moreover, as the object is to get the capital, you will lose a great deal of support if, to a certain extent, you do not make use of the material you already have at hand. If you have new and old directors they will represent all interests alike.

A SHAREHOLDER cordially seconded the proposal that Mr. Clark should be a director, and urged the meeting not to commit the great error of losing the advantage of that gentleman's ripened experience.

Mr. ROBERTS: Does any gentleman on the board know anything about mining?

The SHAREHOLDER: Mr. Clark does.

The CHAIRMAN: I should say that Mr. Clark knows as much about mining as any gentleman in the room.

Mr. ROBERTS: I believe that all the former directors are very estimable gentlemen. (Hear, hear.)

NEW DIRECTORS.

Other names were then proposed as signatories of the articles of association with the view to some of them becoming directors. The full list included the following:—Mr. McIlquham (Aberystwith); Mr. Charles Clark (the late chairman); Mr. Catling (one of his colleagues); Mr. Dawson (of the Don Pedro Company); Mr. Hamilton (a member of the committee); Mr. Peter Watson and Mr. Kitching.

The CHAIRMAN: These gentlemen, it is understood, will represent the board until the four-monthly meeting.

A SHAREHOLDER: What about the royalty question?

ROYALTIES REDUCED.

The CHAIRMAN: We have obtained a reduction of nearly 50 per cent. from the Marchioness of Londonderry, and are in negotiation with Sir Watkin Wynn. The dues were 1-14th, but are now 1-20th.

Some discussion then ensued as to the local management, the feeling of the meeting being evidently that a new manager should be appointed.

A cordial vote of thanks to Mr. Lavington for presiding closed the business.

THE SHEBA GOLD MINING CO., LIMITED.

THE PROSPECTS NEVER BETTER—REMARKABLE PROGRESS WITH THE MINE AND MACHINERY—CRUSHINGS TO COMMENCE 1ST MARCH—PRACTICALLY NO LIABILITIES.

THE sixth ordinary general meeting was held at Winchester House, Old Broad Street, on Monday.

Wm. Garland Soper, Esq., J.P. (chairman of the company), presided.

The SECRETARY (Mr. J. E. Booth) read the notice convening the meeting. The report was taken as read.

THREE IMPORTANT TOPICS.

The CHAIRMAN, who was loudly cheered on rising, said: Gentlemen, having had the pleasure of meeting the shareholders on 24th September and on 16th October last, there is the less necessity for me to enter into any lengthened explanation. The day for mere speech, as it may affect the Sheba Company, is, I hope, past; and the hour for action is just about to strike. I propose, therefore, to advert simply to three topics—the accounts, the capital, and the prospects of the mine. In the profit and loss account you will see that the amount standing last year to the credit of the revenue account has been fully absorbed; and the resources of the future, after providing for the raising of the debentures and the interest thereon, have been anticipated to the extent of 2,789*l*. Suffer me to explain how this has arisen: Our stock last year stood in our books at 26,910*l*., and the value of our stock now in hand is 21,000*l*. These figures, as they appear on the face of the accounts themselves, show a difference of 5,910*l*. I will not lay much stress on the fact that the further 500 tons of quartz this year in stock is still entered at only 1*l*. per ton, although this valuation is ridiculously low. But as to the tailings, I think I must point out to you that since the quantity was entered in last year's balance-sheet some have been added and some treated. The tailings treated yielded at per ton more than the value at which they were entered in last year's balance-sheet; and the money from these tailings, to the extent of 5,700*l*., is included in the amount entered in this year's profit and loss under the heading "By gold produced." Nevertheless, some shareholders may say: "Either last year you valued the stock too high, or this year you sold the stock too low." I admit the soft impeachment. But if I am to choose as to which horn of the dilemma shall be my uncomfortable seat, I would say the choice is not mine but Hobson's. (Laughter.)

"HOBSON'S CHOICE."

I do not think the stock was valued too high; but the question we had to resolve when financial necessities were pressing was—How shall we raise money? By paying a long price? or by selling our tailings even at a low figure? We agreed on the latter course—may I not add with your concurrence? The negotiation was only concluded in this hall at our summer meeting; and if I must state my belief, this is my opinion, that the sale of the tailings induced the 30,000*l*. subscription of debentures, and the success of the subscription of the 30,000*l*. gave the impetus to secure the further 20,000*l*. debentures, making the 50,000*l*. debentures required, and thus enabling us to husband Mr. Trubshawe's acceptances, which are still intact. As a matter of figures, however, the stock is accountable for the reduction of 5,910*l*. Dealing further with the profit and loss account, you will note that the current charges of the mine are entered at 22,775*l*. and the gold produced at 18,260*l*., showing a further reducing sum of 4,515*l*. Now, as to charges generally: some are for permanent work and some for current work. The line between the two is occasionally undefinable with precision; and where the doubt arises the entry has been made to current account. Practically, our revenue has been at a minimum; because we have not been crushing. The tailings and clean up have done well for us; but still they were inadequate. The credit from gold this year is 18,000*l*., as compared with last year, 56,000*l*. Taking deficits on stock 5,910*l*., and on working 4,515*l*., we therefore account for 10,425*l*. This sum is further enhanced by 7,837*l*. entered as depreciation of plant and machinery.

WHY SUCH A LARGE DEPRECIATION YOU ASK?

Well, our 20 stamp mill is old; it will have to be sold. The manager, therefore, I think, is wise in writing off 2,250*l*. The Wheeler pan and settler and Edge Roller pan too are not very saleable assets. The manager, I think, is prudent in writing off 808*l*. These and the ordinary reductions for depreciation constitute the 7,837*l*. which, added to the above explained 10,425*l*., make the amount 18,262*l*. During the year the usual London charges have been going on; and being 3,578*l*., this sum, when added to the 18,262*l*., makes the debit, say, 21,840*l*. In the raising of the debentures (2,498*l*.), and in the interest paid on them (1,753*l*.), both new charges to our revenue account, and arising this year for the first time, we have two sums which, when added to the just-mentioned 21,840*l*., bring up the sum total for the year to 26,091*l*. The transfer fees (890*l*.) and the surplus on sale of Sheba steam tram shares (2*l*.) have paid for the charge for extra services (285*l*.), the expenses on gold shipments (137*l*.), and the transfer duty composition (297*l*.), besides furnishing a surplus of 173*l*., which surplus, when substracted from the amount of 26,091*l*., equals 25,918*l*., the balance carried down under the heading as of loss for the year. But against this there was a balance brought down as of profit last year, 23,129*l*., leaving

A CHARGE AGAINST NEXT YEAR'S REVENUE ACCOUNT OF 2,789*l*.

Turning now to the balance-sheet, I will advert to the assets. The increase in expenditure relates to construction. The board are satisfied that the work has been well and thoroughly done; and they congratulate the shareholders on the fact that great as has been the cost, the works and plant are likely to prove equal to the stress of storms or the strain of active operations. The sums therefore specified express, in our opinion, reliable value. It will be noticed that, as to the tailings, the same number of tons appears this year as in the stock last year. This is merely a coincidence, and represents the outcome after additions to the old stock, and reductions of a portion of the tailings into gold. It must be remembered, however, that the basis of our agreement with Mr. Trubshawe sets forth 9,000 tons. These large blocks of tailings are always difficult to gauge accurately; and the manager seems to have treated more of them than we figured when making the contract with the purchaser. Of course our treatment of the tailings has ceased; and the manager has stationed a man on the spot to check the weights of the tailings delivered to Mr. Trubshawe. The figures set forth in the assets, under the headings debtors and cash, have necessarily varied since 30th September, 1890; as also have those quoted in the liabilities under the headings creditors (Eureka and London), loan from bankers and bills payable. I may add that we might have made our balance-sheet look yet more favourably had we inserted the fact that we have 3,000 tons of quartz broken and ready, and 3,000 tons of quartz unbroken, and, therefore, so far not ready; but inasmuch as these were not in the concrete form in which tailings exist, we did not think it right to put this into the balance-sheet as an actually immediately available asset. We now have no loan from any source; and there are no bills payable of any kind. (Cheers.) In fact, the company may be said to have, except the debentures,

PRACTICALLY NO LIABILITIES.

(Cheers.) On the contrary, we have a good cash balance at our bankers. Indeed, as far as the board are able to estimate, they now have, inclusive of the sale at par of 2,000 of the unissued shares, sufficient funds in hand, independently of Mr. Trubshawe's acceptances, to carry the company along until the results from crushings are available. (Loud cheers.) Taking, therefore, a glance at the accounts on the whole, the revenue balance of 1889 has sufficed to meet the charges at the mine for 1890; and the produce from the small amount of tailings treated, and the clean-up, has covered, within 2,789*l*., not only depreciation and London expenses, but also the serious items for debenture charges and interest, a position which, on the whole,

MUST BE CONSIDERED SATISFACTORY.

It is necessary I should refer to the authorised capital and the debenture issues. In the option of the debenture-holders of the last subscribed 50,000*l*., the issued share capital may be increased by conversion of these debentures into shares, and the capital would then reach 650,000*l*.

THE DEBENTURE ISSUE.

It will be remembered that our first appeal to shareholders resulted in a subscription of 29,000*l*. to bear interest at 7 per cent, and these debentures were, as I said they should be, simply preferent. A meeting of these preferent debenture-holders, held at the offices of the company, and called for consultation as to raising further money, suggested the issue of mortgage debentures to bear interest at 10 per cent.; and a circular was sent out accordingly. But the result of this second appeal, in April, was so unsatisfactory that the sums then tendered on those terms were returned. A third appeal, in May, wherein the mortgage debentures at 7 per cent. interest were offered at 95 for the 100 was also unsuccessful. In these circumstances the board was in this position: they were obliged to raise the money, say some 50,000*l*., on the best terms which would suffice to secure the money, but nevertheless, to raise the money. The only means was by debentures convertible into shares at the option of the holders; and this proposal, which circumstances forced on the board, has proved adequate to accomplish the object.

THE MINE AND THE OFFICERS.

It remains for me to say a few words on the mine. In the first place, on behalf of the directors and myself—and I trust your cheers will also say on behalf of the shareholders—we desire cordially to recognise the skill, the energy, and the devotion of our general manager, Mr. Howard Hill, and every officer and man on the works. (Loud cheers.) In the next place all of us must be gratified to learn that, in addition to what we have known of the Sheba property generally, there has been found a rich shoot of 81 ft. in depth. "The richest quartz ever seen in the mine was taken out by Capt. Cook at 25 ft. below the collar of the winze. Both he and the miners say there has been nothing to equal it seen above the level." But you will say the report states "The ore giving out." Now the

PECULIARITIES OF THE SHEBA

Mine have been the discovery of either rich deposits, as in the quarry, or rich shoots, as in some of the other levels, only to find other rich shoots at no great distance. Our expectations are likely to be realised, for, from written advices from the general manager under date

21st December, 1890, and received in London on 20th instant, we learn, "We have again come into better quartz at a depth of 88 ft. to 90 ft." Be that as it may, the average value of the ore already won in the 76 ft. sinking, assays during five weeks drilliug,

4 OZS. 10 DWTS. 3 GRS. TO THE TON.

You will also have noticed that by a cablegram published on 23rd instant, the manager says, "North cross-cut, No. 6 level, rich quartz has been struck." This is an instructive and encouraging commentary on the words in our report:—"It will be understood, however, that while our manager reports the limits of the rich ore shoot as having been reached at 76 ft. below the lowest level, this refers simply to the depth of the rich ore, its length and width not being known. It is fair to suppose that in opening this latest discovery it will prove to be one of great importance." (Cheers.) Now it would be easily possible for your directors to make a sensational crushing, and abnormally drive up the value of the shares. But we do not intend to adopt any such firework policy. The mine has been developed so as to attain the best results with the most economical mode of haulage and delivery of the quartz. In harmony with these mining arrangements will be our reduction policy. We shall crush the quartz with an undeviating regard to make the best of the whole of the Sheba ground, taking the rich and poorer quartz together. What we accomplish at the start we are not without reasonable hopes of being able monthly to sustain. Both the general manager at Barberton and the directors in London are quite agreed in their determination that the

SHEBA PROPERTY SHALL BE WORKED ON THIS BASIS OF ABSOLUTE INTEGRITY.

In the third place I am afraid there is some slight disappointment because crushing has not already commenced. The mine is in order. The quartz is waiting to be despatched. The mill is anxious to start. But the tramway is not ready to transport. The disappointment at the delay is not unnatural. Remember, however, the quantity of material which crowded the port of Durban, and more than overtaxed the fitful and slow mode of transit from the coast to the mine: this in itself has set us back more than two months. Realise, if you can, the track which the aërial rope way is to cover: it starts from the mine with a rise of some 1,500 ft., and then, with two gulches intervening, proceeds to the battery. Bear in mind that the general manager has rendered extra assistance by taking labour from the other portion of the works to hurry on the rope way. When these facts are considered I think you will appreciate the difficulties which have had to be surmounted, and will feel that good progress has been made in the construction of the rope way. In the last place you will say—when are we about to start crushing? Well, we have given you in the report the dates we had received both by letter and cable from the general manager; but as our public meeting was postponed until this day, we have been enabled to send another cable message to our manager. This message, despatched on 21st inst., and alluding to the cable of 9th inst., quoted in the report, was: "Will you be ready within the time given?" And his answer, received on 23rd inst., is: "Delayed by bad weather; ready 1st March."

HONEST DATES.

We believe our general manager has given the dates honestly to the best of his judgment. The question now further arises as to how, in the intervals of the general meetings, communications shall be made between the directors and the shareholders. We take it of course that the shareholders will desire that any cablegrams or important letter advices should be made known. This information may be conveyed either with or without directors' comments. If the cablegrams or letters are published as received, this can be done, as hitherto, through the newspapers. If, on the other hand, the shareholders would wish that any development should also be accompanied by an explanatory note of the directors on the development, the directors *quantum valeat* will be happy to make such note of explanation. Now this can only be done by circulars to the shareholders. We estimate these circulars each time of issue cost the company about 12*l*. Our opinion is that usually the better mode of communication is by means of the newspapers, but should it be necessary or desirable on any important occasion, also by circular. What the directors desire to emphasise is that they regard shareholders' interests as paramount. (Hear, hear, and cheers.) With the restarting of productive work in the Sheba Mine, Barbertonians are not without hopes that a renewal of prosperity may smile on the De Kaap Valley. If one were to judge from some financial newspapers, the Sheba, the Oriental, the Edwin Bray and the Piggs Peak, with many other mines, are all properties in the Witwatersrandt district. We are not jealous of our wealthy sister in the northern region of the Transvaal.

THE "ELDER" GOLDFIELD.

But the De Kaap, as the elder goldfield in South Africa, claims a separate existence; and the time has, perhaps, arrived for a more accurate classification. It may be hazardous for the chairman of a mining company to indicate the slightest want of accuracy in those whose daily avocation it is to guide the public mind on financial subjects generally, and to criticise for the benefit of the community the management, or want of management, of mining companies. But the gold-producing districts in South Africa are so distinct in their characteristics, that it is desirable the public should be able readily to trace the output of gold from different and differing geological conditions. Let us hope that, if this record is made, the outcome of the Sheba Mine will not suffer by comparison either with any of the mines in the De Kaap Valley, or in any other district of the South African Republic.

A FORECAST.

Probably, when this year shall be drawing to a close, the outcome of gold from Southern and Central Africa will not have fallen far short for this year of say two and a half millions sterling, with every probability of greater extension annually. I congratulate you, the shareholders of the Sheba, on the fact, not only that you will be reaping for yourselves a profitable return for your investments, but also that you will be contributing your share—and no inconsiderable share—to increase the quantity of the circulating monetary medium, and thus to consolidate and extend the commercial status and prosperity of the British Empire. (Loud applause.)

The chairman closed by moving the adoption of the report and accounts.

A GRATIFYING LETTER.

Mr. PARKER: I beg to second the motion, and in doing so will read a letter I have received, written by a friend who has been on a visit to the Sheba Mine. He has no interest in it, and, therefore, his testimony is quite independent. It is dated 15th December:—

"It will be quite unnecessary for me to describe the mine, as you are no doubt thoroughly conversant with its prospects. There is fully a mile in extent of drives and winzes, and the work of inspection is, therefore, something considerable. Still, the mine is splendidly opened up, and there is not the shadow of a doubt about its magnificent future. In passing the old mill in Fever Creek we noticed that the Cassells people were busy erecting vats for treating the tailings. By the end of next month we ought to know the result of their process, and sincerely hope their best expectations may be realised. We travelled over part of the route of the Sheba aërial tram, and were glad to know the rapid manner in which this work is being pushed forward. It is quite impossible to imagine the difficult nature of this work. It must be seen to be realised. Dragging several miles of inch wire-rope over mountains 1,200 ft. high is a tough job, and Mr. Hill seems to have got over it most successfully. All the wires, both "standing" and "hauling," have been laid along the line of route ready for fixing on to the standards. This Mr. Hill expects to finish in six weeks, and unless difficulties present themselves he ought to get through with the aërial tram by that time. The 60-stamp mill is practically finished, and is a truly fine piece of work. It abounds in Yankee notions—some of the minor details being samples of ingenuity. This plant has been rather costly, but the company has got full value for every shilling spent. It is in every respect worthy of the mine, and will no doubt give an excellent account of itself when once started. Whatever measure of success attend the Sheba Company in the future will be largely due to the splendid abilities of Mr. Hill, who is without doubt the most capable manager we have had in the district. But we suppose we are only expressing an opinion already known to you. The different works at the mine and mill speak for themselves."

ADVERSE CRITICISM.

Mr. L. L. LEWIS: It is rather a difficult thing for a humble individual like myself to make remarks after the magnificent oratorical effort of the chairman, with its beautiful perorations and rounded periods; but still, I presume that figures speak for themselves, and I will only call attention to a few of them. The chairman alluded to the plant and machinery. Originally this machinery, in 1888, cost 12,000*l*., and was written down to 3,232*l*., and we start in 1889 with it valued at 12,479*l*., and then there was 2,642*l*. written off the net value—9,836*l*. In 1890 this machinery is valued at 25,906*l*. This must be nearly all new, but depreciation was written off to the extent of 7,837*l*., so that the machinery we bought in 1888 is really worth nothing, and new machinery bought in 1889 is diminished by 7,837*l*. As to the item, machinery in transit, 23,330*l*., I should like to ask whether that machinery in transit is paid for, and if so, how.

The CHAIRMAN: My friend, Mr. Lewis, has complimented me on my oratory, but I should have been much more gratified had he attended to my speech—(laughter)—because I said that all liabilities had been paid, and that there was not a bill out of any shape or kind. The machinery has been paid for, and paid for in cash. (Cheers.)

Mr. L. L. LEWIS: I am quite as pleased as you are to find that it is paid for. (Laughter.) I now come to directors' fees, which in 1888, when there was a profit of 32,110*l*., were 884*l*.; in 1889, when there was a profit of 36,000*l*., they were 1,141*l*.; and in 1890, when there is a loss of 26,000*l*., they are 1,322*l*., or 450*l*. more than they were in our prosperous years. I now come to the balance-sheet. In 1888, wages and salaries outstanding were 848*l*.; in 1889, 1,600*l*.; and in 1890, 3,000*l*., less 30*l*. On the credit side I find the Sheba Low Level claim 20,448*l*. The buildings in 1888 were 3,562*l*.; in 1889, 6,292*l*.; and in 1890, 4,284*l*. The shafts, and winzes, and drives were 1,428*l*. in 1888; and 2,552*l*. in 1889; and in 1890 the same. I daresay you will laugh again at my utter ignorance, but I fail to see how the shafts, drives, and winzes can maintain their value if buildings are depreciated to the extent of 2,000*l*. If one thing is written off another must be. The water rights remain the same.

FIE! MR. LEWIS.

I thoroughly agree with the next item, "dam, Queen's River. (Great laughter.) I find we have altogether invested in Queen's River about 40,000*l*. (Time.) I find also that shareholders pay attention to little things, but allow the big things to go by. I see the average of gold has decreased year by year. The chairman said they had 30,000*l*. worth of gold if they liked to bring it out, and here is a return of 18,260*l*. Referring to page 17 of the report of the meeting held 30th January, 1890, you will find certain statements embodying certain figures which I would have gone into, but some gentlemen present seem to be so busy and so anxious to get away that I will leave them alone.

The CHAIRMAN: Will you please hand up that report? (Handed in.)

Mr. MUIRHEAD: What is the probable amount of ore remaining? It is estimated in the previous report at 4,000,000 tons, and has anything occurred to lead you to suppose that to be an inaccurate estimate? Has another 12 months experience enabled you to say what is the probable cost per ton of treatment? The two main factors in this company are, first, the enormous bodies of quartz we have, which are of varying degrees of richness, and, secondly, the cost at which we can win the gold, which I understand is something like 1*l*. There is only one other point, and that is on the subject of the accounts. I think that

DEPRECIATION OF 7,000*l*. IS DECIDEDLY HEAVY.

I have not followed Mr. Lewis's figures because I could not hear them for one thing, and they were rather old for another. I understood that he took exception to the item of depreciation, and I should like to know on what principle it is fixed. For instance, a great deal of your machinery is new, and I should like to know whether you write down 10 per cent. or 20 per cent., or what principle you go on. The second point is about the accounts. I think the discount on debentures should have been a capital, and not a revenue charge, but I may be wrong.

Mr. LIVERMORE: What is the estimate of the reserves in sight?

Mr. LAWRENCE: Has the mine manager ever estimated what weight of stone he expects the 10-stamp mill to crush in a month, and taking a fair representation of crushing, what does he expect to be the richness—in other words, has he ever given you any idea of the quantity and the results?

Mr. DOVE: What is the present position of the tailings? On page 6 of your last report you refer to the 20-stamp mill as no longer available for working the tailings, and you go on to say that the directors have reason to believe that Mr. Trubshawe will commence treatment of the tailings in the middle of January,

CHAIRMAN'S REPLY.

The CHAIRMAN: The first question in order of importance is that of depreciation of machinery, raised both by Mr. Lewis and Mr. Muirhead. The depreciation, or the writing off as I would rather call it, of the heavy sums of the old mill must I think be separated in your mind from the ordinary depreciation, and writing off of the machinery as the years pass on, and considering its work. That old mill has been doing its work for the company, and as the workings will have to be abandoned at Fig Tree Creek, we naturally wanted to make that very safe, and although there was no prompting from the directors to the manager, when we saw he had made it safe by writing off such an amount we did not think it prudent to challenge it, because the stock is still there, and if after sale it could realise more so much will result in the future as profit for the company. It is rather more a matter of figures than profit and loss at the present moment. As a general principle the depreciation is written off machinery according to the nature of that machinery. All the machinery in the mine is not necessarily open to an all round amount of depreciation like the furniture in an office, but, speaking generally, what is written off is about 10 per cent.

Mr. LEWIS: There is more than 30 per cent.

The CHAIRMAN: I cannot answer these interjectory remarks. We have written off 50 per cent., I think, from the old mill, but I have explained the writing off must apply to the thing from which the writing off takes place,, and to the age of the machinery from which the amount is deducted. I now come to Mr. Lewis's remarks on the question of directors' fees.

WE HAVE HELD 84 MEETINGS THIS YEAR.

(Cheers.) But it is not for us to speak respecting ourselves, but I hope the shareholders believe that we have done our duty. (Loud cheers.) While in the name of the directors I thank you for that appreciative cheer—may I say that honestly we do not feel we have been overpaid. There are directors and directors. There are directors who do their work and show an interest in the company, and there are directors who simply take their fees. Reference was made to the Sheba Low Level, and I am sorry Mr. Lewis does not appreciate that purchase. The purchase was for 10,000 shares in the Sheba Company and 10,000*l.* in cash. When I went to school 10 and 10 generally made 20. (Laughter.)

Mr. LEWIS: They seem here to make 21. (Laughter.)

The CHAIRMAN: They make 21, because we had to pay for timber and other material on the Sheba Low Level property, which we bought at a comparatively low price, for use in making the winzes, drives and shafts. I am now speaking of Sheba Low Level as a mine, and I say 10 and 10 make 20, and the extra "one" I have already explained. (Cheers and laughter.) Reference was also made by Mr. Lewis to the depreciation of shafts, drives and winzes. I would venture to suggest that the Sheba shareholders for the future should appoint Mr. Lewis auditor. He certainly goes in very minutely into figures, and I think I can do the same, and you will believe me when I tell you that I can show you statements for every item, both in the balance-sheet and profit and loss account, back to 1888, and I will do Mr. Lewis the justice of saying that the most of his quotations have been strictly accurate; but when you come to apportion, as I said, whether items shall be debited to capital or revenue account, then I think the auditor, acting on behalf of shareholders, ought to have the dominating voice in that position — basing his opinion, as the directors do, upon the reports which he finds before him from the manager of the mines. Therefore, it is not a question as between directors and shareholders as to where these items shall go. We leave that entirely in impartial hands, and, as I have said, our instructions are, that if there be a doubt as to the dividing line, whether the money expended shall go to capital in order to produce future revenue, or whether it shall be at once met and written off from the revenue account to loss, is a point that can most fairly be decided by the auditor. I can, therefore, give Mr. Lewis no other answer as to the shafts, drives, and winzes than that which I have just made. (Cheers.) Mr. Muirhead also suggested the desirability that the discount on the debentures should be added to capital account. Again, I say, we have followed the usual course, and the wisest, I think—that of meeting our expenses as they arise, and then look to the future to recoup us on a question of profit. Another gentleman raised

THE QUESTION OF THE TAILINGS.

I had hoped that he had heard the agreement with respect to the tailings, which was read at the last public meeting of the company. The tailings are now practically out of our hands. They are being treated by the Gold Recovery Syndicate Company. I believe that the plant for their treatment has been erected, and hence it is that we now have nothing to do with the tailings save, and except, that we shall hope to turn into cash the acceptances of Mr. Trubshawe.

A SHAREHOLDER: Has the machinery, as a whole, been started, and does it work satisfactorily?

The CHAIRMAN: The next point is the question of a stock of quartz, and whether the manager has given any indication that he has modified the opinion already he has sent home. We have had no opinion upon that subject, directly or indirectly, save and except what answers the questions raised by our friend Mr. Livermore as to the ore in sight, which I made in my speech when I said there were 3,000 tons broken as well as ready, and 3,000 tons unbroken, but ready, of course, to be hauled to the mill.

Mr. LIVERMORE: I mean independent of that.

The CHAIRMAN: That is the sum total of our returns at present. The next important question was the

COST PER TON OF WORKING.

We have not given pointed attention to that, because all hands have been on deck with regard to getting the thing immediately into crushing, but we have made just one preliminary inquiry into this question, and have rather a generic answer, which I will give out for what it is worth. The manager supposes the cost will be between 20s. and 25s. per ton, which, I hope, includes (so I give it in all reserve) mining, transport, milling, and, in fact, delivery of the retorted gold to the bank.

Mr. MUIRHEAD: You do not quite answer my point. Since this time last year has the manager given you any indications of the amount of quartz likely to be above level No. 5? His figures are very large, and I should like to know whether you think they are visionary or practicable.

The CHAIRMAN: We have not gone into that question, but have never seen any reason to doubt Mr. Hill's estimates.

Mr. MUIRHEAD: That is the answer I want.

PROBABLE MONTHLY CRUSHING.

The CHAIRMAN: We have also been asked how much ore will be crushed per month. We have never put that question pointedly to the manager, but to the best of our belief it will be about 4,000 tons per month.

A SHAREHOLDER: He stated that in one of his reports.

The CHAIRMAN: We have also been asked whether machinery has been started as a whole. Mr. Wilde, who has erected the mill, very much to the general manager's satisfaction, was anxious to leave South Africa, because of the coming fever season. We said we presumed he would not leave until the mill had been started, and had a message back that, of course, he would start the mill in a preliminary way by running some rough quartz through it. It is his intention to do so, but we have no advices by letter or cable that he has so done.

QUARTZ IN SIGHT.

Mr. LIVERMORE: What is the estimated amount of quartz in sight? You said 3,000 tons broken, and ready, and 3,000 tons unbroken, and if we treat 4 000 tons a month, that would leave less than two months supply.

The CHAIRMAN: It is a question of what you mean by "ore in sight." (Laughter.)

Mr. LIVERMORE: It is not a laughing matter. (Hear, hear.)

The CHAIRMAN: I quite agree it is not a laughing matter, but by "sight," I mean what I can see. This is what I have to say *vide* Mr. Hill—3,000 tons broken and 3,000 tons unbroken, and you want to know what is in sight. I say *the Sheba mine is in sight*—(cheers)—and you have heard the estimate quoted by Mr. Muirhead.

Mr. LIVERMORE: At the Mysore Gold meeting Capt. Plummer was asked to state how much ore was broken and unbroken. He did so, and also stated there were 15,000 tons in sight.

The CHAIRMAN: I can only refer you to the whole of the Sheba Mine which is in sight, because we are going to put it through as fast as possible.

Mr. Lewis rose to speak again.

The CHAIRMAN: We must have an understanding. How many times is one shareholder to have the privilege of putting questions to the chairman? If you do not mind the time, I am here to be cross-examined.

Mr. LEWIS: At what date were those acceptances given, and when are they likely to mature?—are they given till doomsday? (Order.)

The CHAIRMAN: Here is a financial statement (holding it up). Mr. Lewis is evidently given to the study of archæology, and that is probably why he refers to doomsday. (Laughter.) Our acceptances from Mr. Trubshawe are due as follows:—February 17th, 4,000*l.*; June 17th, 6,500*l.*; October 17th, 6,500*l.* I am getting old, and cannot read very well.

Mr. LEWIS: You *speak* very well. (Cheers.)

The CHAIRMAN: I have now given you the dates, and Mr. Lewis will be able to watch.

Mr. LEWIS rose again amidst loud cries of "Time." He said: I am only going to ask the chairman to return the report I lent him. (Loud laughter.)

The motion before the meeting was carried unanimously.

The CHAIRMAN then proposed the following resolutions to alter articles of association:—1. "That article 12 of the articles of association of the company be amended by striking out the first paragraph down to the word 'exchange,' and substituting therefor the words 'The transfer of any share in the company shall be in writing in the usual common form.'" 2. "That the following article be inserted after article 93, namely: '93a. A printed copy of such statement, balance-sheet, and report shall, seven days previously to the meeting, be sent to the members in the manner in which notices are hereinafter directed to be served.'" He stated that the object was to comply with the wishes of the Stock Exchange. They were recent regulations, or otherwise they would have been embodied in the articles as originally presented.

The motion was seconded and carried unanimously.

ROUTINE BUSINESS AND THANKS.

Mr. MUIRHEAD: I hope I may be allowed to propose the election of the chairman as a director. I can bear testimony to the fact that he has given a great deal of attention to Sheba affairs, and he is always ready to answer any reasonable question. I hope the shareholders will unanimously re-elect him. (Cheers.)

Mr. GEORGE FREEMAN: I have very much pleasure in seconding that motion.

Carried by acclamation.

The CHAIRMAN: I am much obliged to you for my re-election, and will continue to do my best for the company. I move the re-election of Mr. Town.

The motion was seconded by Mr. Cox—carried, and Mr. TOWN responded.

The CHAIRMAN proposed the re-election of Capt. Lister, which was seconded, carried, and acknowledged.

Mr. FREEMAN proposed the re-election of the auditors, Messrs. Deloitte, Dever, Griffiths and Co.

The motion was seconded, and the proceedings terminated with a hearty vote of thanks to Mr. Soper for presiding.

THE CORTEZ MINES, LIMITED.

A SATISFACTORY YEAR'S WORK—33 PER CENT. OF THE CAPITAL RETURNED TO THE SHAREHOLDERS IN TWO YEARS.

THE third ordinary general meeting of the shareholders of this company was held at the Cannon Street Hotel, on Monday, 26th Jannary.

Mr. Thomas J. Bewick presided.

Mr. ALFRED L. PENNY (secretary) read the notice convening the meeting.

The CHAIRMAN: Gentlemen, you will, I suppose, take the report and statement of accounts, which have been printed and issued to the shareholders, as read. It is not my intention to detain you for any great length of time with the observations I have to make. Mr. Wenban's report is so full and clear that it is unnecessary for me to do more than briefly call your attention to some of the important points and circumstances affecting your interests. I may, however, here mention that we, on this side of the table, will be pleased to give you the fullest information in our power in reply to any enquiries you may consider it necessary to make. The history of tho nndertaking has already been so fully and ably described that it is unnecessary on this occasion to say much thereon. At the annual meeting, held about 12 months ago, at which I regret I was absent, reference was made to the area of mining claims, or locations, in the United States, as compared with those in the Transvaal. I have figured them out with the following result:—Each full location in America is 1,500 ft. long by 600 ft. in width, which is 100,000 sq. yds., or 20.66 acres; whilst in the Transvaal each mining claim is only 400 ft. in length by 150 ft. in breadth, being 6,667 sq. yds. or 1.38 acres. Thus each of the Cortez claims is equal in area to 15 of those in the Transvaal, you can, therefore, readily understand the great extent and value of the property we hold.

17 PER CENT. FOR THE YEAR.

We cannot but congratulate ourselves on the result, financially, of the second year's operations, enabling us to divide at the rate of 17 per cent., as against 16 per cent. for the preceding year. Thus the company has already paid in dividends 33 per cent., or, say, one-third of its entire capital, in two years. Although this may be described as good, your directors look forward to still greater returns being made to the shareholders. But in addition to the dividends, we have the pleasure of learning from Mr. Wenban "that the outlook for the future prosperity of the company's properties is most satisfactory and encouraging," and in concluding his annual report, says "the quantity of ore at present in sight is greatly in excess of what it was a year ago," and that after the heavy expenses incurred on improvements, and which have all been paid for out of revenue, the undertaking "is now in a most desirable situation." I cannot pass over Mr. Wenban's report, on which one might dilate at much length, without referring to the property known as St. Louis Mine. This portion of the company's holding was the first which Mr. Wenban attacked on locating the district some 25 to 27 years ago. It is situated less conveniently than the Garrison, or existing workings, being at a higher elevation and more distant from the mill site. Hence it has not been fully developed.

DEVELOPMENTS ON THE ST. LOUIS MINE.

Recently, however, it has been deemed desirable to re-open the original workings and make further explorations, with the result set forth at page 12 of Mr. Wenban's report, and from which, at the risk of wearying you, I cannot resist a short quotation. It is where he says, "The prospective value of these is of fully as much, if not of more, importance than that of those where the present operations are carried on." I may mention that the ore in the St. Louis lode is of a higher grade than at the other mines. Comparing the two years ending 30th September, 1889 and 1890, we have the following figures bearing on the output of mineral and the products obtained therefrom, viz:—

	Mineral tons.	Silver ozs.	Gold ozs.	Average per ton ozs.	Bullion extracted per cent.
1889	8,021	516,845	396	64.00	86
1890	9,079	492,949	340	56.58	90

This shows a considerable increase in the output of mineral with a reduced bullion value, but what is eminently satisfactory is the fact that the percentage of bullion extracted was 90 in 1890, as against 86 the previous year. Both these results go to prove that the system adopted in the mill is good, but the last year's result is approaching perfection. Since the last annual meeting Mr. Moreing, the company's consulting engineer, has visited Cortez and made a complete inspection of the mines and works, and I much regret that owing to an important appointment for this hour he is unable to be present.

THE MANAGING DIRECTOR'S FAITH IN THE PROPERTY.

During the summer of last year Mr. Wenban visited this country when the Board had frequent opportunities of conferring with him on the condition and prospects of the undertaking. These, Mr. Wenban assured us, were of the most satisfactory character, and this is fully confirmed by his report now before you, and by Mr. Moreing. I cannot conclude my remarks without reference to the large stake which Mr. Wenban continues to hold, and the unabated interest he takes in the operations and in the success of the property, and I feel sure you will concur with me in expressing our appreciation of his valued services, and which, later on in the proceedings, will take, I hope, a more practical form. Mr. Norris, the company's auditor, is present, and should any shareholder so desire he will be pleased to offer an explanation of the balance-sheet and profit and loss accounts. The chairman concluded by moving the adoption of the report and accounts.

THE CAPITAL INTACT.

Mr. SAMUEL GREEN (director) seconded the motion, and said: It is unnecessary for me to detain you at any length after the speech of our chairman, and the very full and excessively interesting report sent us by our managing director, Mr. Wenban. Still I cannot rise without congratulating my fellow shareholders and myself on the very satisfactory condition of things. I do not think I have ever taken up a document which has been so satisfactory as this report presented to-day. When you look at the report as coming from the directors you see that the capital, 10,000*l*., is absolutely intact, and 8,000*l*. of it is invested in a stock which is worth considerably more to-day than the price we paid for it. We mean to retain that capital absolutely intact. (Hear, hear.) And when you look at this report of Mr. Wenban's, which cannot fail to be gratifying to every shareholder, you must see that the property is made up of a very large number of places. There is a careful and detailed account of the proceedings of each, and throughout that report you find in every case the future prospects are satisfactory, and the present performances are good.

THE ST. LOUIS PROPERTY.

But there is one point I wish specially to speak upon, and that is the St. Louis property. The St. Louis property is the part on which Mr. Wenban originally commenced his works and operations. It was exceedingly rich and very valuable, but he was obliged to discontinue the operations, because of the situation of the property. It is situated in an inconvenient part, high on the mountain, and the works and mill would necessarily have to be some distance from it. He, therefore, thought it desirable to work then in the immediate neighbourhood of the mill. We are now making arrangements that will enable us to carry on operations on the St. Louis lodes with less expense and greater facilities, and we have great hopes before we meet you next year we shall be working upon those lodes. Mr. Wenban always assured us that there was an immense amount of virgin ground here, and that we are only, as it were, scratching on the surface, and we have not begun to test the value of the properties we possess. This is Mr. Wenban's thorough and entire conviction. I feel fully confident that if there be such a thing as certainty in mining, for mining must assuredly be more or less a speculation, that certainty exists in the Cortez Mines.

The motion was then put to the meeting, and carried unanimously.

THE DIVIDEND.

The CHAIRMAN: The next resolution I have to submit to you does not call for much comment—"That a final dividend of 9½ per cent., making a total dividend of 17 per cent. for the year, be declared."

Mr. EDWARD WOODS (director) seconded the motion, which was carried unanimously.

Mr. WOODS proposed the re-election of the retiring directors, Mr. Thomas J. Bewick and Mr. Samuel Green.

Mr. PONTIFEX seconded the motion, which was carried.

Major QUIRK proposed the re-election of the auditor.

Mr. STONE seconded the motion, which was also carried.

THANKS.

The CHAIRMAN: I propose "That a cordial vote of thanks be passed to Mr. Wenban (our managing director), Mr. Clark (the superintendent), and the local staff at the mines and mills for their services." I am sure we here feel impressed with the fact that we have a very excellent staff at Cortez, and I shall be very glad if you will enable us to pass this resolution, and show these gentlemen that their services are appreciated.

Mr. NASH seconded the motion, which was carried unanimously.

A vote of thanks to the chairman and directors closed the proceedings.

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

(IN LIQUIDATION.)

THE LAST ACT AND DEED.

A GENERAL MEETING of the members of the above-named company was held at Winchester House, Old Broad Street, on Monday, for the purpose of having an account laid before them, showing the manner in which the winding-up had been conducted, and the property of the company disposed of, and of hearing any explanation by the liquidator, and determining by extraordinary resolution the manner in which the books, accounts, and documents of the company and of the liquidator thereof should be disposed of.

Mr. J. H. A. Smith (liquidator) presided.

The SOLICITOR read the notice calling the meeting, and the report and accounts were taken as read.

THE STORY OF THE LIQUIDATION.

The CHAIRMAN: Gentlemen, you will observe from the notice that this meeting has been called in compliance with the provision of the Companies Act, which requires that a liquidator shall, on conclusion of a liquidation, call together the shareholders for the purpose of showing the manner in which the winding up has been conducted, and the property of the company disposed of. In the report and accounts, which I have already laid before you, the details are fully given, so that it is not necessary to go over them all to-day, but we will just take briefly the course of liquidation. In August, 1888, you will recollect the directors of the old company reported that the operations then in progress in the upper levels of the mine had proved very unsatisfactory, and the opinion of Mr. Bland was that it was useless continuing them. A committee of shareholders was appointed to consult with the directors as to the course to be adopted, and I was invited to join that committee, and was one of those who presented the report, saying it was useless attempting the development of the mine with the capital at command. It was then resolved to wind up the company, and I was appointed liquidator. At the same period an instruction was given me that I should advertise the property for sale, and seek to find a purchaser, but before I did anything definite in disposing of the property I should submit such offers as were made to the shareholders. The property was advertised for a month, and in April, 1889, the only offer received, which was a nominal one, was rejected, and re-construction was adopted. I proceeded with the re-construction, and in six weeks was able to announce that all shares not taken up by the shareholders

entitled to them had been taken by the Gold Trust Company. So far everything had proceeded satisfactorily, and I was in hopes of closing the liquidation very speedily, but unfortunately it happened one shareholder who had not taken up his interest during the time specified was dissatisfied, and he commenced an action in the Court of Chancery. That action was eventually brought before the Court, and on 20th December, 1889, after two days' arguing, Mr. Justice Stirling delivered a judgment in which he emphatically declared that the agreements entered into were fair and proper ones. That judgment reflects great credit upon our solicitors. This matter was disposed of on 20th December, 1889, but the shareholder claimed he had the right to appeal within 12 months, hence it was necessary to keep the matter open, so that it was not until December, 1890, I was able to close up affairs. Turning to the accounts, you will see you had about 2,000*l.* in hand in February, 1889, and some 400*l.* of arrears of calls. The result of the formation of the new company is

WE HAVE AVOIDED THE 1S. CALL,

which was apparently staring us in the face, and you have cleared off all liabilities and had a dividend of 3d. per share as a return. The liquidator's expenses you will see come out at 64*l.* 4s. 4d. up to the date of this balance-sheet. The whole amount of legal expenses with which this company has been debited is 91*l.* 13s. nett, including the attempted sale by tender and the transfer of the property. The balance brought down, standing against closing expenses, is, of course, in excess of the amount that will probably be required for that purpose. It is necessary, however, that the winding-up shall be complete before the final meeting is held, and as the nett amount would be too small for division, it is treated in this manner, but subject to the approval of the shareholders. The Act does not require that the accounts should be passed, but simply that they should be presented. However, it will be more satisfactory to me, and I hope to you, to have them passed, and I, therefore, move "That the report of the liquidator, showing the manner in which the winding-up has been conducted and the property of the company disposed of, together with the accompanying statement of accounts, now presented, be received and adopted."

Mr. SAMUEL JAMES seconded the motion, which was carried unanimously.

The CHAIRMAN: The next business is the disposition of the books, papers, and accounts of the company. I move "That the books and papers of the company be destroyed at the end of three months."

The motion was seconded, and carried unanimously,

The proceedings closed with a vote of thanks to Mr. Smith for the manner in which the liquidation had been carried out.

HOLLOWAY'S OINTMENT.—Miners and Workers in the Goldfields.—This invaluable and renowned Ointment is extensively used and patronised by such people to their very great advantage. Being in small compass it is portable and easy of application. When used in conjunction with Holloway's Pills in accordance with the clear and concise directions for use which accompany each pot and box, there are but few of the diseases which afflict mankiud that will not yield to the sanative powers of the combined remedies. Holloway's Ointment and Pills do not deteriorate by keeping nor by change of climate, and as they contain no deleterious mineral drug, they can be used with the most perfect safety under the most adverse climatic and sanitary conditions.

THE LOMA GOLD MINES.

THE FIRST GOLD RUN.

THE secretary of the Loma Gold Mines, Limited, notifies that he has received the following report from the superintendent at the mines: —I cleaned up after a run of 460 hours, of which 180 were devoted to running off top soil, so we may call the run 280 hours, which has producing 43.35 ozs. of bar gold. This is giving us over 1 lb. of gold for every 80 hours worked, which certainly speaks well for the future of the mine when we get on the extra water. The invoice accompanying this report values the bar at 160*l.*

ZAMBESI GAZA. ZAMBESI SOFALA.

THE description given by us of the wonderful wealth of Manicaland when we first drew attention to it and advised the purchase of Ophir Concession shares was ridiculed and laughed at, the existence of enormously rich gold reefs and alluvial deposits was denied point blank, and our statement that Manica was a healthy country was met by the assertion that it was a fever-stricken, deadly swamp.

Who was right? The newspapers now cannot describe it in too glowing terms. Long accounts showing the magnificence of the country—how fertile and healthy it is—appear on all sides. It is now spoken of as the "Promised Land," fabulously rich in gold, with plenty of timber and abundance of water—a miner's paradise, in fact.

Notwithstanding, however, all that has lately been written on the subject, it is pretty evident that the investing public fails yet to realise the true state of affairs, and, unless it quickly wakes up to the situation, all chance of picking up really cheap stock will have passed, for the Chartered Company division and their friends, who are thoroughly alive to the position, are not allowing the grass to grow under their feet. They know that the greatest gold rush the world has ever seen is on the eve of commencing, and that the Transvaal, rich as it undoubtedly is, will be virtually forsaken and forgotten in the wild excitement that must follow the opening up of this extraordinary country, and are taking steps accordingly.

Who are the people who are now buying claims in Manica, and registering new companies for working them? The same clique! Turn which way you will you find them negotiating for calls of shares and claims, and generally preparing for the coming boom.

Although, of course, the shares of the Ophir and its sub-companies must of necessity improve materially, we regard those of the Zambesi Gaza and Zambesi Sofala as being more especially worthy of attention at the moment. These are two distinct undertakings, but under the same board of directors, and identical in other respects. Each company owns 500 claims, with a capital of 42,500*l.*, so that jointly they hold 1,000 claims, with a total capitalisation of only £85,000 Think for a moment what it means. One thousand mining claims in such a country—a country in which M. de Kergarion was able to locate 50 claims on a reef, the assay value of which goes from about 7 ozs. to 209 ozs. to the ton—a country now proved to be auriferous to an almost fabulous degree.

Something like the true value of these claims may be arrived at when we state that the shares of the Sabi Company, which paid £75,000 for only 50 claims, and has a capital of £110,000, could not be bought in any quantity for 15s., if at all, simply because investors are apathetic, and have allowed some of the members of the Pioneer Force and their friends to forestall them. Taking £1,000 as quite a safe estimate for each claim owned by the Zambesi Companies, it gives us £1,000,000 against a total capital of only £85,000. But we may mention that already claims (40 of which are located) sufficient to return £70,000 of the £85,000 in cash or shares have been virtually disposed of to some of the same clique, and that the directors are now negotiating for the sale of a further number on very advantageous terms. It is not necessary for us to point out what this means.

One company is just as good as the other. The shares are fully-paid, and are freely dealt in on the Stock Exchange, to-day's price being about 15s.—16s. We strongly advise their immediate purchase; but, as they are not likely to remain long at the present absurdly low figure, to delay will be dangerous. Act at once!

Do not follow in the footsteps of some of the Ophir shareholders, who stood irresolute, and would not buy when they had the opportunity of doing so at 10s.—12s., but who acted when the price had risen to £10—£12.

EAST LONDON RAILWAY CONSOLIDATED STOCK, £100, fully paid. Present price, £10 5s. to £10 15s.

BUY EAST LONDON CONSOLIDATED STOCK for an immediate £10 advance, or to double its present quotation of £10 15s. per £100 Stock.

DO NOT DELAY ONE MOMENT the PURCHASE of

EAST LONDON RAILWAY CONSOLIDATED STOCK.

BUY OF YOUR OWN BROKER OR OF US.

OUR SPECIAL NOTICE of EAST LONDON CONSOLIDATED STOCK, as appearing in *Financial News* and *Financial Times* of yesterday and date, has had the effect of creating an active and well-merited demand for it.

THAT EAST LONDON CONSOLIDATED STOCK will at any moment reach double its present price does not admit of doubt, and in the near future par, or £100, for that which is now obtainable at £10 15s. should be its quotation.

BUY EAST LONDON CONSOLIDATED STOCK. In the extract from our circular above referred to, we directed special attention to the jealousy—otherwise dog-in-the-manger policy—characterising the position of this truly great, although, in respect of distance, small line of railway. The great companies—knowing its transcendent value when public opinion and public necessity shall dictate its full and free use irrespectively of the policy of chairman or boards of directors—have decided to jointly control, for the present, this indispensable link, which admits of through traffic from north, south, east and west.

BUY EAST LONDON CONSOLIDATED STOCK.

THIS is no haphazard or idle statement, as the following facts, of the moment, will exhibit.

THE DIRECTORS, reduced from six to four, under this Company's Act of 1885, consist of

SIR EDWARD WATKIN, Bart., M.P., Chairman (the greatest Railway organiser on earth).

LORD ALFRED S. CHURCHILL (of the Marlborough family), Vice-Chairman.

CORNELIUS SURGEY, Esq.

W. R. FARQUHAR, Esq., of the eminent Firm of Bankers combining this name.

THESE are not paper names; but the very *élite* of railway administrative power and influence, whose names would not be lent to anything worthless or questionable.

WE proceed further, however, in proof of our contention that possession of the line is being struggled for by leading railway companies, the representatives of which on

THE EAST LONDON JOINT COMMITTEE as as follows, viz.:

EAST LONDON.—Lord ALFRED S. CHURCHILL and W. R. FARQUHAR, Esq.

GREAT EASTERN.—C. H. PARKES, Esq., and Lord CLAUD J. HAMILTON.

BRIGHTON.—S. LAING, Esq., Chairman, and J. B. BICKERSTETH, Esq.

CHATHAM and DOVER.—Sir SYDNEY H. WATERLOW, Bart., and Major A. G. DICKSON, M.P.

METROPOLITAN.—H. D. POCHIN, Esq., and H. J. BARRETT, Esq.

DISTRICT.—J. S. FORBES, Esq., Chairman, and Dr. G. WYLD.

SOUTH-EASTERN.—Sir EDWARD W. WATKIN, Bart., M.P., and Hon. A. E. G. HARDY, M.P.

FURTHER TESTIMONY in regard to the consequence of the Line is superfluous, and would not be complimentary to the intelligence of the reader.

BUY EAST LONDON CONSOLIDATED STOCK.

IT may, however, be stated that it connects the North to the South side of the Thames by means of the Thames Tunnel. It is only partially utilised by the representative Companies above enumerated, and its capacity is sufficient for conduct without transhipment of all goods and passenger traffic from the North directed South, West, or East.

BUY EAST LONDON CONSOLIDATED STOCK.

ITS construction was of unimpeachably the highest-class character, and its cost and present market price may be thus reckoned, as officially verified.

£3,240,799 CONSOLIDATED STOCK

now at £10 15s. p. £100 Stock, or a total of £348,382.

BUY EAST LONDON CONSOLIDATED STOCK.

IT would prove confusing to the general reader and our present purpose to dilate upon the Debenture Stocks, amounting in all to £2,549,466, some of which are guaranteed, pay interest regularly, and stand in some cases at a high premium in the market.

HIGH-CLASS Engineers and Railway authorities consider the Line to be now worth much more than its original cost—some portions of it cost over one million pounds per mile—yet we find the Consolidated Stock at little more than one-tenth its original issue price.

THE present and daily increasing value of this link, not only to London, but the entire country, has been, and is up to now, completely overlooked.

"COMPARISONS ARE ODIOUS," and we dislike them when they bear the odour of being invidious; but dwelling upon and as shortly as possible impressing our subject we are forced to engage the readers' power of reflection.

THIS invaluable HOME RAILWAY STOCK and connecting link, standing complete at our very doors, on the very threshold of the world's commerce and industry, is at the moment obtainable at about one-tenth of its cost. It is as readily saleable as Consols or London and North-Western Railway Stock on the Stock Exchanges of Aberdeen, Birmingham, Edinburgh, Glasgow, Leeds, Liverpool, Manchester and Sheffield; and yet with all its capacity, highest-class direction, indispensable immediate uses, it has been allowed to dwindle to its present quotation.

AS a contrast take Transvaal Securities, which in the excitement of the moment were run to many times their original unknown value.

OCEANAS £1 fully-paid, without then a Stock Exchange quotation, dealings being matter of caprice and thoroughly irregular, were rushed from £4 to £24 each Share.

THEY rushed back nearly as rapidly to £4, a loss of £20, or twenty times the original cost of the unquoted Share.

BUY EAST LONDON CONSOLIDATED STOCK.

IF a fraction of the amount thrown away upon that and kindred securities had been invested in the stock we justly recommend, it would have stood at many times its present market price.

REMEMBER it is as readily dealt in by buyers and sellers as the changing of a bank note, and at a close market price, not a capricious one according to the strength or fancy of the dealer.

BUY EAST LONDON CONSOLIDATED STOCK.

"THE MONEY MARKET REVIEW," of Saturday, 24th inst., in devoting its valuable and exhaustive article to this Stock, recommends Shareholders in all the Northern Lines running into London to buy a portion of the Consolidated Stock, small or great, as conducing to the increased value of their present holdings in other Railways, all of which must benefit in dividend earnings by throwing open the

EAST LONDON RAILWAY to the full extent of its locomotive capacity.

BUY EAST LONDON CONSOLIDATED STOCK.

EVERY reader with a £10 note to spare should purchase and lock up £100 of this Stock. Soon he will take it from its depository and find that it has multiplied, although otherwise, perhaps, like the proverbial talent buried in the earth or tied up in a napkin for the time being.

AS an additional aid to clients and friends in deciding how to act, we may mention that in more recent times, and when the line was not such a desideratum as now,

THE CONSOLIDATED STOCK stood in 1883 at 17⅜, and less than two years ago 15½.

IF, therefore, the mere rumour of a probable absorption of the Line by the London and North-Western could send the price up 50 to 75 per cent., what may be expected if the public Railway Shareholder takes up, holds, and controls, through gentle coercion of his Directors at their meetings, a Stock the merits and prospective value of which are practically without limit?

FROM the present activity in market dealing in the Stock a day or two will serve to send it almost out of reach through scarcity, and orders should, therefore, be telegraphed on the instant.

AT OUR OFFICES can be obtained fuller particulars, and Map showing the connection of the Line with the entire Railway net-work of the country.

BUY EAST LONDON CONSOLIDATED STOCK.

BUY OF YOUR OWN BROKER OR OF US.

BUY EAST LONDONS for a £5 to £10 rise.

MINING MARKET.

CITY, FRIDAY EVENING.

SHARES BUOYANT, AND BROKERS ACTIVE—INDIAN SHARES LEAD THE WAY—THE GOLDFIELDS DEAL—THE FINAL YURUARI CALL DEPRESSES THE SHARES — HOME MARKET STILL IN A BAD STATE — BRIGHT OUTLOOK.

MINING shares have been buoyant this week, and the market has been active to a degree. Not for many weeks past has the outlook been so cheerful, or the general position so strong. However much mining may be denounced in the ordinary walks of commerce, or from the judicial bench, the *penchant* of the public for it is unquestionable. There is an excitement about it which, although it may not always be pleasant. at least offers a change from the dull monotony of ordinary business life. If its losses are phenomenal, so are its profits. Shares valueless one day may become sought after the next at big prices. Written off as a dead loss they often re-appear in the ledger as a live asset. When prices are low the difficulty is to induce the public to bear their financial inflictions with patience, and when they are high it needs more than a voice from the tomb to induce them to take their profit. In the latter case the public are sometimes right, though more often they are wrong, and live to regret that they allowed the little bird in the hand to escape, whilst their attention was concentrated on the pretty warblers in the bush.

This week, as last, the ball was opened, not in fancy dress but in the nakedness of truth, by Indian Gold shares, which were assisted later on by the announcement of the crushings, which are decidedly good. The progressive character of Indian mines is never better shown than by their monthly returns. There is nothing spasmodic about them. The increase is steady and it is genuine. All Indian shares are better if we except Mysore and Ooregum, which do not close quite so good. Some of them have been better during the week than we quote them to-night.

The proposals shadowed forth at the Goldfields meeting the other day are still canvassed amongst market men from various points of view—some considering them excellent and others in the nature of a financial operation with which these well-managed companies could easily dispense. Endeavouring impartially to summarise the feeling of the market and that of the shareholders who have sent us letters on the subject, we come to the conclusion that Mysore shareholders (to begin with) would much prefer that the Goldfields property should not be bought, but in any case they will follow the counsels of the directors, and notably those of the managers. Nine Reef shareholders, however, seem to regard the possible purchase of the Goldfields block as probably their financial salvation, and the shares have risen in consequence. Balaghat proprietors also are not averse to an operation of this kind, and, meanwhile, Mysore West and Wynaad shareholders, and particularly the directors, are, figuratively speaking, doing a mining jig, for they say in so many words, "any sale you may make of Goldfields property will enhance the value of our Tank Block Claim, which we bought for an old song." The shares are up a point in consequence.

The South-East Mysore meeting was, on the whole, encouraging as regards the work done at the mine. At the depth of 500 ft. the position underground is far more hopeful than it was at 295 ft. the point reached at the July meeting, and the ore is not of a refractory nature. The object of the meeting was to raise more money by debentures. Would that it had been to put the capital account on something like a reasonable basis. The ordinary shareholders are ground to death between the upper millstone of preference shares, and the nether millstone of debentures.

The interesting letters that have appeared in our columns on the subject of Ooregum Preference shares for several weeks past will not have escaped the attention of our readers. Our Weymouth correspondent returns to the charge this week, and doubtless the "compiler of the charts" will make his rejoinder in our next issue.

The South African January crushings, so far as received up to the hour of going to press, viewed as a whole, are unfavourable when compared with those of December. It is true that in some cases a rise is observable, but generally speaking, the converse holds good. Perhaps the heavy rains have had something to do with reducing the output. We very much object to those companies that crowd two months crushings into one without making it clear in their telegrams that they have done so. Such companies ought to be avoided, or otherwise they will have some startling experiences for the injudicious investor. A few brokers are talking of the coming African "boom," but nothing of that kind can be based on such a series of crushings as we announce this week. Gold, Land, and Diamond shares have moved unevenly, and there is no feature about them worthy of special attention.

Australian descriptions have been in good demand, with the exception of New Queens, which have fallen, on the explanation of the manager with regard to the late poor crushing. Gympie Great Easterns, on a telegram announcing a fresh discovery, rose, and have so far justified our previous remarks as to the desirability of purchasing them. Gympie Golden Crown advanced on the declaration of the dividend, and Kangarilla and Scottish-Australian are both up half-a-crown each.

In the general Foreign market there has been a fair rise, led off by Don Pedro, under the circumstances set forth in an interview with one of the officials, which we publish in another column. Flagstaffs are also up, and present a firm market. The telegrams from Golden Gate and Feather Companies advanced those shares to-day. Callao Bis during the week have nearly reached 10s., but do not close so good. There has been an inquiry for Gravel Gold, Loma and Colombian Hydraulic. St. John del Rey, New Guston and Tolima are all up. Emmas have lost a little of the rise that was noticeable last week. Montanas are down on the monthly return and there has also been a decline in Pahang Corporation. Copper shares have been featureless.

The surprise of the day has been the final call of 6d. upon Yuruari shares, which at once fell on the announcement. At the recent meeting the directors were blamed for not making this call, instead of financing the company with their own money, or rather with that of the chairman, and paying interest. The present call will probably fall lightly upon these gentlemen, but it will be felt heavily by those who hold the shares in large blocks.

"There were prophets in those days," and Mr. Samuel James is amongst them. His predictions have been singularly fulfilled. Of 22 companies favourably mentioned in his mining circular for January, 17 have advanced in price, four have declined, and one has pertinaciously declined to move either way. There is much valuable information regarding many mines in the present issue, and the forecasts seem based upon reasonable probabilities and ascertained facts.

At the same time, we think that some of Mr. James's remarks relative to Glenrock scarcely toe the line of the facts, and that his judgment in regard to this concern has suffered a partial, if not a total, eclipse. After careful inquiry we are led to the following conclusions:—The statements made by Mr. Beal in his original report allude to what the deep level will render available; those of Mr. Farrell's the present position of the mine, until that level is completed. Had such reserves been available without the costly deep adit, it is scarcely permissible to think that the Glenrock Company would have got the Premier Mine. Mr. Farrell, we happen to know, was most reluctant to crush at all till he was able to go ahead regularly, for this, it seems, the shareholders *must* wait. The board only got transfer of the mine at the end of December, and Mr. Farrell naturally would not commit the company to a heavy contract until he got legal possession. The Premier capital is reserved for Premier purposes, and the board utilise *other* money, a small amount, at their disposal through the paying off of the West Argentine debenture—in a direction to which, at one of the meetings, shareholders called attention, and were promised that it should not be overlooked. On all other points the observations of Mr. James admirably sum up the general situation.

The Home market has been again on the down-grade, and one is at a loss to know where the fall is going to stop. During January the dividends declared by three Cornish mines amounted to 5,600*l*., and the calls upon four mines to 8,657*l*.—a contrast that looks bad for Cornish mining. Van shares have fallen, but we understand that the subscriptions under the re-construction scheme are coming in well.

The stock of copper fell, during January, 4,770 tons. According to Messrs. H. R. Merton and Company's circular, the total supplies were 7,494 tons, and the total deliveries 12,264 tons in England and France. Shipments from Chili have been reduced by the disturbances there, and those from North America are increasing.

The Stock Exchange will be closed on the 14th inst., in order to carry out certain work in connection with the new electric light plant.

The market for the ensuing week looks firm, and we have little hesitation in saying that it will be characterised by a large amount of business.

Kaffirs.

These shares have been moving up and down all through the week, and although the crushings, so far, have been satisfactory, dealers on the market have taken a somewhat adverse view. Geldenhuis, Jumpers, and Moss Rose, are the best, and are higher, while City and Suburban, Langlaagte, Stanhope, Wemmer, and others, are all on the downward grade.

Business:—Those that have risen are as follows: Aurora, ⅛; Bantjes, 1s.; Forbes Reef, 6d.; Geldenhuis, ½; Heriot, 1/16; Jumpers, ¼; Main Reef, 1s.; Moss Rose, ⅛ and Royal, 1/16. Those that close lower are the following: Joe's Luck, 1s.; Piggs Peak, Ordinary and Preference, ¼; City and Suburban, ¼; Crœsus, 6d.; Durban Roodepoort, 1/16; Langlaagte, 3/16; Langlaagte Black B, 1/16; May Consolidated, 6d.; Modderfontein, 1/16; Randfontein, 1/16; Robinsons (De Villiers), 1/16; Stanhope, ⅛; Wemmer, ⅛ and Witwatersrandt (Knight's), 6d.

South African Lands.

The feature of the week has been in Explorings, which have been freely dealt in, and close higher. Orange Free States have also risen slightly, but do not close at best.

Oceanas have been offered, and close lower. There are hardly any other changes to note,

Business.—The falls are as under:—Horo Concession, 1/16; Klerksdorp, 1s.; Nooitgedacht, ¼; Oceana, ⅛; Ophir, 3d.; Silati River, 6d.; Sutherland Reef, 1/16; Transvaal Land, ⅛; and Zoutpansberg, 1/16. The only rises to note are in Exploring of ½; and London and Orange Free State, ¼.

Diamonds.

The market has been almost a dead letter, and notwithstanding the persistent advocating of De Beers, they have only risen to a

slight extent. Intending buyers should be careful to get full particulars before becoming holders of this stock.

Business.—The only alterations to note in this class are a rise in De Beers of $\frac{1}{16}$ and Gordon 6d. Others remain as last quoted.

AUSTRALIANS.

Business.—Those closing higher are Bonnie Dundee, 3d.; Cumberland, 3d.; Gympie Golden Crown, 6d.; Gympie Great Eastern, 2s. 6d.; Kangarilla, 2s. 6d.; and Scottish Australian, 2s. 6d.; whilst British Broken Hill shares have fallen 1/4; Etheridge, 3d.; and New Queen, 9d.

INDIANS.

The feature of the week has undoubtedly been the extensive dealing in Goldfields of Mysore, which at one time freely changed hands at 35s. There are brokers who quite believe they will go to 3*l*. Champion Reefs have offered a somewhat restricted market and it has been impossible to deal in them to a large extent. Mysore Reef and Balaghats have also been in demand, but do not close at best, although they show an advance. Mysore and Ooregum have sustained a slight check.

Business.—The upward move in this class is to be observed in Balaghat of 9d.; Champion Reefs, 1/8; Colar Central, 3d.; Goldfields of Mysore, 7/16; Mysore Reefs, 2s.; Mysore West and Wynaad, 6d. each; New Devala Moyar, 3d.; Nine Reefs, 6d.

Those down are Mysore Gold, 1/8; Ooregum Preference, 1/8; and South-East Mysore, 3d.

COPPER.

There has been hardly any dealing in this class with the exception of Quebradas, which are quoted higher. Most of the shares are quoted lower.

Business.—An improvement has taken place in Bratsberg of 3d.; Quebrada, 1/4; and Tharsis, 1/8; whilst those lower are Capes, Mason and Barry, Namaqua and Rio Tinto of 1/8 each.

GENERAL FOREIGN SHARES.

Don Pedros have been freely dealt in, and at one time have been as low as 1 1/8 and as high as 1 1/2, but after many changes leave off about 1 3/8. Tolima, New Guston and Golden Gates have also had a good advance, and may go higher. Montanas, although lower, appear cheap. New Organos will have to re-construct, so that holders must be prepared to find further capital. Loma, Russell and Yankee Girl at present prices appear to be cheap investments.

Business.—The rises are as under:—American Belle, 6d.; Don Pedro, 3/16; Elkhorn, 1/16; Flagstaff, 9d.; Frontino and Bolivia, 1s.; Golden Feather, 2s.; Golden Gate, 3/16; Gravel Gold, 6d.; New Guston, 1/4; Palmarejo, 6d.; St. John del Rey, 1s.; Tolima, 1/2; Venezuelan-Austin, 3d.; and Yankee Girl, 6d.

The falls are in Amador, 6d.; Callao Bis, 3d.; Colombian Hydraulic, 1/8; Colorado, 6d.; Emma, 3d.; Montana, 1s. 6d.; Monte del Oro, 1s.; New Organos, 3d.; Pahang Corporation, 1/8; Plumas Eureka, 1/16; Yuruari, 4 1/2d.; and Zaruma, 6d.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.	
Amador	7/6	8/6 ...	7/	8/

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—A telegram, dated 4th February, gives last month's return of gold as follows:—"350 tons of quartz produced 465 ozs. of gold."

MYSORE.—A telegram, dated 5th February, gives last month's return of gold as follows:—"3,350 tons of quartz produced 4,851 ozs. of gold, also 509 ozs. from tailings, making together 5,360 ozs. of gold."

MYSORE REEFS.—A telegram dated 6th Feb. gives last month's return of gold as follows:—"Crushed, 580 tons; obtained 83 ozs. of gold."

NUNDYDROOG.—A telegram, dated 3rd February, gives last month's return of gold as follows:—"830 tons of quartz produced 1,471 ozs. of gold."

OOREGUM.—A telegram, dated February 3rd, gives last month's return of gold as follows:—"1,353 tons of quartz produced 2,890 ozs. of gold."

COLONIAL MINES.

BROKEN HILL PROPRIETARY.—For the week ending 5th instant there were 4,884 tons of ore treated, yielding 977 tons of lead, containing 195,360 ozs. of silver. The leaching plant realised 2,400 ozs., making a total production of 197,760 ozs. of silver. The company give notice that the usual monthly dividend of 2s. per share, amounting to 96,000*l*. for Feb., has been declared on the 960,000 shares of the company, and will be paid on the 18th February.

DAY DAWN P.C.—A cablegram gives the result of crushing for the fortnight ending January 31st, viz.:—"1,200 tons, 1,065 ozs. (estimated value, 3,621*l*.") An interim dividend of 6d. per share (free of income-tax) has been declared, payable on and after Monday, February 23rd, to all shareholders on the register on the 10th inst.

ETHERIDGE UNITED.—A telegram from the mine, dated 3rd February, advises the returns for January as "250 tons crushed, 119 ozs. of gold produced."

GYMPIE GREAT EASTERN.—A telegram from the mine, dated 3rd February, reads:—"On further developments in the Eastern reef, the stone is improving, and is now a well-defined reef, showing fair gold."

GYMPIE GOLDEN CROWN.—Cablegram: "100 tons, 130 ozs. (Estimated value, 468*l*.) Our prospects at the Two Mile are very good, and we hope soon to be able to wire you the cutting of payable stone."

MIDAS.—Cable from the mine: "Yield for week, 73 ozs."

MOUNT ALBION SILVER.—A telegram from the manager at the mines shows work done during four weeks ending 24th January: "443 tons of ore raised containing 14,000 ozs. silver; 510 tons of ore smelted containing 15,000 ozs. silver, producing 51 tons silver-lead bullion, containing 12,000 ozs. silver. Shipped per Tara 56 tons silver-lead bullion, containing 10,500 ozs. silver, and 11 tons ore, containing 1,850 ozs. silver."

MOUNT LEYSHON.—A cablegram, dated 31st January, from the manager at Charters Towers, gives the fortnightly crushing: "600 tons crushed, 320 ozs. gold; 20 stamps mill ran 288 hours; estimated value, 750*l*."

NEW QUEEN.—A cablegram gives the result of crushing for the past fortnight :—"240 tons yielding 200 ozs. gold. Cannot account for crushing this week poor quality."

FOREIGN MINES.

COLOMBIAN HYDRAULIC. — Cablegram of the result of run No. 169 :—"We have cleaned up after a run of 41 days, during which time we have washed 780 hours. The gross returns are 1,300*l*. Only fork sluice cleaned up." Secretary's note.—The above return is from Clarke's banks.

DON PEDRO.—The information by cable reads :—"Sampling the lode ; generally rich and large ; 5 ozs. per ton ; plentiful ; since when a rich line has been discovered in the southern part of No. 8 shoot." A late telegram was received on the 4th February showing that the rich line met with in the southern part of No. 8 shoot is a new discovery, and quite distinct from the 5-oz. mineral previously cabled as being plentiful.

ELKHORN.—Cable from Capt. Plummer :—"Bullion shipped for week ending the 31st January, $9,000 (nine thousand dollars)."

GOLDEN FEATHER CHANNEL.—Cable from Colonel Frank McLaughlin :—"Weather remarkably favourable for operations. Have worked almost continuously. Very small snowfall in mountains assures most favourable year for river mining. Everything is going well."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cable from Colonel Frank McLaughlin :—"Most favourable year now assured through remarkably small rain and snowfall. Head dam and property in spleudid condition. Everything going all right."

GOLDEN LEAF.—The secretary announces the following telegram received from Mr. F. Henry Longmaid, the manager at the company's Empire property :—"During January the mill worked 60 stamps for 24 days, crushed 3,500 tons, and the yield was as follows : Bullion, $10,700 ; sundries, $400 ; total, $11,100. The working expenses for the month were $7,500—$3,600." There was also expended on capital account $2,500. The manager adds—"Have lost time through want of water ; now overcome."

ISLAND BLOCK.—The directors have just received advice by cablegram to the effect that during last month 220 ozs. of gold were obtained, the expenses at the mine being about 32½ per cent.

JAY HAWK.—Telegram from the manager, viz. : "The shaft has reached a depth of 280 ft. ; have commenced cross-cutting towards the vein."

MAMMOTH GOLD.—The bullion produced to 31st December last has reached a total of 27,384*l*. 19s. 10d.

MESQUITAL DEL ORO.—A cablegram gives the result of the January mill-run : "50 stamps ran 554 hours (23 days 2 hours) ; quantity of ore crushed was 1,633 tons ; bullion produced at clean-up, 1,283 ozs. ; value, 4,650*l*."

NEW EBERHARDT.—Cable from the manager : "Mine prospects are very favourable ; weekly output quantity 30 tons. The average is $42 per ton. Expenses during the month of January $2,650."

NEW PIERREFITTE.—The company has sold 200 tons silver lead ore to the Société des Mines de Pontgibaud, at 12*l*. 10s. 2d. per ton f.o.b. Bordeaux.

ORITA.—A cablegram from the superintendent relates to run No. 53 :—"We have cleaned up from the branch sluice 300*l*."

PESTARENA.—Returns for January were 367 ozs. from 465 tons of ore, equal to 15 dwts. 19 grs. per ton, viz. : Pestarena, 288 ozs. from 320 tons ; Val Toppa, 79 ozs. from 145 tons.

PINOS ALTOS BULLION.—The out-turn for the week ended 24th ult. was $9,225.

SAN BERNARDO SILVER.—The following telegram has been received from Mr. Mason, managing director at the mines, dated February 2nd : "Ore (concentrated ?) ready to ship to the extent of 80 tons. Mines looking splendid."

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, 6th February :—"29 fms. sunk during January."

SUCRE.—The directors have declared an interim dividend at the rate of 10 per cent. per annum on the preference shares, and 8 per cent. on the ordinary shares.

VISHNU.—The manager telegraphs : "Crushed45 tons, which yielded $1,500."

ZARUMA.—The bullion for the month of November has been sold, and realised 825*l*. 18s. 2d. net.

HOME MINES.

EAST BLUE HILLS.—The following telegram just received from the manager, Capt. Nance :—"Thirty new lode improving considerably, worth 20*l*. fm."

LOVELL.—The mine continues to improve in actual yield and prospects. A meeting will be held in London towards the end of February, and another dividend declared.

WHEAL METAL AND FLOW.—A call of 1s. was made. No call has been made since 1889.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 214 AND 215.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

FERREIRA.—Output, 4,033 ozs. (No time named.)

HERIOT.—The result of last month's crushings is 246 ozs. of gold.

NIGEL.—The result of last month's crushings is 1,103 ozs. of gold.

CENTRAL LANGLAAGTE.—Crushings for January, 610 ozs.

STANHOPE.—The result of last month's crushings is 667 ozs. of gold.

SIMMER AND JACK.—Cablegram :—"January crushing, 2,445 ozs. ; 80 stamps."

MAY DEEP LEVEL.—570 tons (crushed) 717 ozs. ; value of concentrates, 1,200*l*.

CITY AND SUBURBAN.—The result of last month's crushings is 881 ozs. of gold.

MAY CONSOLIDATED.—The yield of gold during January was 2,078 ozs.

VIOLET.—Yield for December amounted to 205 ozs. ; 10 stamps working 19 days, and 20 stamps 10 days. Tonnage crushed, 800.

METROPOLITAN.—Yield for December was 349 ozs. 9 dwts. of gold. Time, 21 days. Tonnage crushed, 1,000.

PIGG'S PEAK ESTATE.—A cablegram has been received in cipher indicating that the result of the clean-up will be telegraphed on 9th February.

FORBES REEF.—A telegram reports the results for January as follows :—"Crushed 1,100 tons surface soil and quartz, obtained 570 ozs. of gold."

ORIENTAL AND SHEBA VALLEY.—Cable :—"The mill has run 18 days ; crushed 2,400 tons ; yield, 830 ozs. of gold ; working expenses for month, 1,750*l*."

EDWIN BRAY.—Cable result of the first crushing :—"Twenty stamps out of the thirty erected, running 14 days, have crushed 460 tons of ore, yielding 396 ozs. of gold."

SALISBURY.—Last month's crushing was 400 ozs. The battery only worked 11 days, owing to the dam of the City and Suburban Company bursting and destroying the dam of the Salisbury Company.

TRANSVAAL GOLD EXPLORATION.—During January mined 375 tons ; battery working 19 days, double shifts ; crushed 550 tons Nu ore, yielding 875 ozs. ; pans 425 ozs. Total for month 1,300 ozs.

JUBILEE.—Result of last month's crushing is 1,019 ozs. of gold. Have declared a dividend of 5 per cent., payable on the 12th March to all shareholders registered on 5th February.

GRASKOP MILL AND MINING.—A cablegram announces the result of the January crushing as follows :—"Crushed 408 tons ; yield 282 ozs., estimated cost 450*l*."

NI-WOT.—Cablegram :—"Result for the month working 24 days, running an average of 49 stamps. 600 ozs. amalgam, ? tons concentrates, 25 tons of smelting ore. Mill shut down five days for repairs counter shaft."

GELDENHUIS MAIN REEF.—In January this company crushed 900 tons, producing 425 ozs. of retorted gold. The December gold, 432 ozs. 7 dwts., has been received by the Standard Bank of South Africa for realisation.

GELDENHUIS ESTATE.—The company recently arranged with the Jumpers Company to crush the ore at grass. They are at present considering schemes of amalgamation and reconstruction, particulars of which will be shortly placed before the shareholders.

NOOITGEDACHT ESTATE.—The secretary has received advices as to the crushing for December :—"620 tons have been crushed and have produced 73 ozs. of bullion and 15 tons of concentrates, assaying 20 ozs. per ton, representing in all the gross yield of 373 ozs."

THE LANGLAAGTE ESTATE.—The following telegram has been received from Johannesburg by the London Agency of this Company : "5,500 tons ore crushed last month yielded in retorted gold 4,600 ozs."

DURBAN ROODEPOORT.—A cablegram states that 1,250 tons have been crushed since 7th January, working 20 days, producing 877 ozs. of retorted gold ; also that owing to excess of rain there had been difficulty in mining last month, but that prospects were more favourable now.

VICTORY HILL.—The manager writes :—"I consider the results of the month's work most satisfactory ; gold is with us everywhere and in paying quantities. I only want to see the lode again in the adit and I will cable you ; I feel sure this is only a matter of patience, as the rock is fast changing, but the driving is very slow."

BARRETT.—The mine manager reports a return of 185 ozs. gold for December, viz., 175 ozs. from the mill, and 10 ozs. alluvial. The run of alluvial gold, which had been temporarily lost, had been again picked up, and splendid rains having filled the dams, and enabled the resumption of washing, far better results are anticipated for January. Prospecting has been started on Bannister's reef, and stuff being taken out, which the manager thinks worth attention. Trees are being planted at the rate of about 1,000 per week, and the manager anticipates that in a few years a large revenue will be derived from this source.

SHEBA.—The following report for the month of December has been received from the general manager :—Mine : Little has been done in the quarry and No. 3 level west stope, owing to the men and boys having been taken from there to work on the aerial tram. No. 2 level : Cutting into east stope on No. 3 level from No. 3 winze ; 20 ft. below No. 2 level in rather low grade ore. No. 3 level : We are underhand stoping this level between Nos. 6 and 11 winzes, breaking into No. 12 winze. We are also stoping opposite the east stope, and getting some very good ore from near the hanging-wall. No. 5 level : No. 15 winze has been sunk a further 17 ft., making a total of 95 ft., and a station has been blasted out on the west end of winze at a depth of 80 ft. on the incline, where we are now busy erecting a windlass for further sinking and putting in a small pump, as we intend taking up all the water we can at this level. During the month the ore from the winze has not been of as high a grade as it had previously been, but it cannot be expected that we should continually have as good ore as we had for the first 75 ft. of sinking, but the appearance of the ground would indicate that we shall soon have a change for the better. The east line of chute passes have been tapped, and 200 tons from there, run into the ore bin at aerial gear loading station. The shoots and automatic switches on the new tram lines work satisfactorily.

New mill: A few men are still at work on this fixing plates, tighteners, turbines, &c., but the mill is practically ready to start, and water would have been turned into the turbines on the 3rd inst., but for the damage done to the race during past week's storms, which will delay us for two weeks to enable us to clean the race out. The dam has stood a good test, and so far shows no weak spot. On the 31st December 8 ft. of water was breaking over it, that being a pressure of 24 ft. Aerial tram: Work on this has been sadly delayed during the past week's heavy rains, it being impossible for men to work out in it. The highest standard (100 ft.) has been erected, and the ropes tightened for one-fourth the distance. We are pressing the work all we possibly can, but it is slow work, men cannot work well in the rainy season on these hills.

Note.—The cablegram published on 23rd January, namely, "North cross cut, No. 6 level, rich quartz has been struck," was sent after the above was written.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (5th Feb.)—Wheal Maria, Capel Tor lode, Eastern shaft: In the 112-fm. level west the lode is 3 ft. wide, yielding a little copper and mundic ores. In the 74-fm. level east the lode is small and unproductive. Watson's engine shaft: In the 72-fm. level west the lode is 3½ ft. wide, and yields saving work of copper and mundic ores. In the 160-fm. level east the lode is 3 ft. wide, composed of capel and quartz, with fluor and small quantities of copper and mundic ores.—I. RICHARDS.

DEVON UNITED (5th Feb.)—Willesford's shaft: In the 144-fm. level west the lode is 2½ ft. wide, composed of capel and quartz, with peach and a little copper and mundic ores. In the 132-fm. level west the lode is 3 ft., very promising, and is yielding saving work of copper and mundic ores. In the stope in the back of the 132-fm. level west the lode has improved, and is now worth 3 tons of copper ore per fm. Watson's shaft: In the 60-fm. level west the lode is very promising. It is 1½ ft. wide, composed of capel and quartz, with peach, mundic and copper ore; worth of the latter 1 ton per fm.—I. RICHARD.

DRAKEWALLS (5th Feb.)—In consequence of the breakage of the balance-bob on Monday morning last, causing the stoppage of the engine for 14 hours, we have not been able to work in the bottom level; the water is very quick, and the forking is going on slowly. The stope in the bottom of the 132 east continues to yield 7 tons of copper and mundic ores per fm., and the stope in the bottom of the 132 west of the cross-course 5 tons of copper and mundic ores per fm. We are getting on as fast as possible with taking out the foundation for the jiggers. We purpose turning the draught on Saturday for another clean out of soot.—H. RODDA.

EAST GRASSINGTON (4th Feb.)—Report from the mine manager:—Hammond shaft: In the 47-fm. level west the encasing rock is extremely hard and spare for progress. The vein continues fully 18 ins. wide, carrying highly congenial matrix, mixed with nice branches of lead ore, worth 20 cwt. per fm. Stope in back of level, in a lode 18 ins. wide, yields 12 cwt. of lead ore per fm. King sump: Drivage and stope east of this point, in a lode averaging 2 ft. wide, and worth together 32 cwt. of lead ore per fm. No. 2 sump: Sunk 38 ft. below the 47-fm. level. We have, as predicted, just touched the second horizontal bed here, which, as usual, has temporarily confused the lode, beneath which, we hope, richer and less bunchy zone of ore-bearing ground will be met with than immediately above and at the 47. Two stopes in back of the 37 worth together 20 cwt. of lead ore per fm. Harris' main engine shaft: In the 47 east I am glad to say the lode is wider, with a less acute underlay, and the matrix all that can be desired for the production of ore in payable quantities; valued to-day 22 cwt. of lead ore per fm., and altogether is a most promising lode. Stope in back of level yields 12 cwt. lead ore per fm. We hope to be in a position to resume driving the 37 east shortly, intersect the heave, and sink to communicate with the rise in back of the 47 below, which will thoroughly ventilate the mine, enabling us to more vigorously extend our operations, which our improved prospects justify. Other points without change. Dressing and smelting in full swing.

LEADHILLS (3rd Feb.)—Brown's vein: Five men are set to drive the 145-fm. level, now 137 fms. 4 ft. north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide, and too dried for producing ore, but anticipate an early improvement. Three to cut out water lodgment at 145 south of Jeffrey's shaft, at 60s. per fm. Four to stope above the 145 south of Jeffrey's shaft, at 42s. 6d. per fm., worth 30 cwt. of ore per fm. Eight to stope above the 145 south of Wilson's shaft, at 50s. per cubic fm., worth 25 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft, at 32s. 6d. per fm., worth 20 cwt. of ore per fm. Twelve to sink No. 4 winze below the 130 north of Jeffrey's shaft, at 130s. per fm., worth 15 cwt. of ore per fm. Five to No. 1 stope above the 130 north of Jeffrey's shaft, at 50s. per fm., worth 15 cwt. of ore per fm. Five to No. 2 stope, at 45s. per fm., worth 20 cwt. of ore per fm. Four to No. 3 stope, at 47s. 6d. per fm., worth 30 cwt. of ore per fm. Four to rise above the 130 south of Jeffrey's shaft, at 85s. per fm., yielding small stones of ore, which look like mending. Two to stope above the 130 north of Wilson's shaft, at 40s. per fm., worth 35 cwt. of ore per fm. Four to size the 115-fm. level north of Jeffrey's shaft, at 30s. per fm.; this is through the run of ore already stoped out. Five to stope below the 115 north of Jeffrey's shaft, at 42s. 6d. per fm., worth 25 cwt. of ore per fm. Two to stope above the 115 south of Wilson's shaft, at 40s. per fm., worth 20 cwt. of ore per fm. Two to drive the 85-fm. level, 207 fms. 1 ft. 6 ins. north of Jeffrey's shaft, at 125s. per fm.; vein above 4 ft. wide, showing hard blue stone and quartz; joints too dried for bearing ore. Four to drive the 70-fm. level, now 48 fms. 5 ft. 3 ins. south of Wilson's shaft, at 80s. per fm.; veiu 4½ ft. wide, charged with too soft stone for bearing ore; we look for an improvement here soon. Four to drive the 35-fm. level, now 67 fms. 3 ft. south of Flat Rod shaft, at 95s. per fm.; veiu, 4½ ft. wide, worth 20 cwt. of ore per fm. Four to stope above the 35 south of Flat Rod shaft, at 32s. 6d. per fm., worth 25 cwt. of ore per fm. Sarrowcole vein: Eight to stope above Gripp's adit north of George's Roust vein, at 45s. per fm., worth 10 cwt. of ore per fm.—T. NEWBIGGING.

MID-DEVON.—Report for week ending 31st January:—Surface: The machinery is being worked at the rate of 3¾ revolutions per minute. A shaft: Water in fork to the 80. C shaft: The No. 3 stope worked on for three days by six men; yield of ore, 2¾ tons per cubic fm.; strata more porous, and the deposits of chlorite larger, still indicates increased deposits of ore. On Thursday we commenced at the 60-fm. level a cross-cut south by six men under the point at which the wiuze from 50 was communicated: it has been driven 3 ft. in strata, conducive to the yield of ore, chiefly composed of flookan, chlorite, axinite, quartz, a little capel, with small veins of yellow copper ore, at times sufficient to save; this cross-cut is intended to test the lode south of the main level east, as it is possible the large deposit of ore at the 50—the continuation of which has not yet been seen at the 60—may have taken a more southerly dip.—J. NEILL.

ROMAN GRAVELS (5th Feb.)—The 155 cross-cut is now driven 10 fms. 4 ft., and we have reached what we believe to be the great spar portion of the Roman lode. On Saturday last we intersected a rib of spar, which carries a very nice quantity of rich-looking ore; then stone was met with, and now the big spar above referred to, so that the main lode proper is still ahead of the present forebreast. We have been prevented from doing any work here during two days this week in consequence of the failure of two clacks and a bucket, necessitating the stopping of the pumping engine. The 140 north is driven 76 fms. 2 ft.; lode, 3 ft. wide, producing a nice mixture of lead ore and blende, and improving as the end approaches the true hanging-wall division of the vein. The winze from the 125 north is 8 fms. 3 ft. 6 ins. deep; lode at present depth being still worth 1¼ tons of lead ore per fm. The stopes in back of the 140 north are without change since last week. The 140 south is driven 76 fms. 2 ft. 9 ins.; lode in two parts together 2½ ft. wide, producing stones of lead ore and blende, and showing a more favourable character than for several weeks past. The remaining stopes and other points throughout the mine are just as when last reported. We have sent out samples of 20 tons of blende for sale next week.—A. WATERS.

SOUTH CONDURROW (4th Feb.)—The flat lode in the rise above the 123-fm. level north of Marshall's shaft is cut off by a cross-head or fault. We are now putting out a cross-cut, and hope soon to intersect the lode north of the heave. The stope in the back of the 123 west of the rise mentioned is worth 10*l*. per fm. We are urging on the sinking of the shaft below the 123. The lode in the 40 end east of engine is worth 10*l*. per fm. Three stopes in the back of the 40 are worth in the aggregate 30*l*. per fm.—W. RICH, W. THOMAS.

SOUTH DARREN (5th Feb.)—The stope under the 142 west is not looking quite so good; the ore does not carry regular, and it may soon improve. The stopes in the back of this level are without change. In the bottom of the 142 east we found the water rather much to stope underhand. The 15 tons of silver-lead ore sold on the 3rd inst. realised 184*l*. 2s. 6d.—J. MITCHELL.

WEARDALE.—Report on mines for week ending 31st January.—Ore raised for week, 80 tons; ore dressed for week, 110 tons; ore, slag and fume smelted for week, 121 tons, producing 67 tons of pig-lead.

WHEAL CREBOR (3rd Feb.)—The following are the points now in operation. Six men driving the 156-fm. level east of the new shaft at 5*l*. per fm. The lode is 4 ft. wide, containing peach, friable spar, white iron, and a small quantity of mundic and copper ore, but the principal part of it is capel. The ground by the side of the lode is soft killas of a dark grey colour. Six men sinking a wiuze below the 144 west of cross-cut at 7*l*. per fm. The lode is 7 ft. wide, yielding 2 tons of copper ore and 8 tons of mundic per fm. Two men driving the 144 west of cross-cut at 5*l*. per fm. The lode will yield 2 tons of mundic and copper ore per fm. Four men stoping the back of the 144 west of cross-cut at 3*l*. per fm. The lode is worth 6 tons of copper ore and 5 tons of mundic per fm. In the upper levels there are 12 men working on tribute. Their tributes varies from 10s. to 12s. in the £. We shall sample on Friday, the 6th, one parcel of copper ore, computed 66 tons. By the end of next week we shall have ready for sampling a parcel of coppery mundic, and also by that time we shall have dressed and got together what No. 1 and No. 2 mundic has been raised with this ore. We are making very fair progress in driving the 156, driving about 9 ft. per week, and as we are now able to continue the sinking of the 144 winze, we hope soon to bring these two points together and lay open some good stoping ground.—P. D. HOLMAN.

WHEAL UNY (4th Feb.)—We are highly pleased with the appearance of the lode in Hind's shaft, which is now 4 ft. wide, and turning out some good stones of tin. The elvan is getting small and followed by a splendid looking granite, which to me is a good indication. It is a purer granite than we have ever seen in the bottom of the mine before. The 230 ends east and west are changing a little. I like the character of the lode in these ends, although the valuation is not increased as yet. All the other points are equal in value to last report.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report for fortnight ending 10th January.—Development: Driving north end, 24-fm. level on the 100 lode with machine drill, 29.4 ft.; average width of lode, 6½ ft.; average width of pay-streak, 2 ft. 8 in.; average yield in ore per lineal fm., 10 tons; average assay value as per general samples assayed daily 59 Troy ozs. per ton; total ore ground driven through, 76 ft. The breast at present shows only about 1 ft. of ore, but it is expected to improve again shortly. Exploration: Cross-cutting west at tunnel level to intersect 100 lode, 7 ft. on lime-rock; total extension, 11 ft. Cross-cutting west at 24-fm. level, 10 ft. N. of No. 7 winze, 12 ft. on vein matter belonging to the main lode. The breast is already in horse matter. The object of both cross-cuts has been explained before. The recent change in the course of the 100 lode, noticed at the 24 level north, will cause said cross-cuts to be a little longer than I expected. Stoping: In back and sides of main stope, north and south ends, estimated ore ground stoped, 21 fms.; in back of 36-fm. level, 100 lode, 4 fms.; total, 25 fms. Both stopes are looking about the same as last reported. Surface work—ore dressing: Rough ore extracted from underground, 640 car loads; estimated 512 tons. Estimated yield from same after cobbing—smelting ore, 12 tons; cobbed milling ore, 148.5 tons; sifted milling smalls, 148.5 tons; total, 309 tons. Stamping: Cobbed ores and smalls to mill, 330 car loads; estimated 297 tons; average ley of same, as per daily battery samples assayed, 41 ozs. per ton. Roasting: Stamped ores sent to reverberatories, 588 charges, at 1,000 lbs.; estimated, 294 tons. Assays: Raw pulp to

oveus (average of 14 samples), 40.8 ozs. per ton; roasted pulp from ovens, samples taken from furnace doors, 35.5 ozs. per ton; roasted pulp from ovens, general samples taken from heaps, 28.9 ozs. per ton. Leaching: Roasted ores served to vats, 355 tons. Average ley of same, 27.7 ozs. per ton; average silver chloride in same, 25.9 ozs. per ton; average ley of tailings to dump, 2.0 ozs. per ton. Precipitate obtained in two clean ups made January 3rd and January 10th is being calcined, and its exact value is not yet known; it is estimated to be worth about $9,000. Refinery: January 3rd we obtained five bars silver, worth $4,649.20. On January 10th we had to withdraw the silver before it was clean, owing to a crack in the hearth. In the current week we expect to obtain a large amount of silver—probably no less than $10,000. Smelting: A campaign was started on the 1st inst., and we have obtained in 12 days 1,549 bars of pig-lead, worth, in silver, about $7,000. The furnace is running very well. There is a scarcity of labour, water and firewood, but we are doing our best to overcome these difficulties.

ANGLO MEXICAN.—The superintendent reports for week ending the 6th January as follows:—East drift, 814-ft. level, has been advanced during the past week 6 ft., making the total distance 232 ft. The rock is exceedingly hard, and our progress owing to this circumstance and to the scarcity of labour, our standing grievance, is, I am sorry to say, very slow and unsatisfactory. Samples taken from this drift recently assayed 28 ozs., as shown by the enclosed assay report. West drift, 814-ft. level, has been advanced during the past week 9 ft., making the total distance 183 ft. Mr. Ham reports this drift as looking much better. The face of the drift shows 1 ft. of ore of a fair grade. Our progress, of course, is very slow, owing to the causes so often referred to already. Surface drift, above Santa Herlinda tunnel level, has been advanced during the past week by the machine drill 28 ft., making the total 89 ft. We have managed to keep a machine drill at work pretty steadily in this drift throughout the whole week, and our progress is consequently more satisfactory here. Mr. Ham reports this drift as looking very promising, and expresses his hope that he may be able to push work ahead as energetically as heretofore. The face shows 1½ ft. of high-grade ore, the value of which you will note from the assay office returns. East drift, on the main vein, above Santa Herlinda tunnel level, has been advanced during the past week 6 ft., making the total 54 ft. I regret to say that, owing to want of men, we have not been able to push work in this drift forward as rapidly as intended. Mr. Ham does not report any change worthy of note in its appearance.

AUSTRALIAN BROKEN HILL CONSOLS.—Report for fortnight ending December 25th.—Engine shaft sunk 22 ft.; total, 503 ft.; very favourable sinking the last few feet, the lode formation being about the full width of the shaft, with seams of calespar showing. The 370 level west driven 12½ ft.; total, 74 ft.; country very hard, consisting of black diorite; lode carries fine seams of calcspar, with galena occasionally showing. The 280 level west driven 16 ft.; total, 281 ft.; width of formation continues the same, and lode consists of ironstone and carbonate of iron. Winze in 180 level: This has been sunk 26 ft., and has just holed with the rise from the 280, thus connecting these two levels, and as thorough ventilation has thereby been secured we shall be able to start upon the opening up of the ore-bearing portions of the lode passed through in the rise. Water shaft: Cross-cut driven 11 ft.; total, 22 ft.; during the last few days have passed it through a 6-in. vein of lode matter underlying south, and are now in a very hard sandstone country difficult to blast. Block 95: Shaft sunk 3 ft.; total, 75½ ft.; ground has been very hard, but country has suddenly changed from diorite to quartzite, and the bottom of shaft is now well mineralised with pyrites.
